Lord Althorp obtained the appointment of a committee to inquire into the mode of taking the poll at county elections; and Colonel Davies obtained a similar one to inquire into the mode of taking the poll at elections for cities and boroughs. The principal object of Lord Althorp was to get rid, if possible, of the enormous expense of a county election. He stated that the last election for Yorkshire, though it had never come to a poll, had cost at least £120,000. If a poll had lasted fifteen days it must have cost the contending parties half a million of money. On that occasion, a gentleman of large fortune, for whom the greatest show of hands appeared, was compelled to abandon all thoughts of standing a poll, in consequence of the ruinous expense which must have awaited him. Lord Althorp likewise brought in, and carried through, a bill for the better prevention of corrupt practices at elections, &c. The object of it was to prevent substantial bribery from being perpetrated under the mask of merely giving employment, and therefore to deprive all persons of the right to vote who should be employed by a candidate in the election. It was notorious that at elections different nominal offices were created, to be filled by voters who were classed as plumpers, and who received double the pay of split votes. It was not meant that the provisions of the bill should apply to any real and fair agent of a candidate, but to that spurious collection which went under the names of runners, flagmen, &c., and musicians who had never played upon an instrument in their lives till they were enrolled at an election. This was just another mode of paying them for their votes, and therefore it was right

that, in that election at least, they should have no voice. On the suggestion of Mr. Spring Rice it was further determined, with the view of promoting the purity and diminishing the expense of elections, to prohibit the distribution of ribbons and cockades. This last suggestion led to a good deal of merriment. The anti-reformers contended that the prohibition of music, and ribbons, and cockades was absolutely ridiculous. It was not desirable to put an end to all the spirit and gaiety of an election; and, even if it were, this measure of Mr. Spring Rice would be utterly inefficient. It was downright folly to suppose that a short weak bill like this would make an English election as demure and orderly as a Methodist love-feast. Everywhere the electors voted for a particular colour; and, "in point of fact," said Mr. Calcraft, who was unusually facetious, "without flags and ribbons the electors will not know whose heads they are breaking, and may knock down their friends under the mistaken notion that they are knocking down their foes." Now, as the bill confessedly was not to put an end to the breaking of heads, there was no use in misleading people to break the wrong heads. The bill, however, passed into a law: by its provisions any person who, within six months before an election, or during an election, or within fourteen days after it, shall have been employed in the election as counsel, agent, attorney, poll-clerk, flagman, or in any other capacity, and shall have received, in consideration of such employment, any fee, place, or office, or any promise or security for a fee, place, or office, shall be incapable of voting at such election. A penalty of £10 for each offence is inflicted upon every candidate who, after the test of the writ, or if parliament be sitting, after the seat has become vacant, shall directly or indirectly give to any voter or inhabitant "any cockade, ribbon, or other mark of distinction."

During this session several attempts were unsuccessfully made to modify the invidious and oppressive game laws. Lord Wharncliffe, who, before his elevation to the peerage, had paid much attention to the subject, had carried through the commons a bill which failed in the peers. He now reproduced it in that upper house. The provisions of the measure went, first of all, to remove the absurd and contradictory qualifications of the old law, and to substitute in their place the qualification of property; every proprietor being permitted to kill game on his own lands, whether his estate were large or small. His lordship next proposed to legalize the sale of game, as one great means of diminishing the temptations to poach, and as being in itself a just and reasonable thing. Another object of the bill was to mitigate the severity of the punishments provided by the ex-

isting game laws for certain offences—a severity which did not carry the feelings of the country along with it, and led jurors to refuse to convict. The bill was allowed to be read a second time; but, on the motion that it should be read a third time, it was lost by a majority of one. In the course of the discussion Lord Harrowby said that, during the last three years, about 4500 persons had been imprisoned under the game laws, while the number in 1810, 1811, and 1812 had been only about 460. Lord Wharncliffe's bill being lost, the Marquis of Salisbury introduced another, merely for legalizing the sale of game under certain restrictions. The noble marquis proposed to empower all persons qualified by law to kill game, to take out licenses authorizing them to sell game to licensed dealers. The measure was to be temporary, and to expire at the end of three years. This bill, too, was allowed to pass through a second reading, and was lost on the motion for the third. There was raised this sentimental objection—the bill would deprive the sportsman of his highest gratification, which was the pleasure of furnishing his friends with presents of game! Nobody would care for a present which everybody could give! One great alteration, however, was effected by a bill introduced by Lord Suffield, and eventually carried, for abolishing the barbarous practice of setting spring-guns and other engines of destruction for the preservation of game.

Out of office, as in office, Mr. Peel proceeded with his valuable improvements on the criminal law. Five acts were passed which consolidated into one body the whole of the law regarding offences against property, and cleared off an immense quantity of ancient rubbish and bewildering phraseology. Not the least of this fresh instalment of reform in our penal code was, that the number of capital offences was materially diminished, and convictions for lesser offences obtained by a summary mode of procedure, by which the long delay and imprisonment that usually preceded conviction by a grand jury were dispensed with.

As chancellor of the exchequer Mr. Canning's task was easy and pleasant. There was a surplus of income applicable to the sinking fund; the supply demanded for this year did indeed exceed that of last year by £800,000. This difference had been caused by the army extraordinaries, and by a vote of credit rendered necessary in consequence of the affairs of Portugal; but Mr. Canning said he intended to bring down the expenditure to the lowest possible scale consistent with the public service. It was the determination of government to apply their most strenuous and best efforts to the matter, and to call the house into counsel upon it.

Mr. Canning spoke in parliament for the last time on the 29th of June. Parliament was prorogued by commission on the 2d of July. On the 6th a treaty combining England, France, and Russia for a settlement of the affairs of Greece, and for the stopping of a horrible species of warfare, was signed at London. This was the last of Mr. Canning's public acts. One of the first poems he wrote in the enthusiasm of youth, was a lament on "The Slavery of Greece." His classical mind revolted at the idea of seeing the last edifices of antiquity levelled with the soil, and the last of the Greeks exterminated, or carried in captivity into Egypt. Like other generous-hearted statesmen, and like all the sympathizers in the Greek cause, he entertained fond hopes of improvement and regeneration, which, alas! the Greek people have not yet verified. In signing the treaty, and in feeling that he was chief in a deed which might restore Greece, if not to her ancient supremacy, to a respectable place among nations, he felt a joy which relieved the languor of disease. He went down to the Duke of Devonshire's pleasant seat at Chiswick, to seek tranquillity after his many toils. The disease proceeded with a violence and rapidity which set the medical art at defiance; and Mr. Canning expired at Chiswick, in the very house in which Mr. Fox had breathed his last, on the morning of the 8th of August. He was only in the fifty-eighth year of his age, and he had been prime minister for only four months. Thus prematurely was removed the most accomplished and liberal-hearted statesman and the most perfect orator of his time.

The death of Mr. Canning left the ministry not only without a head, but also without a heart. For the present, however, very few changes took place, and their effect was to bring back into office a portion of Mr. Canning's former friends. Lord Goderich became premier, and Mr. Huskisson succeeded him as colonial secretary. The only difficulty that was encountered lay in the appointment of a chancellor of the exchequer. The office was declined by Mr. Tierney, Mr. Huskisson, and Mr. Sturges Bourne; and was at last given to Mr. Herries, who had been secretary of the treasury under Lord Liverpool's administration, and who had resigned on the appointment of Mr. Canning. Lord Harrowby retired from the presidency of the council. His place was taken by the Duke of Portland, and the Earl of Carlisle succeeded his grace as lord privy-seal. Lord Dudley and Ward, although both his health and intellect were already beginning to fail, remained as secretary for foreign affairs; Mr. Huskisson united the war secretaryship to the colonial department; Lord Lyndhurst was chancellor, Lord Bexley

chancellor of the duchy of Lancaster, &c.¹ This Goderich ministry was the third which the country had seen in the course of seven months. Infirm and tottering from its commencement, it yet lingered out a precarious existence of some five months and a half. Its infirmities were the subject of more melancholy jokes than had been perpetrated for a very long time.

Mr. Canning's triple alliance for the liberation of Greece, was attended by consequences he could have scarcely foreseen, which sorely crippled the Ottoman empire, and consequently forwarded the ambitious views of Russia—views to which Mr. Canning had ever and most decidedly been opposed. In the autumn of 1827, the allied squadrons of England, France, and Russia constituted an imposing force in the Archipelago, and endeavoured to give effect to the treaty of London. Sultan Mahmoud, whose armies had suffered a terrible series of checks and defeats ever since the commencement of the war in 1821, had called in the assistance of the Egyptians; and an army of Egyptians, Arabs, Nubians, mercenaries, and adventurers from nearly all the southern side of the Mediterranean, were now ravaging the classical land, burning down the olive-groves of Attica, desolating the fair fields of Messina, and carrying fire and sword wherever they went. This army was commanded by Ibrahim Pacha, a son by adoption of the astute Mehemed Ali, and a man of uncivilized intellect and ferocious heart. Of civilization he had only learned the modern military art—the art of killing with the greatest effect. The undisciplined Greeks could not stand against the trained troops of the pacha; nor could the Greek flotillas, composed almost entirely of light-built trading polacca brigs, risk a contest with the ships of the line of the sultan and Pacha of Egypt. The seas, from the mouth of the Adriatic to the Strait of the Dardanelles, were, and had for three years been, swarming with Greek pirates, some being men who had escaped from starvation or from massacre on shore, but still more being desperadoes and inveterate plunderers, who had betaken themselves to the profession from an innate love of it, or for the sake of the easy booty which might be picked up. These marauders respected no flag whatever; they fell upon the mercantile ships of England, that had been their best and kindest friend during the war, as readily as they fell upon the trading ships of Austria, which, notwithstanding the neutrality agreed to at the congress of Verona, had been perseveringly and maliciously hostile to the cause of Greek independence. Thus, neither by land nor by water was this state of things to be tolerated. It was thought, however,

¹ The Duke of Wellington now reassumed the command-in-chief of the army.

that the double evil might have been checked without any illicit and extreme act on the part of the allies. On his side, the sultan was blameable for an unreasonable obstinacy. In vain Mr. Stratford Canning urged upon the divan the expediency and absolute necessity of conceding independence to the Greeks, and of becoming a party to the pacifying treaty; in vain the French ambassador seconded the British; and in vain the allied admirals invited the Egyptian-Turkish commanders to cease hostilities and enter into the proposed arrangements. While our officers were treating with the officers of the sultan and the pacha, the Morea was in a blaze. The Greeks were but too happy to accept the armistice under the treaty. Ibrahim refused it, and went on burning and slaying as before. The allied admirals now declared to him that they had received positive instructions to stop the effusion of blood; that they would reduce by force either of the two belligerent parties that should refuse to accede to the armistice; that the Greeks had already accepted that armistice; and that, if he resolved to continue hostilities, he would peril his fleet and the most essential interests of his

sovereign. At last Ibrahim Pacha gave way so far as to promise that he would stop the work of devastation on shore, and not quit the Bay of Navarino upon any new enterprise against any part of Greece, without further instructions from Constantinople.

Trusting to this engagement, the allied squadrons sailed away, leaving an English and a French

frigate to watch the harbour of Navarino, and the motions of the Turks and Egyptians. They were scarcely gone ere Ibrahim put to sea, with the view of sailing to Patras. On the 2d of October, Admiral Sir Edward Codrington, being then at Zante, was informed of this breach of faith, and of the continuance of atrocities on shore. With his own ship of the line, one frigate, and two brigs, the only force he had then in hand, Sir Edward sailed to meet the Turco-Egyptian fleet, or such portion of it as might have quitted Navarino. He soon discovered nine corvettes, two brigs, and nineteen transports sailing round the Morea and hugging the coast. He cleared his ships for action, and told the Turks and Egyptians that they must forthwith return to Navarino. They returned at his bidding, but the excesses on shore were continued: women and children were put to the sword, every habitation that would burn was burned; the olive-trees, the vines, the mulberry-trees were torn up by the roots, in order to complete the devastation of the country. The three admirals—Codrington for England, de Rigny for France, and Hayden for Russia—consulted how they were to carry out the intention of the treaty of London in enforcing a *de facto* armistice. They concluded that they had only one of three courses to adopt.—1 To continue throughout the whole of the winter a blockade, difficult, expensive, and perhaps useless, since a storm might disperse the squadrons, and afford to Ibrahim Pacha the facility of conveying his destroying army to different parts of the Morea and the islands which had hitherto escaped the horrors of war. 2. To unite the allied squadrons in Navarino itself, and to secure by this permanent presence the inaction of the Ottoman fleets; but this mode alone, it was reasoned, would lead to no termination of hostilities if the Porte should persist in its system. 3 To proceed to take a position with the squadrons in Navarino Bay, and then renew to Ibrahim propositions which, entering into the spirit of the treaty of London, were evidently to the advantage of the Porte itself. This last or third alternative was the one which the allied admirals agreed to adopt, in the hope, they said, “that it might produce a determination leading to the desired object without the effusion of blood, and without hostilities, but simply by the imposing presence of the squadrons.” It was unfortunate that these admirals had not learned enough of Turkish and Egyptian obstinacy to know that this imposing display of force would produce no effect, unless it were seconded by broadsides; and in determining to enter the harbour they must also have determined to fire on Ibrahim’s ships, in the event of his saying “No” to their demands. Their first movement

towards the harbour of Navarino was a hostile movement. The Russians could not repress, and they scarcely attempted to conceal, their exultation. They professed an ardent zeal for human- ity, an unquenchable desire to rescue their co-religionists the Greeks; but the real visions before their eyes were, the supremacy of their flag on the Black Sea so soon as the naval force

THE BAY OF NAVARINO.—From *Expédition Scientifique en Morée*

crowded in Navarino should be annihilated, their own way clear to the Balkan Mountains and to Adrianople, and finally the standard of the victorious czar floating over the Seven Towers or the palace of the sultan and the mosque of Santa Sophia at Constantinople

On the 20th of October, at two o'clock in the afternoon, the combined squadrons passed the Turkish batteries, to take up their anchorage in the bay. Not a shot was fired at them either by the batteries or by the ships; and without interruption or remonstrance they were allowed to anchor in the harbour, close to the Turkish and Egyptian fleet, which was moored in the form of a crescent. The force of the allies amounted to twenty-six ships of all rates, carrying 1324 guns, the Turks and Egyptians had seventy-nine ships, armed with 2240 guns, and there were some heavy batteries on shore; but as the Mussulmans had only three ships of the line, and their opponents had ten sail of the line, and as all their ships were crowded with men who had not the slenderest pretensions to pass as seamen, the allies can hardly be said to have fought at a disadvantage. There still survives a rational doubt as to the way in which this terrible battle really began. Sir Edward Codrington had indeed given orders that not a gun should be fired unless the Turks and Egyptians began first; and the Mussulmans, on their side, although evidently making preparations, did not fire so much as a musket. In this manner the hostile fleets stood at gaze, and in awful silence within the Bay of Navarino, each unwilling to begin the combat, but ready to accept

the slightest signal to action from the other—a single spark would be enough for the volcanic explosion and the death of thousands. And mere accident, if not design, was certain in such a case to kindle the blaze. In this state, a boat was sent from the *Dartmouth* British frigate, to request the removal of six Turco-Egyptian fire-ships at the entrance of the harbour; but this advance being mistaken by the enemy for a hostile signal, and a purpose of boarding the nearest vessel, was encountered by a volley of small arms, by which Lieutenant Fitzroy of the *Dartmouth* was killed, and several of the boat's crew. Almost simultaneously, two shots were fired into the *Syrene*, by which the cable of that ship's anchor was cut in the act of being let go. These aggressive signals were enough, and the volleys of small arms with which the battle commenced were quickly succeeded by a general cannonade. So little had the British ships expected this beginning, and so punctually had Codrington's pacific orders been obeyed, that the band of music on board his ship, the *Asia*, were employed upon the deck in their wonted practice when their notes were suddenly interrupted by the crash of the artillery.

The imprisoned storm had now broke loose, and this naval action, after so long an interval of peace at sea, equalled the fury of all our former naval encounters. The Mussulmans stood boldly to their guns; and amidst the bewildering blaze and crash of broadsides, the ships paired off in single combats, where the skill of the European sailors was more than a match for the inexperi-

enced hardihood of their antagonists. One Turkish ship after another was silenced or shattered; but when their crews could no longer defend them, they set them on fire, and made out in boats for the shore; and in this manner the whole bay was soon an illumination of blazing hulks, that shook the neighbouring ramparts with their explosions, and compelled the victors to stand aloof. At one moment the leading ship, the *Asia*, amidst a terrible encounter, disappeared in the smoke, and was thought to have perished, and her poop was cleared of every person upon it but the admiral himself, whose clothes were torn with the shot; but when the flag upon her topmast re-appeared over the storm of close battle, the whole allied fleet cheered the signal as the promise of victory. Already, too, the French and British ships, while fighting side by side, and in the cause of a common humanity, showed that generous friendship towards each other which only the brave can feel, and which so often converts them from enemies into firm friends. On one occasion, at three o'clock, the British ship *Tulbot* was engaged with several of the enemy, and on the point of being overpowered, when Captain Hugon, of the French frigate *L'Armide*, dashed forward to the rescue. He dexterously winded his vessel through the inner Turkish line, without interrupting the fire of the English ship, and poured such a heavy broadside into the enemy with which she was chiefly engaged, as compelled it to strike. He then took possession; but instead of arrogating this success to his own countrymen, he hoisted the English flag upon the prize along with his own, to indicate that he had only completed what the *Tulbot* had begun. Why should the banners of two such nations wave in mutual and deadly opposition? For four hours the battle continued with unabated fury. It ended in the loss to the sultan and Pacha of Egypt of three ships of the line, four or five frigates, and between forty and fifty smaller vessels of war, there being included in the last number many beautiful and large corvettes, equal in size to our old frigates. The rest of the fleet surrendered, and a convention followed, by which Ibrahim Pacha evacuated the Morea, and the Greek prisoners whom he had sent over to Egypt as slaves were restored to their desolated country. The loss of the allies had been considerable. The English of course came in for the greatest share of it; we had seventy-nine men killed and 197 wounded. Among the killed was the veteran Captain Bathurst, who commanded the *Genoa*, one of our line-of-battle ships. The Russians had fifty-seven killed and thirty-seven wounded. The French counted forty-three dead and 117 wounded. In all 626 Christians were put *hors de combat* in

this stern conflict with the Moslem. The French showed great ardour and emulation; but their firing was not good. The firing of the Russians was decidedly bad. Many of the poor Turks who escaped alive out of the battle and conflagration, afterwards boasted that if there had been none but French and Russians they would have beaten them. By the battle of Navarino Greece was virtually dis severed from the Ottoman empire, and a seal put to the Greek independence.

The news of the disaster, terrible as it was, did not dismay Sultan Mahmoud, or even ruffle his temper. The ambassadors of England, France, and Russia, who were at Constantinople when the battle was fought, and who, in other times, would have been torn to pieces by the janizaries and the populace, were allowed to depart in safety, and without one insulting word being offered to them. Such of their countrymen as chose to remain were taken under the protection of the Turkish law, and had, in no single instance, cause to complain of the inefficiency of that protection. But none were so thunder-struck by the intelligence of the irregular fight as the cabinet of Lord Goderich. In this, as in other matters, the members of that cabinet knew not what course to pursue. At first they eulogized, and, to some extent, rewarded the officers who had fought at Navarino—thus virtually pronouncing their approbation of the affair. But then, disconcerted by the rumours and complaints that were afloat, they despatched Admiral Sir John Gore to the Archipelago, for the purpose of collecting information, and reporting thereon. This seemed, indeed, weak and inconsistent; but before the question could be debated in parliament, the disjointed administration fell to pieces.

Lord Goderich resigned on the 8th of January, 1828, and to give time for the formation of a ministry, the sitting of parliament was prorogued to the 29th. The king sent for the Duke of Wellington, and commissioned him to form an administration, of which he should himself be the head. The great captain was taken by surprise at this unexpected and unwelcome choice, and on former occasions had declared his utter incompetence for such an office as that of premier; but the emergency of the case, as well as his habits of military obedience, prevailed, and before the middle of January he found himself prime minister of Great Britain. But to form an administration out of such discordant parties was no easy task, and much treaty and concession was necessary before this object was effected. The result was, that while all the Whig members of the cabinet went out with Lord Goderich, the principal friends of Mr. Canning remained in, and the Tories returned who had resigned office

on the appointment of Canning to the premiership. Thus Lord Lyndhurst remained as chancellor, and Mr. Goulburn became chancellor of the exchequer, by the transference of Mr. Herries, who was appointed master of the mint; Earl Bathurst became president of the council, in the room of the Duke of Portland; Mr. Peel became secretary for the home department, while Lord Dudley and Ward remained secretary for foreign affairs; Mr. Huskisson retained his office of secretary for the colonies; Lord Melville took the presidency of the board of control, in the place of Mr. C. W. Wynne; and the Earl of Aberdeen

became chancellor of the duchy of Lancaster, in the place of Lord Bexley; Lord Palmerston continued in office as secretary at war, and the Duke of Clarence in his extraordinary appointment of lord high-admiral; the Marquis of Anglesey, who had been master-general of ordnance, without a seat in the cabinet, was now appointed Lord-lieutenant of Ireland. With all these resignations and changes, the ministry was now almost the same that it had been during the premiership of Lord Liverpool. Much discontent was of course expressed by those who had gone out, against those of

their party who consented to retain office, and the largest share of this indignation fell upon Mr. Huskisson, who was reproached with having deserted his old alliance with the principles of Mr. Canning.

On the 29th of January the session of parliament was opened by commission, and the king's speech was read by Lord-chancellor Lyndhurst. The nation was eager to learn the views of the new government upon the great and urgent questions of the period; but there was not a word about Irish troubles or the Catholic Association, and none about the corn law; instead of this, the burden of the speech was the unfortunate battle of Navarino, which was now characterized as an "untoward event." Never, perhaps, was the gentle, innocent word "untoward" used in politics with a more bitter effect: it was used by an administration who were hostile to the cause of Greece; and it condemned as peace-breakers and

blunderers the leaders of the three allied powers who had won the victory, and conquered in the cause of freedom and humanity. The phrase was eagerly arrested by the opposition, as well as that which spoke of Turkey as "our ancient ally;" and the battle of Navarino was characterized by Mr. Brougham as a "glorious, brilliant, decisive, and immortal achievement." In the same speech, while expressing the objections of his party to the appointment of one possessed of such military power and influence as the Duke of Wellington to the premiership, Mr. Brougham gave vent to sentiments that have found an echo in the hearts

of every party, and to an expression which has now become a household word throughout the homes of Great Britain. Scorning the supposition that a military dictatorship was to be apprehended from the duke's appointment, he exclaimed, "I have no fear of slavery being introduced into this country by the power of the sword. It would take a stronger, it would demand a more powerful man than even the Duke of Wellington, to effect such an object. The noble duke might take the army, he might take the navy, he might take the mitre, he might take the seal—I would

make the noble duke a present of them all. Let him come on with his whole force, sword in hand against the constitution, and the energies of the people of this country will not only beat him, but laugh at his efforts. There have been periods when the country heard with dismay that 'the soldier was abroad.' That is not the case now. Let the soldier be ever so much abroad, in the present age he can do nothing. There is another person abroad—a less important person, and in the eyes of some, an insignificant person—whose labours have tended to produce this state of things. *The schoolmaster is abroad!*—and I trust more to the schoolmaster, armed with his primer, for upholding the liberties of the country, than I fear the soldier with his bayonet." How groundless this popular apprehension was of the Duke of Wellington's military power and alleged ambition, was fully shown, not only by the course of his life to the close, but by the recent

HENRY BROUGHAM —From a portrait by Lonsdale

fact, that he had resigned his office of commander-in-chief as soon as he had been appointed to the premiership. Except these memorable sentiments of Lord Brougham, the debate on the "untoward event," which was waged in both houses, produced nothing of importance. There were motions for explanations of the battle of Navarino, and motions for the thanks of parliament to the British officers engaged in it; but the usual addresses to the throne were carried without a division.

In February commenced that rupture between the Duke of Wellington and Mr. Huskisson, which was to lead in May to a division in the cabinet. The popularity of Mr. Huskisson was now upon the wane, when it was seen with what different ministers he could coalesce and act, and how easily he could join the present cabinet, although he had been the bosom friend of Mr. Canning. On his late re-election at Liverpool, he had publicly declared to his constituents, that before accepting office under the Duke of Wellington, he had "obtained guarantees from the duke" that Mr. Canning's policy would be followed out. It was a rash declaration, even though uttered in the heat of an electioneering speech, as well as insulting language in a holder of office when used about his superior in the government. An explanation was now demanded in parliament, and the duke repelled the statement with indignation. Mr. Huskisson, thus compelled to reply, gave a lame and by no means creditable explanation, which resolved itself into his own belief, and the understanding of his colleagues, that the duke meant to pursue this line of policy; and thus the matter ended for the present.

On the 15th of February, the nomination of a finance committee, which had occasioned the misunderstanding in Lord Goderich's cabinet, was moved for by Mr. Peel, and voted almost unanimously. In making the motion, Mr. Peel stated that since 1815 a reduction of the funded and unfunded debt had taken place to the amount of £48,608,000, while the actual sum of unredeemed debt was £777,476,000. This being the total incumbrance, he stated that the income of last year was £49,581,000, and the expenditure £49,487,000, leaving an excess of income equal to £94,000. Of the expenditure of the present year he could not give a specific statement, as it was not yet made up; but it would be less than that of the previous year to the amount of about £1,188,260. He then begged to impress upon the committee about to be formed, the advantage of simplifying the public accounts, in imitation of France and America, which would be a lasting benefit to the state. The report of the finance committee was given in too late to allow many of

its recommendations being immediately adopted; but one discovery which it made caused a prompt suspension in the granting of government life annuities, until better calculations on the duration of life could be established. When these annuities were brought in by Mr. Perceval in 1808, Dr. Price's tables had been adopted as the standard; but either these tables were miscalculated, or the usual term of longevity had been on the increase since they were framed, and the government annuities had been selling at too low a premium. It was also found that of all professions Scotch gardeners were the longest lived, and of these many were government annuitants. Even in 1819 it was ascertained that the rate of mortality, instead of being one in forty of the outstanding annuities, was only one in fifty-six, occasioning a loss to the public of £95,000 a year, or nearly £8000 a month. Several other suggestions of this committee were of considerable national benefit.

Mr. Canning's widow had been lately raised to the peerage; and when the estimates of the year were presented, a proposal was made to grant a pension of £3000 per annum to his family, in the person of one of his sons. Mr. Canning had possessed no fortune of his own, and the political rank he attained, as well as his own profuseness and indifference to money, had prevented him from making any provision for his family. Had he gone to India he might, in a short time, like other governor-generals, have amassed an independent fortune; but on the death of Lord Castlereagh this prospect he had generously sacrificed to the call of duty and the demand of his country, so that when his political life had ended, he was as poor as when he commenced it. The sum, also, which was proposed for his family was from a special fund, to which he would have been entitled had he been two years in the premiership. Considering these obligations, and the worth of the great statesman to whom they were due, no demur could have been reasonably expected. The claims of such a minister to the gratitude of his country were well set forth on this occasion by the eloquence of Sir James Mackintosh. "That he was a man of the purest honour," said Sir James, "I know. That he was a man of the most rare and splendid talents, I know. That he was a man renowned throughout Europe for his brilliant genius and philosophic thinking, not a member of this house can be ignorant; or that with his best zeal, as well as with success, he applied that genius and those views of policy to advance the service and the glory of his country. If there were those from whom he had differed—and can it be doubted that every politician must have some opposed to him?—if there were some from whom he differed even widely—poli-

tically or personally—this is not an hour when these differences ought to be recollected." And yet, such was the opposition to the proposal, that it was twice debated, and at great length, before it was finally settled. But the ministers were unanimous in seconding the motion, and it passed by a majority of 216 to 54. The pension extended to the lives of both the sons, as the elder, being in the navy, was exposed to the numerous risks of his profession; and the precaution was well thought of, for only five months afterwards he was drowned while bathing at Madeira.

The proceeding of greatest interest during this session was the repeal of the test and corporation acts. These enactments, which were originally levelled against dissenters from the Established church, had now become obsolete; but while they existed, they formed an invidious distinction, which the large and powerful bodies whom they affected were unwilling any longer to endure. Accordingly it was moved by Lord John Russell, on the 26th of February, that a committee of the whole house should be appointed to examine these acts, with a view to their removal. In giving the history of the acts, he showed that, however necessary they might be at first, they were now unsuitable to the present time and circumstances. The dissenters might have been dangerous to the house of Stuart, but assuredly they were loyal subjects to the house of Hanover. They did not deserve to be excluded from civil office by the corporation act; and as to the test act, it had been originally devised for the protection of the church against James II., who was a converted Papist, and known to be hostile to Protestantism. Several speakers followed in the same track, while the opposition to the measure was conducted by Mr. Peel and Mr. Huskisson. Mr. Peel was of opinion that the dissenters were sufficiently relieved by the often-repeated indemnity bills; while Mr. Huskisson feared that by wholly repealing these restrictions, the dissenters would become less vigilant about the rights of conscience, and the Roman Catholics be furnished with an additional ground of complaint, because they were not included in the repeal. Lord John Russell's motion was carried by a majority of 237 to 193; and it was thought that the cabinet, who had resisted it, would be compelled either to abandon office in consequence of their defeat, or sacrifice their opinions to the tolerant spirit which had now obtained the ascendancy. They decided upon the latter alternative, and the bill was brought into the House of Lords under the protection of the premier. The Duke of Wellington said that the only opposition of government to it in the lower house had been because the system had appeared to work well hitherto; but now that the commons had declared for a change, and

because it was found that the old principle of exclusion was indefensible, it would be the duty of the lords to pass the bill, if they found that it was not incompatible with the safety of the Established Church. No such danger seemed to be apprehended; even the Archbishop of York, and the Bishops of Lincoln, Durham, and Chester, voted in favour of the bill; and the chief opposition was from the ex-chancellor, Lord Eldon, who testily declared that, much as he had heard of "the march of mind," he did not expect to see it marching into the house, with the Duke of Wellington and the prelates at its head! A few amendments were suggested by the lords, that were thought of trivial moment at the time; but one of these was afterwards of no small importance, and was to create abundance of trouble amidst the changes of this changeful period. It was thought necessary in the repeal of these acts, that a proper recognition of Christianity should be retained; and it was decreed that the entrant into office should subscribe the oaths "on the faith of a true Christian." This was latitude enough to all the classes of dissenterism; but it effectually shut out the Jews, who were already looking forward to political office and parliamentary representation, but to whom it presented an insurmountable barrier. The bill was passed through all its stages, and ratified in the beginning of May by the royal assent.

The opposition to the repeal of the test and corporation acts had chiefly arisen from a dread of its ulterior consequences, irrespective altogether of dissenterism. This repeal was a protest against exclusion from office on account of religious opinion, and as such, it threw open the door to Catholic emancipation. The opportunity was eagerly embraced; and on the 8th of May, after the repeal had passed, Sir Francis Burdett moved for the appointment of a committee to consider "the laws affecting Roman Catholics, with a view to such an adjustment as might conduce to the peace and strength of the empire, and to the stability of the Established church." After a debate of three evenings, this expediency was recognized; but instead of proceeding to form resolutions in detail, a conference was sought with the lords, to ascertain whether their sentiments on the subject had undergone any change. The proposal was accepted, and on the 9th of June the resolution of the commons formed the subject of a debate, which lasted two days. The Duke of Wellington, on the passing of the dissenters' bills, had anticipated the use that might be made of them in the present question, and had said, "There is no person in this house whose feelings and sentiments, after long consideration, are more decided than mine are with regard to the subject of the Roman Catholic claims; and until I see a great change

in the question, I certainly shall oppose it." He saw as yet no great change in the question, and he opposed it accordingly. With him also were the law lords and the bench of bishops, and the motion was lost by a majority of forty-four.

Before the subject was thus closed for the session, a misunderstanding had occurred between the premier and a member of his administration, which occasioned an important disruption in the cabinet. Mr. Huskisson had pledged himself to vote for the transfer to Manchester of the elective franchise which East Retford was held to have forfeited by its corruption. Ministers, however, had entertained no such project; and the House of Commons had resolved that, instead of the borough of East Retford being disfranchised, the right of voting should be thrown open to its adjoining hundred. After having voted against his colleagues, Mr. Huskisson addressed a letter, marked "private and confidential," and inclosed in a cabinet box, to the Duke of Wellington. In this letter he said, that after his vote on the East Retford question, he thought it his duty, "without loss of time, to afford him (the duke) an opportunity of placing his office in other hands." The duke immediately laid Mr. Huskisson's letter, as a resignation, before the king. Mr. Huskisson now declared that he had never intended to resign—that his letter was "private." The duke maintained that the letter was, to all intents and purposes, a resignation, and an official letter—which it indisputably was. Lord Dudley and Ward called on the duke, and told him it was a mistake. The duke replied, "It is no mistake—it can be no mistake—it shall be no mistake." His grace also said that the resignation was Mr. Huskisson's own act, and not his. After making repeated and humble entreaties, which he mis-called explanations, to the Duke of Wellington, Mr. Huskisson requested an interview with the king, in the hope of finding his royal master more placable. The duke, however, did not think proper to advise his majesty to grant an audience to Mr. Huskisson until the correspondence between that gentleman and his grace should be at an end. But the duke said to Lord Dudley, "Huskisson is a man of sense, and knows well what should be done to settle the whole matter, and bring it to an end." His grace hereby meant that Mr. Huskisson should withdraw his letter, which, while it remained, was a recorded resignation. But Mr. Huskisson was too proud to act upon the duke's hint; his pride, coming after the exhibition of so much humility, being indeed very much out of place. His letter had been written on the 2d of May, and it was unrecalled on the 25th, on which day the Duke of Wellington wrote to him—"My dear Huskisson,—It is

with great concern that I inform you that I have at last attended his majesty, and have received his instructions respecting an arrangement to fill your office." Mr. Huskisson, in giving his own explanation of these occurrences in the House of Commons, insinuated that he had been made a scapegoat or a peace-offering to gain the support of persons who would join the ministry only on condition that he, and with him all chances of improvement, should be removed; and he made a violent attack on the noblemen and gentlemen who celebrated the birth-day of Mr. Pitt (the 28th of May), as if their approaching festivities had a connection with his downfall.

Along with Mr. Huskisson went out Lord Dudley and Ward, Lord Palmerston, and Mr. C. Grant. The Earl of Aberdeen now became foreign secretary; Mr. Huskisson was succeeded in the colonial office by Sir George Murray; Sir Henry Hardinge became secretary at-war, in lieu of Lord Palmerston; and Mr. V. Fitzgerald was put at the head of the board of trade, in place of Mr. Grant. Mr. Huskisson forthwith retired for a time to the Continent. The folly of his recent conduct ought not to weaken the recollection of the services he had rendered to commerce and his country; and the lamentable, tragical death which so very soon overtook him, ought to obliterate every angry feeling towards him.

At an early period of the session, Mr. Brougham, in a speech which occupied nearly six hours in the delivery, advocated again a sweeping law reform, and concluded with the motion for an address to the king, requesting the issue of a commission of inquiry into the state of the law and constitution of the courts. Nothing like the extensive design of Mr. Brougham was carried into effect; but in the course of the session two commissions were issued for inquiry into the state of the common law, and the law of real property.

Ministers brought in a new corn bill, with the sliding scale, government being still convinced that a scale of varying duties was the best expedient for doing equal justice to all parties interested. The medium or pivot price, which Mr. Canning would have fixed at 60s., was now raised to between 64s. and 65s.

The session was prorogued by commission on the 28th of July, the speech delivered regretting that hostilities had commenced between Russia and Turkey, and that his majesty's just expectations had been disappointed in Portugal.

Another change in the ministry happened during the autumn. The Duke of Clarence resigned the unusual, and, in his hands, expensive office of lord high-admiral; the admiralty was again put into commission, and Lord Melville was reinstated at the head of the board.

CHAPTER XVI.—CIVIL AND MILITARY HISTORY.—A.D. 1828—1830.

GEORGE IV.

Intimidating proceedings of the Irish Roman Catholics—Their political movements—Their menacing proclamations—Counter proceedings of the Irish Protestants—Public expressions in England about Catholic emancipation—Meeting of Pennenden Heath—State of the emancipation question in the cabinet—Opening of parliament—Consideration of the Roman Catholic claims advocated in the king's speech—The ministers blamed for unfair concealment—Bill for the suppression of the Catholic Association—The subject discussed in parliament—Speeches of Mr. Huskisson and Mr. Peel—The bill for the suppression of the Catholic Association passed—Introduction of the Catholic claims into parliament—Mr. Peel's statements in their behalf—His arguments in favour of Catholic emancipation—His plan of emancipation—Opponents of the motion—Arguments brought forward against the emancipation bill—Proposal to dissolve parliament and ascertain the will of the country—The proposal defeated, and the bill for Catholic emancipation introduced—Numerous petitions against it—The bill passes through the commons—Declaration of the Duke of Wellington in its favour in the House of Lords—The bill passed in the lords and ratified by royal assent—O'Connell's admission into parliament—Failure of Catholic emancipation to compose the troubles of Ireland—O'Connell's agitation for the repeal of the Irish union—Unsettled state of Ireland—Foreign politics in connection with Britain—Russian campaign of 1828 against the Turks—Its indecisive result—The Russians invade Turkey in the following year—Their successes—They cross the Balkan and take possession of Adrianople—Treaty of Adrianople—Turkey compelled to accept it—Affairs of Greece—Narrow limits assigned to the new Greek kingdom—Nature of the Russian interference in behalf of Greece—Portugal—Dom Pedro's charter—Its violation by Dom Miguel—Miguel's tyrannical proceedings—He becomes absolute King of Portugal—Donna Maria takes shelter in England—Non-interference of Britain in the internal government of Portugal—Parliamentary proceedings—Last illness and death of George IV.

URING the summer and autumn of this year the Roman Catholics of Ireland took bolder and longer strides than they had hitherto done. They adopted intimidation as their best working principle.

They would extort from the fears of government that which they said they could not obtain from its justice. The priests were uncommonly active. "They passed from the theological to the political arena, harangued at aggregate and other Catholic meetings, and were soon both the priests and the tribunes of the people."¹ Their influence over elections was immense, and was exercised without any regard to truth or fairness, without any scruple whatever. The reluctant, ignorant voter they could terrify with the hint or threat of excommunication, purgatory, eternal damnation. Mr. Vesey Fitzgerald, who had vacated his seat for Clare by taking a place in the Duke of Wellington's cabinet, reappeared on the hustings of his native county. He had long been an advocate of the Catholic claims; his very enemies could not deny the excellency and amiability of his personal character; he had the local influence of family and fortune, and the support of the gentry of Clare; but because he was a member of the Wellington ministry, the priests and the Catholic Association, and their blind devotees the peasants, not only drove him from the field before the close of the second day, but substituted in

his place the disqualified Roman Catholic agitator, Mr. Daniel O'Connell. It was quite certain that, as the law stood, Mr. O'Connell could not be admitted to sit and vote in the House of Commons; but still his return was considered as a master-stroke of party policy. In the words of a writer who cannot see that the Irish Catholics were ever wrong or English statesmen ever right in these affairs—"It was such an appalling manifestation of Catholic determination and force, as no anti-Catholic minister would venture to encounter on a general election."²

A plan was formed, and was soon executed, with the aid and agency of the priests, to sever the ties between the Catholic forty-shilling freeholders and their landlords. They also framed and promulgated certain tests. Every candidate for parliament must pledge himself to an uncompromising opposition to the Wellington ministry so long as emancipation was resisted. Mr. Sheil, the best educated of the agitators, delivered many startling speeches, which were printed in the newspapers, as well in England and Scotland as in Ireland. He, too, relied upon the effects of intimidation. His motto, like Danton's, was "*Faire Peur*." In one of these speeches he said—"Does not a tremendous organization extend over the whole of Ireland? Have not all the natural bonds by which men are tied together been broken and burst asunder? Are not all the relations of society which exist elsewhere

¹ Wallace, *Memoirs of the Life and Reign of George IV.*

² Wallace.

gone? Has not property lost its influence? Has not rank been stripped of the respect which should belong to it? *And has not an internal government grown up, which, gradually superseding the legitimate authorities, has armed itself with a complete domination?* Is it nothing that the whole body of the Catholic clergy are alienated from the state; and that the Catholic gentry and peasantry and priesthood are all combined in one vast confederacy? So much for Catholic indignation while we are at peace; and when England shall be involved in a war—I pause. It is not necessary that I should discuss that branch of the subject, or point to the cloud which, charged with thunder, is hanging over our heads."

With defiant proclamations like these, and with the Roman Catholics ranked and marshalled in most hostile array before them, could the Irish Protestants remain silent, neutral spectators? It has been the greatest curse of that country that every set of opinions, in politics or in religion, has been carried up or down to the fanatical point. Protestantism was there as hot and uncompromising as Catholicism. The old Orangemen began to look to their swords and pistols. Protestant associations and Brunswick clubs were formed, to organize a resistance to the associated Romanists. If the British government and its troops had not been between these two furious parties, there would have been at once a war *à l'outrance*, and Ireland would have been deluged with blood. That the adherents of the Roman church would have been victorious in the end, is not quite clear to any conception except that of an Irish Roman Catholic. True, in numbers the Papists more than trebled the Protestants; but look at the respective qualities of the men; look at them physically and morally; look at the education, property, wealth, and general intelligence of the Scotch and English descended Protestants, and then let the eye rest for a moment upon the ignorance, the proneness to blundering, and the squalid poverty of the great body of the Papists! Heaven forbid that these parties should be left to themselves to try that stern contest; but one good way of preventing it may be to impress on the minds of the Roman Catholic peasantry, that mere numbers do not give victory, and that the final result of such a contest would be for them very doubtful.

Even in England the tumultuary proceedings of the Irish Catholics created a great ferment. The opponents of emancipation, fearing that government was about to yield to the organized power of the Papists, thought it right to call for a public expression of the opinion of Englishmen. The example was set by the county of Kent. In pursuance of a requisition, signed by

many persons of rank and influence in the county, a meeting of the freeholders and yeomanry was held on Pennenden Heath, on the 24th of October. It was the most numerous public meeting that had assembled in England for many years: 20,000 persons met on that broad heath, with leaders and speakers very different from the noisy demagogues who had presided over the meetings for parliamentary reform, with universal suffrage and vote by ballot. These leaders and speakers might be somewhat intolerant in matters of faith, or somewhat too much afraid of the effects which would follow the granting of any more concessions to the intolerant Church of Rome; but they were gentlemen of character and fortune—men respected throughout the country, and certainly men who had a right to express freely their opinion on this vital subject. Orator Hunt, whose popularity had greatly declined since the day of Petersfield, endeavoured to thrust himself in, but he was not allowed a hearing. Nor was Mr. Cobbett more successful in the same experiment. The Earl of Winchelsea, and Sir Edward Knatchbull, one of the members for the county, supported the petition proposed for the adoption of the meeting. It was moderate in expression, and after announcing the strong and inviolable attachment of the petitioners to Protestant principles, it prayed the parliament to maintain the Protestant constitution of the United Kingdom entire and inviolable. No counter-motion was made which directly favoured the demands of the Roman Catholics; but it was moved that it ought to be left entirely to his majesty's government to propose such measures as they might think proper for the pacification of Ireland, and the general benefit of the kingdom. This motion was supported by Earl Camden, Earl Darnley, the Earl of Radnor, and Lord Teynham; but the petition was carried by a great majority.

The English friends of emancipation were very severe in their censure of the Pennenden Heath meeting, talking about the wickedness of attempting to control government by such meetings and votes. It has been justly said, that had the meeting terminated the other way, these very men would have applauded it as a magnificent and temperate display of constitutional action. "Was the question, whether Catholics should be admitted to political power, one on which ministers alone were fitted and qualified to decide? Assuredly not. It involved the weightiest interests of every man in the kingdom: its Protestant opponents held that the constitution itself was at stake. If ever there was a doubtful topic on which every part of the people was bound and entitled to make its voice be heard, it was that which had been submitted to the freeholders

of Keut." The example of Pennenden Heath was followed in some other parts of England. Brunswick or constitutional clubs rose up in Leeds, in Leicester, and under the patronage of the Marquis of Chandos, in the county of Buckingham. But they displayed no activity; they neither salaried nor in any other way cherished "agitators;" they were moderate and prosy, and they left scarcely a trace behind them.

The Catholic question still continued an open one in the cabinet. Mr. Dawson, the member for Derry, secretary to the treasury, and brother-in-law to Mr. Peel, had hitherto been a zealous anti-Catholic; but now, at a public dinner to his constituents, he declared that he had come to the conclusion that emancipation was the only means of restoring the supremacy of government and law in Ireland. In a correspondence with Dr. Curtis, the Roman Catholic primate of that country, the Duke of Wellington said that he was most anxious to witness the settlement of the Catholic question, and if it could be buried in oblivion, for a *short time*, he would not despair of seeing a satisfactory result. On the other hand, the Marquis of Anglesey, the present lord-lieutenant, was of opinion that it was neither possible nor desirable to bury the question, though for ever so short a time. The noble marquis - the gallant soldier, and perfect English gentleman - gave the Irish Catholics and their agitators advice much too gentle and good to be taken by them. He told them, that though they might persevere in their cause, they ought to abstain from using personal and offensive language towards those who opposed their claims. "Personality," said the marquis, "offers no advantage; it effects no good; on the contrary, it offends and confirms predisposed aversion. Let the Catholic trust to the justice of his cause, and to the growing liberality of mankind." This was said during the month of December. In the beginning of January the Marquis of Anglesey was recalled, to be succeeded by the Duke of Northumberland.

Parliament was opened by commission on the 5th of February, 1829, with a speech which contained a decisive recommendation from the throne:—"The state of Ireland has been the object of his majesty's continued solicitude. His majesty laments, that in that part of the United Kingdom an association should still exist which is dangerous to the public peace, and inconsistent with the spirit of the constitution; which keeps alive discord and ill-will amongst his majesty's subjects; and which must, if permitted to continue, effectually obstruct every effort permanently to improve the condition of Ireland. His majesty confidently relies on the wisdom and on

the support of his parliament, and his majesty feels assured that you will commit to him such powers as may enable his majesty to maintain his just authority. His majesty recommends, that when this essential object shall have been accomplished, you should take into your deliberate consideration the whole condition of Ireland, and that you should review the laws which impose civil disabilities on his majesty's Roman Catholic subjects. You will consider whether the removal of those disabilities can be effected consistently with the full and permanent security of our establishments in church and state, with the maintenance of the reformed religion established by law, and of the rights and privileges of the bishops and of the clergy of this realm, and of the churches committed to their charge."

Generally, those who were opposed to emancipation charged the Duke of Wellington with an unfair concealment of his design up to the last hour, and taxed Mr. Peel with faithlessness and apostasy. They said, that had the Duke of Wellington disclosed his intentions sooner, the petitions of the people and the counsel of individuals would have fortified the king's well-known opposition to the measure. The duke vindicated himself by the fact of his not having obtained the king's sanction until near the last moment. Indeed, down to the afternoon of the 10th of February, when the ministerial plan was to be introduced into the commons, the Duke of Wellington did not feel perfectly secure. It was said, that down to the very last hour, it was really a matter of doubt with Mr. Peel whether he should proceed; and that this doubt was removed by the duke writing him a hurried pencil note, containing the words - "You may go on." Mr. Peel went on, beginning by introducing a bill to suppress the Catholic Association, as a measure which ought to precede any consideration of the claims of the Catholics.

In the course of the discussions, it was strongly questioned of the ministers why the suppression of this association had not been sooner accomplished? You justly describe this association, it was said to them, as a body whose existence is incompatible with the due operation of the powers of the regular government. You represent Ireland as being in a state of agitation, which can be soothed only by granting all that the Catholics demand; and no man can doubt that the Catholic Association, which exists only for purposes of agitation, is the great fomentor of that dangerous and alarming spirit. You say that it must be put down; you ask extraordinary powers to put it down; by doing so you grant that it may be put down. If so, why has it been allowed to go on prospering and unimpeded for years, till, having gained "a giant's stature and a tyrant's

strength," it brings you crouching to its feet in trembling obedience to its mandates? In short, you acknowledge that by a due use of power you might have prevented the state of things, in which, now that it has been allowed to grow up, you seek an apology for deserting the policy to which you have been so long pledged. Above all, you asked and obtained, in 1825, an act for suppressing this very association. Yet it is since that time that it has become so formidable. If the powers given by that act were sufficient, why was it not enforced? If they were insufficient, why were more effective powers not demanded? for who would have grudged any powers necessary to put down an usurpation of the regular government of the country?

The solicitor-general for Ireland answered, that he had attended to the debates of the association with the closest anxiety; but, after all his anxiety and all his vigilance, it was the unanimous opinion of his colleagues on the other side of the Channel, that it would have been a useless task to have undertaken a prosecution against any individual for his conduct in the Catholic Association, and that an abortive attempt at prosecution would have been worse than useless, inasmuch as it would have irritated, without putting down, the members of that association. He could not, upon the present occasion, enter into a detail of all the circumstances which, in his opinion, rendered it impolitic to attack the Catholic Association—he would confine himself to saying, that it was a matter of extreme difficulty to draw up a bill of indictment against 7,000,000 of people. He did believe, that baffled and hampered as the legal advisers of the crown were, the wisest plan which they could pursue was to confess the real truth, that it was a matter of extreme difficulty to frame such an indictment. He had voted for the bill of 1825; but since that time there had been a new parliament, and it was by no means certain that the present parliament would repose the same confidence in, or intrust similar powers to a ministry, unless some hopes were held out that the coercive measure was to be immediately followed by one of concession. The solicitor-general, however, forgot that this very House of Commons had refused, in 1827, to entertain Sir Francis Burdett's motion for a committee.

Mr. Huskisson said that it would have been impossible, in the way of definition and enactment, to have gone further than the act of 1825 went, without interfering improperly with the rights and privileges of the subject generally; and from the period in which that act was passed, down to the period in which he ceased to have a share in his majesty's councils, the government had been most anxious to give full efficacy, as far as was consistent with the liberty of the sub-

ject, to such provisions of it as were intended to guard against the mischief of the Catholic Association. When he saw the mode in which that act was evaded in Ireland, his mind was made up to this conclusion—that there was no mode of terminating the danger arising from that association without vesting in the government a considerable portion of arbitrary power—indeed such a portion as it was now proposed to vest for a time in the government of Ireland. Now, he would ask whether the house was prepared to place such power in the Irish government permanently? He was not at liberty to state to the house what passed in his majesty's councils during the period in which he had the honour of enjoying a seat at the council board—neither was it necessary that he should do so: he was at liberty, however, to state this—that, having come to the conclusion which he had just declared to the house, he could not help coming to another conclusion also; and that was, that, consistently with his public duty, he could not grant to the government that arbitrary power which was necessary to put down the Catholic Association, without putting an end, at the same time, to the cruel system of exclusion which called that association into existence. Either in or out of office, he never would have agreed to such a measure of coercion, if assured it was to be a permanent measure, unless it had been accompanied at the same time by an assurance that the evil system, which the association sought to remedy, was going to be abandoned.

Mr. Peel said, that to state the reasons why he did not enforce the act of 1825, would make it necessary to go into the whole history of affairs in Ireland during the last four years, which would lead to the conclusion that, amid the divisions and contentions which prevailed, the real abatement of faction was impossible. Moreover, it should be borne in mind how the act of 1825 was followed up by the same parliament which introduced it. It had been followed up by a bill for Catholic relief, which, though lost in the upper house, must yet have shown the people that conciliation was intended to accompany coercion. The act, then, of 1825, was not the only measure upon which the House of Commons depended for the tranquillity of Ireland, when they had recorded its accompaniment by the admission that Catholic disabilities ought to be removed. These were the causes which had prevented the effectual operation of the law of 1825.

The act passed: but the association rendered it unnecessary to make use of the powers which it bestowed. Their parliamentary friends had pointed out to them that, as matters stood, with the government pledged to emancipation, their continuing together as a body could only do mis-

chief; and the association, even before the bill had completed its hasty progress, declared itself dissolved. It was plain, however, even from the explanations given by ministers themselves, that the association had been allowed to bully the government into submission, and that the present act for its suppression was mere legislative mockery—the ridiculous assumption of a threatening gesture to cover and conceal their impotence. The association had demanded emancipation, unqualified emancipation, and nothing else. It had said to the government, Give us emancipation, and we exist no more; refuse us what we ask, and we defy your power either to restrain or to resist us. The question between it and the government had never been, whether it would be quiet, if the government gave all that it demanded—but whether or no the government could compel it to be quiet, even though it should get nothing. In such circumstances, when one hand held a bill for suppressing the association, while the other contained a bill granting all that the association demanded, to speak of having suppressed the association was an abuse of words. It was as if a man should boast of his victory over a highwayman, to whom he exclaims, when the pistol is at his breast, “Down with your pistol, sir, for there are my purse and my watch.”¹

The new bill against the association received the royal assent on the 5th of March; and on the same day Mr. Peel moved in the House of Commons, that the house should go into a committee on the laws which imposed disabilities on the Roman Catholics. But he no longer rose as member for the university of Oxford. On the 4th of February, the day before the meeting of parliament, he addressed a letter to the vice-chancellor of the university, announcing the new views of policy by which he was about to be guided, acknowledging that his resistance to the Catholic claims had been one main ground on which the university had made him its representative, and tendering his resignation. His resignation was accepted; Mr. Peel vacated his seat, and was immediately proposed as a candidate at the new election. His opponent was Sir Robert Harry Inglis, who had not yet seen the expediency of changing his opinions. Never were greater exertions made in the course of any election. The united influence of the government and of the Whigs was pushed to its utmost limit in behalf of the home secretary. On the other hand, Sir Robert H. Inglis was supported by some of the dignitaries of the church, and, with great zeal, by the parochial clergy. After a contest of three days, Oxford rejected Mr. Peel by a majority of 146. He was immediately returned for the borough of Westbury.

On the 5th of March, for which day a call of the house had been ordered, Mr. Peel, having made his motion, began a long speech with stating that he rose, as a minister of the king, to vindicate the advice which an united cabinet had given to his majesty, to recommend to the consideration of parliament the condition of the Catholics, and to submit to the house those measures by which government proposed to carry that recommendation into effect. He was aware that the subject was surrounded by many difficulties, which were increased by the relation in which he himself stood to the question; but having come to the sincere conviction that the time was arrived at which an amicable adjustment of the disputed claims would be accompanied with less danger than any other course which he could suggest, on that conviction he was prepared to act, unchanged by any expression of opinion of an opposite nature, however general or deep—unchanged by the forfeiture of political confidence, or by the heavy loss of private friendship. He had long felt that, with a House of Commons favourable to emancipation, his position as a minister opposed to it was untenable. Under this feeling, when a bill passed the house in 1825, he had intimated to Lord Liverpool his wish to resign, that he might thereby remove one obstacle to the settlement of the question. His resignation, he was informed, would occasion that of Lord Liverpool, and dissolve the ministry: he had agreed, therefore, to wait the decision of a new House of Commons. The new House of Commons, elected in 1826, decided in 1827 against the Catholics; but in 1828 it adopted a different course, and came to a resolution determining the principle of the question. After that decision he was prepared to follow the course which he had proposed to himself after the decision of 1825, with this addition—that he notified to the Duke of Wellington not only his readiness to retire from office, but that, seeing the current of public opinion, he was ready to sacrifice consistency and friendship; and, by whatever parties the settlement of the question was undertaken, he, for one, was prepared, in whatever post he might be, to support the measure, provided he thought it was undertaken on principles safe for the Protestant Establishment. He was aware that he was called on to make out a case for this change of policy; and he was now to submit to the house an argument of fact, which proved to his mind, with the force of demonstration, that it was imperative on ministers to recommend the measure which he was about to introduce, however inconsistent it might seem to be with their former tenets.

Mr. Peel, in the next place, proceeded to explain the nature of the measure which he and his

¹ *Annual Register for 1829.*

colleagues had resolved to propose, as that which ought finally to adjust and settle the question. No persons, he said, except the members of government, had been parties to the framing of the bill. It had been thought advisable that it should not be proposed as a compromise or compact with any parties whatever; and that for its concessions as well as for its restrictions, government alone should be responsible. The principle and basis of the measure was to be the abolition of civil distinctions and the equality of political rights. There would be exceptions standing on special grounds, but such was to be the general rule. Another pervading principle of the bill would be the maintenance, in fact and in word, of the Protestant religion as by law established, its doctrines, its discipline, and its government. He would first of all repeal those laws which placed Catholics, unless they took certain oaths, on a different footing from Protestants, even in regard to real property, a distinction which Protestants and Catholics were equally interested in abolishing; the next provision would be the admission of Catholics to parliament, on the same terms with Protestants. Unless this was granted, all other concessions of political power would avail nothing. It had been proposed to restrict the number of Catholic members, and to define certain subjects on which they should not be allowed to vote: both of these limitations ministers had rejected. Any limitation of their numbers it would be difficult to carry into effect; and even if it were practicable, it would have the mischievous result of making them combine, and holding them up as a sacred band charged with the interests of the Roman Catholics. There could be no efficient test for deciding on what questions a Roman Catholic member should be entitled to vote, and on what he should not. It would be difficult to determine what questions relate exclusively to the interests of the Established church; and it might be that questions nominally relating to the interests of the Established church might not be those in which its interests were really involved. If the Roman Catholic were entitled to speak, but precluded from voting on such questions, injury might be inflicted as effectually by an able man, with party ties and connections, making an inflammatory speech, and then leaving his party to support it by their votes; yes, as much mischief might be inflicted by such a man, if he spoke, as if he were entitled to vote. On the whole, such a restriction would be a departure from the principle of the bill, viz., the abolition of all distinctions, and the equality of political rights. In conformity with the same principle, the bill would proceed, as a matter of course, to render Catholics admissible to all corporate offices in Ireland, to all offices

connected with the administration of justice, and to all the higher civil offices of the state. He was aware, he said, of the objections as to the last; but having once resolved to yield political power, this could not be refused. He doubted the wisdom of qualifying the Roman Catholic to receive a favour from the popular branch of the constitution, and leaving him disqualified to receive a favour from the crown; of allowing him to acquire distinction by flattering the prejudices and courting the applause of the people, and depriving the crown of the power to reward him for any exertions which he might make in support of its honour and dignity. In order to leave the avenues of ambition in parliament open to the Roman Catholic, he was of opinion that we ought to render him capable of being employed in the civil service of his country. It necessarily followed from those concessions, that the oaths taken by members of the legislature must be modified. In the new oath the Catholic member would be called on to swear allegiance in the usual terms—to disclaim the deposing power of the pope, and the doctrine that his holiness had any temporal or civil power, directly or indirectly, within the realm—solemnly to abjure any intention of subverting the Establishment, and to bind himself not to employ any of his privileges to weaken the Protestant religion or government. No doubt there was no disclaimer of certain other doctrines—the doctrine that faith was not to be kept with heretics—the doctrine that persons could be relieved by the pope from the solemn obligations of an oath. But to require them to make those and other disclaimers of a similar character was, in his opinion, an unnecessary piece of legislation. He had omitted them as unnecessary to be applied to those who were thought worthy to be incorporated into that house. The remaining part of the measure regarded the exceptions from the general rule—the securities which were to be retained in the midst of concession, as the safeguards of the Protestant constitution. These lay within a narrow compass, and related to duties or offices connected with the Established church. The only offices from which Mr. Peel proposed to exclude Catholics, were those of lord-lieutenant or chief governor of Ireland, and of lord high-chancellor, or keeper, or commissioner of the great seal. He also meant to exclude Catholics from appointments in any of the universities, or colleges, or institutions upon Protestant foundations, such as Eton, Westminster, Winchester, or any ecclesiastical schools of the same kind; in addition to which he meant to retain the law against even presentations by Catholics to places of this kind; and he proposed further, that in case a Catholic, by virtue of his situation or pro-

party, should hold any office of church patronage, such influence should be attached to and exclusively vested in the crown. He further proposed that it should not be lawful for any Catholic to advise the crown regarding the investiture or distribution of any ecclesiastical dignity in the Established church of England or Ireland. Of other ecclesiastical securities, as they were called, which had at different times been proposed, he entirely disapproved. One proposal had been to provide for the Roman Catholic church, and incorporate it with the state; but this would require negotiation and compact with the see of Rome, and he saw the greatest difficulties at arriving at any such result. There was something revolting to the feelings of Englishmen, to the independence and pride of the country, in the King of England being obliged to go to a foreign ecclesiastical court like that of Rome, for the purpose of obtaining securities and determining on what footing his own subjects were to stand. They could not approach the court of Rome on such a subject without admitting it at once as an authority in legislation, and recognizing its right to withhold its assent from the measure. On that ground he took it that negotiations of this nature with the court of Rome were incompatible with the dignity, the character, and the independence of England; and this was a sufficient objection to that mode of attempting to provide securities for the Protestant establishment in church and state. Moreover, the incorporation of the Roman Catholic church with the state, the granting to the crown a control over the appointment of the Roman Catholic clergy, and the payment of salaries by the state to the ministers of that religion, would be a measure more repugnant to the feelings and principles of the inhabitants of this country than any other measure that could be devised.

A veto on the nomination of the Catholic bishops was another security which had been contained in former proposed bills; but that, too, he would give up. His objection to it was, that it would be considered, and that not unjustly, as the commencement of a qualified establishment with regard to the Roman Catholic church. He objected to it, not that he thought this an unreasonable demand on the part of the crown, but because he thought that if we had sent to us a list of the names of candidates for the dignity of Catholic bishops in Ireland, it would be extremely difficult to free ourselves from the responsibility that must attach to our choice. We, in fact, would thus be parties to the nomination of Roman Catholic bishops, and would commence a qualified establishment for that church, which above all things, under existing circumstances, it was desirable to avoid. At once, then, he

abandoned the idea of a veto—first, because it afforded no rational security; and in the second place, because objections might possibly be made by the Roman Catholics towards our exercise of such a power, which objections it was not worth while to raise. Still less was he inclined to adopt a third security, viz., a power of examining the intercourse between the Irish Catholic church and the see of Rome. He did not know whether the Catholics would object to such a provision; but he had no desire to inspect the correspondence, and therefore no wish to raise the question. He would much rather that the secretary of state should have no more to do in the way of interference with the spiritual affairs of the Romish church than he had to do with the internal discipline and regulation of the Wesleyan Methodists. If the time should arrive when, from a change of circumstances, danger was likely to result from that intercourse (civil or spiritual) after the settlement of the present question, he should have no hesitation in coming down to the house with a bill, regulating, and, if necessary, interdicting that correspondence. The great advantage of settling this question and composing the differences at present existing in Ireland, in consequence of the civil disabilities imposed on the Catholics, consisted in this—that, after we had set this matter at rest, we should be enabled to demand and to take any securities that might be necessary. We should then be enabled to maintain a high, independent, and uncompromising tone towards the Roman Catholics of Ireland, and legislate for them as for others of his majesty's subjects.

But though he discarded all these arrangements as sources of security, there were certain other things which it would be proper to make matter of regulation. In the first place, he thought it fit to provide that when Roman Catholics were admitted to the enjoyment of corporate offices, and other offices of a similar nature, in no case, and under no pretence whatsoever, should the insignia of office be taken to any other place of worship than a place of worship of the Established church; that the robes of office should not be exhibited in any other place of public worship except the Protestant church; and that the insignia of office, if carried in any religious ceremony, should be carried in the ceremonies of that church alone. Secondly, a practice had been got up of late calculated to afford great, and, he might add, just offence to Protestants—a practice of claiming and assuming on the part of Roman Catholic prelates the names and titles of dignitaries belonging to the Church of England. He proposed to prohibit the assumption by members of the Roman Catholic church of episcopal titles and names made use of in the Church of England. Thirdly, it

was necessary to enact some regulations for monastic institutions. At present such societies were not interfered with; and with the existing communities he did not propose to interfere to any considerable extent. However, it was manifest that we ought to know the numbers of these societies, and who were the members of them; and with a view to obtain this information, government intended to make a provision for having the names and numbers of the individuals composing such communities registered. They would also require that communities bound by monastic vows should not be extended and multiplied in this country in future; and it was meant to provide against the entrance into this country of a class of men against whom other countries had set their faces, and who hitherto, therefore, had resorted to this; he meant the order of Jesuits. Other countries had taken precautions against them, and why should not we? The state of the law, as now proposed to be established, would at least give to every party belonging to these religious orders and communities the full enjoyment of the rights which they enjoyed at present; it would confirm the existing privileges on a registration of their names and numbers. We had a clear right to take measures of security and precaution against the entrance of other members of these orders into the country, and against the extension of religious communities professing no allegiance to any authority in this country, and being under the control of foreign superiors, resident, it might be, at the court of Rome.

Such was the plan described by Mr. Peel as that which ministers meant to propose for the new settlement of the constitution; such were the grounds on which he maintained that a new settlement could no longer be postponed. A concomitant measure was the raising of the freehold qualification in Ireland. But although Mr. Peel developed at some length the principles on which he called for the assent of parliament to the disfranchisement of the forty-shilling freeholders in return for the concessions to be granted, yet, as that measure was contained in a separate bill, which ran its own course, it seems better to reserve the discussions regarding it for their own place, merely observing that it was always held out as a change which must accompany the other important measure, whether in success or defeat. Ministers would not ask for it unless emancipation were granted; and if emancipation were granted, they would not dispense with it. "And now," continued Mr. Peel, concluding a speech which occupied more than four hours, "although I am not so sanguine as others in my expectations of the future, I have not the slightest hesitation in saying I fully believe that the adjustment of this

question, in the manner proposed, will not only give much better and stronger securities to the Protestant interest and establishment than any other that the present state of things admits of, but will also avert evils and dangers impending and immediate. I know I might have taken a more popular and palatable course—more popular with the individuals in concert with whom I long thought and acted—more palatable to the constituents whom I have lost; but I have consulted for the best for Protestant interests and Protestant establishments. This is my defence against the accusations I have endured—this is my consolation under the sacrifices I have made—this shall be my revenge. I trust that, by the means now proposed, the moral storm may be lulled into a calm, the waters of strife may subside, and the elements of discord be stilled and composed. But if these expectations shall be disappointed—if, unhappily, civil strife and contentions shall arise—if the differences existing between us do not spring out of artificial distinctions and unequal privileges, but if there be something in the Roman Catholic religion not to be contented with a participation of equal privileges, or with anything short of superiority—still I shall be content to make the trial. If the battle must be fought—if the contest which we would now avoid cannot be averted by those means—let the worst come to the worst, the battle will be fought for other objects, the contest will take place on other grounds. The contest then will be, not for an equality of civil rights, but for the predominance of an intolerant religion. If those more gloomy predictions shall be realized, and if our more favourable hopes shall not be justified by the result, we can fight that battle against the predominance of an intolerant religion more advantageously after this measure shall have passed, than we could do at present. We shall then have the sympathy of other nations; we shall have dissolved the great moral alliance that existed among the Roman Catholics; we shall have with us those great and illustrious authorities that long supported this measure, and which will then be transferred to us, and ranged upon our side; and I do not doubt that in that contest we shall be victorious, aided as we shall be by the unanimous feeling of all classes in this country, as demonstrated in the numerous petitions presented to this house, in which I find the best and most real securities for the maintenance of our Protestant constitution—aided, I will add, by the union of orthodoxy and dissent; by the assenting voice of Scotland; and, if other aid be necessary, cheered by the sympathies of every free state, and by the wishes and prayers of every free man, in whatever clime, or under whatever form of government, he may live."

The debate upon the motion for going into a committee was continued by adjournment upon the 6th of March. The principal supporters of the proposal were found among ministers and their converted adherents. The Whigs, satisfied with approving and lauding the ministry, did not take any leading share in the discussion. Lord Milton, Sir J. Newport, Mr. Brougham, and Sir F. Burdett spoke, but left the task of justification to the introducers of the measure, to whom it was much more difficult than it would have been to themselves.¹

In opposition to the motion, Mr. Banks, Sir Robert Inglis (who had succeeded Mr. Peel in the representation of Oxford), and Mr. Clinton, denied that any one, or all of the grounds on which this new policy had been adopted by government, could be admitted as valid. The grounds stated by Mr. Peel had been the state of Ireland, the evils of a divided cabinet, the difficulty of managing a House of Commons which left him in a minority, and the mischiefs consequent upon a division between the two branches of the legislature. In regard to the first, the discord and agitation to be found in Ireland not only were no new features in the history of that country, but were not even the result of the penal laws, and would not disappear on the removal of civil disabilities. These evils had existed in Ireland, in one shape or another, as long as we had known it; and ministers were bound to show that the situation of Ireland was worse than it had been when they held themselves bound, in justice to the country, to resist concession. The opponents of emancipation were asked what other remedy they would propose for the mischiefs of the present state of things. It would be enough to say, that at all events a remedy was not to be sought in the overthrow of the Protestant constitution, an evil in comparison with which all others became as nothing. According to the account of ministers themselves, the Catholic Association had been a main instrument in producing that disease for which they could now discover no cure but concession. But, confessedly, at the same time, not even an attempt had been made to crush that usurping convention. Acts had been passed for that purpose; and the very ministers who had called for them had allowed them, when obtained, to remain inoperative. With respect to the argument founded on the divided state of the cabinet, why did not the Duke of Wellington and Mr. Peel, instead of changing their own course, rather attempt to make such of their colleagues as were friendly to concession accede to their views?—the rather, as the right honourable gentleman stated that his opinions of the danger of granting Catholic emancipation were un-

changed. Surely he could not be fearful of being able to form a cabinet unanimous on the point of exclusion, and therefore should never have struck those colours under which there were no difficulties too great to surmount. As to the danger of a civil war unless the intended measures were acceded to, ministers had erred in not relying on the aid and force which they would have derived from public opinion, and the moral determination of the people of England. Besides, it was not a choice between civil war and concession, as far as the people of Ireland were concerned; but a far greater chance of a civil war to-morrow, on the part of the Protestants of England, if the Catholics were admitted to the entire privileges of the constitution. At best, it was only postponing the evil day; and it was for the house to consider under what different circumstances the attack could be resisted now, from those to which it would be possible to meet it when the Catholics possessed all the political immunities of the constitution. Unfortunately, the very manner in which the measure was brought forward provoked further attack. It was not the triumph of those who long espoused the cause gradually working their way by the power of opinion: it was the victory of force driving former enemies into desertion by intimidation. It told the agitators of Ireland that they were too strong for the government of Britain; that whatever they asked would be conceded, even to the giving up of the constitution, provided only it were asked with enough of clamour and confusion. Ministers themselves did not venture to represent this measure as an act of grace, but as one which had been forced upon them by imperious necessity, many of them still retaining their former opinions, and having their eyes open to all the evils likely to result from the course which they were pursuing. No rational man could expect that the Catholics and Catholic priesthood would remain satisfied even with what was now given. The re-establishment of their church was not only their interest, if they were true Catholics it was their sacred duty, an obligation far more holy than that of battling for a civil franchise, which, in truth, would be chiefly valuable only as an instrument by which to regain religious preponderance. Even the home secretary seemed to anticipate an ulterior struggle, which implied that he believed the Catholics to entertain ulterior objects; and it was inexplicable wisdom to prepare for a contest by clothing your enemy in new armour, and putting into his hands new weapons of offence.

The opponents of emancipation did not consider the provisions, which were called securities against the danger of admitting Roman Catholics to the civil, judicial, and military powers of

¹ *Annual Register*, 1829.

the state, as sufficient, or as other than ridiculous. Admission of Catholics to all places was the general rule of the bill; and the securities were to be found in the exception of two offices, all the power connected with which might be just as much employed by the influence of Catholics filling other offices to which no disqualification was attached. The lord-chancellor was not to be a Catholic; but then the first lord of the treasury might be a Catholic, and so might all the rest of the cabinet ministers. It was the first lord of the treasury who recommended to the crown persons who were to act as bishops in the Protestant church. Was it to be expected that a Roman Catholic first lord of the treasury would make a proper use of this patronage? Mr. Peel had stated that if any office to which church patronage was attached should happen to be filled by a Catholic, then that patronage was to be transferred to some other minister. But what did this mean? The first lord of the treasury was the individual who recommended to the crown the appointment of the higher dignitaries of the church, but the appointment did not rest in himself, and therefore it would seem that there was nothing to prevent the first lord of the treasury, being a Catholic, from recommending to the sovereign persons appointed to bishoprics; though the first lord of the treasury or the chancellor of the duchy of Lancaster, if Catholics, could not exert a direct influence which might belong to their offices in conferring minor church preferments. It was maintained, on the same side, that the Catholics, regarding all shades of Protestantism as an accursed heresy, would never cease in their endeavours to proselytize. Ministers themselves acknowledged there was this danger—why else did they say that the moment when they were granting nearly all that the Catholics desired, still they were not willing to trust them without some restrictions? These restrictions showed that they did not consider them worthy of being trusted.

Different members urged the propriety of dissolving parliament. Mr. Estcourt, one of the members for the university of Oxford, denied that the present parliament was qualified to settle the Catholic question. It had, he said, been elected in 1826, when the affairs of the country were under the guidance of that vigilant protector of the Protestant cause—the late Lord Liverpool. There was not then the same anxiety about the Catholic question, for the country had confidence in his lordship, and even in the right honourable home secretary (Mr. Peel) himself. He thought it incumbent on ministers to take the sense of the country, by calling a new House of Commons, before they ventured to introduce so extraordinary a measure as that of admitting

the Catholics to parliament and to the offices of state.

The motion, on the other hand, was supported by Sir George Murray, the colonial secretary, by Mr. Grant, Mr. North, and Mr. Huskisson. They repeated and enforced the positions, that the pacification of Ireland was necessary to the safety of the empire, and that without emancipation that pacification could not be effected. We could not destroy one part of the people by rousing and inciting the other. Government could not ally itself with Orange clubs. Peace was not to be restored to Ireland by Protestant arms or by a thoroughly established Protestant ascendancy. It was the duty of government to protect the whole community, without distinction as to religions or sects; it was the duty of government to insure to all the greatest degree of protection, and to give to the people whatsoever privilege they had a right to claim and enjoy. Mr. Peel replied to those who called for a dissolution. A dissolution of parliament, said he, means that the Catholic Association and the elective franchise are to be left as they now are. If parliament is to be dissolved, the Catholic Association *must* be left as it is; for the law officers of the crown have declared that the common law is altogether inadequate to suppress it; and, being so left, it will overturn the representation of Ireland.

On a division the motion was carried by a majority of 188, the numbers dividing being 348 against 160.

Petitions were now poured into the house from all quarters. Before the first reading of the bill there had been presented 957 petitions against emancipation, and 357 in its favour. Among the anti-Catholics there were several sudden conversions, which were not always thought to proceed from disinterested motives. Sir Thomas Lethbridge, one of the members for Somersetshire, had worried or wearied Mr. Canning in his last days by his incessant harangues against the Catholics and against those who favoured their claims; he had taxed that minister as an apostate to the Church of England, and, quite recently (only in the middle of January), he had attended a public meeting in Devonshire, assembled to petition against further concessions to the followers of that religion, and he had then and there been the organ of obstinate and enthusiastic resistance to the ministerial scheme. Yet, in the beginning of March, this same Sir Thomas Lethbridge stood out and pronounced a recantation, and declared all at once, and with such solemnity as was in him, that the plan of ministers was wise, excellent, patriotic, perfect in all its parts. On the 17th of March, Mr. Peel moved the second reading of the bill. Sir Charles

Wetherell, the attorney-general, who had refused to draw the bill, was still in office, but only waiting until his successor could be appointed. He censured the whole bill in the bitterest manner, and was not sparing of personalities in speaking of those who had framed it, or who were advocates for it. The bill, however, was read a second time by a majority of 173, the numbers dividing being 353 to 180. In committee an amendment was moved, to include the place of prime minister among the offices which could not be filled by Catholics. After three days in committee, the bill came out as it went in; and on the 30th of March it was read a third time and passed by the commons. On the very next day, Mr. Peel, with a very numerous escort, presented his bill at the bar of the lords. It was read that evening for the first time, and without opposition. The Duke of Wellington, who was determined to admit of no delay, moved that it should be read a second time on the 2d of April. Lord Bexley and the Earl of Malmesbury opposed this motion, on the ground that such precipitate haste was unbecoming. The duke answered that the subject had been sufficiently discussed already, and that the public were exceedingly anxious to see it settled. Lord Holland justified his grace by referring to the haste with which the statutes about to be repealed had been originally passed; and the motion was soon carried without a division.

On the 2d of April, the Duke of Wellington moved the second reading, hoping the house would believe him when he said that the course which he had now adopted on this question had not been adopted without the fullest conviction that it was a sound and just one. After taking a review of the actual state of Ireland, and dwelling upon the extremities to which adverse factions, animated by bigotry and hereditary hatred, were likely to proceed, the duke said, "It has been my fortune, my lords, to have seen much of war—more than most men. I was constantly engaged in the active duties of the military profession from boyhood until I grew gray. My life has been passed in familiarity with scenes of death and human suffering. Unfortunately, I have been chiefly engaged in countries where the war was internal—where a civil war was maintained by conflicting factions. I must say that, at any sacrifice, I would avoid every approach to the horrors of civil war. My lords, I would do all I could—I would run any risk—I would sacrifice my life to prevent such a catastrophe! Nothing could be so disastrous to the country, nothing so destructive of its prosperity as civil war: nothing could take place that tended so completely to demoralize and degrade as such a conflict, in which the hand of neighbour is raised against neighbour—that of the father against the

son, and of the son against the father—of the brother against the brother—of the servant against his master—a conflict which must end in confusion and destruction. If civil war be so bad when occasioned by resistance to government—if such a collision is to be avoided by all means possible—how much more necessary is it to avoid a civil war in which, in order to put down one portion, it would be necessary to arm and excite the other! I am quite sure there is no man that now hears me who would not shudder were such a proposition made to him; yet such must have been the result had we attempted to terminate the state of things to which I have referred, otherwise than by a measure of conciliation. In this view, then, merely, I think we are justified in the measure we have proposed to parliament."

The debate which followed was continued during three days, the 2d, 3d, and 4th of April. On the 6th of April the bill was read a second time, by 217 against 112. On the 7th and 8th it passed intact through the committee; on the 10th it was read a third time and passed; and on the 13th it received the royal assent. Every one will understand that but for the energy and decision of the Duke of Wellington, this full emancipation, even now, could not have been carried.

Mr. Peel had brought in his bill to disfranchise the Irish forty-shilling freeholders, and raise the qualification to £10. It was part of the general measure recommended from the throne, and it passed with little opposition through both houses. Mr. O'Connell, who had publicly bound himself to reject even emancipation if coupled with this disfranchisement, became silent, and acquiesced. The Catholic Association had ceased to exist, and being left to themselves, the Irish "Forties" were indifferent to the measure.

On the 13th of May, Mr. O'Connell presented himself to take his seat for Clare. The clerk produced the old oath, which the recent relief bill had repealed. Mr. O'Connell proposed to take the new oath prescribed by that bill; but he was informed by the speaker that his return had been made before the passing of that act, and that he was therefore excluded from its operation. Mr. O'Connell was heard at the bar in support of his pretended right, which, after a good deal of discussion, was negatived by 190 against 116. The chief agitator then went back to Ireland, and was re-elected without opposition for Clare.

All the discontents of Ireland were to end with emancipation. Thousands of times had it been said, Only grant the Irish Catholics that boon, and they will be as quiet and as observant of the laws as the people of England and Scotland. The extent of Irish gratitude would be

equal to the amount of the benefit conferred. But, alas! these were but fanciful predictions. The relief bill was carried in April, and in May Ireland seemed as turbulent as ever. By letters, and by speeches at aggregate meetings, Mr. O'Connell kept up the excitement. He told the

DANIEL O'CONNELL.—From a portrait by R. M. Hodgotts

Irish people that they had themselves achieved the religious liberty of their country; that they, "a sober, a moral, and a religious people," had become too strong for their oppressors; and that their progress towards prosperity was in vain opposed by the Peels and Wellingtons of society. He spoke with reverence of the monastic orders, and with horror of a design which, he said, was entertained by ministers for the suppression of those orders in Ireland. With his pockets well filled with "rent," he deplored the poverty of the Papists, and held out the wealth of the Protestants as a tempting bait. He gave nicknames of the most degrading kind to the leaders of the Brunswick clubs, and to every man who presumed to oppose him. He daringly and undisguisedly announced that emancipation was not all he wanted—that his great object now was to force on a *repeal of the union with England*. That union, he said, had converted Ireland into a province:—"That cursed measure had deprived Ireland of her senate, and thereby made her dependent upon British aristocracy, and British intrigue, and British interests. It could be repealed—it must be repealed. He would never cease to agitate until it was repealed." All this, and a great deal more, incensed and roused the Irish Protestants. Fierce conflicts took place in various parts of the island, and many lives were lost. In the county of Tipperary matters went to such a length, that a numerous meeting of the magistracy, assembled in the beginning of September, expressed an unanimous opinion that nothing but

a revival of the insurrection act could restore or secure the peace of the country. This meeting was not made up of Orangemen; the greater number had nothing to do with Orange or with Brunswick clubs, and Lord Llandaff, the chairman, had been a strenuous supporter of emancipation. In the resolutions which they adopted to be communicated to government, they affirmed that a large proportion of the community were in possession of arms—that bodies of armed men appeared at noonday, to obstruct the execution of the laws, and threaten the lives and properties of all who attempted to resist their illegal proceedings—that it was impossible to obtain information to convict the offenders, owing to a league of false honour, and to a system of terror, which served the same purpose, by the dread of a violent death. The insurrection act could not be revived; for it had not been suspended, but had expired, and parliament was not sitting.

To the affairs of foreign politics we now turn our attention; and of these, the aggressive movements of Russia in the direction of Turkey demand our principal notice, on account of their relation to British interests, and the great European war which they were afterwards to occasion. Amidst every change since the days of Peter the Great, Russia had never for a moment withdrawn her eye from Constantinople, or her heart from the hope of succeeding to the Byzantine empire of the East: it was from the East she expected to derive that new, warm life-blood which would make her the greatest of European powers, and the arbitress of the world at large; and although her progress was slow, it had only been the more certain, while she felt that she could afford to wait for the full realization of her purpose. The battle of Navarino gave a new opportunity for fresh aggressions and conquests, of which Russia was not slow to avail herself. By this "untoward event," Turkey had no fleet to defend herself in the Black Sea, or secure the approaches to her capital by the Bosphorus; while she was equally helpless by land, in consequence of the destruction of the janizaries in 1826, and the rawness of the new levies, into which European discipline had as yet made a very imperfect progress. Turkey, in fact, was in that transition state which, although it should be from feebleness to strength, is often the weakest of all conditions. All this the Czar Nicholas well knew, and was prepared to use his advantage. Leaving the Greeks, therefore, to their fate, and disentangling himself from the triple alliance which Mr. Canning had made for the liberation of Greece, he resolved to make war upon Turkey on his own account, and for interests entirely Russian. In May, 1828, the campaign commenced: the Russian army, num-

bering 115,000 men, and supported by their fleet in the Black Sea, crossed the Pruth, and, after several successes, advanced to the foot of the Balkan Mountain, the Mount Hæmus of classical remembrances. But its fortress of Shumla, and the neighbouring sea-port of Varna, offered such a stubborn resistance, that the latter place was not taken until October, and then only through the treachery or cowardice of the pacha who was second in command. Compelled to be satisfied with this doubtful advantage, the Russians, after garrisoning Varna, fell back upon the Danube, which they crossed, being closely followed by the Turks in their retreat, and leaving the greater part of their baggage behind them. In other directions little better success attended the Russian arms, especially at Silistria, from which, after a four months' siege, they were compelled to make an ignominious retreat. Behind stone walls, indeed, or among the natural entrenchments of rocks, where the precision of the drill was little needed, the Turks displayed all their ancient valour; and it was only in the evolutions of the open field, where they could be easily outmanœuvred or thrown into disorder, that they were liable to a defeat. Such was the case at Czoroi, on the 26th of December, 1828, where General Gismar defeated the Pacha of Widdin, the only Muscovite victory that distinguished the European portion of this Turkish campaign.

As the losses of Russia had been so heavy both in military *material* and reputation during the last year, the campaign of 1829 was opened with greater precautions. Silistria, the strong fortress on the right bank of the Danube, from which the Russian army had been driven in disgraceful retreat during the preceding year, was to be reduced and occupied before a march was hazarded into the interior; and Count Wittgenstein, the inept commander of the last expedition, was succeeded by General Count Diebitsch, a soldier of far greater wisdom and military experience. Operations were commenced by the Russian fleet taking possession of Sizeboli, a Turkish sea-port at the eastern extremity of the Gulf of Bourgas, on the shores of the Black Sea; and although the Turks, who had suffered it through carelessness to fall into the enemy's hands, made desperate efforts, both by land and sea, to recover it, the Russians retained their hold of this important station, by which they could maintain a close communication with their army in the interior. That army, in the meantime, had crossed the Danube, and in May had advanced upon Silistria, where they found a Turkish force drawn up for its defence. After a hard fight the Turks were defeated, and Silistria invested; but the Russians were interrupted as soon as the siege had commenced by the advance of the grand vizier, Red-

schid Pacha, from Shumla, to arrest the progress of the besiegers. A desperate battle ensued on the 17th of May, which lasted from three o'clock in the morning until eight at night. It was a drawn battle, in which both sides claimed the victory; but it was noted as a hopeful symptom of the Turkish troops, raw and undisciplined as they were, and not superior in numbers, that they had sustained a close and destructive fight against a regular, well-disciplined army for seventeen hours. Similar to this engagement was the battle of Kulertscha, on the 11th of June, where the obstinacy of Turkish valour maintained itself at every point against European discipline, and might in the end have prevailed, but for the blowing up of the ammunition wagons, which left the Turks no alternative but retreat.

As might, however, have been expected, science was finally to prevail over mere force and courage, and in this campaign the perfection of military science was exhibited by General Diebitsch. Silistria fell before his arms on the 30th of June, after a siege of six weeks. By a series of able movements, with which the enemy were perplexed or thrown off their guard, he advanced toward the Balkan, dispersing the Turkish detachments that disputed his passage; and on the 21st of July he entered Palisbano and Erketsh, on the ridge of the Balkan Mountain, forming the gates of that strong bulwark of the Ottoman empire. After this his progress was easy, for his movements were so rapid, and the Turks so dispirited and disconcerted by his unexpected advance, that they were quickly defeated wherever they attempted to rally. On the 19th of August, the Russian army had arrived in sight of Adrianople, the second city of the Turkish empire, having a population of 80,000 inhabitants, and with a numerous army drawn up advantageously for its defence; but the troops were so astounded at the appearance of their enemies, who seemed to have dropped from the clouds, that all their thoughts of resistance evaporated, and they could not be led into action. It was in this way that Turkish fatalism, and Turkish arrogance and sloth, the consequences of their creed and early successes, negated the patriotism and fearless hardihood of the people, and will probably be the causes of their final downfall. As there was no hope of the defence of Adrianople by arms, the pachas in the city entered into capitulation, and the hard terms, which they accepted to save the town from storm, were the surrender of all their arms, artillery, standards, provisions, and ammunition, and of everything belonging to the Ottoman government. Thus Diebitsch became master of Adrianople without firing a single shot. Upon the same day, a considerable division of his army

occupied the important town of Kirk-Kilissa, between Adrianople and the Euxine, and threw its vanguard forward as far as Lulle-Bourgas, on the road to Constantinople. Nor did these movements comprise the whole of this important campaign of 1829. By sea the Russian fleet was equally successful, and co-operating with the land force, Admiral Greig quickly made himself master of some of the principal ports in the Euxine; while another Russian fleet, in communication also with Diebitsch, was on the opposite shores of the Mediterranean. In this manner, the fairest of the Turkish European provinces were in possession of an enemy, whom a few easy unopposed marches would conduct to Constantinople itself. While the western portion of the Turkish empire was thus in danger, the north-eastern portion of their Asiatic territories was in scarcely better plight. By a series of skilful marches and successful engagements, Count Paskewitch, the Russian commander in Asiatic Turkey, obtained possession of Erzeroum, the capital of Anatolia; and driving the discomfited Turks before him, was making preparations for the capture of Trebizond. Constantinople was now filled with dismay; the Giaour was already at the threshold of that gate through which, according to ancient prophecy, he was to enter in and drive the faithful to their old homes across the Hellespont; and Sultan Mahmoud, with the sacred standard carried before him, was about to make a last and a hopeless effort in person for the defence of his capital. But it was not for the interest of Britain, France, and Prussia, that Constantinople should fall into the hands of Russia, and the ambassadors of these three powers were obliged to interpose with the Turkish obstinacy, and persuade the Porte to accept such reasonable terms as would still preserve its national independence. Their interference was successful, both with the conquerors and the conquered; and after some natural demur on the part of Turkey, the treaty of Adrianople was definitively signed on the 14th of September. Russia was to restore to Turkey the principalities of Wallachia and Moldavia, and all the fortresses she had occupied during the war. The boundary between the two empires was still to be the Pruth, from where it touches on Moldavia to its junction with the Danube; but from the latter point to the mouth of St. George, the right bank of the Danube was to be the boundary, all the islands formed by the different branches of the river being declared to belong to Russia. The pachalics of Kars, Bayzid, and Erzeroum in Asia, which the Russians had captured, were restored; but a new frontier line was established in that quarter, by which Russia obtained possession of the pachalic and fortress of Akhalzic. Such were the chief territorial

changes produced by the treaty of Adrianople; the other stipulations regarded the unrestricted freedom of Russian ships in the Turkish ports and roadsteads, and in the Strait of the Dardanelles and passage of the Bosphorus. By these terms, as they were set down, the conditions were highly favourable to the Porte; for the chief cession demanded was a small portion of Asiatic territory, and the principal money indemnity the sum of 10,000,000 ducats (£5,000,000), which Turkey was to pay by equal instalments, during a course of ten years. But the principalities which the Russians had conquered were to be retained by them until the debt was liquidated—a time that might give them opportunity for a fresh quarrel and more decisive conquest; and the dominion of the Turkish provinces on the left bank of the Danube was to be wholly resigned to the native hospodars, who were well known to be in the interests of Russia. Such were the subsidiary acts or conventions which were added as explanatory of the original terms of the treaty; and in this way were those coils more closely drawn around Turkey which seem destined to strangle her at last.

Those events, by which her great enemy was humbled, and for the time rendered powerless, had necessarily an effect upon Greece and upon Greek independence. In the autumn of the preceding year, the French government had sent out a strong military force under General Maison, by which Ibrahim Pacha was driven from the Morea, and the Turkish garrisons of its fortresses compelled to surrender. These attempts were so successful in that quarter, that by November the whole of the Morea, once the Peloponnesus of classical history, was completely cleared of its Turkish oppressors, and placed under the new provisional Greek government, at the head of which was Count Capo d'Istria as president. After this encouraging commencement, the French were ready to march beyond the Isthmus of Corinth, to deliver Northern Greece as they had done the Morea; but as the allied powers had not yet decided about the boundaries of the future Greek republic or kingdom, the French troops were ordered to suspend their operations. It was added, that if the Greeks wished to reduce the Turkish fortresses of Northern Greece, they might do it by their own unaided efforts; and availing themselves of this permission, the Greek army in the west, under General Church, a British officer, compelled the Turkish garrisons of Vonizza, Carvassara, Lepanto, Anatolico, and Missolonghi successively to surrender. But while the Greeks were animated with the heroic desire of recovering all that had formerly been their country, and showing their ability to effect it, the three allied powers, after much contrariety and hesitation,

signed a protocol, on the 22d of March, by which the limits of the new Greek kingdom were definitely settled. But in the geographical use of scissors and compasses, the European statesmen of the period evinced that they had neither improved in generosity and liberality, nor yet in political wisdom. The natural boundaries, the means of self-protection, and the national wishes and distinctions of the people themselves, were all equally set at nought; and the scanty allotment of territory, where the boundary line commenced at Zeitoun near Thermopylæ on the east, and ended where the river Aspropotamos joins the sea—thus excluding Thessaly and Acarnania, and leaving the whole western frontier of Northern Greece open and defenceless—was decided without consulting either the feelings of the Greek people or the wishes of their government. Still less, if possible, was Turkey regarded in a proceeding which rent from her dominion so important a country as Greece—a country which she had held for centuries, but which she was now required not only to forego, but also to recognize its complete independence, without tribute, ransom, or any price whatever in return. At first the sultan resisted, and would only consent on the condition of the Greek kingdom being limited to the Morea, and ruled by a hospodar of his own election. This was when the Russians had only crossed the Balkan; but when they had established themselves at Adrianople, and were in a condition to dictate, they made the acceptance of the Greek protocol one of the stipulations of the treaty of Adrianople. Sultan Mahmoud had then no alternative but to submit. It is worthy of remark that Russia, at the commencement of her Turkish campaign, had expressly and loudly announced that her war had no connection with the Greek question, and that she would act in it only in accordance with the allied powers; but now, without consulting their wishes, she made herself the principal and the sole umpire in the affair—thus cheaply purchasing the patronage of Greece, and a claim to her gratitude and co-operation in every future movement which had the Russian conquest of Turkey for its object.

Since our last notice of Portugal, our ancient ally, the affairs of that unhappy kingdom had been in as wretched a condition as a divided government, a bigoted intolerant priesthood, and the atrocities of a civil war could well make them. The military force sent by Mr. Canning had been completely successful in its object, which was, to protect the country from the interference of Spain, without siding either with the liberals or absolutists. Dom Miguel had sworn allegiance to his elder brother, Dom Pedro, as his sovereign—had accepted the constitutional charter which Pedro

had framed for the government of Portugal—and had engaged upon oath to deliver up the crown to his niece and future spouse, Donna Maria II., as soon as she came of age. These strong guarantees, and the hope that his brother would improve in wisdom, experience, and liberal sentiments, by his travels in the unconstitutional countries of Europe, where he would witness with his own eyes the evils of despotic rule, made Pedro sit easy upon his throne in Brazil; and Miguel had written from Vienna to his sister, who was for the meantime Regent of Portugal, that he was “determined to maintain inviolate the laws of the kingdom, and the institutions legally granted by our august brother, and cause them to be observed, and by them to govern the kingdom.” From Vienna Miguel repaired to England, on his way to Portugal, at the end of 1827, and resided in London nearly two months; and there he was waited upon with an address from the Portuguese residents, who were very numerous in our capital, and for the most part liberals, to whom he did not give the slightest indication either of hostility to the charter, or to the rights of his niece; and nothing in his conduct indicated the Nero that was lurking within him, and which circumstances would so soon awaken into such unscrupulous action. On the 22d of February, 1828, he landed at Lisbon, amidst shouts of “Long live the Infant!” intermingled with a few cries of “Long live the absolute King!” It was as yet unknown what were his real sentiments about the charter; but on his arrival he fell into the hands of his mother, who soon resumed over him the old ascendancy, and converted him into a perjured wretch and a tyrant. The symptoms of the alteration were not long in following. The ministry was changed, the stocks fell, and all business was at a stand; the liberals were insulted, displaced, and driven from the capital, and absolutists received into favour: in less than one short month it was no secret that Dom Miguel, instead of being a limited responsible regent, would become an unconditional autocrat. The new British ambassador at the court of Lisbon, Sir Frederick Lamb, felt himself in an unexpected, strange position amidst this sudden change, but he acted with wisdom and promptitude. The British troops sent by Mr. Canning were embarking for England, and a large sum of money, a loan from Mr. Rothschild, was arriving for the prince; but Sir Frederick, acting on his own responsibility, stopped the embarkation of the troops, and sent the money back to London. Soon after, these troops were called home by order of the British government, and with their departure, the progress of absolutism, which their presence might have checked, went onward at full speed. On the 26th of June

the estates of the kingdom, which were assembled for the first time after a long interval of more than 130 years, declared Dom Miguel to be lawfully King of Portugal. The foreign ambassadors at the court of Lisbon immediately took their departure.

Nothing but a civil war could be the consequence of this usurpation; and, in fact, it had commenced already, and before the new sovereign had assumed his royal titles. Oporto and other towns had risen against him in behalf of their young queen, Donna Maria, and many of the Portuguese refugees had returned from England to join the patriotic cause. But the ardour of the liberalists was sorely mismanaged; their junta which they had established was obliged to dissolve itself; and their army, dwindled by desertion and defeat to 3000 men, was obliged to take shelter upon the Spanish frontier. The cause of Miguel was everywhere triumphant, and such severities were inflicted upon the liberalists throughout the whole kingdom, as are generally confined to the proceedings of a Romish Inquisition. In the meanwhile, Dom Pedro, who had heard of the usurpation of his brother, but who rejected it as an idle tale, and who seems to have thought that the mere presence of the legitimate sovereign would compose every difference, and reconcile all parties to her succession, sent his daughter, Donna Maria, only nine years of age, to Europe, that she might be seated upon the throne of her ancestors, with a loving uncle for her protector and partner. She arrived at Gibraltar on the 2d of September, 1828, but there her conductors heard such tidings, that instead of proceeding with her to Genoa, and afterwards to Vienna, on a visit to her grandfather, the Emperor of Austria, they conducted her at once to England, as the only home where suffering patriotism or exiled royalty could be in safety from its enemies. She arrived at Falmouth on the 24th of September, and was everywhere received with pitying sympathy and respect, as the rightful Queen of Portugal, her title being recognized by all classes, from the British sovereign to the humblest of his subjects. But beyond this nothing further could be done consistently with the principles of non-interference, to which the British government had pledged itself. If the Portuguese had chosen a tyrant for their sovereign, and absolute principles for their code of rule, it was not for Britain to interfere, even though the suffering minority implored her interposition. All that our treaties with that kingdom required us to do, was to protect her from foreign aggressors, not to enter into her domestic struggles. This Dom Pedro understood; and accordingly, in 1829, he recalled his daughter to Brazil.

It was not in this instance alone that the principle of non-interference in the affairs of the Portuguese government was strictly observed by the British ministry, however tempting might be the occasion to violate it. The only spot of the Portuguese dominions remaining in the hands of the constitutionalists was the little island of Terceira, one of the Azores, which gallantly maintained its loyalty against the Miguelites, and was regarded by the liberal party as the best stronghold and rallying point of their cause. Here the Portuguese refugees now in England resolved to make their rendezvous for an invasion into Portugal; and having collected a considerable armament, they set sail from Plymouth, with a large collection of arms and ammunition, pledging their word to the British ministers, who had watched their proceedings, that they were going nowhere else than to Brazil. But mistrustful of its purpose, a small squadron was sent to observe its proceedings, and found the expedition preparing to disembark at Terceira, upon which the British commander fired a shot into Saldanha's ship, which killed one man and wounded another. The armament was compelled to leave that island and sea, and retrace its course, being followed and watched by the British ships until it arrived within 500 miles of Scilly. It was a stern necessity that compelled Britain to look on and witness the atrocities and misrule which she had the power but not the right to remove; and the sympathy that pervaded all classes was embodied in the king's speech, which was delivered by commission at the close of the session, on the 24th of June, 1829:—"It is with increased regret that his majesty again adverts to the condition of the Portuguese monarchy. But his majesty commands us to repeat his determination to use every effort to reconcile conflicting interests, and to remove the evils which press so heavily upon a country, the prosperity of which must ever be an object of his majesty's solicitude."

On the 4th of February, 1830, parliament was again opened by commission. The speech lamented that, notwithstanding a strong indication of active commerce, distress should still prevail among the agricultural and manufacturing classes in some parts of the United Kingdom. This subject occupied several days, and it led to various propositions and suggestions. Some thought they could relieve this distress, which was only temporary, and which was by no means so extensive as it was represented, by returning to a paper currency. Mr. Attwood conceived that to make silver a legal tender in lieu of gold would remedy all our evils. What ministers did, was to repeal the beer and leather duties; but they increased the duties on ardent spirits.

They also reduced the salaries of various public officers, and abolished some of the offices altogether. Further reductions were made as well in the navy as in the army, but the opposition was signally defeated when they attempted to carry these reductions a great deal too far.

Various motions were made tending to parliamentary reform. Lord John Russell failed in his motion for transferring the elective franchise of East Retford to Birmingham; but after this he moved for a bill to confer that privilege, independently of all other considerations, on Leeds, Birmingham, and Manchester. At this stage, or even at a later, the bestowing of the elective franchise on a few populous and wealthy towns would have satisfied the most of the reformers; but his lordship's motion was rejected by 188 against 140.

Some further improvements in our criminal code were introduced and carried by Mr. Peel. The annual executions for forgeries had been revolting—terrific! The capital punishment was now set aside, except in cases where the forgery touched the privy seal, wills, warrants on the public funds, and orders for the payment of money. Sir J. Mackintosh carried an amendment, confining the infliction of death to the forgery of a will only; but this was thrown out by the lords.

Upon the reports of committees of the House of Commons and of the law commissioners, an act was passed abolishing the separate system of

Welsh judicature, and annexing it to that of England.

Parliament was yet sitting when George IV. departed this life. The king's health had been for a considerable time in a precarious state; but he had long lived very secluded. Little was known to the public of what passed in the interior of the palace; and it was not until the 15th of April that the court physicians issued their first bulletin, wherein they announced that he was labouring under a bilious attack, accompanied by embarrassment in his breathing. On the 21th of May a message was delivered to both Houses of Parliament, stating that his majesty found it inconvenient to sign public documents with his own hand, and requesting parliament to provide means for the temporary discharge of that function of the crown, without detriment to the public service. The necessary bill was passed. The sign-manual was allowed to be executed with a stamp: the stamp was to be used in the king's presence by some person authorized by his majesty's word of mouth; but no document was to be stamped before it had been indorsed by three members of the privy council.

At the end of June it was reported that the king was getting better; but he burst a blood-vessel, and expired at three o'clock in the morning of the 26th of June. His popularity had died long before him, and the feeling of the people at his death approached nearer to indifference than to any other sentiment.

CHAPTER XVII.—HISTORY OF RELIGION.

A.D. 1802—1830.

Religious revival during this century—Its manifestations—Its effects upon parliament—Eligibility of clergymen to have a seat in parliament—The question tried in the case of Horne Tooke—Debate on the subject—Horne Tooke's appeal—His right to a seat admitted—Decision that clergymen should not become members of parliament—Revival of statutes on clerical non-residence—Hardships of the clergy under them—The subject brought into parliament—Statement of the clerical revenues of this period—Extreme poverty of the inferior clergy—Impossibility of the design to equalize clerical livings—Bill to rectify abuses of clerical farming and enforce clerical residence—It is superseded by a bill upon the salaries of curates, and the conditions of non-residence and clerical farming—Attention bestowed by parliament on the interests of the church—Continuing poverty of the inferior clergy—Its amelioration—Attention called to the mode of collecting tithes—Grievances attending it—Question of church-extension brought into parliament—Necessity for more churches—Parliamentary grant for its removal—Question upon the rights of dissenting clergymen—The meaning of the toleration act on the subject debated—Proposal to limit the application of the act—Alarm of the dissenters at the proposal—Arguments employed in parliament on the subject—The bill against the rights of dissenting clergymen lost—The principle of toleration extended to Unitarians—Disabilities of Roman Catholics—Hopes of relief from the union with Ireland and the support of Mr. Pitt—The expectation disappointed—Opposition to Catholic claims by the king and the national Protestant feeling—The great conflict for Catholic emancipation—The demand advocated in parliament—Fate of the measure from year to year—Attempts to obtain it by concession frustrated by the Irish Roman Catholic prelates—Proposal of the *veto* abandoned—Continued yearly demands in parliament for Catholic emancipation—The Catholic committee organized in Ireland—Its arbitrary authority and dangerous proceedings—Fruitless attempts of government to check them—Canning's appeal in 1812 for the removal of Catholic disabilities—The success of the appeal inter-

rupted by the dissolution of parliament—Renewal of the subject in the following year—Grattan's motion—His emancipation bill—Its conditions—Its defeat—Opposition to it from the Irish Catholics themselves—Dangerous aspect of Popery in Ireland—Concessions made to the Roman Catholics in 1817—Catholic emancipation an inevitable result—Strength of the party in its favour—Opening of the parliament in 1829—Recommendations of the royal speech in behalf of concession—The Catholic Association dissolved in consequence—Mr. Peel's motion for Catholic emancipation—His arguments for its necessity—Emancipation finally granted—Zeal of British Protestantism during this period—Its direction into new channels—Formation of Bible and missionary societies—The British and Foreign Bible Society—Its successful efforts and great resources—Obstacles to its progress—The Apocrypha controversy and its causes—Its effects in the formation of new societies—The Edinburgh Bible Society—Revival of a missionary spirit during the present period—Previous apathy of Britain on the subject—Cromwell's extensive missionary plan—Early British missionary societies—Establishment of the Baptist Missionary Society—Its mission to India—Its numerous translations of the Bible into the languages of the East—Dr. Carey's extraordinary philological achievements—The London Missionary Society—Its mission to the South Sea Islands—Its remarkable success in Tahiti and other islands—Missions of the society to South Africa and Madagascar—Its missions to India and China—The London Church Missionary Society—Its mission to Sierra Leone—Its other extensive operations—Missionary societies in Scotland—Comparison of Protestant with Roman Catholic missions—Slowness of the former and rapid progress of the latter—Causes of this disparity.

THE commencement of the nineteenth century, and the spirit of improvement by which it was characterized—an improvement in which the new religious impulses had borne so distinguished a part—could not fail to react upon the history and character of the National church, and the sects with which it was so intimately connected. The sluggish apathy under which the guardians of the church had gone to sleep—the general abandonment of those studies so essential to their sacred calling—and the moral irregularities in which they had been allowed to indulge without question or check, were as incompatible with the character of the present age as the old feudal institutions, the last relics of which were being so unsparingly swept away. A more exclusively theological range of intellectual accomplishments—a style of preaching better fitted to alarm, convince, and instruct—and, above all, a decorousness of character in full consistency with the clerical office, were now, and had for some time been, the demand of the awakened public; and, as is usually the case with such demands, the application had not been in vain. The priesthood were awakened as well as the people; and between both parties the mutual action and reaction was in operation, which was certain to provoke to good works, and promote a better spirit of harmony and cordiality, or at least of virtuous rivalry. Even in parliament, the removal of the abuses that had crept into the church was now a subject of anxious consideration; and notwithstanding the impediments of party feud and political expediency by which the discussion of such questions was characterized, there was, throughout, the indication of a better spirit, and the promise of improvement at the great national fountain-head.

The principal church question at the commencement of the present century was the eligi-

bility of clergymen to a seat in the House of Commons. The cause that stirred it was the nomination of the Rev. John Horne Tooke, by Lord Camelford, to the representation of Old Sarum, in consequence of which, the reverend member took the oaths and his seat in the commons, on the 2d of February, 1801. Although there was no express law upon the subject, there was an impression of force equal to law, and which is usually considered to make the enactment of a law superfluous: it was considered impossible that any one who was known to have been in holy orders, should hold a seat in the House of Commons. Horne Tooke had been ordained so early as 1760, and had officiated for thirteen years as a clergyman at New Brentford; but he had been more distinguished in literature as a philologist, and in politics as a keen agitator and reformer, than in his clerical capacity: now, however, he had abjured reform and the Whigs, passed over to the ministerial party, and by submitting to become the nominee of a peer and the representative of a place without a constituency, had proclaimed his conversion to the Tory interests. On the other hand, Earl Temple, by whom Horne Tooke's right to a seat in the house was to be opposed, had deserted Pitt, and gone over to the Whigs. It was thus a party question at the outset; a political contest, in which religion was to be used as a convenient watchword. No sooner had the ex-clergyman taken his place in the house, than Earl Temple rose and proclaimed the informality, and announced his purpose to wait the allotted term of fourteen days, when, if no petition was presented against Mr. Horne Tooke's return, he would himself move that the subject should be taken into consideration. At the end of that time no petition having been presented, the earl commenced proceedings, by moving that the deputy-register of Sarum and the parish clerk of Brentford should be summoned to the bar of the house, to

prove that Mr. Horne Tooke had received priest's orders; and this fact being easily settled by the testimony of the witnesses, was alleged to be conclusive of the question. A committee of inquiry was appointed, who, after investigation, reported that since 1641 only one instance had occurred of an ordained clergyman having been elected as a parliamentary representative. This was the case of Mr. Edward Rushworth, who had been returned in 1784 as one of the members for the borough of Newport, in the Isle of Wight, and who, though petitioned against, was allowed to retain his seat. Earl Temple then moved that "a new writ should be issued for the election of a Burgess to serve for the borough of Old Sarum, in room of the Reverend John Horne Tooke, who, being at the time of his election in priest's orders, was, and is, incapable of sitting in this house." His lordship disposed of the solitary exception by stating that Rushworth was only a deacon, and that it was on the strength of this fact that his counsel had pleaded for his eligibility. "I may be told," his lordship added, "that other clergy have actually sat in this house. The fact may be so, yet it does not alter my case. It is a very old and a very true law adage, that no blot is a blot till it is hit. Peers, minors, aliens, clearly ineligible, may have sat, and may at this moment be sitting in this house. . . . All I contend for is, that in every instance, without one solitary exception, where the house has noticed a priest within its walls, the individual so noticed has been expelled, and the principle laid down of the ineligibility of the clergy." Lord Temple then stated the danger that would result to the constitution from the admission of a fourth estate into parliament, and the immense acquisition of power which the minister of the day might gain by holding out the temptation of church patronage to ecclesiastical members. His lordship next adverted to the defence which Mr. Horne Tooke had already set up, that he was no longer a clergyman, having divested himself of his orders—a proceeding which, both by canon and common law, was impossible. He finally administered a solemn rebuke to Mr. Horne Tooke, for the use he had made of ludicrous and unseemly phrases in the former debates on the subject, adjuring him that, as he had administered the sacrament in times past, he should therefore recollect that solemn office, and tremble when he talked of getting rid by quarantine of the infection of duties which he assumed at the altar of his God.

Lord Temple's motion was opposed by Mr. Addington, the prime minister, who seemed resolved at all events to maintain the rights, in order that he might retain the services of the once formidable agitator and reformer. But his

speech was a confused mixture of arguments, in which the defence of his new ally was mingled with the repudiation of any wish for the establishment of such a fourth estate as that which his lordship had dreaded. He deprecated the entrance of such an element at a time when one-third of the livings of the clergy were disposable at the will of the crown. But the law was still indistinct as to the right of the clergy to hold a seat in parliament. As to the clerical character, there was no difference between a priest and a deacon, and therefore the case of Mr. Rushworth was not conclusive on the subject. In this case, if they rejected Mr. Horne Tooke, he might be re-elected by his constituents, and admitted to his seat by a committee, through the authority of the Grenville act.¹ let the house decide to the contrary as it pleased, and thus the recurrence might be perpetual, unless the legislature applied a remedy by which the whole evil would be at once removed. To effect this, a bill should be prepared for the purpose of excluding persons in holy orders from a seat in parliament, and upon this principle there would be a general agreement, although there might be some difficulties in its details.

Mr. Horne Tooke then rose to answer for himself; and his speech was a talented but rambling discourse, characteristic of the man and his case of appeal. He commenced with a statement of the circumstances of his earlier life, to prove that he was no lover of personal controversy—although, in truth, he had been one of the keenest of controversialists. He then proceeded, as a philologist, to the report that had been given in by the committee of inquiry, and stated, that whoever drew it up was utterly ignorant of the Anglo-Saxon language, having mistaken the character no less than eleven times in transcribing a manuscript of the time of Henry VI., containing no more than twenty-one lines. It had also omitted to state that all the persons named in it, who were declared ineligible, actually continued to sit till they were disqualified by act of parliament; and no act, as yet, had disqualified any one from sitting in the house who had been in holy orders. To elect representatives and to represent electors are privileges inseparable; and as the right of electing knights of the shire had been conceded to clergymen, and afterwards fully confirmed to them by the 18th of Geo. II., they had a right also to represent their fellow-citizens. It might be said that the nature of the clerical character is indelible, and its operation a disqualification for a seat in parliament; but here Mr. Tooke put

¹ By this act every disputed election was to be left to the decision of a committee, and the house not to interfere except where it was absolutely necessary.

several cases to show the absurdity of the conclusion. A younger brother of a small fortune might take orders, but afterwards, unexpectedly, succeed to a very large one; why should he then be excluded from parliament? What did his own case of having taken holy orders prove, except that forty-one years ago he had been a youth of a fair character? "Were I," he said, "a Jew, a Jesuit, a Mahometan, a Pagan, a Presbyterian, a Quaker, there could not be the least objection to me. In spreading the doctrines and administering the rites of these various religions and sects, there is nothing corrupting; but connection with the Established church, it seems, leaves a foul and indelible stain! In Roman Catholic countries there is nothing more easy than for a priest to lay down his orders, and the pope dispenses with his vow. In England, every man is a pope to himself. He confesses to himself, and from himself he receives absolution. He ought, of course, to be able to become a layman as soon as he changes his views. Even yet," the reverend speaker added, "the door was not absolutely barred against him; he might get deposed from the ministerial office, and so become undoubtedly eligible for parliament." After adducing many instances of persons who had renounced orders altogether, and embraced a different line of life—of peers who had succeeded to their titles and seats in the upper house, although they were in orders, and of clergymen who had, while exercising their clerical functions, been secretaries to, or otherwise employed by ministers of state—Mr. Horne Tooke thus concluded: "Though I wish earnestly to be out of the house, I feel it to be my duty to strive to continue in it as long as I can, and am prepared to meet opposition in whatever way it may present itself. I wish the house to proceed legally. I wish that an act should be passed founded on the broad basis of general justice. Let the house save its character as much as possible, and try to preserve the confidence of the public."

In the debate that followed, the eligibility of the clergy was maintained by Fox, Erskine, and Grey, and opposed by Mr. Simeon, Sir William Scott, the attorney and solicitor general, and several other members. It was contended by the latter, that the canon law was conclusive against the eligibility of a clergyman, and abundantly supported by the precedents, the paucity of which arose from the general conviction that the point was fully established—just as it was clearly understood that women could not sit in parliament, although the journals might be explored in vain for a single decision on the subject. Both parties, however, agreed in getting rid of Lord Temple's motion, and, accordingly, that of Addington was substituted, and carried by a

majority of ninety-four against fifty-three. Having thus secured the services of Mr. Horne Tooke at least during the present parliament, the chancellor of the exchequer, ten days afterwards, moved for leave to bring in a bill "to remove doubts respecting the eligibility of persons in holy orders to sit in parliament." After long discussion and several modifications, the bill as it now stands in the statute (41 Geo. III. c. 63) was finally passed through both houses, by which not only priests and deacons of the Church of England, but ministers and licensed preachers of the Church of Scotland, have been excluded ever since from the British House of Commons.

The clergy were thus deprived of a privilege which they could well forego; but in requital, they were exempted from certain penalties of a more substantial character. The old statute, 21 Henry VIII., of "spiritual persons abridged from having pluralities of livings, and from taking of farms," &c., was still unrepealed. By this statute, any clergyman who should be absent even a single month from his parsonage, was subject to a heavy penalty, which could be inflicted upon the evidence of a common informer. He was prohibited from taking a house except in a city, market-town, or borough. A vicar could not take a lease of his parsonage, or any clergyman whatsoever take a lease of land, or even buy or sell a cow, under heavy penalties. These penalties were moreover so unequal, that in some livings one or two inflections would absorb the whole annual produce, while in other cases, they would amount to no more than an income-tax. When this statute was passed the clergy were for the most part unmarried, and could easily submit to such restrictions; but the case had been altered by the Reformation, since which period the clergy had married, and been involved in the secularities which such a connection naturally entails. They might inherit family property, in which the giving of leases or making bargains was involved; or the declining health of a wife or child might compel to occasional non-residence beyond the allotted period. These were but a few of the grievances to which the statute subjected a Protestant clergy, in consequence of which it had been regarded as a dead letter, until within the last year or two, when it had been revived by a few trading attorneys, who regarded it as a trading bank upon which they might draw at pleasure. Common informers had therefore been set to work in every part of the kingdom, and 800 actions against defaulting clergymen had been raised to a very large amount. It was urgently necessary that the evil should be checked, and on the 11th of May (1801) Mr. Dickenson moved for leave to bring in a bill for suspending so much of the

statute in question as related to non-residence, and this for the purpose of relieving those clergymen against whom prosecutions had been already commenced. Much debate followed upon the questions of residence, and the right to be given to the clergy of employing themselves in agriculture; but the bill, which merely suspended all proceedings against them for not having resided on their livings, received the sanction of parliament.

In the following year the subject was resumed by Sir William Scott, who brought a bill into parliament on the 7th of April for the amendment of the statute of Henry VIII. It had been enacted, he said, in a spirit of royal resentment, when Henry was impatient for the divorce which the pontiff withheld. In the words of Bishop Burnet, "The king intended by this to let the pope see what he could do if he went on to offend him, and how willingly his parliament would concur with him if he went on to extremities." He (Sir William Scott) questioned the propriety of submitting the punishment of clergymen for non-residence to any but the ecclesiastical courts, and characterized it as a clumsy policy to dethrone the bishop from his ecclesiastical authority, and place the common informer in his stead. After showing the incompatibility of the law with the change of manners and living, and the new position occupied by the clergy since the Reformation, by which they were involved in the temporalities of families and property, he proceeded: "But what above all creates a necessity for new moulding this statute is, the extremely depauperated state of many of the churches and parochial clergy of this kingdom. The statute makes one uniform demand of universal residence, under one uniform penalty; and universal residence cannot be had without universal competency. If all the benefices in the kingdom were equal and competent, an equal obligation enforced by an equal penalty might be applied to them all universally. But the fact is, that the inequality is great, and has greatly increased since the passing of this act, since it is certain that if many benefices have increased in value, many have been comparatively depauperated by the Reformation. He then gave a startling account of the poverty into which the clergy had fallen at the time when Queen Anne granted the first fruits and tithes for their relief, when the number of livings and their revenue were returned to the exchequer. From these it appeared that there were 1071 livings that did not exceed £10 per annum—1467 rated at £20—1126 at £30—1049 at £40—and 844 at £50—giving 5557 livings under £50 per annum. "Since the first returns," he added, "many hundred cures have been returned as of small value—some not more than 20s. or 40s.—so that, there

being about 11,700 and odd livings in the kingdom, about one moiety of the whole were under £50 a year, and upon an average, less than £23 a year." Relief, indeed, had been added to the benefaction of Queen Anne from private benefactions and accidental improvements; but in coming to the gist of the argument, he gave a melancholy statement of the condition of the clergy as it existed in England even at the present period. "It appears," he said, "that if we compute the number of livings under £50 per annum to be, as above, about 6000, a moiety of which are actually under £30 per annum, and if we reckon that they have been since improved by the governors, and by other means, upon an average, two-thirds, which is a very liberal allowance indeed, it follows that there are now 6000 livings in England and Wales that do not exceed upon an average £85 per annum, and that a very great proportion of them are at this time not £30 per annum, and so progressively from £30 to £40, and from £40 to £50."

In this financial and matter-of-fact statement, a rude shock must have been given to the idea so commonly entertained of the wealth of the English church, and the overflowing revenues of its clergy. Making allowance for the proportion of numbers, it will thus be found, that as a body the English clergymen were more scantily endowed than the ministers of the poor and primitive Church of Scotland. Even this comparison also seems to have entered into the calculations of several in England, who were anxious for the more comfortable maintenance of their own churchmen; and this, they thought, might be effected by equalizing all the benefices of the church. Such a plan had even been suggested in parliament; but those who advanced it must have been strangely forgetful of the impossibility of such a Presbyterian parity existing in an Episcopal church like that of England, whose prelates were princes, and who required a princely revenue for the maintenance of their state. As justly and reasonably they might have proposed the restoration of the Puritan Commonwealth, and the renewal of the Solemn League and Covenant. Indignantly Sir William Scott repudiated the idea, and showed by the same statistics how impossible it was to realize it. "Equalize all the clergy," he exclaimed, "and you in effect degrade them all; for it is the grossest of all mistakes that the parochial Church of England is amply endowed. It is demonstrated by a very exact inquirer upon these subjects—Mr. Cove—that if even all the preferments of every species belonging to the Church of England were moulded into one common mass, and thence distributed—if the venerable fabric of the hierarchy was dissolved (a matter not to be effected without a

convulsion and laceration of the civil state of the country, of which no man can foretell the consequences) and its funds parcelled out amongst the parochial clergy—the maximum of an English benefice would be not more than £167 a year; an income by no means adequate, in the present state of the world, to the demands which society makes upon that profession, in point of education, of attainments, of manners, of general appearance in life. As the revenues at present are distributed, the clergy, as a profession, find an easy and an independent access to every gradation of society, and maintain a fair equality, as they ought to do, with the other liberal professions, and the elevation of the highest ranks gives something of dignity to the lowest: alter the mode of distribution, and you run the risk of producing a body of clergy resembling only the lower orders of society in their conversation, in their manners, and their habits; and it is well if they are not infected with a popular fondness for some or other species of a gross, a factious, and a fanatical religion.” The bill which the eloquent speaker subsequently moved in parliament, was designed to rectify the abuses of clerical farming, and enforce the duty of clerical residence, by making the bishops the proper judges and umpires in all such questionable cases, instead of civil magistrates and informers. As such, it comprised the following proposals:—1. An entire amnesty for past neglect where no prosecution had been commenced. 2. Where prosecution had been commenced, an exemption from its continuance, on payment of costs already incurred. 3. On the matter of farming, a liberty given in the cases where they were injuriously prohibited by the ancient statute. 4. On the matter of residence, to give a fair and reasonable allowance of time to the clergyman for the occasions of private life, free from the doggings of any informer, though still subject to the superintendence of his proper superior; to allow an *ipso facto* exemption from all penalties for clergymen bearing certain offices, during the times required for the duties of those offices; to restore the power to bishops to grant licenses for absence, in certain enumerated and expressed cases—which licenses shall protect from the common prosecutor—and in other cases, which cannot be specifically foreseen or provided for, to allow the concurrence and consent of the metropolitan to have that effect. The bill was opposed chiefly on the plea that it would entirely change the constitution of the church, by lodging an enormous power in the hands of the bishops; and that the inferior clergy, rather than submit to such domination, would prefer the strict and antiquated statute of Henry VIII., with all its alleged imperfections. It was prevented, how-

ever, from passing during this session, chiefly through the declarations of Lord Grenville in the House of Lords, that a still larger measure of relief and more ample revenues were designed for the clergy than the present measures contemplated. Notwithstanding this assurance, however, the subject, although repeatedly brought before parliament between 1802 and 1817, in every case failed, or was only partially successful, until the last-mentioned date, when the bill of Mr. Manners Sutton upon the salaries of curates and clerical residence became the law of the church. By this act, 57 Geo. III. c. 99, the salaries of curates were to be determined by the bishop, and their amount to be fixed according to a given scale, corresponding to the population and value of the benefice. Should any complaint arise between the ecclesiastical superior and his curate, the bishop was empowered to determine summarily, upon the complaint of either party. The authority of the bishop was also confirmed in the matter of residence; and he could grant licenses for non-residence upon grounds enumerated in the act, and even upon such other grounds as he judged reasonable, provided that in such cases the license was submitted to the archbishop, and confirmed with his sanction. In enforcing residence, he was commissioned to do it by admonition and sequestration, a disregard of which would deprive the offender of his benefice. The persons exempted from residence remained as they had been before, but the penalties of the non-exempt who were non-resident without license, were—for more than three months’ absence in the year, one-third of the annual value of the benefice; for more than six months, one-half; for more than eight, two-thirds; and for the whole year, three-fourths of the clear annual value; and these fines to be recovered by any one who would sue for them. With regard to the secular occupations of the clergy, the old laws against their taking and holding farms were repealed, the only restrictions being, that they were prohibited from farming more than eighty acres without the written consent of the bishop, and this consent only to be available for the limited term of seven years. But no clerical person was to carry on any trade, or to buy and sell for gain, under penalty of forfeiting the goods thus bought or sold, and all contracts made by them in such trade or dealing were declared to be null and void.

Although so long an interval had elapsed between the moving of Mr. Dickenson’s bill and the final adjustment of the subject, the interests of the church at large, and also of its office-bearers, had not been neglected. Thus, the condition of the clergy of the city of London, in regard to their inadequate salaries, was taken into considera-

tion by parliament in 1804; and in the debate it was shown by Porteus, Bishop of London, that of the fifty livings in the city, the value of the highest was only £200 per annum, and of others £150, while many did not exceed £100. On this occasion a bill was passed, by which the lowest of the livings were raised to £200, and the highest to £366. In 1805, the restrictions upon the universities of Oxford and Cambridge in the purchase of the advowsons of livings were repealed. In 1809, a grant of £100,000 was made to the governors of Queen Anne's bounty, for the purpose of supplementing the revenues of the poorer benefices; and the need of this was shown from the statement, that the operation of the queen's bounty was such as to require a period of forty years to raise all the poorer livings up to the scanty amount of £50 per annum. This statement was subsequently confirmed by the fact, that nearly thirty years afterwards there were still 297 benefices that fell short of that sum. When this grant of £100,000 was made, it was the intention of government to continue it annually until all the livings in the church should be raised to £150, or at least £100 a year. During the debate several humbling statements of the prevalence of clerical non-residence were adduced by Lord Harrowby, by whom the claims of the poorer clergy to a more liberal support were advocated. From these it appeared that not one-half of the parishes of England and Wales possessed resident incumbents. These absentees also consisted of the richer clergy, who possessed the means of travelling or non-residence, while their duties at home were supplied either by their poorer neighbouring brethren, or by curates who were hired for the duty at the cheapest possible rate. "The present practice," said his lordship, "according to which the non-resident incumbents of livings of £50, £60, or £70 a year, put into their own pockets a portion of this wretched pittance, and left much less than the wages of a day-labourer for the subsistence of their curates, appeared to him far from creditable to the parties concerned, and calculated to degrade the character of the church. Many instances came within his own knowledge in which parishes were served for £20, or even for £10 per annum, and in which, of course, all they knew of their clergyman was the sound of his voice in the reading-desk or pulpit once a week, a fortnight, or a month." Well might he state, as he did on this occasion, that curates are the actual pastors of about half the parishes in the kingdom! The inquiry, however, was not useless; the working clergy were gradually better remunerated; so that, soon after the close of this period, it was found that the average salary of curates exceeded £80.

Amidst this shaking of the old-established abuses of the church, previous to their removal or amendment, the subject of tithes was not lost sight of, and in 1816 a series of parliamentary discussions on this vexatious question commenced, which at a later period was to produce important results. The sudden reaction from war to peace, and the mercantile disasters occasioned by the change—the high price of provisions, owing to a defective harvest, and the growing numbers of the unemployed had made this a year of bitterness, in which every ground of popular complaint was a subject of angry appeal, if not of downright riot. In such a season, the levying of tithes was complained of by the agricultural community, from whom scarcely a petition for relief issued without this grievance occupying a very prominent place. On the 16th of May, therefore, the matter was brought before parliament by Mr. J. Christian Curwen, who directed the attention of the House of Commons to the obnoxious manner in which questions about tithes were settled. In ancient times suits for tithes had been instituted in the ecclesiastical courts, and all controversy about amount, exemption, or composition, tried by a jury, at the instance of the Court of King's Bench. This mode, however, had been changed toward the close of the seventeenth century, and cases of this nature had been decided by the Court of Exchequer, without a jury, since 1687. Another evil for which a remedy was sought, was the disposition to extend tithes, which was now becoming prevalent. "I am afraid," said Mr. Curwen, "it has occurred too often that the tithe-gatherer has of late entered the garden of the poor cottager, and demanded the tithe of his half-dozen gooseberry bushes, and perhaps a solitary apple-tree." On the motion of the chancellor of the exchequer, it was agreed to appoint a committee to inquire into the expediency of enabling proprietors of tithes to grant leases of them under proper regulations.

Another important subject which occupied the attention of the legislature was that of church-extension. On the one hand the rapid growth of the population, and on the other the increase of dissenters, were enough to alarm the friends of the established order of things with the fear that the Church of England would soon cease to be the church of the nation. An apprehension of this kind, also, which half a century earlier would have met with little sympathy, was now aggravated by the thought that matters since the above-mentioned period had been amending, and that the church in its present state was fully worthy of encouragement and support. Among other instances, this fact had been shown by the efforts of private contribution for the building of new churches to meet

the growing demand; and it was high time that government should take the enterprise into its own hands, or at least aid those generous endeavours, which of themselves were inadequate. The amount of what might be required for the purpose was explained by Lord Liverpool, on the 15th of May, 1818, after the bill for granting the sum of £1,000,000 for church-extension had passed through the commons, and was moved for a second reading in the House of Lords. The demand, his lordship stated, was not for new churches to accommodate the whole population, but only for such as could not be accommodated after every reasonable deduction had been made. In this category of exclusion were comprised all children under a certain age; all who were too old or infirm to attend public worship; all who in every parish were necessarily detained at home by household affairs while the rest were at church; and all who belonged to dissenting congregations, who formed a large share in the population of every parish. After these deductions, his lordship thought that the wants of the country would be sufficiently met by providing church accommodation for a third of the people in country parishes, and a fourth of those in great towns. It was in the latter, however, that aid was chiefly needed. In London it was calculated that five additional churches would be required for the parish of Marylebone, four for that of St. Pancras, four for St. Leonard's, Shoreditch; four for St. Matthew's, Bethnal Green; three for Lambeth, and in similar proportion for the other metropolitan parishes. In the reign of Queen Anne, when London did not possess half the amount of its present population, parliament had voted fifty new churches to be erected, but of these, as yet, only nine had actually been built. Of the other cities, it appeared that Manchester would require an addition of seven churches, Sheffield of four, Stockport of four, Birmingham of three or four, and other towns of one, two, or three. The parliamentary grant of £1,000,000, now demanded, would suffice for the erection of 100 churches; but with aid from subscriptions, it was probable that from 150 to 200 would be built. Even in Liverpool alone, where the population had increased during the present reign from a small number to 100,000, six churches had been wholly built by subscription, in addition to the eight which it previously possessed. The bill was passed, and the management of the money intrusted to an ecclesiastical commission. From this liberal parliamentary movement, so much in contrast with the previous apathy of government, the beneficence of individuals and corporations in the necessary work of church-extension received a fresh impulse, which has been going on to the present day.

While the church was thus rising again in its strength, its interests had been more than once brought into collision with dissenterism: the awakening, indeed, was of an antagonistic character, which could not fail to express itself against the rival movement that had roused it into life and action. It was the old high-church dislike of Puritanism under its revived form of Methodism; and as the latter could multiply its preachers to an indefinite amount, and cared more for the zeal than the learning or intellectual qualifications of its missionaries, the regular clergy were indignant that uneducated men and hard-handed mechanics should be invested, like themselves, with the authority of spiritual instructors, or that such instruction should in any case be followed in preference to their own. Whether there had been a clerical consultation previous to the attack made by Lord Sidmouth upon this privilege of Methodism is not known, but it is certain that after the commencement he was encouraged to proceed by letters from several of high station in the church. On the 9th of May, 1811, he moved for leave, in the House of Lords, to bring in a bill for amending and explaining the acts of William and Mary, and of the 17th of George III., so far as they applied to dissenting ministers. These constituted the toleration act, by which dissenting preachers, instead of being obliged to subscribe to the thirty-nine articles, were merely to make a declaration of their being Christians and Protestants, and of their general belief in the Scriptures. But the question was, Who were the persons entitled to the benefits which the legislature bestowed upon this condition? Within the last thirty or forty years, a novel interpretation, his lordship declared, had been put upon these acts. At most of the quarter-sessions, where the oaths were taken and the required declarations made for enabling a person to preach in a chapel or meeting-house, it was now understood that any person, however ignorant or profligate—whether he descended from a chimney or a pillory—was at liberty to put in his claim, and make his subscription before the justices, and demand a certificate which authorized him to preach, and exempted him from the militia, and from many civil burdens to which his fellow-subjects were liable. But these acts had also been differently understood in different counties, and in some of them the magistrates admitted no one to qualify unless he showed that he was actually in holy orders, or pretended holy orders, and the preacher or teacher of a congregation. This, he thought, was according to the real meaning of the toleration act, and it was upon this principle that his bill was framed. He should propose, he said, that in order to entitle any person to a qualification as a preacher, he

should have the recommendation of at least six reputable householders of the congregation to which he belonged, and that he should actually have a congregation willing to listen to his instructions. With regard to preachers who were not stationary but itinerant, he would propose that they should be required to bring a testimonial from six householders, stating them to be of sober life and character, and their belief that these persons were qualified to perform the office of preachers. At this early stage of the bill, Lord Holland rose to protest against its principles. One fundamental error, he declared, ran through the speech that had been delivered, namely, that the right of any man to teach and preach was derived only from the permission of the government under which he lived. For his own part, he held it to be the inalienable right of every man who thought himself able to instruct others, to do so, provided his doctrines were not incompatible with the peace of society. A similar view was expressed by Lord Stanhope, after which the bill was read for the first time, and ordered to be printed.

Great was the alarm and indignation of the dissenters when the nature of this bill was publicly known. They saw that under the guise of elevating the position of their clergy, and adding to their respectability and efficiency, it struck at toleration itself, the *magna charta* of their religious liberties. As such it was a matter of vital interest not to the Methodists alone, but to all who were without the pale of the Establishment; all parties of dissenters were unanimous in opposing it; and during the short interval that elapsed before the second reading, such a shower of petitions were presented against the bill, that the noble mover was left without support. Of this he complained, and of the misunderstanding that prevailed of its true meaning, at the second reading on the 21st of May; and to show the necessity of such a bill, he made statements respecting the ignorance and incompetence of certain of the dissenting clergy, that savoured more of illiberality than candour. They were such stories as have been found or fabricated against the clergy of every age, country, and communion. He adduced, amongst others, the case of a person who applied to the magistrates of Stafford for a license. One of the magistrates inquired if he could sign his name: his reply was, he had not come there to write. The magistrate told him, if he would read the act he would find what was required, and he asked him to read aloud: to this the applicant replied, he did not come there to read. He was then interrogated if he could write. His reply was, No; he was not ashamed to own it. Could he read? No. The magistrate observed how improper it

was for him to claim a certificate of license, who could not read the Bible, the doctrines of which he was obliged to preach. . . . To this the other, with unblushing countenance, replied that the magistrate knew nothing of inspiration. His lordship explained anew the several provisions of the bill, answered the objections that had been brought against them, and declared his adherence to the principle of the toleration laws, which were never meant, he said, to allow any one to assume to himself the privilege of a preacher or teacher without some testimonials of his fitness for such an important office. He was answered by the Archbishop of Canterbury in a more tolerant spirit. His grace declared his full conviction of the right of separatists from the National church to profess their own systems of religious opinion. The bill in question, he perceived, had two objects in view—that of producing uniformity in construing the act of toleration, and that of rendering dissenting ministers more respectable, by excluding unfit persons from the office. These objects in themselves were laudable; but as the dissenters were the best judges of their own concerns, and as it appeared, from the great number of petitions on the table, that they were hostile to the bill, he thought it would be unwise to press the measure against their inclination. This Gamaliel counsel was followed in the same moderate spirit by other members, who, however desirous of improving the dissenting churches, saw neither the benevolence nor the good policy of a measure by which the improvements were to be thrust upon them perforce, and against their loudest deprecations. Lord Erskine, after stating that if the bill had been postponed a few weeks longer, ten times the number of petitions would have been poured in against it, declared his opinion that the bill itself was unnecessary. If a man taught sedition or blasphemy from the pulpit, there were existing laws to punish him. With respect also to the exemptions granted to ministers, the law was sufficiently clear. If a man was a teacher of religion, and had no other avocation, he was the pastor of a flock, from which it was the meaning of the toleration act that he should not be taken to serve in civil or military offices; but if this were not the case, he could claim no such exemption. Not a single member was found to support the bill, and the second reading was negatived without a division.

Although thus laid to rest for the time, the subject was revived in the following year, but in a spirit more favourable to the dissenters. During the debate upon Lord Sidmouth's motion, it had been stated that different decisions respecting the meaning of certain clauses in the act of toleration had been given by the justices at the

quarter-sessions of different counties, and it was felt that a legal exposition of them was necessary to prevent any future disagreement. Accordingly, on the 10th of July, 1812, Lord Castlereagh introduced a bill into the commons "to repeal certain acts, and amend other acts, relating to religious worship and assemblies, and persons teaching or preaching therein." Its particular objects were the following:—To settle the question as to the right of dissenters to be licensed as religious teachers—to repeal the penalties of an old statute upon Quakers, and others who conscientiously refused to take the oaths—to repeal the five-mile act and the conventicle act, passed in the time of Charles II., and instead of the latter, merely to require that dissenting places of worship should be registered in the bishop's or archdeacon's court; that during the time of divine service they should not be locked, bolted, or barred; and that the preachers or teachers should be licensed according to the act 19 Geo. III. c. 44. Mr. William Smith, the chief leader of the dissenting interest in the house, on moving an additional clause, "to continue the exemptions now enjoyed by the toleration act, without requiring a fresh oath," declared that the unanimity in favour of this bill was a propitious omen of the increasing liberality of the times. He thought that it would remove the practical evils of which the dissenters had to complain, although it did not recognize their great principle that the civil magistrate had no right to interfere in matters of religious opinion. It removed the arbitrary discretion of magistrates, and required no other oath than that of allegiance. As an act of toleration, he added, it was certainly the most complete which had hitherto been passed in this country. The bill having passed in all its stages through both houses without opposition, became the statute 52 Geo. III. c. 155.

The spirit of toleration in religious matters being now better understood and more favourably recognized, an attempt was made in the following session to extend it to the Unitarians, who had hitherto been obnoxious, as much perhaps for their political practices as their theological opinions. But the days of Priestley and the Birmingham riots were now forgot, or only remembered with compunction and shame. Accordingly, on the 5th of May, 1813, Mr. William Smith moved for and obtained leave to bring in a bill for removing certain penalties imposed by an act of 1698 upon persons impugning the doctrine of the Trinity. By this statute, the denial of the doctrine was punishable, for the first offence, by incapacity to hold any office or place of trust; and for the second, by incapacity to bring any action, or to be guardian, executor, or legatee, or purchaser of lands, together with imprisonment

for three years without bail. No objection was offered by government to the bill, and after a third reading it was passed by the lords, on the 22d of July. Thus the triumph of toleration was supposed to be complete, when the Unitarian might hold and give utterance to his opinions without incurring the danger of imprisonment and outlawry. On the effect of this measure in reconciling the contending claims of the civil and spiritual authorities, consistently with the guardianship of religion and the liberty of the subject, Mr. Justice Coleridge makes the following observation:—"It should seem now, therefore, that the temporal courts have no jurisdiction directly in cases of heresy, but they may still have to determine collaterally what falls within that description; as, in a *quare impedit*, if the bishop pleads that he refused the clerk for heresy, it is said that he must set forth the particular point, for the court having cognizance of the original cause, must, by consequence, have a power as to all collateral and incidental matters which are necessary for its determination, though in themselves they belong to another jurisdiction."

But the greatest of all demands for toleration, and something still more than toleration, was that which proceeded from Popery, and which continued to vex and agitate the long reign of George III. from the commencement to the close. Still, as at the Revolution, the Roman Catholics were incapable of holding office either under the crown or in corporations; they were disqualified for sitting in parliament; and they could not exercise the elective franchise, even if the oath of supremacy should be tendered to them. Their hopes had been sanguine that these civil disabilities would be removed in consequence of the union with Ireland, when so large an increase of citizens eligible to equal rights and privileges would be incorporated into the empire; and upon the strength of these hopes, the Irish Catholics themselves had been among the firmest supporters of the union. They had also for their friend and advocate Mr. Pitt, whose influence in the imperial parliament was certain to be exerted in their behalf. But on the other side there was the tenacity of George III., the very principle of whose political existence was to yield not a single step to Popery, and who, whatever might be the movements of his ministers in its behalf, was certain to arrest them by his decisive veto. The whole of this portion of the religious history of England, therefore, as far as the great question of Catholic emancipation is concerned, resolves itself into a long series of struggles between the clamant Roman Catholics, supported by the statesmen of the day, on the one hand,—and the king, backed by the larger portion of the Protestant feeling of his subjects, on the other. Into

these conflicts, which have been from time to time noticed in previous chapters, we cannot here enter; we can scarcely even find space incidentally to advert to them, except for the purpose of illustrating their final results. Catholic emancipation is the great religious event of the nineteenth century, and, as such, it constitutes in itself a voluminous history; but its outline is so generally understood, as to dispense with the necessity of recapitulation.

After Mr. Pitt had resigned office in 1801, in consequence of his inability to influence the king in conceding to the claims of the Roman Catholics, and his resumption of office in 1804, the following session was selected as the opportunity of moving in favour of Catholic emancipation, which was done in the commons by Mr. Fox, and in the upper house by Lord Grenville. On this occasion allusion was made to the expectations of the Irish Catholics; but it was for the purpose of stating that although no guarantee in any form had been given for the realization of these hopes, they had still a just and reasonable foundation. "No authorized assurance was ever given," said Lord Grenville, "no promise ever made to the Catholics that such a measure would be the consequence of the union; but it is no less true that, by the arguments of those who supported the union, by the course of reasoning in-doors and out-of-doors, hopes were given that the subject of Catholic emancipation would be more favourably considered here than it was ever likely to be in the parliament of Ireland." The chief arguments by which the motion was opposed were, that neither the time nor the present state of things gave a favourable opportunity for urging it; and after long and repeated discussion, it was lost in the lords by a majority of 178 against 49, and in the commons by 336 against 124. Even Pitt was obliged to confess that the season was inexpedient, and on that account to give the measure his decided negative. In the following year (1806), when Fox succeeded to the premiership by the death of Pitt, the Roman Catholics were jubilant with hope; but Fox in office was compelled to take the same view of the subject which circumstances had forced upon his illustrious rival. This he confessed, in a strain of peevishness, when he was questioned in the house respecting the change which his sentiments were said to have undergone upon the subject of emancipation. "So far," he said, "as I am concerned in this question, whenever it comes under discussion I shall be perfectly ready to state my opinion; and all I think it necessary to say as to my future conduct, is to refer to a consideration of my past. I cannot, however, hesitate to state, that if any gentleman were to ask my advice as to the pro-

priety of bringing forward the Catholic claims at present, I should recommend him to take into consideration the prospect of success, and the greater probability of succeeding this year or the next; at the same time to bear in mind the issue of last year's discussion." Even when the next year arrived, it did not bring with it a more favourable opportunity. So felt Lord Howick, when he moved, on the 5th of March (1807), for leave to bring in a bill for securing to all his majesty's subjects the privilege of serving in the army or navy, upon their taking a prescribed oath; and for leaving them, as far as convenience would admit, the free exercise of their respective religions. It was like the toleration granted by James II. to dissenters in general, in order that the Roman Catholics might enjoy its benefits. On this occasion Lord Howick and the ministers not only lost the bill, but their places also, for on their refusal to sign an agreement that they should propose no further concessions to the Roman Catholics, the king dismissed them from office.

In 1808, the demand for Catholic emancipation, which had now become an annual subject in parliament, was moved by Mr. Grattan in the commons, and Lord Grenville in the lords. On this occasion Grattan so far forgot the spirit of the church he advocated, as to offer a concession, to the following effect:—"That in the future nomination of bishops, his majesty may interfere and exercise his royal privilege, by putting a negative upon such nomination; that is, in other words, to say, that no Catholic bishop shall be appointed without the entire approbation of his majesty." Such was the first mention of the veto, afterwards so distinguished a principle in its application to the troubled state of the Church of Scotland. Although it was thus made so prematurely, Grattan did not tender it without what seemed sufficient authority, in the form of a paper drawn up by Dr. Milner, the accredited agent of the Romish hierarchy, in the following terms:—"The Catholic prelates of Ireland are willing to give a direct negative power to his majesty's government with respect to the nomination of their titular bishops, in such manner that, when they have among themselves resolved who is the fittest person for the vacant see, they will transmit his name to his majesty's ministers; and if the latter shall object to that name, they will transmit another and another, until a name is presented to which no objection is made; and (which is never likely to be the case) should the pope refuse to give those essentially necessary spiritual powers, of which he is the depository, to the person so presented by the Catholic bishops, and so approved of by government, they will continue to present other names, till one occurs which is agreeable to both

parties, namely, the crown and the apostolic see." This apparently was warrant enough for the offer of the champion of Irish Popery, but so it did not appear to his constituents: they were alarmed at the thought of such a surrender, and made haste to revoke it, in a meeting of bishops, which was held at Dublin in September. There it was declared in full conclave, and unanimously, as "the decided opinion of the Roman Catholic prelates of Ireland, that it is inexpedient to introduce any alteration in the canonical mode hitherto observed in the nomination of the Irish Catholic bishops, which mode long experience has proved to be unexceptionable, wise, and salutary." This authoritative declaration not only brought both friends and enemies to a pause, but produced a temporary division in the Roman Catholic Church of Ireland; for while the better classes adhered to the veto as their only means of admission to places accordant with their birth, the lower classes, who had no such claims or prospects, received the manifesto of their prelates as an infallible authority.

After this failure of the veto, the appeals in behalf of the Roman Catholics continued to be repeated in 1810-11 upon the old footing, but with the former results; they were defeated by large majorities, as often as they were brought forward. And for this result, indeed, the violent measures of the applicants themselves had prepared the way; for while they were humbly and constitutionally petitioning parliament, they had been organizing the means of carrying their purpose by force and violence if petitions should fail. This was the Catholic Committee, consisting of the discontented of every class in Ireland, who assembled in Dublin for the redress of religious grievances, and who carried on their deliberations with the authority of a parliament and the secrecy of a conspiracy. The government contented itself with merely watching their proceedings, notwithstanding the violence of their debates and the dangerous character of their resolutions, until the committee had adopted measures which made longer forbearance impossible. In January, 1811, it issued a circular letter to the Roman Catholics of every county in Ireland, showing the necessity of increasing the representatives for the effectual management of a petition which was now in progress, as the united voice of the whole country, and recommending that ten persons should be selected for the management of the said petition in each county, who should all become members of the great Dublin committee. In this manner all Ireland was to be kindled into a flame, from Dublin, its centre and focus. It was ominous also of its power for resistance and aggression, that Daniel O'Connell was already a member of the committee. On

learning this formidable purpose, the Irish government started to action with a haste as reprehensible as its former quiescence, and orders were issued from the authorities of the Castle to the sheriffs and chief magistrates of the counties, denouncing the committee as an unlawful assembly, and commanding them to arrest and imprison its members, or hold them to bail. As soon as tidings of these orders arrived in England, they formed an important subject of parliamentary discussion, but both in the lords and the commons they were justified as not contrary to law. In the meantime, the magistracy were on the alert in Ireland, but to little purpose, for the enemy with whom they had to deal were as cunning and vigilant as they were daring. Two magistrates were sent from the Castle to disperse the Catholic Committee; but on being told that this assembly was only a private meeting, they retired without doing anything. When the committee assembled in full conclave, notwithstanding a previous proclamation denouncing such meetings, and holding out the usual penalties of disloyalty and treason, nearly 300 members had the hardihood to meet on the 19th of October (1811), in Fishamble Street Theatre, Dublin, while the police magistrates did not venture to disperse them until they had finished their business, and were on the point of retiring. Another similar meeting was held at the same place on the 23d of December; but although it consented to disperse at the requirement of a magistrate, it was only to re-assemble in a tavern the same evening, for the purpose of drawing up a requisition for a general meeting of the Roman Catholics of Ireland; and this meeting did take place three days after, in Fishamble Street, notwithstanding the means of the authorities to prevent it. These were significant omens of coming events, let the decisions of parliament be what they might. Those who could read the signs of the times began already to perceive that there was no middle course between a civil war and Catholic emancipation.

In the following year the effects of these symptoms became apparent: the votes against the Roman Catholics were less numerous in parliament, and the speeches less rancorous; while the condition of the king, who was now laid aside, made it no longer necessary to consult his personal feelings upon the disposal of so momentous a question. To this last circumstance Canning alluded when he supported the motion that the House of Commons should go into committee to take into consideration the laws imposing civil disabilities on his majesty's subjects professing the Roman Catholic religion. "While there existed in the breast of the sovereign," he said, "an insurmountable obstacle to the entertainment of

this question—an obstacle not of opinion but of conscience—the only alternative left to a public man who held the opinions which I profess to have holden on the question was, either to push those opinions into action at all the hazards to which such a course would be liable—at the hazard of one calamity too dreadful to be contemplated without awe and terror (a calamity under the infliction of which we are now actually suffering, and to which, therefore, I may now without impropriety allude)—or manfully to interpose between the conscience of the sovereign and the agitation of this question, at whatever risk of unpopularity or of misconstruction. This latter was the course which I thought it my duty to adopt." The motion for inquiry was rejected in the House of Lords by a majority of 174 against 102, and in the commons by 300 against 215. In a few months after, the assassination of Mr. Perceval in the House of Commons loosened the bond by which the friends of the king had been united in their resistance to the Catholic claims; and the opportunity thus afforded was not neglected. On the 22d of June, accordingly, Mr. Canning moved in the commons "that the house would, early in the next session of parliament, take into its most serious consideration the state of the laws affecting his majesty's Roman Catholic subjects in Great Britain and Ireland; with a view to such a final and conciliatory adjustment as may be conducive to the peace and strength of the United Kingdom, to the stability of the Protestant establishment, and to the general satisfaction and concord of all classes of his majesty's subjects." On the morning when this resolution was moved, intelligence had arrived of a general or aggregate meeting held in Dublin on the 18th, at which angry sentiments and dangerous resolutions had been freely uttered; but Canning laid hold of this incident as a sample of the general irritation in Ireland, and an argument for conciliation and concession. His motion was successful, and by a startling majority of 235 to 106; while in the lords, a similar motion of the Marquis of Wellesley was negatived by a majority of *one*! Nothing but the dissolution of parliament, which occurred a short time afterwards, released the commons from the pledge to which they were thus committed.

During the interval between the dissolution of the old parliament and the meeting of the new, the popular discussion of Catholic emancipation had increased both in wideness and intensity, and amidst this feeling the subject was resumed on the 26th of February, 1813. The motion was made by Mr. Grattan that the house should resolve itself into a committee, for the purpose expressed in Canning's resolution, and it was carried by a majority of 264 to 224. The greatest

difficulty in the way of Catholic emancipation was the allegiance of the Roman Catholic clergy to a foreign and alien ecclesiastical ruler; but it was stated by Mr. Plunkett, that even on this head such security could be given by them as would not interfere with the essentials of their religion. "What this security may be," he said,

HENRY GRATTAN.

"provided it shall be effectual, ought, as I conceive, to be left to the option of the Catholic body. I am little solicitous about the form, so that the substance is attained. As a veto has been objected to, let it not be required; but let the security be afforded either by domestic nomination of the clergy, or in any shape or form which shall exclude the practical effect of foreign interference. Let them be liberally provided for by the state; let them be natives of the country, and educated in the country; and let the full and plenary exercise of spiritual authority by the pope, which forms an essential part of their religious discipline, remain in all its force. Leave to their choice the mode of reconciling their principles, and stand not upon the manner, if the thing is done." After the house had gone into committee, the emancipation bill was brought in by Mr. Grattan, on the 30th of April. It proposed that, instead of the oaths of allegiance, abjuration, and supremacy, and the declaration against transubstantiation and the invocation of saints, a new declaration and oath should be required of the Roman Catholics. It proposed to provide that no Roman Catholic should hold the office of lord high-chancellor, or lord-keeper, or lord-commissioner of the great seal of Great Britain, or of lord-lieutenant, or lord-deputy, or other chief governor of Ireland, or any office in the Established Churches of England and Ireland,

or of Scotland, or in the ecclesiastical courts, or the universities or colleges, or schools of royal or ecclesiastical foundation, or should exercise any right of presentation to ecclesiastical benefices, to advise the crown in such exercise. It also proposed to enact that no person born out of his majesty's dominions, except those born of British or Irish parents, should be capable of exercising any episcopal duties or functions within the United Kingdom, under the penalty of being liable to be sent out of the kingdom. All this was ample concession, and thus much perhaps would have been granted; but the bill displeased all parties alike, who complained that too much or too little had been demanded. But the chief objection was of the latter character, and it proceeded both from the Roman Catholic clergy and laity, whose spiritual authority was limited, or whose political aspirations were held in check by the provisions of the bill. On its having passed the second reading, and being committed for a third, Mr. Abbot, the leader of the opposition, moved a clause to prevent Roman Catholics from sitting in either House of Parliament; and as this was carried by 251 votes against 247, the bill was withdrawn, as a thing that had lost both savour and substance. Thus ended the hopes of emancipation for the present. Had the Irish Roman Catholics imitated the moderation of their English brethren, a different result might have been obtained, but the rebellious and revolutionary spirit manifested throughout by the former made the compliance of government impossible. This was shown after the loss of Mr. Grattan's emancipation bill, at a meeting of the Catholic board at Dublin, where a committee was actually appointed to consider the propriety of addressing the Spanish cortes, with a view to obtain their interposition in behalf of the Roman Catholics of Ireland! The temperate conduct of the British Roman Catholic board, which had protested against the violence of their Irish brethren, and been ready to welcome the concessions of the bill, was not without its influence; as, before the close of the session, an act was passed through both houses, repealing the penalties imposed by the 21 Charles II., and conferring upon the Irish Catholics, while resident in Great Britain, the immunities granted to them by the Irish act of the 33 Geo. III.

The history of Roman Catholic discontent in Ireland, for several years after this emancipation movement, may be summed up in a few sentences. O'Connell was now assuming that ascendancy which he contrived to maintain to the end of his life. The Protestants and Papists in Ireland, under their rival associations of Orangemen and Ribbonmen, became more prompt in quarrel and disturbances, which were rife over the whole

country, through their hostile meetings and encounters; and although parliament enacted severe laws for their suppression, they still continued to increase in frequency and violence. Even the court of Rome, which was alarmed by the fierce spirit of Irish Romanism, and counselled moderation, was answered by O'Connell and his followers with remonstrance and refusal, and even with contempt. The Catholic board had established its permanent sitting in Dublin, where it levied taxes, and ruled with more than parliamentary authority; and when suppressed by government, the members constituted it anew, under the name of the Catholic Association. In this state of things it was not wonderful that, for a short time at least, the majorities against their claims, which had been rapidly diminishing, again rose to nearly the mark of their former level. In 1817, however, a concession was made, which showed that the progress of the influence of Popery was on the increase, and finally would prevail. Ten years earlier, when Lord Howick, the secretary for foreign affairs, brought a bill into parliament for enabling Roman Catholics to hold the higher commissions in the army and navy, the proposal was so premature, and withal so obnoxious, that it sufficed for the overthrow of the ministry that entertained it. But now a bill was quietly passed through parliament, which, under the title of "An act to regulate the administration of oaths in certain cases to officers in his majesty's land and sea forces," conceded those privileges which Lord Howick's bill had so unsuccessfully demanded. The question of Catholic emancipation might, therefore, be once more brought forward, and accordingly it was introduced into parliament by its veteran champion, Grattan, in the session of 1819; but although it was defeated in the commons, it was only by a majority of two, and in the lords by 147 to 106.

Over the events which signalized the next ten years of the movement, the national convulsions it produced throughout the three kingdoms, and the progress by which its strength was accumulated for the last great and successful effort, we must pass without notice—and this the more, because they passed before the view, and are deeply recorded in the memories of the present generation. Long had the result been contemplated as an inevitable political necessity, which resistance had only retarded, and further delay would render more dangerous; and it was thought better to concede gracefully, and with a show of free-will, what could otherwise be only maintained by a civil war or a fresh conquest of Ireland. So evident was this necessity, that the Protestant declaration to that effect was signed by the Dukes of Leinster and Devonshire, and by seven marquises, twenty-six earls, eleven viscounts, twenty-

two barons, two counts, twenty-two baronets, fifty-two members of the House of Commons, and upwards of two thousand gentlemen of other ranks—all of them personally interested in the condition of Ireland. No symptom of yielding, however, had yet appeared either in the Duke of Wellington or Mr. Peel, the heads of his majesty's government. Even in 1828 they still continued, as they had previously done, to oppose the Catholic demands, and to declare that their resolution was still unchanged; and these declarations had the effect of lulling the Protestantism of the nation into a state of most confident security. It was evidently the profound cunning of two master-spirits, who were not liable to be frightened or taken at unawares, and who, in this way, were preparing for the sudden and overwhelming onset. Only a few days before the meeting of parliament, in February, 1829, it was whispered abroad that they intended to recommend to parliament some concessions to the Roman Catholics; but the report of such an abandonment of principle seemed too astounding to be credible. When parliament opened, however, the royal speech announced a fresh movement in behalf of Catholic emancipation, although in dark and equivocal language. In the first place, it denounced the Catholic Association, and recommended its suppression, as being "dangerous to the public peace, and inconsistent with the spirit of the constitution; which keeps alive discord and ill-will amongst his majesty's subjects; and which must, if permitted to continue, effectually obstruct every effort permanently to improve the condition of Ireland." On this stumbling-block being removed, his majesty recommended a deliberate consideration of the whole condition of Ireland, and a review of the laws which imposed civil disabilities on his majesty's Roman Catholic subjects. "You will consider," it was added, "whether the removal of those disabilities can be effected consistently with the full and permanent security of our establishments in church and state, with the maintenance of the Reformed religion established by law, and of the rights and privileges of the bishops and of the clergy of this realm, and of the churches committed to their charge."

In fulfilment of this plan of action, the Catholic Association was first assailed and easily dissolved: even the most ardent adherents of Popery were desirous for its dissolution, as an instrument that had served its purpose, and would be needed no longer. It had grown in its strength until it had cowed the government into submission, and now that emancipation was about to be granted, it might safely go to rest, or be sent into its grave. On the 5th of March, the same day on which its extinction was decreed by both

houses without opposition, Mr. Peel moved in the commons that "the house resolve itself into a committee of the whole house, to consider of the laws imposing civil disabilities on his majesty's Roman Catholic subjects." The necessity of their repeal he founded upon three propositions:—First, matters cannot continue as they are; the evils of divided counsels are so great, that something must be done, and a government must be formed with one common opinion on the subject. On this head he adverted to the divisions that had prevailed in parliament about Catholic claims, and gave a summary of these during the course of the last ten years. In 1819, there was a majority of two against the question; in 1823, there was a majority of six in its favour. In 1821, a bill was passed by a majority of nine; in 1822, the bill for the admission of Roman Catholic peers into the House of Lords was passed by a majority of five; in 1824, the question was brought forward; in 1825, a bill was passed by a majority of twenty-one; in 1826, there was a general election; and in 1827, the present House of Commons decided against the question by a majority of four, but in the last session they decided in its favour by a majority of six. The second proposition of Mr. Peel was, that a united government once formed, must do one of two things—it must either grant further political rights to the Catholics, or recall those which they already possess. But, thirdly, to deprive the Catholics of what they already had, would be impossible, or at least, would be infinitely more mischievous than to grant them more, and therefore, no course remained to be adopted but concession. He reminded the house of the ominous year 1793, when the French war broke out, and when the era of concession commenced. The session of that year had opened with a recommendation from the throne to take the grievances of the Catholics into account, and a bill was immediately passed for the removal of many of the disabilities—but passed with such haste and so inconsiderately, that to this day we were reaping some of its bitter fruits. Until he saw a bolder man at the head of affairs than Mr. Pitt—until he saw a more Protestant parliament than that of 1793—he could not think we should be safe in time of war with a government determined on continued resistance; nor could he think but that, at the opening of a war, we might feel ourselves obliged to recede from our former declarations, and to grant the prayer we had before refused, and that in a manner to which, at a more favourable opportunity, we should be unwilling to consent, and with much less security than we might obtain on such an occasion as the present. Since, then, the existing state of matters was one which could be suf-

ferred to exist no longer—since the time had come when the government must adopt one decided rule of policy or another, and must resolve as a government either to concede or to resist—and since a government determined to resist could not carry on the affairs of the country without aggravating all the evils and dangers which were to be removed—it followed that no course remained but to settle the question by adjusting a system of concession on the one hand, and security upon the other.

After having argued upon the necessity of the measure, and the impossibility of avoiding it, Mr. Peel stated his plan of Roman Catholic emancipation, which he and his colleagues had for some time been preparing. But the particulars of this bill, and the discussions it occasioned, belong to another department of this work, where they have been fully detailed. To Popery it was but the beginning of the end, as the events of the succeeding period of our history will sufficiently indicate. A church whose ultimatum is *all or nothing*—whose discipline is perfect and obedience implicit—and which can be moved as one man, whether for stealthy surprise or open battle—was too much for Protestantism, divided not only in itself but against itself, with a large portion arrayed on the side of the enemy, and zealous for its success. The event inaugurated a new religious history of Great Britain, of which even the first chapter was found to be of sad and portentous significance.

While Britain was thus deemed to have compromised its national character as the great bulwark and chief representative of Protestantism, it is gratifying to find that during the whole of this period of struggle, its religious sincerity had been manifested by nobler indications than no-Popery riots and anti-Popery petitions. The awakened zeal of the present century had gone forth in the right direction, by its efforts for the instruction and conversion of heathendom at large; and not merely the commerce, but the Christianity of Britain, was to be carried to every shore, and the knowledge of it made patent in the language of every people to whom it was conveyed. It was now an age of Bible societies, and of missions, the origin, progress, and achievements of which can only be briefly announced in the present division of our history. It is well, however, that this subject is so familiarly known to every class of society, that a few suggestive notices are sufficient for the purpose.

The obvious duty of disseminating the knowledge of the one true religion, although recognized by Protestant and Roman Catholic alike, would naturally be fulfilled by each in a different form; for while the former would recognize the Scriptures as the only authority and guide, the

latter would insist upon their meaning only as the church had decreed it to be understood and explained by its authorized interpreters. The Church of Rome, therefore, had never been sparing of her missionaries, without whom all other appliances were reckoned to be in vain. The Protestant church might have been expected to be equally zealous in the distribution of the Bible, maintaining, as she did, that this was the sole authority, and was sufficient of itself as the guide to light and salvation. But in this obvious duty the Protestant world had been strangely remiss—and Britain most of all. When the Bible had been translated into the English tongue, the achievement seemed to be reckoned sufficient; and after a long interval, when it was rendered into other languages, it was only into the Celtic dialects, for the instruction of the Welsh, the Irish, and Highlanders of Scotland—the subjects of the British crown, whom it was unsafe to neglect. Several institutions, indeed, there were during the eighteenth century in England, such as the Society for Promoting Christian Knowledge, and the Society for the Propagation of the Gospel in Foreign Parts; but while their operations were both languid and limited till the commencement of the present period, there was none which had for its work the distribution of the Scriptures exclusively, until 1780, when the Naval and Military Bible Society was established, whose operations were confined to the soldiers and sailors belonging to the British service. And then succeeded that world-pervading institution, the British and Foreign Bible Society. It was founded in 1804. Its exclusive duty was to circulate the Scriptures both at home and abroad, and the Scriptures in their native integrity, without note or comment, while the version from which translations were to be made was the authorized version of England. All classes of Christians, whether churchmen or dissenters, were invited to co-operate, and made eligible for membership; while the operations of the society were to be conducted by a committee of thirty-six laymen, six of them being foreigners resident in London or the vicinity, while of the other thirty, half were to be members of the Church of England, and the other half members of the other denominations of Christians. Such was the origin of the British and Foreign Bible Society, which grew so rapidly, that at the close of this period it had in Great Britain and the colonies 318 auxiliaries, 438 branch societies, and 1827 Bible associations; while in connection with it there were fifty-four societies on the continent of Europe, four in India, and one national society in America, this last having 645 auxiliaries. Commensurate with this great increase, and the extensive sphere of its operation, was the liber-

ality of the Christian public in supplying it with the means of action. Its expenditure during the first twenty-seven years of its existence amounted to £1,779,973, while the greatest sum expended in one year, which was 1820, was £123,547. Its issues of the Scriptures during this period amounted, in whole copies of the Bible, to 2,757,256, and of the New Testament, to 4,267,471. Of these forty-four were reprints, five were re-translations, and seventy-two were versions of languages and dialects that had never before been printed.

It was not, however, without struggle and opposition that the British and Foreign Bible Society thus went onward; and the first symptoms of hostility arose among the members and supporters themselves. The catholicity of the plan was as yet too startling, and men of different denominations could not at first meet cordially upon one platform, and co-operate in a common sphere of action. The learned bibliologists complained that the society's translations were versions of the common standard, irrespective of the improvements that had been made upon the text by the researches of modern literature. Many churchmen objected to the principle of issuing the *Bible* alone, and wanted the prayer-book to be circulated also, as was done by the Society for Promoting Christian Knowledge; and this demand originated a keen controversy for years between the ministers of the evangelical and the high-church parties, the latter maintaining that though men of different religious persuasions may unite for any merely charitable purpose, yet for a religious purpose the case is different, as there must be some point or other on which agreement is impossible. It was answered that all were at one in recognizing the truth and supremacy of the Scriptures; but to this the high churchmen replied, that unless we interpret the Scriptures there is no meaning in them, and that the very parties who disseminated them, derived from them many different and even opposite conclusions. But the keenest controversy, and the one most important in its consequences, arose from the complicity of the Bible Society in the circulation of the Apocrypha along with the Scriptures in Roman Catholic countries upon the Continent. By a fundamental law of the society, the Bible alone was to be circulated by its agency, and with this Protestant precaution the public were satisfied that no countenance would be given to the errors of Rome by the dissemination of the apocryphal writings. Finding, however, that few of the Roman Catholic countries would accept a Bible without this portion, which was reckoned of equal authority with the rest, the managers of the British and Foreign Bible Society not only assisted

with their funds those foreign societies that issued the Apocrypha, and furnished them with unbound Bibles by the thousand, into which these books were to be incorporated, but had also published various editions of the Bible in which they were actually included. Such was the result of their spirit of toleration carried to its extreme: they broke faith with their constituents and concealed the deed; and afterwards, when charged with their offence, they attempted to deny, to palliate, or to justify it, according to the necessity of the moment, or the spirit in which they were confronted. The debate which it kindled, still remembered as the "Apocrypha Controversy," had its chief seat in Scotland, and for its principal leader Dr. Andrew Thomson, the distinguished minister of St. George's Church, Edinburgh, who, without exception, was the ablest controversialist of the day. It was an unfortunate dissension in the religious world, but not wholly without its benefits; for it not only warned men of the unsoundness of mere political expediency as an agent in the dissemination of divine truth, but confirmed the forgetful or wavering minds of Protestants upon the correct canon of Scripture, and the authority of its rule as a guide in every question of religion. In consequence of the exposure which this controversy occasioned, many withdrew, especially in Scotland, from the British and Foreign Bible Society, but only to establish independent societies of their own, which went onward with all the freshness and vigour of a renewed youth, and thus strengthened and benefited the common cause. The chief of these, the Edinburgh Bible Society, comprises in membership all who are disposed to circulate the Scriptures, being Protestants, and who profess their belief in the doctrine of the holy Trinity; and by these conditions it debars those who sympathize in any way with the errors of the Romanists, as well as anti-Trinitarians, whose admission into the original institution occasioned such umbrage to its orthodox supporters. The Edinburgh Bible Society has nearly 100 associations throughout Scotland, and its expenditure at the close of this period amounted to about £4000 annually. Independently of its extensive circulation of the Scriptures in English and Celtic, this society was distinguished during the present period by the lawsuit it maintained against his majesty's printers for Scotland, who held a monopoly for printing Bibles, and who insisted on preventing the importation of those which were printed beyond the bounds of Scotland. The patentees, indeed, obtained an interdict to that effect; but from the spirit that had been awakened, they found themselves obliged not only to improve the printing, but to lower the price of their subsequent editions

of the Bible. The full success, however, of this appeal, which finally triumphed, was not effected until the following period.

Before that revival of the missionary spirit, which was one of the great religious characteristics of the present age, little had been done by the Protestant world at large, and least of all by Britain. In this, it must be confessed, they were utterly put to shame by the zeal and devotedness of the missionaries of Rome, who not only compassed sea and land to make one proselyte, but attested their sincerity by every kind of self-sacrifice, and often by martyrdom itself. This was especially the case with the Jesuits, for whom no land was too remote or insignificant, no dangers too formidable; and whose labours were signalized not by solitary conversions of individuals and families, but of tribes and whole nations. It seemed, indeed, as if the charge brought by Roman Catholics against Protestantism was justified, when they alleged that it could not fulfil the apostolic duty of going forth and preaching to all nations, as it had neither received the apostolic commission, nor the power of working miracles to attest its divine authority. The chief interruption of this dreary and most culpable monotony in the Protestant church occurred in the case of Cromwell, who, after making England renowned among the nations, was anxious to make it equally famed as the great metropolis of missionary action. His plan is thus detailed in Bishop Burnet's *History of his own Times*:—"Stoupe told me of a great design Cromwell had intended to begin his kingship with, if he had assumed it. He resolved to set up a council for the Protestant religion, in opposition to the congregation *de propagandâ fide* at Rome. He intended it should consist of seven councillors, and four secretaries, for different provinces. These were, the first—France, Switzerland, and the Valleys; the Palatinate and the other Calvinists were the second; Germany, the North, and Turkey were the third; and the East and West Indies were the fourth. The secretaries were to have £500 salary a piece, and to keep a correspondence everywhere; to know the state of religion all over the world, that so all good designs might be by their means protected and assisted. They were to have a fund of £10,000 a year at their disposal for ordinary emergencies, but to be further supplied as occasion should require it. Chelsea College was to be made up for them, which was then an old decayed building, that had been at first raised to be a college for writers of controversy." Such was Cromwell's scheme; and we know that he was neither an impracticable theorist nor indolent dreamer, but a man of resolution and action, with whom to plan and to do appeared but the

self-same thing. But he passed away and the purpose was buried with him, so that we hear little of the missionary spirit until near the close of the eighteenth century, except vague aspirations, and a painful feeling that some great duty was still left undone. And yet British missionary societies had for a considerable time been in existence, although little more than their names had appeared. There was the Corporation for the Propagation of the Gospel in New England and the adjacent parts in America, instituted so early as 1649. There was the Society for Promoting Christian Knowledge, instituted in 1698. There was the Society for the Propagation of the Gospel in Foreign Parts, incorporated in 1701. There was the Society in Scotland for Propagating Christian Knowledge, established in 1709; and finally, there was the Methodist Missionary Society, that originated in 1792. The existence of these was at least a confession of religious duty—and perhaps might be accepted as the continuing promise of performance.

The Baptist Missionary Society for the Propagation of Christianity, with whose origin the revival of modern missionary enterprise in England was coeval, dates from October, 1792. In that year and month, a few Baptist ministers met at Kettering, Northamptonshire, where they constituted themselves into the above-mentioned society, and on opening a subscription list, the whole sum contributed amounted to £13, 2s. 6d. This was a disheartening inauguration; but no sooner was the purpose of the institution generally known, than liberality was excited and funds began to accumulate, so that they were soon able to send out to India two missionaries, in the choice of whom they were peculiarly fortunate, as one of them was the Rev. William Carey. The character of the Hindoos at first sight appeared so gentle and compliant, and the enterprise so promising, that in 1799 four additional missionaries were sent out to India by the Baptist Society, and the whole party established their headquarters at Serampore on the Hooghly, where, for the purposes of economy and mutual protection, they found it necessary to live together as one family or college. Their commencement was a dispiriting one, chiefly owing to the instability and duplicity of the Hindoos; but this was compensated by the diligence and success of Mr. (afterwards Dr.) Carey as an oriental linguist, and in February, 1801, he completed and printed a translation of the New Testament into the Bengalee language. In 1806 the missionaries issued proposals for publishing the Scriptures in fifteen of the eastern languages; and this most arduous enterprise in the difficult work of translation was at last successfully accomplished under Carey's able superintendence. In the meantime, however,

the British government in India had taken the alarm at these attacks upon the religion of the country, which they feared might lead to discontent and rebellion among the natives, and this dread was manifested by sharp restrictions upon the operations of the mission; but these only served to extend its sphere of action, by inducing Dr. Carey and his coadjutors to extend their views beyond the limits of Bengal, and establish new stations in different parts of India, the chief of which was Calcutta. So highly was the mission, however, understood and valued at home, that when a fire in 1812 destroyed the missionary printing office at Serampore, and its large stock of Bibles in the different languages of the East, a subscription that was raised in Britain, of £10,600, in the short space of seven or eight weeks after the news arrived, more than covered the loss. In the meantime, new missionaries from the Baptist Society had arrived in India, chapels were built, and schools for native children established; while, notwithstanding the jealousy of the British government, the opposition of the Brahmins, and the tenacious character of the Hindoo superstitions, a spirit of inquiry was excited among the reflective minds of the country, which both at the time, and afterwards, was manifested by a growing dislike to Brahminism, and greater respect for Christianity. Dr. Carey, who had been the life of the mission, died in 1834, but his immense labours as a philologist, in the translation of the Scripture, are beyond a parallel, either in ancient or modern times. This will be seen from an enumeration of the versions into which he translated the Bible, comprising thirty-nine languages and dialects of the East, either by his own personal labour or the assistants he superintended. And yet his education in England had been confined to a village school, and he had been bred to the humble occupation of a shoemaker! Whatever may be thought of the accuracy or excellence of so many translations effected by one man, it is certain that he not only laid the ground-work and simplified the task of succeeding translators, but left them an example of industrious perseverance, which his successors in the same field have happily had the wisdom to imitate. In this way the Baptist Missionary Society had the distinguished honour of commencing the great work of conversion in India by British agency—a duty so binding upon Britain above every other country. During the present period of our history, the London Missionary Society, the Church Missionary Society, the Methodist Missionary Society, and the American Board for Foreign Missions entered into the same field, and established numerous stations over the widely-extended and populous districts of India. Like

the Baptists, also, they addressed themselves to the christianizing of the half-learned and over-refined population, chiefly by the establishment of schools, and the dissemination of science and

literature, under which silent mode of aggression it has been thought the native superstitions will be gradually undermined and overthrown, as a necessary prelude to the introduction of Christianity. Of these schools, chiefly taught by Brahmins themselves, and natives trained by missionaries for the purpose, there existed at the close of this period about 300, containing 18,000 pupils.

Of still wider character and more ample resources was the London Missionary Society, established in 1795, composed of Protestants of different denominations; and its first attempt was directed towards the South Sea Islands, to which the voyages of Captain Cook had imparted a new interest. Accordingly, in the following year, twenty-nine missionaries were embarked on board the *Duff*, a vessel purchased by the society, and safely landed, most of them at Tahiti, and the rest at the neighbouring islands. But from the ignorance which as yet prevailed of the difficulties of the missionary career, and the few worldly allurements it held out to men of education, the greater part of these adventurers were either untaught mechanics, or unexperienced young men, who had little else than zeal to recommend them to the office. In 1798 the *Duff* again sailed from England for the South Sea Islands, with twenty-nine missionaries, five of whom were ordained ministers, but the ship

was captured by the French, and the purpose of the voyage frustrated; and during the same year, the missionaries at Tahiti having entered into a quarrel with the natives, the greater part of them were obliged to leave the island, and retire to New South Wales. Their places were filled by a fresh arrival in 1800. But still the mission was so unsuccessful, that one of its most hopeful symptoms was the request of Otoo, the Tahitian king, to be taught the Hebrew language! and who, on being dissuaded from such a ridiculous attempt, was induced to learn to read and write the language of his countrymen, in consequence of which acquirements, he penned an encouraging letter to the Missionary Society at London. At length the missionaries left the island in 1809, despairing of doing any further good, and went to New South Wales, as their predecessors had done, but returned two years after, in consequence of a new and encouraging event. Otoo, better known by the name of Pomare, was willing to become a Christian, and besought them to rejoin him. He soon after announced his adoption of the creed of the strangers, and the royal example was followed by multitudes. A coalition of the Tahitian chiefs who adhered to the old idolatry was formed against the converts and their king, which in 1815 broke out into a civil war; but Pomare, in whose character the intelligent Christian was ingrafted upon the energetic barbarian, first defeated the rebels in battle, and afterwards won them over by his clemency. In consequence of this, idolatry was banished from the island; and the horrid practices which it encouraged, such as cannibalism, human sacrifices, the murder of infants, and the licentious societies called *arreeoy*, in which sensualism was reduced to a system, were abandoned with loathing and remorse. The suddenness as well as completeness of the change astonished the friends of missions in Britain, but a parallel could be found to it in the conversion of our Anglo-Saxon ancestors from the savage creed of the North, by the preaching of the Roman missionaries in the seventh century; while the mode in both cases was the same—the king and aristocracy were first won over, in which case the people implicitly followed. In the train of Christianity came intellectual improvement and the arts of civilization; and the population which had been diminished as well as debased by the profligacy and cruelty of the old creed, increased in numbers, while they continued to improve in the knowledge and practice of religion. Such was also the case in the neighbouring islands, Eimeo, Huahine, Borabora, Raiatea, Taha—over the whole of which churches and schools were erected, and even native missionary associations formed; and on one occasion the collections of these Tahitian societies for the propagation of

the gospel among the heathen, not in money, but in cocoa-nut oil, which they sent to England for sale, was worth not less than £1877. New laws were necessary for the new character of such a people; and accordingly, in 1819, Pomare, now the Numa of his country, produced a code of legislation, which was ratified by the thousands whom he assembled to hear it read; and after this consent, it was printed and posted up in every district, that no one might remain ignorant of his civil and religious duties.

Of the other operations under the London Missionary Society among the islands of the Pacific, we can only give a passing notice. The same ship that brought the first missionaries to Tahiti in 1797, landed ten of their number at Tongataboo, one of the Friendly Islands; but after a series of adventures and hardships, chiefly occasioned by the civil wars, they were obliged to abandon Tongataboo in the beginning of 1800, and retire to New South Wales. Different, however, was the result of a less promising attempt in Aitutaki, one of the Hervey (or Cook's) Islands, where two native teachers were left in 1821, by Mr. John Williams, a missionary, on his way to New South Wales for the recovery of his health. For twelve months the labours of these teachers appeared hopeless, when at the end of that period the whole island seemed to be moved by a sudden universal impulse; the chiefs, accompanied by their people, repaired to their new instructors, and in a few days Christianity was professed over the whole of Aitutaki. A similar event occurred two years afterwards in Atin, which was visited by two missionaries, accompanied by six native teachers. The young king of the island, moved by their persuasions, became a Christian, and not only was followed by his subjects in that quarter, but those of the two neighbouring islands, Mitiaro and Mauti, which were subject to his authority. Like Edwin of Northumbria, in the days of the Saxon heptarchy, this young sovereign went from island to island with the proclamation, "I am come to advise you to receive the word of Jehovah, the true God, and to leave with you a teacher to instruct you;" and their reply was, "We will do it; we will receive the good word that we may be saved." Raratonga, the most populous and important of the Hervey Islands, was the next to be visited by the English missionaries; and although the progress of conversion was less rapid in this quarter, it was perhaps the more steady on that account, so that Raratonga afterwards became the most important missionary station in the whole of that insular group.

While thus the attention of the Christian world was arrested, and a new impulse given to missionary enterprise, by the wonderful success

which had attended these efforts in the South Seas, the London Missionary Society had almost at the same period directed their attention to South Africa, and stations were formed in various parts of that extensive colony, for the instruction of the numerous tribes who are known under the generic names of Hottentots, Bushmen, and Caffres. But notwithstanding their exertions, which were afterwards so ably seconded by the institution of the Glasgow Missionary Society, that in 1821 devoted itself exclusively to the aborigines of this important part of the wide empire of Great Britain, the result has not equalled that of Tahiti and the Hervey Islands; on the contrary, the progress of the missionaries of both societies among these numerous tribes has been slow, and the conversions doubtful, although the amount of good which has actually been accomplished was well worth the labour and the sacrifice. During this period, also, the large island of Madagascar was visited by the agents of the London society, for the purpose of establishing a mission; but since 1818, when the attempt was commenced, the progress has been both slow and disheartening, owing to the barbarism of the natives, and also to political obstacles and disturbances. The king, Rudama, indeed, had been favourable to the introduction of Christianity as the means of civilizing his people; and the establishment of schools and the printing-press in Madagascar had given promise of missionary success, when, unfortunately, Rudama died, in 1828, and was succeeded in the government by Ranavalona, one of his wives, by whom all his attempts were discouraged and reversed; even Christianity itself was made a capital crime, and its converts punished with death, which has in many cases been inflicted in a savage, revolting fashion. As yet, no better prospect has been afforded in behalf of new Christian missions to Madagascar.

The other operations of the London Missionary Society during this period may be summed up in a few words. The importance of India as a great field of British Christian enterprise was so apparent, that in February, 1804, the society commenced operations upon it, which were prosecuted with such vigour, that fourteen missionary stations were established in the four presidencies of Madras, Bengal, Agra, and Bombay, before the close of 1830. The zeal of Dr. Carey and the exertions of the Baptist mission had, indeed, left little to do in the work of translation, yet still there was something to be effected, in the production of more correct as well as new versions of the Scriptures in the languages of India, and this duty was ably discharged by these officials of the London Society. But a sphere of missionary exertion and enterprise still more important, but hitherto overlooked or un-

attempted, was China—that populous world within itself, as well as birth-place and cradle of almost every art and science which European intellect has matured. It was a world, however, inclosed within itself, by a rampart more formidable than its famous wall—by that jealousy of foreign, and especially of European intrusion, which defies innovation, and keeps every stranger aloof. This national feeling, also, was doubly intense against the entrance of Christian teachers, from the recollection of their old preceptors, the Jesuits, and the intrigues with which these ambitious men had disturbed the country for their own selfish purposes. A cautious advance upon such a territory was necessary; and the Rev. Robert Morrison, who was sent thither by the society in 1807, was obliged to enter as a Chinese, with a yellow frock and heavy clogs, a pigtail at the back of his head, and long nails upon his fingers, and to eat his food with chopsticks. But this accommodation was unsuccessful either to disguise or conciliate, and his greatest safety consisted not only in abstaining from preaching, but in his holding the office of Chinese secretary and translator to the English factory in China, to which he was appointed soon after his arrival. And yet, though thus circumscribed, he effected much both for present missionary operations, and for the future welfare of China. He not only mastered its most difficult language, notwithstanding the jealousy with which the natives were wont to guard it from the knowledge of strangers, but translated into it the New Testament, and afterwards, with the aid of the Rev. William Milne, who had arrived as his coadjutor, the Old Testament also. Thus the whole Bible was embodied in a language used by nearly a third part of the human race, and made available for the first time for their spiritual instruction. For such a work to penetrate into the heart of China was hopeless for the present; its circulation would have instantly been arrested, and its distributors punished with death; but along the coast of China, and in those neighbouring islands and coasts where the Chinese abound or their language is understood, it was plentifully spread, and, it may be hoped, also heedfully perused. There must have been cases not a few, in which, independently of that subtle intellect for which the people are distinguished, a mere feeling of curiosity would have been enough to prompt both perusal and inquiry, although no immediate fruits were perceptible. Of the other undertakings of the London Missionary Society, the chief were two, so diverse in their nature that they stand out as perfect contrasts, the one being to the poor negro slaves of Demerara, in 1807, and the other to the Ionian Islands, in 1818. The first, which was successful, had a fearful termina-

tion in the negro revolt of that colony in 1823, and the melancholy death of Mr. Smith, who was unjustly accused and imprisoned as its instigator; but the second had little effect in weaning the Ionians from the degrading superstitions of the Greek church, to which they obstinately cling as their best national distinction. A community that already considers itself Christian is the most hopeless of all subjects for missionary conversion.

Although the London Church Missionary Society, consisting of members of the Church of England, was instituted in 1799, it was not until 1804 that it commenced its public career; and in this case, Sierra Leone, in Western Africa, was selected as the sphere of occupation. It was indeed a difficult field, where the missionaries had not only to encounter the heathenism of the natives, but the angry hostility and corrupting influence of the European slave-dealers, who knew that in Christianity there was a power to make the negroes "free indeed," and therefore scarcely fit commodities for the slave-market. All this hostility, combined with a wasteful climate, made the office of a missionary at Sierra Leone a protracted living martyrdom; and while their houses were fired over their heads to drive them from the country, its pestilential diseases made such rapid work, that their band was only kept up by fresh immigrations of labourers, who were scarcely sufficient to replace the old. But their more than Spartan devotedness was requited in the abolition of the slave-trade, and the establishment of Sierra Leone as a colony of liberated negroes, while they were cheered with the results of their own labours in the growing civilization of the people at large. This last, however, was a slow and precarious work among those poor Africans into whose souls the iron of slavery had entered, and who had witnessed the Christianity of the West Indies. Before the close of this period the Church Missionary Society had commenced missions in Malta, Greece, Turkey, Asia Minor, Egypt, Abyssinia, India, Ceylon, and New Zealand.

In this short sketch we have necessarily omitted the mention of other missionary societies, whose operations were less successful or of a more limited extent. We can also only allude in passing to the Scottish Missionary Society, instituted at Edinburgh in 1796. Its sphere of operation during this period was the Susoo country in Western Africa, Tartary, India, and Jamaica. With the same brevity we can only advert to the Glasgow Missionary Society, which was established in the same year as that of Edinburgh, and which, commencing with Africa in general, afterwards exclusively confined its operations to Southern Africa, and especially to Caffria.

In concluding this department of our subject, we can bestow nothing more than a passing notice upon the slow progress and scanty success of these missions at large, compared with the extensive means of operation and the numerous agents who were employed in the work. Very different had it been with the missions of the Romish church, whose converts came in crowds instead of units, so that the turning of a whole people to Christianity was often the work of a few years, or even months. But such conversions were too often the substitution of one set of symbols for another, instead of a vital change of creed and character; and it was easy to win the assent of a barbarous people to crosses and holy water, to imposing clerical costumes and the pageantry of religious processions. These required neither study nor sacrifice, and might be adopted as matters of faith at a moment's notice; and hence the facility with which, especially under the skilful management of the Jesuits, conversions of idolaters by the thousand in Paraguay, India, and China had been effected by the festival of a saint or the celebration of a few masses. Far otherwise, however, was the paraphernalia of a Protestant missionary. He had no mysterious signs or sprinklings to banish the invisible powers of darkness, control the elements, banish diseases, and invest the convert with every blessing both for earth and heaven; no ritual of statues, music, and incense, to lead captive the senses of an unreflective crowd; no easy passport that with a touch and a word could purify the conscience-stricken sinner from his guilt, and waft him from the agonies of a remorseful death-bed to the felicities of paradise. He was no prophet, no oracle, no thaumaturgist. With even the indications of the priestly office he was seldom arrayed, so that he could neither daunt with the terrors of the black gown, nor allure with the gentleness of the white surplice. On the contrary, he came a helpless stranger among savages, craving their hospitality and protection, while his first duty was uncompromisingly to denounce the religion in which they believed, and the national or social sins that formed the chief element of their existence. Nor was this ungracious commencement the worst. The brute idolater must be a man before he could become a Christian. He must learn the faith which he was required to adopt, and the duties by which his new life was to be regulated; and for this purpose, he must not only deny himself, but unlearn himself, and begin a moral and intellectual existence where all had to be commenced anew. Even when the convert repared to the missionary for baptism, his willingness to become a Christian was not enough; he must also show that he understood the creed which he was

willing to adopt, and had undergone the moral change which its profession required him to evince, before the sealing rite could be administered. Was it wonderful, then, that Protestant missionary triumphs were so slow and so scanty, compared with those of Popery? It was an unpalatable lesson which the friends of missions in Britain were obliged to study and lay to heart, when they found so many hopeful undertakings frustrated, or only signalized by delusive promises of conversion, which had been too hastily accepted. It was also a painful experience which the missionaries themselves were obliged to learn in humility, and sorrow, and self-abasement. But the experience doubled their diligence, and sent them to those firm foundations upon which the spiritual regeneration of a people should be built. Their work, therefore, though slow, has been sure, and the present generation is beginning to witness the success of efforts which their fathers were ready to abandon in despair. The seed-

lings of nations, we doubt not, have already been planted by British missions, in which a single century may suffice for a rich and lasting development.

The history of the Scottish church during this period fully corresponded with that spirit of revival which had been going onward so irresistibly in England; and the change was manifested in the growing ascendancy of evangelical principles, and a more determined resistance to the practice of patronage, which the authority of the state had never succeeded in imposing upon the popular will or choice. But this progress will be best understood in the history of that remarkable event, the Disruption, by which the succeeding period of our history was signalized, and to which, therefore, we postpone this portion of our narrative. Such a revolution was too complex to be understood, as well as too important to be detailed, in the form of a mere episode or appendage.

CHAPTER XVIII.—HISTORY OF SOCIETY.

FROM THE PEACE OF AMIENS (1802), TO THE DEATH OF GEORGE IV. (1830).

Progress of British commerce—Its condition at the peace of Amiens—Its progress during the succeeding war—Statistics of exports, imports, and shipping—Obstacles to our commerce arising from bad harvests—The Berlin and Milan decrees of Bonaparte—Rash mercantile speculations in South America—Bankruptcies of 1811—Rise of the agricultural community during the mercantile depressions—Hopeful prospects of our commerce at the close of the war—Its condition from 1816 to the close of this period—Amount of exports and imports—Improvement of the trade of Ireland by the union—Rapid growth of our commercial and manufacturing cities—Progress of our manufactures—Manual superseded by mechanical agencies—Introduction of steam power into spinning, weaving, &c.—Machine-breaking riots—Increase of manufactured produce by the application of machinery—Steam applied to navigation—Earliest attempts to construct a steam-boat—Experimental trials in England, France, America, and Scotland—Henry Bell—His first steam-boat, the *Comet*—Its complete success—Rapid progress of steam-boat navigation—Its application to sea voyages—Time saved and speed gained by the invention—Progress of steam-boat navigation in America—Improvements upon inland navigation and carriage—New canals—Road-making—Telford and Macadam—Erection of bridges—Iron and suspension bridges—Growing evils arising from mercantile wealth—Popular discontent and riots—Increase of poverty and crime—Remedies adopted—Factory laws—Proposal of a national system of education—Establishment of Bell and Lancaster schools—Sunday schools—Infant schools—Educational statistics of the period—Establishment of mechanics' institutions—Society for the Diffusion of Useful Knowledge—Continuing necessity for the improvement of the working-classes—Mode of living among those employed in cotton factories—Their destitution and vices—Increasing numbers of the unemployed—Need of emigration on a large scale—Emigration changed into a national scheme of colonization—Social progress—Introduction of lighting by gas—Its origin and progress—Other indications of social progress—New spirit of travelling at the return of peace—Effects of travel on the national character and manners—Costume of the period—Its changes and final settlement—Its ultimate simplicity—Female dress—Military costume—Science and scientific men of the period—Chemistry—Astronomy—Ethics and metaphysics—Theology—Political economy—History and historical writers—Prevalence of novel writing during this period—Universality of its subjects—Principal novelists—Female novelists—Principal writers of this class—Commencement of a new era in English poetry—Its characteristics—Crabbe and Gifford the successors of Cowper—The Della Cruscan and Lake schools of poetry—Wordsworth—His theory of poetry—His earliest poetical attempts—The obloquy he encountered and overcame—Coleridge—His singular career and genius—Sir Walter Scott—Popularity of his poetry—Southey—His multifarious genius and productions—Campbell—Lord Byron—Byron's unfortunate training—Temporary ascendancy of his poetry—Its perverse moral and intellectual tendencies—Shelley—Keats—Hogg—Allan Cunningham—Thomas Moore—Poets of inferior note—Poetesses—Hannah More—Joanna Baillie—Mrs. Hemans—Miss Landon—Criticism—Prevalent need of a higher critical standard—Establishment of the

Edinburgh Review—Mode of its management—Its ascendancy as a literary tribunal—Establishment of the *Quarterly Review*, *Blackwood's Magazine*, and the *Westminster Review*—High character of the periodicals of the period—Newspapers—Their importance and influence—Progress of the fine arts—Architecture—Principal architects of the period—Architecture as applied to public structures and private buildings—Music—Its stationary character during the present period—Preference given in England to the music of Germany and Italy—Statuary—Flaxman, Chantrey, and Westmacott—Painting—Its encouragements during the present period—Eminent portrait-painters—Sir Thomas Lawrence—Historical and poetical painters—Painters of domestic life—Landscape and general painters.

THE peace of Amiens, which held forth such promise of lasting tranquillity, and was welcomed by Britain with such popular triumph, was but a passing gleam of sunshine, and the prelude of a renewal of the tempest in still greater violence; and from 1803 to 1815, a war was to rage over the whole of Europe such as had been unparalleled for ages, and the expense of which was mainly to be borne by British wealth and industry. It was now, therefore, that the benefits of its commerce were to be tested, and the energies of the "nation of shopkeepers" put to the proof. How had their traffic prepared them for a contest under which mightier kingdoms were successively to succumb! The prosperous result was a full answer to the question. The commerce of Britain was too strong for the best legions of Europe; its industrial energy and resources shivered both the sword and sceptre of Napoleon. The mercantile history of the country, therefore, during the thirteen years of struggle, forms a most important portion of the history of the period. But upon so ample and so complicated a subject, all that we can afford is a general view, embodied in a few brief statements.

The unfavourable harvest of 1799 had been so remarkable, as to occasion it to be called in popular language "the year of the dearth," and the fearful scarcity and high prices of grain continued until 1801, when relief was brought by a harvest of moderate abundance, and the re-opening of the Baltic, which permitted the importation of corn from Russia; so that the prices in the corn market fell at first to almost one-half of their previous amount, and at the close of the year to nearly one-third. During the following year—the year of peace—the spirit of the nation was revived, its commercial confidence increased, and all was in readiness to resume its traffic upon a larger scale. The number of vessels, and their tonnage, that entered inwards and cleared outwards in Great Britain in the year 1802, according to the published tables, was the following:—

INWARDS.			OUTWARDS.		
Vessels.	Tonnage.		Vessels.	Tonnage.	
British,...	10,347	1,378,620	British,...	10,282	1,345,621
Foreign,...	5,407	780,155	Foreign,...	5,626	804,880

In 1803, when the war was resumed, the tonnage of ships built and registered in the United King-

dom during that year, amounted to 135,692 tons, and the whole of our mercantile navy consisted of 20,893 vessels, including 2825 belonging to the colonies, giving a tonnage, according to measurement, of 2,167,860 tons.

But the subject becomes more intelligible to general readers when we state the official value of the imports and exports, which was given for three years as follows:—

	IMPORTS.	EXPORTS.
1801	£31,780,262 ..	£35,264,650
1802	29,826,210 ..	38,300,980
1803	26,622,696 ...	28,500,174

In this change between the exports of the two last years, we can perceive the immediate effects produced by the resumption of hostilities. The effects upon our mercantile marine also were, that 112,819 tons of foreign shipping were introduced into our carrying trade, to the lessening of our own to the amount of 173,900 tons.

In 1804 the harvest turned out to be very deficient, that of England and Wales showing a falling off, not less than from a fourth to a third. In consequence of this, the price of wheat, which in March was 49s. 6d., had risen at the end of that year to 86s. 2d.; barley, from 22s. 9d. to 43s. 10d.; and oats, from 19s. 6d. to 26s. 11d. But the foreign trade of the country was already recovering from the depression occasioned by the renewal of war, so that the imports of this year were valued at £27,819,552, and the exports at £32,626,050. In 1805, in consequence of the fears of an unfavourable harvest, the price of wheat rose in August to 98s. 4d.; but a better crop having been produced than was expected, the average price of wheat subsided by the close of the year to 78s. Still there was a dearth of grain, in consequence of the scanty harvest of the preceding year; and the natural effect of this deficiency was, to produce demands for higher wages on the part of the working classes, and "strikes" until their demands were fulfilled. Amidst this depression, however, there was no perceptible decrease in our foreign trade, as the imports bore the official value of £28,561,270, and the exports £31,020,061. Of these exports, more than two-thirds were British and Irish produce. The manner in which they were distributed, shows the relative amount of our foreign commerce in the different quarters of the world. Of the real, not official value of these exports, there were sent—

To foreign Europe, ...	£13,025,676
To the United States of America, ...	11,011,409
To the rest of America, ...	7,771,418
To Asia, ...	2,904,584
To Africa, ...	756,060

The year 1806 was a momentous era in the history of British commerce. There were serious apprehensions of a defective harvest; and while these gloomy anticipations prevailed, the Prussian government, under the control of Napoleon, issued a proclamation forbidding the entrance of British ships into any of its ports and rivers. As this threatened the loss of our Baltic trade in corn, the price of wheat rapidly rose from 74s. 5d. to 84s., and thus continued until the promise of a better harvest lessened the panic. But towards the close of the year, Bonaparte issued his notable Berlin decree, proclaiming Great Britain and its isles in a state of blockade. His chief annoyance had been our commerce, which furnished to an almost boundless extent the sinews of war to those nations that had courage to resist him. The blockade itself was an absurdity in one who had no naval power to enforce it, and its only effect could be, the injury of our markets upon the Continent wherever his power extended. No immediate effect, however, was experienced by the decree; for though our exports to Europe fell short by £2,000,000 during this year, the defect was more than compensated by an increased demand for our goods in other quarters. The contest between France and England was now to be a warfare of mercantile prohibitions, seizures, and confiscations. British property in foreign countries was seized; vessels of neutral powers carrying British merchandise were arrested, brought into French ports, and condemned; and a system of search for prohibited articles was set on foot over the markets of the Continent. On the other hand, the British ministry in the beginning of the following year retaliated, by ordering that all neutral vessels, trading from one hostile port to another with enemy's property, should be seized; and finding this order generally evaded, and the Berlin decree enforced with increasing rigour, they issued further orders in November, by which France, and all the countries under its dictation, were proclaimed to be in a state of blockade in turn, and all vessels liable to seizure that were found trading with them. In this way, the neutral trade was crushed and annihilated amidst such a hostile collision. Not to be outdone, Bonaparte, on the 17th of December, published his Milan decree, by which, not only Britain and its islands were declared in a state of blockade, but also all its colonies and dependencies in every part of the world. Hitherto, the United States of America had hoped to monopolize the carrying trade between Britain and the rest of Europe; but dis-

appointed in this expectation by the decree of the British ministry, which made all vessels trading between the hostile countries liable to seizure, they laid an embargo upon their own vessels, and prohibited all traffic with France and England alike.

In 1808, the commercial difficulties of Britain were such as might have filled the most sanguine with dismay. The defective crop of the preceding year was followed by one more defective still, so that the price of wheat, which at the former season had amounted to 66s., had now risen to 92s. There was no prospect of the importation of foreign corn, as the Baltic was closed against British commerce; and of all the European nations, none but Sweden was open to our traffic. Every other commodity necessarily became high-priced, as well as corn, and there was a prospect of scarcity in every article of European produce required as raw materials for our manufactures, or as naval stores. This dearth and the prospect of its continuance, gave rise to an adventurous spirit of mercantile speculation, and for this a hopeful outlet was promised in South America, by the emancipation of the Spanish colonies from the control of the mother country. Into this quarter of the world, accordingly, the whole tide was directed, and that, too, with a violence proportioned to the restrictions which had been opposed to it in Europe through the Berlin and Milan decrees. Such, indeed, was the inundation, that more Manchester goods were sent thither in a few weeks, than had been consumed during the twenty previous years; in the city of Rio Janeiro warehouses could not be found to contain them, so that whole cargoes had to lie heaped upon the beach, exposed for weeks to the chances of weather and theft; and not only necessary articles, but those of the highest luxury and refinement, were sent to a people who had no demand for them, and could not use them. "Elegant services of cut glass and china," says the narrative, "were offered to persons whose most splendid drinking vessels consisted of a horn or the shell of a cocoa-nut; tools were sent out having a hammer on the one side and a hatchet on the other, as if the inhabitants had nothing more to do than to break the first stone that they met with and then cut the gold and diamonds from it; and some speculators actually went so far as to send out *skates* to Rio Janeiro!"¹ During this year, while the exportations to the United States had diminished to less than a half of their former amount, those to the rest of America had more than doubled. In the following year, the market of Britain was glutted in turn with importations from the foreign countries that had become impatient of the mercantile restraints imposed by

¹ Macculloch's *Principles of Political Economy*, p. 329.

France, in consequence of which their prices fell, and the spirit of hazardous speculation was abated. But it was in 1810 that the mercantile reaction was most strongly felt. The overstocking of the South American market from which a profitable return was impossible, the speculations in grain during the previous scarcity, the absorption of ready money and the decay of credit—evils that had been accumulating and growing to a height, were now to produce their natural effects; and these were manifested in the depreciation of paper securities, and a more alarming amount of bankruptcies than had been known during the preceding years. Their number amounted to 2314, of which 26 were banking houses. Nor was Britain alone in the calamity; the other countries which depended upon her merchandise and had continued to partake in its benefits in spite of decrees and prohibitions, now shared in its disasters and sufferings, so that not only over the Continent, but even in America, these mercantile evils prevailed with more or less severity.

With 1811, that mercantile crisis so often dreaded as the prelude of national bankruptcy, had arrived. The investigations of the bullion committee during the previous year, their conclusions upon the necessity of cash payments, and the restoration of the circulating medium to the original principle of such payments, had filled the holders of paper money with alarm, and deepened the general feeling of insecurity. The United States of America also, which had removed the embargo, and received during 1810 about £11,000,000 of our exports, now passed a decree prohibiting all importations into their territories of every kind of goods, the manufactures or produce of Great Britain. Still, however, there were circumstances productive of present relief, as well as hopes for the future. In April parliament interposed, by decreeing a loan of £6,000,000 in aid of the distressed condition of the commercial and manufacturing interests; and although not more than a third of this amount was advanced, it was influential in the restoration of public confidence. The expulsion of the French from Portugal, and the victories of our armies over them in Spain, had re-opened nearly the whole of the Peninsula to our commerce. The redundant goods with which South America and the West Indies had been overflowed, had now been absorbed, and followed by a fresh demand; and the growing hostility of Russia to France gave promise of the renewal of our commercial relationships with the north. By these alleviating circumstances, the difficulties of this trying period were surmounted, although the average price of wheat in the month of December was 10*s.* 8*d.* Still, our foreign trade during the whole of this century had never been so low as

in the present year, in which our imports had borne the official value of only £26,510,186, and our exports only £28,799,120.

The war had now continued so long without as yet the prospect of termination, and the depressions upon our foreign merchandise were so numerous, that the landed interest and agricultural community had got the start of our merchants and manufacturers. Encouraged by the high prices of grain, farmers and landlords were now the great speculators, of whom, the former leased new farms, and the latter purchased fresh estates, as if the war, and its restrictions upon the importation of foreign grain, would never come to a close. In August, 1812, the average price of wheat had risen to 15*s.* and that of butcher meat had increased in proportion; land-rents had nearly doubled, and with them, the wages of agricultural labourers and artisans; while the high prices of food, and superior style of living, had necessitated a similar rise in the salaries of clerks and other officials, and the prices of town labour in general. But little of this rise had as yet extended to the operatives of our manufactories. The chief articles of manufacturing industry imported from foreign countries, had also been diminished during the two previous years, and threatened to become still less, in consequence of the occupation of Prussia and invasion of Russia by the armies of Napoleon. But the ambition of the latter had given the alarm to Russia and Sweden, and treaties between these powers and Great Britain were confirmed, by which the Continent was once more to be opened to our commerce. On this account, though the imports of this year were not greater than those of 1811, the official value of our exports had increased by nearly £11,000,000 sterling.

As the course of events was daily more promising for the liberation of Europe and the return of peace, the effects of these prospects were distinctly manifested in 1813. These, and an abundant harvest, brought the price of wheat down step by step to the close of the year, when it was reduced to 7*s.*, and farmers complained that they were undone. But equal to their dismay was the undue elation of the mercantile classes, who were prepared to speculate upon the opening Continent with newly-awakened eagerness. The coalitions of the continental powers against France renewed their mercantile relationships with Britain, which were instantly followed by a brisk and over-sanguine commerce, in which the general demand for our articles of colonial produce throughout Europe turned the speculations of our dealers exclusively to sugar, coffee, &c., and the amount of these commodities exported from our warehouses could scarcely find money among our impoverished foreign cus-

tomers equal to their abundance and value. The recoil therefore was felt in the following year (1814), when many of these shipments to the Continent had fallen to fifty per cent. In other cases, the shippers had been obliged to receive goods in payment instead of money, and these, when brought home, had to be sold at a greatly inferior price. In consequence of this over-trading, the exports of this year had increased to the enormous value of £54,000,000 sterling, of which £20,000,000 were foreign and colonial produce. In the following year (1815), indications were given that the course of commerce, so long checked and altered by the war, was finding its proper channels. Our exports had increased by £4,000,000, while our imports had decreased by £1,000,000. In this increase of our exports, also, there was a larger sale of British and Irish commodities, and a diminution in that of colonial produce, the rage of speculation in the latter article having now considerably abated. Another cause of the increase of our foreign trade, was the peace with the United States of America, by which goods to the amount of £13,000,000 were sent thither. An early and abundant harvest, which had for several seasons been unwonted, was added to the hopeful symptoms which the return of peace afforded, so that the average price of grain, which in May was 70s. 4d., had declined in December to 55s. 7d., being a smaller amount than had been known during eleven previous years.

British commerce having thus surmounted a storm almost unparalleled in the history of commercial enterprise, and having fully exhibited to the world its strength and resources, was now to go onward without impediment, except such as might arise from its own errors. Were we to follow out the account of its principal events from 1816 to the close of this present period, we should in this case have to give a history of the corn laws, of the bankruptcies, of the resumption of cash payments, of coinage, of the East India Company's commercial progress, and other such component parts of the subject, as would either be tedious by minuteness, or unintelligible from abbreviation or omission. A more specific idea also will probably be conveyed by the results as given in the following short tabular statement of our exports in British and Irish produce alone, according to their official value:—

Years, and annual average of years.	British and Irish produce, and manufactures from Great Britain.	Irish produce, and manufactures exported from Ireland.	Total.
1815-19.	£28,176,200	£948,440	£29,124,640
1820-24.	39,544,600	620,280	40,164,880
1825.	48,024,952	705,515	48,730,467
1826.	46,453,022	697,668	47,150,690
1827.	40,382,354	682,882	41,065,236
1828.	51,279,102	942,882	52,221,984
1829.	52,019,728	768,319	52,788,047
1830.	55,465,728	747,819	56,213,547

In this official table, the steady and successful progress of British commerce from 1815 to 1830, will at once be distinctly perceptible. From the same source we learn, that the increase in the exports of our manufactures during 1830-31, as compared with 1792, a year of remarkable commercial prosperity, was 450 per cent. Keeping in mind that the increase of population during this period was only 70 per cent., we can perceive more effectually the superiority of wealth, comfort, and resources which the present generation possessed over that which had been enjoyed by their fathers. In this table, the stationary amount of the exports from Ireland will strike the attention of the reader, and make him demur as to the benefits which that country had derived from its unwilling union with Great Britain. But we are not to seek in these Irish exports to foreign countries, a proof that her trade had not participated in the general improvement. Her export trade since the union was chiefly carried on from British ports, and far exceeded that which had gone direct from her own shores while she rejoiced in her form of separate national identity. In Sir Charles Whitworth's tables, and the statements in the House of Commons in 1834, it was shown, that during the seven years ending with 1729, the Irish exports to Britain amounted only to £2,307,722, but that in 1833, the Irish exports to Liverpool alone amounted to not less than £7,456,692!

Another equally tangible demonstration of the effects of the commerce of this period, is to be found in the rapid increase of our towns, and especially of those in which trades and manufactures were most prevalent. The tables of this increase in eight of the principal towns of Great Britain during a period of ten years, are given as follows:—

	Population in 1821.	Population in 1831.	Increase per cent.
London, Westminster, Southwark, and suburbs, . . .	1,225,694	1,471,941	20
Manchester, Salford, and suburbs, . . .	154,807	227,808	42
Glasgow and suburbs, . . .	147,043	202,426	38
Liverpool (borough), with Toxteth Park, . . .	131,808	189,242	44
Edinburgh (city), . . .	188,235	162,408	18
Birmingham and suburbs, . . .	106,721	142,206	33
Leeds, . . .	83,796	123,393	49
Bristol, . . .	87,779	103,896	19

In these eight towns collectively, the decennial increase averages 25½ per cent., while that of Great Britain at large was only 15½ per cent.

While such was the progress of our commerce, a correspondent improvement was effected in our operations of manufacture, by which power might be multiplied and delay avoided. This was especially the case in the manufacture of our cotton fabrics, which during the earlier part of the preceding century had become of great

national importance, and for which there was a continually growing demand. And yet, up to 1760, the machinery used in this department was as simple and primitive as that of China or India. "The weaver," says Baines, "was continually pressing upon the spinner. The processes of spinning and weaving were generally performed in the same cottage, but the weaver's own family could not supply him with a sufficient quantity of weft, and he had much pains to collect it from neighbouring spinners. Thus his time was wasted, and he was often subjected to high demands for an article on which, as the demand exceeded the supply, the seller could put her own price." In such a state of things, it was of urgent importance that science and ingenuity should come to the aid of industry, and devise ways and means by which mechanical power might be multiplied, and one man enabled to do the work of many. Accordingly, Hargreave invented the spinning-jenny in 1764, and Arkwright his spinning-machine in 1767; and when many machines could thus be set in motion by a single hand, the next attempt was to spare manual labour itself, and multiply power by the application of mere brute or mechanical force. At Nottingham, accordingly, in 1768, Arkwright's invention was driven by horse power. But the still greater and more regular power of steam had been contemplated from the discoveries of Watt, and on this being applied, the profitable discovery was made that one horse power would drive 100 spindles with cotton yarn and the preparatory machinery, and that the same power would work twelve power-loom, with preparation. By this mighty operation of steam, the processes of spinning and weaving could be introduced into our populous cities where workmen were in plenty and water-power not to be obtained; and accordingly, in our crowded streets as well as upon the banks of our rural streams, manufactories began to rise, and a world of machinery to be set in active motion. This was the characteristic of the close of the present period—the commencement of that wondrous era of utilitarianism by which the next was to be characterized, and in which the application of steam as a mechanical power, will obtain a more minute and particular detail. But such changes, that went to revolutionize our whole industrial population, could not be accomplished without alarm; the thousands who had hitherto depended upon the loom and the wheel for subsistence, found themselves superseded and thrown out to starvation; and under the apprehension of what was still to follow, machine riots became prevalent over the country, and machine-breaking the order of the day. These misguided alarms continued, until experience taught the mob-legislators that the demand for manufac-

tures would increase with the supply, and that their own services could still be necessary for the superintendence of the machinery. But this experience was long in coming, and the war against artificial labour continued even during the earlier part of the present period. To this in a great measure may be attributed the slowness of the progress of these inventions compared with their immense utility. But their application and improvement were equally inevitable, and at the close of the last century the more difficult operation of the spinning of flax by automatic machinery had been introduced, as well as that of cotton. After a considerable interval, power-loom weaving was applied to the manufacture of linen; and before the close of the present period, calico-printing by steam was beginning to be attempted in its simplest forms. It was fortunate also for the growing demands of science and literature, and the new attempts for the diffusion of knowledge over society at large, that the manufacture of paper by steam was introduced, through which the number and the price of books could be adapted to the means of the middle and even the lower classes. At the close of the present period, the application of steam and water in the produce of our manufacturing articles was becoming universal over the three kingdoms, while the products, vast as they were, could scarcely meet the world-wide demand, and the markets that were opening up for their sale.

But to show the progress of this increase, and its value, it is only necessary to have recourse once more to statistical tables. In 1780 the inhabitants of Great Britain and Ireland scarcely numbered more than 13,800,000, while their productive force, according to Dupin, was equal to the manual labour of 31,281,000 effective labourers. In 1826 the population amounted to about 22,500,000, being an increase of about 8,700,000, while the amount of productive power was equivalent to the labour of 60,206,000 workmen. In 1769 our cotton manufactures did not exceed in annual value £200,000. In 1824 their annual value had risen to £33,500,000, in 1827 to £36,000,000, and at the close of this period to little less than £40,000,000. Our limits permit us to give only this single instance, instead of entering into details of our wool and flax manufactures, which would furnish a similar result, or even into the quantity of coal, iron, and the several metals which were required for the making and working of machinery. One brief statement in this respect must suffice. In 1780, the quantity of coal raised for general use was about 2500 tons: in 1833, it was about 18,000,000 tons.

But to impart to one man the industrial efficacy of a hundred, was not the only achievement of steam during this era of invention and discovery.

Space was to be abbreviated, town and country brought together, and even nation linked with nation in close connection, by the application of its powers to the purposes of locomotion. The facilities of intercourse as well as of traffic among the whole human family were to be multiplied tenfold by the invention of the steam-boat, which now demands our especial notice.

After repeated trials of the power of steam in various departments, and the success with which they were followed, the idea of tasking it to impel a boat as well as to operate upon the spinning-wheel or capstan, was a natural suggestion. It appears, indeed, to have been proposed so early as 1736, when Mr. Jonathan Hulls took out a patent for a boat to be propelled by steam; but his proposal was neglected, and himself forgot. The second attempt was made in France by the Marquis de Jouffroy, in 1782; but his vessel, although it is said to have been in use fifteen months, was also set aside. A third, made in America, for the propulsion of boats by steam, in 1785, was relinquished, either from want of public support, or failure in the experiment. The next attempt was in Scotland, in 1787, by Mr. Patrick Miller, of Dalswinton, ably and effectually assisted by James Taylor and William Symington, who, after trying the experiment of propelling vessels by paddle-wheels driven by men or horses, advanced a step higher, by stating that "he had reason to believe that the power of the steam-engine may be applied to work the wheels, so as to give them a quicker motion, and to increase that of the ship." In the following year (1788) he accordingly launched a pleasure-boat, which he had fitted with a steam-engine, upon the lake of Dalswinton; but though it moved by steam, it was found that the engine and wheel needed the additional aid of manual labour with a windlass. Other similar experiments followed with but partial success, the last of these being on the Forth and Clyde Canal in 1802. But although in the last-mentioned attempt, the steam-boat, called the *Charlotte Dundas*, towed two loaded sloops, each of seventy tons, a distance of $19\frac{1}{2}$ miles in six hours against a head-wind, the proprietors of the canal opposed its further use, in the idea that the action of the paddles would destroy the embankments; and thus the unfortunate vessel was laid up, and permitted to go to decay. The construction of this vessel, the veritable parent of steam-boats, con-

stitutes perhaps the most important incident in the whole history of this department of navigation. The expensive and hazardous experiment was undertaken by Thomas Lord Dundas, who, on learning the attempts of Mr. Miller, employed Symington to construct a steam vessel to ply on the canal; and the result was the *Charlotte Dundas*, a vessel in which there was an engine with the steam acting on each side of the piston, working a connecting-rod and crank, and the union of the crank to the axis of Miller's improved paddle-wheel, which last was Symington's own invention. By this happy combination, William Symington was the first who united those improvements in the action of steam machinery which constitute the present system of steam navigation; and as such, the *Charlotte Dundas* is worthy of particular notice, as the

SECTION OF THE "CHARLOTTE DUNDAS" STEAM-BOAT
From Woodcroft's Rise and Progress of Steam Navigation.

earliest exemplar of a complete, practical steam-boat. Its merits were appreciated by the Duke of Bridgewater, to whom it was recommended; and after having seen a model of the vessel, and received explanations from Symington, his grace gave the latter an order to build eight boats similar to the *Charlotte Dundas* to ply on his canal. But the death of the duke and the unreasonable alarm of the proprietors of the Forth and Clyde Canal, reduced the unfortunate engineer to poverty, when the success of his undertaking promised him wealth and fame; and while the *Charlotte Dundas* was laid up uselessly in a creek of the canal, where it remained for years, Symington himself was consigned to ungenerous neglect.¹ While he thus prepared the way for steam navigation, he had, so early as 1786, anticipated the application of steam to land travel, by exhibiting in Edinburgh the model of a steam carriage to be used upon common highways.

Every attempt had thus been discouraged, either from want of funds or want of public support; and the scheme of steam navigation itself was laid aside for several years, and seemed

¹ Woodcroft's Rise and Progress of Steam Navigation.

to be utterly forgot. But fortunately for it, there was an eccentric mechanic at hand whom no failure could daunt, and to whom the enterprise had

ENGINE OF THE "COMET" STEAM-BOAT — From a photograph

additional charms from being condemned as impracticable. This was Henry Bell, who, after trying various handicraft occupations and abandoning them, became finally a bath and tavern keeper at Helensburgh—a man of a thousand projects, of which the one success was an over-payment for the nine hundred and ninety-nine failures. The propulsion of boats by steam was an idea which he seized with avidity; he repeatedly tried experiments on the subject, and rectified their errors; and having at last matured his plan, he employed the ship-wrights of Port-Glasgow to construct for him a boat that was 40 feet keel, and 10½ feet on the beam, with a paddle-wheel on each side; and when finished, he equipped it with a steam-engine which he had directed to be made for the purpose. This memorable vessel, which was completed in 1811, was called the *Comet*, from the great natural phenomenon of that year; and in January, 1812, it began regularly to ply on the Clyde between Glasgow and Greenock. But, obvious as were the advantages of such a mode of conveyance, that equalled the speed of coaches at only one-third of the fare, the public were at first cautious in using the *Comet*, and preferred travelling by land; while this reluctance was not a little increased by the hostility of fly-boat and coach proprietors,

who foresaw in this formidable invention the ruin of their monopoly. But such hostility was too selfish to be lasting: the public were quickly awakened to a sense of their own interests, and after Henry Bell had so effectually pointed the way, other vessels were constructed, in which the plan of the *Comet* was faithfully adopted, with only an increase of power.

Of the favour into which steam-boat conveyance had come, only four years after the *Comet* had commenced its career, and the rapidity with which the vessels had multiplied on the Clyde alone, a statement is given in 1816 by Mr. Robert Buchanan, a distinguished Scottish engineer. "Before the introduction of steam-boats," he says, "the whole number of passengers in the common passage-boats did not, it is supposed, even in summer, exceed fifty up and fifty down, and those generally of the lower classes of the people. The number that then went down by coaches has been estimated at twenty-four persons up and the same number down. But now, in fine weather, it is no uncommon thing for 500 or 600 passengers to go and come in the same day. One of these boats alone has been known to carry 247 at one time." Previous to the publication of his statement, five steam-vessels had been established on the Thames, and even already they were performing the then adventurous passage from London to Margate. Only two years later, there were

BELL'S FIRST STEAM-BOAT, THE 'COMET'¹

eighteen steam-boats plying on their native Clyde. During four months of the same year, 10,000

¹ The above illustration shows the vessel perfected, and as she wrought with success till the time she was run ashore and wrecked on the coast of the West Highlands, in 1820, a period of eight years. When the *Comet* was first tried she had two pairs of paddles, of the form shown in the annexed figure; but after a few days' experience one pair of them was removed, as it was found that she wrought better with two than with four.

passengers had been conveyed by steam-boats between London, Richmond, and Twickenham, showing the immense and rapid increase that had taken place in this kind of navigation upon the Thames alone. The distribution of the other vessels in 1818 is thus enumerated: two at Dundee on the Tay, two on the Trent, two on the Tyne, four on the Humber, two on the Mersey, three on the Yare, one on the Avon, one on the Severn, one on the Orwell, six on the Forth, two at Cork, and two intended to navigate between Dublin and Holyhead. Even already, also, steam packets and luggage vessels were used in France, Spain, the Netherlands, and Russia, and about to be used in the East Indies. But what the while of Henry Bell, the author of all this improvement? In poverty, and even in sickness—for he was crippled with rheumatism—he had carried on his experiments; and when his vessel was at last completed, he hobbled down to the beach to make the first voyage, and threw his crutches on board with the triumphant glee of a conqueror. But after his plan had succeeded, he was soon distanced by richer and more active competitors; his vessel, the *Comet*, was run ashore and wrecked, and a second which he also started, of the same name, was run down and sunk in 1825, while neither of them was insured; and thus, poorer than ever, he could look out from his little inn of Helensburgh upon the river covered with steam-vessels, that swept along in their holiday pride, utterly forgetful of the man to whom they owed their being, although the white walls of his hospitiuin stood like a landmark in their course. It is true, indeed, that the town of Glasgow, in his old days, and when such liberality would not long be needed, settled upon him an annuity of £100; but this was little, when not only Glasgow, but Britain at large, was so deeply his debtor. It was well for the simple-minded, warm-hearted, and eccentric, but enterprising old man, that he could turn to new pursuits with all his former enthusiasm, and find in their flattering promises a consolation for whatever disappointments he had encountered; and one of his last projects was a new method of road-making, by which he hoped that travelling by land would be rendered as smooth, expeditious, and comfortable, as he had already made travelling by water. In this spirit of buoyant, youthful confidence and universal benevolence, he ended his days at Helensburgh on the 14th of November, 1830, at the age of sixty-three.

Hitherto, in the practical revival of steam navigation, we have only made special mention of William Symington and Henry Bell, and the success of their experiments in Scotland, with the effects produced by their example over the United Kingdom, and throughout Europe at large.

Within this circle they were undoubtedly the originators of the experiment; and to Bell especially, the whole merit of European steam naviga-

HENRY BELL.—From a portrait by J. Tannoch.

tion in its practical appliance may be traced. But even four years before his *Comet* was launched on the Clyde, a steam vessel was embarked on the Hudson, which plied between New York and Albany, a distance of 160 miles, with complete success; and in consequence of this, the honour of the discovery has been claimed by the Americans for Fulton. But so early as 1801, being then in Scotland, he visited Symington; enjoyed a short trip in the new steam-boat on the canal, and took notes and sketches of the vessel and its machinery. It would appear, also, from Bell's statements in his letter, published in the *Caledonian Mercury*, October, 1816, that it was from him that Mr. Robert Fulton had derived, or at least matured, his plan of a steam-boat. He had already seen and studied the properties of the *Charlotte Dundas*, and he afterwards wrote to Bell on the subject, and desired him to send him a drawing and description of Miller's boat. This Henry Bell did accordingly, and two years afterwards, Fulton wrote again to him, stating that he had constructed a boat from his sketch and description, and that with some improvements it would answer the desired object. This set Bell a-thinking, and he resolved to construct a steam-boat of his own, instead of sending his plan to other countries; but while he was making models of his intended vessel previous to its construction, Fulton's superior means and science had outstripped him by four years, and enabled him to launch his steam-boat in America in 1807. In this way, the honour of so vast a discovery was divided, and each hemisphere claimed its origi-

but from this statement it appears that Symington and Bell were really the originators, and Fulton the successful imitator and copyist. The glory, however, was enough for all three, and the name of each will descend to future ages among the renowned of the nineteenth century. It was well for the trial made upon the loch of Dalswinton, and afterwards quietly laid aside, that it fell into the hands of three such men, by whom it was raised from a scientific experiment into a great practical reality.

At the commencement of the invention, the steam-boat was only intended for still water and river navigation, while its form, and the nature of its machinery, were judged unfit to contend with the perils of an open sea. But even the second year after the *Comet* was built, it was employed as a jaunting boat over the coasts of England, Scotland, and Ireland, and this, as Bell stated, that he might show the advantage of steam navigation over every other mode of sailing. But the utmost that steam-boats continued to adventure, was a short way beyond the precincts of rivers and the coasts of friths, and then only in fine weather. At last, Mr. David Napier, of Glasgow, at that time a young man, conceived the bold idea of making steam navigation as available for the open sea as for rivers, and to ply steam-ships in all kinds of weather between England, Ireland, and France. He carefully studied the science and theory of the question; but not contented with the abstract results alone, which confirmed his opinion, he resolved to witness in person the storms with which he should have to contend, and for this purpose took a passage at a very stormy period of the year, in one of the stout packet vessels that plied between Glasgow and Belfast. From the bows of the vessel he watched the dashing of the waves as the spray flew over him, and the gathering of the winds into a tempest, and seemed sadly disappointed when told that as yet the passage was not one of unusual roughness. At last he was gratified to his heart's desire: such a storm arose, that the whole deck was overswept by the waves, and he was assured by the captain that he had never weathered a more terrible night. "Oh, is that all? I think I can manage that!" said Napier with a gratified look, as he retired to his cabin, while the skipper gazed after him in perplexity and doubt. Knowing the full force and nature of what was to be overcome, Napier adapted the structure of his new vessels accordingly; and in 1818 established a steam-vessel between Greenock and Belfast, and another in 1819 between Holyhead and Dublin. These were but small vessels, the first being only of 90, and the second of 150 tons; but their security as well as speed in the open sea was so effectually proved, that larger

ships for still greater distances were not long in following. Of these, the greatest, and also the fastest that were constructed before the close of this period, were the *Majestic* and the *United Kingdom*, the former of 270 tons and 100 horse-power, the latter of 561 tons and 200 horse-power. The advantage thus secured over the common sailing vessels, although not equal to what can now be realized, was strikingly manifested by the following comparison of relative speed between them and the steamers, drawn from the tables at the close of this period:—

	Steam-vessels.	Sailing-vessels.
London Bridge to Calais, . . .	12 hours.	36 hours.
London to Leith, . . .	55 "	5 days.
London to Dublin, . . .	84 "	16 "
Dublin to Liverpool, . . .	14 "	36 hours.
Greenock to Liverpool, . . .	24 "	8 days.
Greenock to Glasgow, . . .	3 "	12 hours.
Brighton to Dieppe, . . .	9 "	50 "

While river and sea had thus been made equally accessible to the steam-boat, the facilities of inland navigation, by the construction of canals, had made rapid progress during the present period. In this department of civil engineering, England had hitherto been manifestly defective, so that when Brindley commenced his daring operations, a general ignorance prevailed in the construction of embankments, aqueducts, and tunnels; and it was only by the complete success with which his boldest undertakings were crowned that the nation was encouraged to multiply artificial rivers for the purposes of home traffic. But the enterprise once commenced was prosecuted with such ardour, that before the close of 1830, England had become a net-work of canals to the amount of 2400 miles—a greater extent of canal navigation than any other country in Europe possessed. Of these, 442 miles had been constructed during the present period alone. The canals so constructed were the Leeds and Liverpool Canal, the Rochdale Canal, the Grand Junction Canal with its numerous branches, and the Kennet and Avon Canal. In Scotland also, that gigantic undertaking, the Caledonian Canal, to effect a navigable communication between the eastern and western seas, was begun at the commencement of this period, and completed in 1823; while a year earlier, the Edinburgh and Glasgow Union Canal was opened, by which these two great northern cities were no longer confined to land carriage. In Wales, and especially in Ireland, the same progress of canal-making was exhibited, a grant having been made by parliament to the latter, a short time before the union, of £500,000 for the advancement of its inland navigation in general. And seldom has a national boon been more wisely bestowed, or more profitably expended. The survey of the country, for the purpose of finding lines on which canals

could be constructed, has made the levels and waters of Ireland be better known than those of any other country in Europe, Holland only excepted. The communication opened with Dublin, as was stated by Mr. Nimmo, in 1830, before a committee of the House of Commons, had saved the payment of a bounty of £100,000 per annum for bringing corn to Dublin, that city having now become one of the first corn ports of Europe. The promotion of agriculture, and the diffusion of wealth and comfort throughout those districts which had hitherto been so scantily cultivated, were the happy consequences of this encouragement to the inland navigation of Ireland.

With the construction of canals, the improvement of roads was very naturally connected. We have noticed in former chapters the miserably defective state both of the country highways and the city streets of England, and the urgent need of their improvement. At the commencement of this century, the roads of Ireland were considered to be the best in the United Kingdom, but this was nothing more than necessary for the maintenance of order, and the suppression of rebellion among a wild people impatient of restraint. Next to them were the great roads of the Highlands of Scotland; but these were also military constructions for the purpose of bridling the clans, and had owed their existence to the rebellions of 1715 and 1745. No such compulsory road-making having been demanded in England since the days of William the Conqueror, that which had been a common duty had fallen into general neglect, which the numerous acts of parliament passed from time to time on the subject had been insufficient to rectify. Nothing short of the all-awakening energy which was now predominant, could have roused the public spirit from its lethargy, and it was only with the commencement of the present century, that the making of roads became a regular science. It was fortunate also for this purpose, that Mr. Thomas Telford was appointed engineer to the parliamentary commissioners for Highland roads and bridges, and that he brought his great scientific skill and practical character to the construction and improvement of our highways. He commenced operations in the Highlands, where the military roads had become insufficient, and twenty-five years after (1827), there were constructed over Scotland at large 1000 miles of new roads and about 1200 bridges under his superintendence. Besides planning his roads so as best to obviate difficulties, and occasion the least expenditure of toil and labour in travelling—circumstances that had hitherto been overlooked as trifles—they were constructed for durability; and his method was, to lay a surface of broken stone, known by the name of *metal*, upon a rough, firm

pavement of large stones. But a still more eminent road-maker than Telford, was Mr. London Macadam, who introduced a new theory into the art, and was in 1816 appointed surveyor of roads

THOMAS TELFORD.—From a portrait by S. Lane

in the Bristol district, where he had ample opportunity of carrying his plan into effect. He saw that the mixture of clay and chalk among the materials used in making roads was the general cause of their failure, however favourable might be the ground; and that by a proper application of materials, a good road might be made in any country. The chief part of his plan consisted of breaking the stones of which a road is to be made, into small angular pieces of about an ounce in weight, and an inch in circumference, excluding from them all soft or earthy materials; and these, by their roughness, will always combine into a solid substance, with a smooth surface, that can endure alike the action of wheels and the vicissitudes of the weather. In this way, not only new roads could be made, but the old renewed by breaking up their materials. This method was found to be not only the simplest and most economical, but also the one that most accorded with scientific principles, especially upon a boggy soil; and while his report on the subject was approved of by a committee of the House of Commons, and his plan rewarded by a parliamentary grant of money, it was adopted upon an extensive scale, so that in a few years the roads of Great Britain, hitherto so inferior and defective, became the envy of every country, and the admiration of travellers from every quarter of the world. Even when the stones are broken into less minute fractions for the repair of highways, the principle of Macadam is found available for the purpose.

While roads were thus improved and multiplied to so great an extent, the progress of bridge-

making was necessarily correspondent. In Scotland, especially, where they are so necessary, the erection of bridges, promoted by the abundance of excellent stone, and the science of Telford and other able engineers, was a striking feature in the industrial improvement of the present period. Of these erections that were the most distinguished for boldness and architectural beauty, we can only particularize that upon the river Teviot, immediately above its junction with the Tweed, which was finished in 1803—that across the Den Burn at Aberdeen—the large bridge over the river Spey, near Gordon Castle, at Fochabers—and one superior to them all over the river Tay at Dunkeld. It was in London, however, that this spirit of enterprise and improvement was manifested upon its grandest scale. Until the middle of the eighteenth century, when Blackfriars' and Westminster Bridge were erected, the citizens had contented themselves with their one Old London Bridge, and the wherries, to keep up the communication of both sides of the river; but this was too little for the growth and bustle of traffic which had now set in; and accordingly, during the present period alone, three new bridges were extended across the Thames. These were, Vauxhall Bridge, distinguished by its iron arches, reckoned the lightest structure of the kind in Europe; Waterloo Bridge, proclaimed by Canova the finest European specimen of bridges extant; and Southwark Bridge, which is of iron, and remarkable for the boldness of its design, the central arch having a span of 240 feet, while the whole consists of only three arches. Of these bridges

the two first were erected by John Rennie; the last was constructed from his plans by his son; and the grandeur and beauty as well as durability of these three noble national structures have established the fame of their engineer in the highest rank of that department of science. In mentioning the material of the bridge of Southwark it may be stated that the construction of iron bridges was not new in the country, one having been erected upon the river Severn, near Colebrookdale, so early as 1777, while others had followed in rapid succession; but in grandeur of design all were surpassed by the iron bridges of the present period—one of

these being Telford's plan of a substitution for London Bridge, by a cast-iron bridge of a single arch, the chord of which was to be 600 feet, and the versed sine 65 feet. This mention of iron bridges is suggestive of the suspension bridges which became prevalent during this period. The idea of combining banks of rivers where the torrent of water was too strong to be bridled by the work of masonry, and uniting the opposite points of ravines where the depth was too great for a regular arch, was taken from a practice that had prevailed in India and South America from the earliest ages, where ropes of reed or bamboo were thrown across, by which the obstacle was surmounted, and a safe, though perilous-looking passage provided for foot-passengers, and sometimes even for small cattle. The first of the kind erected in England, was a small foot-bridge of iron chains thrown across the Tees, near Middleton, before the middle of the eighteenth century; and so early as 1785, the idea

THE MENAI SUSPENSION BRIDGE.—From a photograph

was entertained of erecting such a bridge across the Menai Strait, to connect the mainland with the island of Anglesea. This daring project was finally realized by Mr. Telford, and the suspension bridge completed in 1826. It is constructed partly of stone and partly of iron, and consists of seven stone arches exceeding in magnitude every other work of the kind; while the two main piers, which rise fifty-three feet above the level of the road, suspend chains from their top weighing 2016 tons. But before this period, several bridges had been erected both of chain and wire, the chief of which were the Union Bridge over the Tweed, near Kelso, in 1820, and that at Hammersmith, near London, in 1824.

In this brief and general sketch of the new spirit of the nineteenth century, we perceive everywhere the indication of improvement. A rapidly increasing population—an extension on every side of commerce and its resources—the improvement and multiplication of the agencies of manufacturing industry—and the general direction of intellect to the practical and the useful, had increased the means of comfort and subsistence over the empire at large: a whole century of advance had been effected in a few years, that excited alike the wonder and envy of foreigners, and the self-congratulations of our countrymen. But with all these advantages, there was a correspondent increase of evils that gave too much cause for regret and apprehension. The unprecedented wealth of our merchants and manufacturers made the working classes discontented, and during seasons of public depression, this feeling was manifested by revolutionary clubs, conspiracies, and outbreaks. Such were the outrages in 1812 of the Luddites, the Hampden Union and Spencean disturbances in 1816, and the radical commotions of 1819—revolts of the working classes, in which, at one time, there was a wholesale demolition of machinery, and at another, a demand for the overturn of government and the establishment of an agrarian equality. But deeper still, and of more extensive diffusion, were the manifestations of a growth in ignorance and crime among the lower orders, while the middle and higher classes were improving in wealth, morality, and intelligence. Of this, the statistics afforded a melancholy evidence. In 1805, the convictions of crime in England and Wales were 2783; in 1811, they were 3163; in 1815, 4883; and in 1819, they were 9510. Thus, the increase of criminals was almost three-fold that of the ratio of the population. It was necessary, even in self-defence, that the intelligence and philanthropy of the better part of the community should be roused into action, to prevent the growing national prosperity from becoming the fruitful source of national decay and destruction; and accordingly, measures were from time to time adopted for the prevention of crime, and the promotion of moral intelligence among the industrial and lower orders. As these attempts form an important feature in the social history of the nineteenth century, and were tentative experiments for the cure of evils to which legislation had hitherto been unaccustomed, a brief notice of the chief of them may not be unnecessary. It was the maladies not of national poverty, as in times past, but of national abundance and repletion, which were now to be removed or alleviated.

In 1802, an act of parliament was interposed for the protection of the young employed in

public works, so that they might not be utterly sold into bondage either by the avarice of their parents or their employers. By this act of 42 Geo. III. c. 73, it was provided, that in all woollen and cotton mills and factories in the United Kingdom, in which three or more apprentices, or twenty or more other persons are employed, apprentices shall have two complete suits of clothing yearly; that the hours of working shall not exceed twelve hours, exclusive of meal times, for which three hours are allowed; that they shall be instructed every day for the first four years of their apprenticeship, in reading, writing, and arithmetic; that the apartments of males and females shall be kept distinct, and two only sleep in one bed; that the rooms shall be washed with quicklime and water twice a year, and kept well aired; that at midsummer sessions two visitors shall be appointed, to report the conditions of such mills and factories; and that copies of the act shall be fixed up in two conspicuous parts of the building.

In 1807, Mr. Whitbread's great plan was brought forward before the House of Commons for the promotion of industry and the relief of the poor. For all this the poor-laws, instead of being effectual, were found to be absolutely the reverse, as they broke the independent spirit of the poor, and destroyed their industrial habits, so that they had come to prefer the dole of mendicancy, which they regarded as their right, to the proceeds of honest active labour. The extent of the evil was manifested by the fact, that of the population of England and Wales, amounting to 8,870,000, the enormous proportion of 1,234,000 were receiving parochial relief. The remedy proposed by Mr. Whitbread, was a system of national education, by the establishment of parochial schools throughout the kingdom, attendance upon which should not be compulsory, but voluntary on the part of the poor; and by this plan he proposed to elevate the lower classes, stimulate their activity and enterprise, direct their energies, and convert them into an intelligent, high-minded, and thriving population. But this remedy, which was so available for Scotland, and so easily established in the days of the Solemn League and Covenant, when the people were of one mind and one creed, could scarcely have been transplanted into England amidst the contentions of parties both religious and political; and, accordingly, it was regarded rather as a devout imagination, than a scheme of practical application. It was not indeed tried, being thrown out of the House of Lords during the same year. It was fortunate, however, that the subject of education had not been compelled to wait upon parliamentary decisions; for the systems of Bell and Lancaster had been established, and their

schools were in active operation. Dr. Bell, who presided over a charity school at Madras, had been struck with the practice established in the native schools of Malabar, of teaching by writing in sand, and had introduced with success the plan into his seminary at Madras, in 1789. In 1797, he published in England a pamphlet, in which, under the modest title of an *Experiment in Education*, he gave an account of this principle of teaching by sand-writing, and afterwards proceeded to establish schools, where this simple method was to be adopted. But he had to do with teachers who had plans of their own; and finding that he could not overturn their established prejudices, or persuade them to adopt such a mode of tuition, he was obliged to have recourse to the elder boys of the schools, whose minds were still unbiassed, and to whom his plan had the charm of novelty to recommend it. In this way commenced the system of teaching by monitors, so that hundreds of pupils could be managed by a single schoolmaster, and instruction communicated for a fee which the poorest could afford. Another plan by which the labour of teaching was simplified, was the introduction of reading and pronouncing by syllables, instead of the common mode of spelling. But though Dr. Bell had the merit of being the first to introduce this educational plan into Britain, he was not unsupported in carrying it into effect; for in 1798, the year after the publication of his pamphlet, the principles were adopted by Mr. Joseph Lancaster, a gentleman of the community of Quakers, who established schools in which the plan was followed out with several modifications of his own. These Bell and Lancaster schools afterwards changed their titles, the former being called the "National School Society," and the latter, the "British and Foreign School Society." They continued in active operation during the whole of this period, while the chief distinction between them was, that the pupils admitted into the National School Society's establishments were required to give their attendance at the Established church, and be taught the church catechism. Another important educational institution, was that of Sabbath-schools, at first chiefly intended for the children of the dissolute or the poor, who had no means either of religious instruction or Sabbath supervision. These schools had originated, as we have seen, during the preceding period of our history, and as there was an all-pervading necessity for their existence, they continued to be zealously supported both by churchmen and dissenters. Education had thus seemed to have reached the *ultimatum* in its downward progress of philanthropic exploration, when a yet lower deep was discovered. While the children of the poor were thus cared

for, what was to become of the *infants*, who were as yet too young for a public school? While the industrious poor were employed in their out-door occupations, there were myriads of little ones deprived of parental care when such care was most needed. For this difficulty Mr. Owen had attempted to provide, by the establishment of an asylum for young children at New Lanark; and his plan suggested the idea of infant schools, the first of which was commenced at Brewer's Green, Westminster, in 1818. The attempt was so successful, that in 1820 another was established in Quaker Street, Spitalfields; and in 1824 an Infant School Society was established, after which infant schools were rapidly multiplied over the principal manufacturing towns of the three kingdoms.

It was fortunate for education, which had now become a subject of paramount importance, that it had Mr. Brougham for its chief advocate and director; and that from a university down to an infant school, he was able to master the details of each, and suggest the necessary improvements. Under the impulse of such an active and universal intellect, the subject was frequently brought before parliament; and in 1816 and the two following years, a parliamentary committee was at work to "inquire into the education of the lower orders," at first in the metropolis, and afterwards throughout England at large. The result of their investigation, presented in 1818, showed not only the good that had already been effected, but how much remained to be done. Of endowed, unendowed, and Sunday-schools, there were 23,611, and in these the number of children receiving education was 1,097,099. But as many of these children were only the attendants of Sunday-schools, the number receiving daily and regular education was thereby reduced to about 850,000. But besides that nearly 160,000 children had thus only their *weekly* lesson, it was found that there were 100,000 in London, and 500,000 in all England, who received no education whatever. In 1828, Mr. Brougham resumed his inquiries on the education of the lower orders, by addressing a circular to the ministers of the parishes of each county in England (with the exception of Middlesex), and the satisfactory answers he received gave the following result: the number of unendowed schools, which ten years before had amounted to 14,000, had now increased to 32,000, while the number of scholars during the same period had risen from 478,000 to 1,003,800. In like manner, the pupils of Sunday-schools had increased from 452,817 to 905,634; but again deducting those scholars who received nothing but Sunday instruction, these returns give us a total of 1,500,000 children belonging to the lower classes who were now receiving a regular educa-

tion. When it is recollected, also, that the number of children in England between the ages of five and twelve years amounted to about 2,000,000, and when a deduction has been made for those who belonged to the higher classes, it will be seen from this statement, that the means at least of education were now within the reach of the whole working population of the kingdom.

It was not, however, to children alone that the facilities of intellectual and moral improvement were confined. The adults of our industrial population were also in need of the schoolmaster, and the zeal which had been stirred up in behalf of the young was soon extended to the old. In Birmingham, and also in Scotland, intellectual clubs of the working classes were already in existence, the members of which had voluntarily associated for mutual improvement in general knowledge; but in 1823 these private meetings were raised to the rank of a public institute, chiefly through the exertions of Dr. Birkbeck, who in that year established the London Mechanics' Institution. Its object was to diffuse among the industrial classes the knowledge best fitted for their condition and employments, through the means of lectures, reading-rooms, and libraries; and the example thus set by the metropolis was soon followed by the establishment of mechanics' institutions in the principal towns throughout the United Kingdom. Another plan afterwards devised for the same purpose, was to publish a series of works expressly adapted to such readers, and accordingly, the Society for the Diffusion of Useful Knowledge was established in 1827. It was composed chiefly of men distinguished by their literary and scientific attainments, under whose superintendence were published periodically treatises on natural science, ethics, metaphysics, and political philosophy, and works of history and biography. Independently of its excellent publications, the influence of this example upon the press in general was so effectual, that the enterprise of private publishers in process of time made the existence of such a society unnecessary, and "books for the million," upon every variety of subject, and in every form of style and illustration, became so plentiful that every hut and hovel in Britain could be cheaply furnished with a well-selected library.

From these educational agencies, which had been multiplied to so great an extent, and in so short a period of time, a rapid moral reformation of the lower orders was impatiently anticipated. But there were counteracting influences at work, through which, let philanthropy labour as it might, a large residue of poverty and crime was certain to be left untouched. The wages for mill and factory work had naturally fallen to their lowest amount, while the competition for employ-

ment, owing to the redundancy of workmen, compelled the labouring poor to accept these stinted terms, and live or vegetate upon them as they best could. The following minute description,

DR. BIRKBECK.—From a portrait by Samuel Lane.

by Dr. James P. Kay, of such a mode of life among the cotton manufactories of Manchester in 1832, and which is more or less applicable to such places throughout the kingdom, gives us a sketch of their condition at the close of this period:—"The population employed in the cotton factories rises at five o'clock in the morning, works in the mills from six till eight o'clock, and returns home for half an hour or forty minutes to breakfast. This meal generally consists of tea or coffee, with a little bread. Oatmeal porridge is sometimes, but of late rarely used, and chiefly by the men; but the stimulus of tea is preferred, and especially by the women. The tea is almost always of a bad, and sometimes of a deleterious quality; the infusion is weak, and little or no milk is added. The operatives return to the mills and workshops until twelve o'clock, when an hour is allowed for dinner. Amongst those who obtain the lowest rates of wages, this meal generally consists of boiled potatoes. The mess of potatoes is put into one large dish; melted lard and butter are poured upon them, and a few pieces of fried fat bacon are sometimes mingled with them, and but seldom a little meat. Those who obtain better wages, or families whose aggregate income is larger, add a greater proportion of animal food to this meal, at least three times in the week; but the quantity consumed by the labouring population is not great. The family sits round the table, and each rapidly appropriates his portion on a plate, or they all plunge their spoons into the dish, and with an animal eagerness satisfy the cravings of their appetite. At the expiration of the hour they are all again em-

played in the workshops or mills, where they continue until seven o'clock, or a later hour, when they generally again indulge in the use of tea, often mingled with spirits, accompanied by a little bread. Oatmeal or potatoes are, however, taken by some a second time in the evening. The comparatively innutritious qualities of these articles of diet are most evident." But even worse than this scanty, uncomfortable style of living, chiefly occasioned by low wages, were the habits of dissipation induced by the dull, confined, monotonous kind of labour in these factories, and the twelve long hours *per diem* during which it was continued. The immoderate use of ardent spirits as a stimulant was a common accompaniment of such labour; the workman frequently stopped at the gin-shop for a dram on his way in the morning to the factory, and in like manner on his return in the evening; the Saturday night and Sunday were seasons of sluggishness and debauch; and from the men, the practice of dram-drinking naturally descended to the boys, and even the young girls of the factory. But gin was soon found not strong enough and cheap enough for the purpose, and opium was plentifully used by the factory labourers, both in its crude and liquid state, as an incentive to labour, or solace when work was over. This use of such opiates, and their rapidly increasing consumption, forms an alarming feature in the history of factory employment, as appeared by the "Inquiries" which were instituted at the close of this period. From the same inquiries we learn that illicit intercourse between the sexes was common among the work-people of the factories, and that such crimes were regarded, both by the employers and employed, with absolute indifference. "The licentiousness," it is stated in one of these reports, "which prevails among the dense population of manufacturing towns is carried to a degree which is appalling to contemplate, which baffles all statistical inquiries, and which can be learned only from the testimony of observers. And in addition to overt acts of vice, there is a coarseness and grossness of feeling, which we would fain hope and believe are not the prevailing characteristics of our country."

The great evil of a redundant population compared with the means of subsistence, and of more labourers than labour, had acted for years upon our growing commercial prosperity, like the admonitory slave behind the triumphal chariot of the Roman conqueror; it suggested that all this grandeur was productive of causes that would swamp our abundance, and drive us into poverty and ruin. These fears were deepened and confirmed also by the theory of Malthus, now of general acceptance, which had established the fact of the tendency of the human race to increase in num-

bers beyond the means to feed it. It was felt as if Britain had already become over-populous, while the only means to lighten the excess was that of emigration; but hitherto the plan had been confined to private enterprise, and those who had deported themselves by ship-loads to our colonies consisted for the most part of those whom the country could least spare—men who had either the means or the industry to raise themselves from the condition of mere British labourers, into comfortable colonial traders and landholders. Their places at home, also, were so quickly filled that the relief was unfelt, and the prevalent destitution was more urgent than ever. It was necessary to raise emigration from a private enterprise to a public and national measure; and accordingly, an emigration committee of the House of Commons was appointed to receive evidence, and return their report on the subject, which they did in 1827. In this report the redundancy of population, as compared with the demand for labour and the means of subsistence, was distinctly shown, and that the effect was materially to deteriorate the condition of the working classes. It was stated, also, that in England this redundant population had been partly supported by a parochial rate, which threatened in process of time to absorb the entire rental of the country; and that in Ireland, where no such rate existed, and where the redundancy was still greater, many of the people depended for subsistence upon begging or absolute robbery. And for all this the committee recommended a "National System of Colonization" as the remedy, while the extensive unoccupied districts of the British settlements in North America, New South Wales, Van Diemen's Land, and the Cape of Good Hope were pointed out as more than sufficient for the purpose. It was a wholesale plan of colonization, like those of the Phœnicians or Greeks of old, in which whole communities were to be deported at once, and not only conveyed by government bounty to their new homes, but furnished with the means of industrious occupation and independence when they had landed. To raise the necessary funds for this national enterprise, it was proposed either to advance them from the public taxes, to be afterwards repaid by the emigrants themselves, or by raising a sum on the security of the poor's rates, which should be received as payment in full of all future demands. And lest the amount of money surmised as necessary for such a purpose should be too alarming, it was stated by Sir Wilmot Horton, that the annual expenditure of £240,000 would be sufficient to carry off that yearly surplus of the unemployed population, which would otherwise accumulate into an intolerable burden. The manner in which this important subject was

followed out, and its effects, both in the relief of the mother country and the prosperity of our colonies, more properly belong to the next period of our history.

In passing from these general statements in the history of social progress, to the particular features of this earlier part of the nineteenth century, nothing certainly could be more strikingly indicative of the spirit of change and advancement, than the flood of artificial sunshine which could now be thrown at pleasure over streets and highways, through public buildings, and even into the recesses of private dwellings, by the slightest touch of the finger. It will be seen at once that we allude to lighting by means of gas, one of the greatest marvels of modern discovery. Even so early as 1739, as we find by the *Transactions of the Royal Society*, the Rev. Mr. Clayton had been experimenting for the purpose of extracting a permanently elastic fluid of an inflammable nature from coal, and was so successful that he filled several bladders with it; and that on puncturing these bladders, and applying a light to the orifice, he could, by a slight compression, make the air escape in a clear, bright flame. But although he had thus hit upon the discovery of producing light from coal gas, he appears to have thought of no other use of it than to astonish his friends and visitors. A practical man was needed to turn it to account, and such a person was found in Mr. Murdoch, in 1792, who, in trying experiments, discovered that the gas obtained by distillation from coal, peat, wood, and other inflammable substances, yielded during its combustion a bright, pure light. This was not enough, however; and he arrived at the happy conclusion, that by confining the gas in proper vessels, and afterwards discharging it through pipes, he might make it a cheap and convenient substitute for lamps and candles. In 1797, after having matured his plan, Mr. Murdoch published it, and in the following year he erected an apparatus, with which he lighted the Soho Foundry, in Birmingham, with gas. This commencement was insufficient to attract general notice until 1802, when, in consequence of the public rejoicing on the return of peace, the foundry was so brilliantly illuminated with gas, as to throw every competitor into the shade. The next public building to admit this new mode of lighting was the Lyceum Theatre, in London, which was effected in 1803-4, and in 1804-5 Mr. Murdoch was enabled to carry out the trial upon an extensive scale, by erecting an apparatus for lighting the manufactory of Messrs. Lee and Phillips, of Manchester; and at the same period Mr. Lee had the courage to admit the agency of gas-light into his own dwelling. These trials were enough to demonstrate not only the

innocuous character of the inflammable fluid, so far as health was concerned, but the safety with which it could be used; and accordingly, in a few years, streets, shops, and public buildings were lighted with gas, so that in 1822 the capital vested in the gas-works of the metropolis alone amounted to £1,000,000 sterling, while the pipes of these establishments comprised an extent of more than 150 miles. The last step of all was to light private dwellings with gas, but this for a considerable time was only partially done, on account of the dangers arising from mismanagement; and it was not till the close of this period that gas began to be generally used in some of our towns for the purposes of domestic comfort.

The other external changes that characterized this period of mutation were so various that it would be difficult to specify them, while they are so well understood by the present generation, that such a specification, in a work of this nature, would be superfluous. London was continuing to extend its net-work of streets into the country in every direction, but especially the west, until all men wondered—as they still do—within what possible limits this overflow should at last be confined. The dwellings of the merchant princes in the city were now thought good enough to be used only as warehouses, while their fastidious owners had their showy suburban villas, to which they could retire from business in the afternoon, and combine the peaceful amenities of the country with the interchanges of civic life. The thriving, substantial shopkeepers soon followed the lead, and had their snug boxes at Islington or Camberwell, where they could be nigh enough to their counters during the day, and enjoy in the evening the sight of green fields, or their own little gardens and summer-houses, and where they could smoke their pipes, and plan flower-beds in the fashion of their well squared ledgers. In this way the wealth of London, like a rich lace, was chiefly displayed upon the hem and border. All this necessitated changes in dress, in furniture, in domestic living, and even in amusements and the hours of meals. What need, for instance, was there for a walk in the parks, for those who had their half-rural homes to repair to? and how could they frequent the concert or theatre, when their hour of dining was six o'clock? And, moreover, could not they and their families comprise every possible enjoyment in a trip to Boulogne, or even to Paris or Baden? The great fashion and amusement of the age, after the war with France had ended, was travelling; and England, so long pent up within its four seas, was impatient to precipitate itself by wholesale into the Continent. Thither, accordingly, every class and degree repaired, from the duke to the slop-seller—from the *littera-*

teur in quest of new materials for a book, to the proscribed *roué* or uncertificated bankrupt. It could not be otherwise than that a multiform importation of fashions, frivolities, and follies would be the result of all this foreign travel.

FASHIONS OF THE TIME, 1806-1807 —From prints of the period

But while a large portion of these undesirable innovations were so unsuited to the atmosphere of Britain that they sickened and died for lack of nourishment, the general and permanent result was such as made this opening of the world a great national advantage to our country. It tamed the arrogant pride and corrected the surly prejudices of John Bull. He was compelled to open his obstinate eyes to the fact that the French are not a nation of starvelings who live on frogs, and that one Englishman is not enough to beat three Frenchmen—a misgiving which he had occasionally begun to entertain during the late war. He also saw that manhood, common sense, and active enterprise are not exclusively his own; and that foreign excellencies actually existed which he had not yet learned, and which he would do well to copy. Such was the general effect, which infused not only a new spirit into our literature, but impressed a new aspect upon our manners and customs, as may be seen by comparing the people at the commencement of this century with the same people thirty years afterwards. Without ceasing to be Englishmen, they had unlearned to a large amount the insular pride and prejudices of their fathers, and were evincing a courtesy and liberality towards those of other nations which had scarcely been mani-

fest in England since the days of the Crusades.

With regard to the costume of this period, the mutability was as great as ever; but in this case an apology might be urged with a greater show of reason. When the whole character was undergoing a state of transition, it was not wonderful that this influence should pervade the outward man, from the topmost curl of his head to the point of his shoe. Accordingly, in the storm of the French revolution, the wig was utterly blown away, queues and pig tails vanished, and hair-powder resumed its legitimate purpose as the staff of life; while shoe-buckles, broad-skirted coats, and buckram were proscribed as relics of ancient feudalism, and hostile challenges to the new doc-

trines of liberty and equality. Men were now contented to wear their natural hair, and of its own natural colour, but shorn and trimmed à la Brutus; while their limbs were encased in simple, natural, succinct dresses, that left the

FASHIONS OF THE TIME, 1818-1830 —From prints of the period

wearer to act as he pleased. The rude sans-cullotism of France was the means of introducing nature and simplicity into the costume of England; and there, happily, the change stopped short, and went no farther. But for the better understanding of these, we must have recourse to pictorial illustration; and in the preceding groups, our readers will understand how their fathers were dressed in the earlier part of this century. The ordinary attire was a coat divested

of its former stiffness, and adapted to the shape of the wearer, with close breeches buttoned beneath the knee; while for full dress, the silk stockings without a crease, the ornamented border of the vest, as it peeped out from the opening of the coat, and sometimes the opera hat or *chapeau bras*, smartly tucked under the arm, or gracefully gesticulating in the hand, were the *ne plus ultra* of the day. Then came another sumptuary revolution, in which breeches and pantaloons were discarded for loose trousers, and tight formal coats for surtouts; while boots and tops, hussar and Hessian boots, and other such coverings for the foot and leg, were ex-

changed for Cossacks, Bluchers, and Wellingtons. Indeed, the titles of the different articles of dress proclaimed their own period, and the man who happened to be in the ascendant. This was especially the case during the era of the prince-regent before he had expanded into George IV., and when he rejoiced in a form worth dressing. His indeed was an era of dress, in which the previous simplicity was abandoned, and in which his fastidious and changeful tastes were followed, imitated, and caricatured. Such were the ample neckcloths with which he concealed his throat, and the stays by which he sought to compress his unwelcome growth of form. A voluminous

BONNETS AND HEAD DRESSES OF THE TIME, 1806-1830 ¹—From *La Belle Assemblée* and *Ladies' Magazine*

neckcloth enlarged with a pad, or stiffened with a stock, became in this case the general wear; while the slim erect dandies of the period betrayed the source of their pretensions to superior gracefulness by the creak of their stays, or even the occasional bursting of a stay-lace. With these, the voluminous efflorescent hair-dress (and subsequently wig) of George IV., became the "rose of fashion" in the arrangement of the hair, and to be in full dress, the head required to be of royal amplitude and flourish. Of the padded and buckram'd coats expanding into an arch in front, and scarcely descending below the region of the heart, while behind they terminated in long, but sharp and narrow swallow-tails, and of the balloon-like trousers, whose length and ample volume were in ridiculous contrast to the pinched and short-waisted coat, an idea will be more clearly conveyed by the copied illustrations of the period. It is enough to state that George IV. and the rough Cossack of the Ukraine were alternately the models of costume, and sometimes both together. Of the Beau Brummel ascendancy,

and the empire of starch which succeeded, we care not to speak; these matters are chronicled in the memories of the living generation.

Of the ladies' dresses during this period, the chief peculiarity was the multiform, but generally preposterous bonnet, within which their faces were concealed, and the short waists of their gowns, that sometimes dwindled into utter nothingness, and left to the wearers nothing but the semblance of head and skirt. Nothing, indeed, could be more ridiculous than the female waist of this period, "if waist it might be called that waste had none." Before ten years of the present century had elapsed, this essential portion of the female form had disappeared, in consequence of the gown being wholly composed of shoulders and skirt; and for fully ten years this uncouth fashion reigned, when a love of the classical and statuesque began to predominate, under which the waist gradually elongated itself into its own natural extent. (This will be seen by a reference to the figure character-

¹ 1, Year 1807. 2, Year 1808. 3 Year 1817. 4, 5, Year 1830

istic of 1830, in the second of the accompanying illustrations.) Of the bonnets in their variety of form, whether of felt, straw, or other richer material, whether high or low, narrow or expanded, over the whole of this period, we must

the branch of the service in which he was enrolled. Still more barbarous was the dress of the common soldier, to the back of whose hair was fastened a queue of lackered tin, with a tuft like a shaving-brush at the extremity, and who was compelled to

BRITISH MILITARY COSTUMES. 1.—From prints published in 1812.

lather his hair with soap every morning, that it might be whitened into the likeness of a veritably powdered head. But before twelve years elapsed, a reform in military costume had cashiered these anomalies, and delivered both officers and soldiers from the tyranny of hair-powder, tight waists, and pipe-clay, spatterdashes, and scoured fire-locks, leaving little except the garrotting leather stock and pipe-clayed belt as relics of departed military barbarism. And will it be believed that even in India, and at the present day, our soldiers

again give our references from the *Ladies' Magazine* or *La Belle Assemblée*. In these, also, the changes from the artificial to the natural in the several departments of female costume will be distinctly traced, and intelligibly recognized. The dressing of the hair was of course as capricious as the form of the bonnet, being gradually raised from the flat simplicity of 1806 to the pyramid of 1830, stiffened by a plate of tortoiseshell sometimes six inches in height. It is enough in concluding this portion of the subject, to state that before this period closed, both male and female costume had settled very much into the convenient form which still continues to predominate. Of the military dress, a considerable portion of the foppery of the Prussian school survived till the beginning of the present century; and the time can still be freshly remembered when the powdered and pig-tailed head of every officer was surmounted by a huge cocked hat, and his breast defended, or rather ornamented, by a smart little cuirass, about two inches in length and one in breadth, and which now did duty, by serving as a resting-place for the wearer's chin when his head was depressed by sleep or contemplation. Of course the boot was an indispensable part of the officer's dress, and was Hessian, hussar, or French in form, according to

were exposed in their marches and campaigns to the inflictions of the torturing neck ornament, in addition to the furnace heat of the climate, and the risk of *coup-de-soleil*? With these brief notices we can safely consign what remains of the manners and customs of the period to the recollections of our readers. A later age must arrive before the charm of interest or novelty can be imparted to their full detail.

In passing to the science and scientific men of the present period, we need merely to advert to the preceding pages for a proof of their practical and utilitarian character; in fact, mere theories and abstractions were now only valued by how much they could be brought to bear upon the real business of life, in the promotion of human happiness, and the multiplication of the means of comfort. In chemistry the principal names were Sir Humphrey Davy, Professor Thomson, and Wollaston, to whom may be added Gregor, Leslie, and Dalton—men whose researches are suggestive of improvements in mining, dyeing, &c., independently of their more purely intellectual discoveries, upon which their renown will be principally established. Of these, the most illustrious, and the most practical in his researches, was Davy, who was born at Penzance, in Cornwall, in 1778, and who died in 1829. His first contributions to chemical science were in 1799, when two of his papers, remarkable for their original character and genius, were published, in a work of Dr. Beddoes, entitled *Con-*

tributions to *Physical and Medical Knowledge*; and after this period until that of his death, the discoveries and improvements of Davy in chem-

SIR HUMPHREY DAVY —From a portrait by J. Jackson, R. A.

istry were too many to enumerate within our narrow limits. Of these, we can only particularize his discoveries upon dephlogisticated nitrous air and its respiration—upon the chemical agencies of electricity—and upon oxymuriatic acid. But the scientific achievement by which Sir Humphrey Davy will be most widely remembered, was his invention of the miner's safety-lamp, the first paper on which he published in the *Philosophical Transactions* for 1815, and the last in 1817. The incalculable benefit of this invention in all the operations of mining, and the safety which it imparts to their hitherto perilous explorations, are of universal acknowledgment. A scarcely less important name in the same department of science, is that of Dr. William Hyde Wollaston, who was born in 1767, and died in 1828. He was the first to show that the evolution of voltaic electricity is dependent upon chemical action; and he perfected the method of rendering platinum available for the purposes of chemistry and the chemical arts. By the "reflective goniometer," he gave to crystallography all the accuracy of which it had hitherto stood in need, by showing that three substances—viz., the carbonate of iron, lime, and magnesia—which were previously supposed to crystallize in rhomboids measuring the same angles, had all different angles. It was in the succeeding period, however, that these discoveries were fully appreciated and turned to the best account. In astro-

nomny Herschel, who had made himself illustrious during the previous period by his discovery of the planet Uranus, was still without a rival. In 1802 he published his catalogue of 500 new nebulae and nebulous stars; in the following year he announced the motions of double stars around each other; and he continued his discoveries till the year of his death, in 1822. In ethics and metaphysics the principal luminaries of this period were Dugald Stewart, Thomas Brown, and Sir James Mackintosh. In inquiries into the beautiful and the principles of taste, the chief successors of Burke were Alison and Jeffrey. In theology as a science, the present age produced few names worthy of commemoration; but as general theological writers and preachers, Thomas Chalmers, John Foster, and Robert Hall formed an illustrious trio, that for eloquence and power would have made the pulpit of any age distinguished. In political economy, now a science of great importance as well as general interest, we can only advert to the names of Jeremy Bentham, who wrote with great power and originality on this as well as on almost every other subject; Malthus, Mill, and M'Culloch. To this list, were it merely for his singularly vigorous style, and the effect his multifarious writings produced, especially upon the lower orders, may be added the otherwise questionable name of William Cobbett.

If the historians which the present period produced were few compared with those of the later part of the eighteenth century, it was because history itself was fully more recognized as a science than it had been in times past. Laborious

SIR JOHN HERSCHEL.

thought and accurate research were now its chief essentials, for the absence of which, neither eloquent writing, nor imaginative descriptions, nor ingenious plausible theories could compensate; and even already the age was demurring at the

one-sided Jacobitism of Hume, and the high-sounding scepticism of Gibbon. During this transition period of historical writing, therefore, the authors were both few in number and inferior in popularity to their predecessors, although their investigations were more profound, and their statements less impeachable. The most distinguished of these were Turner and Palgrave, who, entering a field that had hitherto been too much neglected because of its difficulty, explored the origin of the English nation, and threw new light upon the Anglo-Saxon and Anglo-Norman periods. Another laborious investigator was Dr. Lingard, who wrote a voluminous history of England, but chiefly from a Roman Catholic point of view, and as the advocate of his own church. Equal to any of these was Hallam, who, in his *Constitutional History of England*, developed with great clearness and eloquence the origin and growth of our national institutions. As an historian and biographer, Southey was distinguished by his luminous power of description and exquisite style, although his *Book of the Church*, *History of Paraguay*, and *Life of Wesley* have failed to win the popularity which their high qualities merited. An eminent classical historian of the period, whose congenial subjects were Italian history, was the accomplished Roscoe. Inferior to none of the foregoing writers was Dr. Mc'Crie, the historian of a portion of the Reformation, and biographer of the Scottish reformers, Knox and Melville, who threw light upon a period as yet too little understood, and vindicated the characters of those men whom it had been too long the fashion to vilify.

From the foregoing enumeration of the intellectual lights of the period in each department, it will be felt that a higher measure of excellence, as well as a more numerous array, might have been confidently expected. But it was upon action rather than writing that the spirit of the age was expressed, and men were less intent in formulating a theory than reducing it to practical and profitable use. In this manner, the thoughts that had been so carefully elaborated during the latter part of the eighteenth century, were substantially embodied in the first thirty years of the nineteenth. Another mode of expressing new forms of thought, or delineating their tendencies, was not by essay or disquisition, but in the alluring and popular form of the novel, which speedily became the most prolific as well as the most carefully cultivated kind of writing by which the period was characterized. In this form Godwin, as the author of *Caleb Williams*, *Saint Leon*, and the series that followed, propounded his philosophical axioms; the author of *Anastasis* delineated the lights and shades of eastern character; and writers conversant with

historical literature, but who were too impatient to write formal histories, discussed the actions of an epoch or the character of its presiding hero. Even theology availed itself of this kind of popular writing, and the doctrines of Millenarianism were never more distinctly or persuasively illustrated than in the magnificent romance of *Salathiel*. But the names of the novelists of this period, with Sir Walter Scott at their head, are too numerous to be rehearsed, as well as too well known to need rehearsal. Of their writings in general it is enough to state, that while they seek a higher aim than the mere amusement of the passing hour, and inculcate a better morality than the imaginative works of any previous period, they are divested of that indelicacy and grossness which disfigured the works of Fielding, Smollett, Sterne, and the other novelists of the past generations. It was well that a kind of writing so universally popular and sought after should have been so thoroughly purified, and so well fitted for general perusal. The novel being a species of literature in which imagination rather than learning is required, and quick observation rather than profound thought, became a favourite department with female writers, so that during the whole of this period the female novelists were about as numerous as those of the other sex, while in sterling excellence they could scarcely be said to be inferior. Miss Edgeworth, by her admirable delineations of Irish character, and the popularity her writings secured, gave the impulse to the author of *Waverley*, and induced him to render the same service to Scotland. Miss Lee's powerful tale of "Kreutzner," in the *Canterbury Tales*, took possession of the young fancy of Byron, who dramatized, but did not equal the story, in the play of "Werner." In the grand and terrible of romance, where natural events are aggrandized into the supernatural, no modern writer has as yet surpassed Mrs. Radcliffe. Miss Porter, by her *Scottish Chiefs*, may be said to have originated one of the most popular and instructive of all the classes of fictitious writing—that of the historical novel; while in delineations of Scottish character and scenery, Mrs. Brunton, Mrs. Johnstone, and Miss Ferrier only yield to Sir Walter Scott. But it is in describing the delicate shades of feeling, and depicting the charms of home life and action—those circumstances which should chiefly constitute the materials of a novel—that female writers most excel; and in these departments, where their natural tact and delicacy are called into full play, they have been, and will still continue to remain unrivalled.

In the poetry of this period a new era had commenced. The artificial monotonous sing-song of the old school, independently of its growing

duiness, which soon would have insured for it a natural death, was unable to withstand the shock of the French revolution, which pervaded the literature of Europe with the energy and change of a new life; and the example of Burns and Cowper, which was the first poetical result of the new spirit that was moving, was sufficient to announce to their countrymen the opening of the field into which they were to enter and take possession. And yet it was nothing else, after all, than a return to truth and nature. There was no new world to be discovered, no new language to be created: nothing more was needed than the adaptation of the natural feelings of the seventeenth century to the form and mode of the nineteenth; to let the true and tuneful spirit of the Elizabethan age speak in the language and spirit of the reign of George III. This was done accordingly, and the result was the formation of the third great school of English poetry. Attempts, indeed, have been made by theorists to assign a foreign paternity to each of these schools, and to prove that as the first was derived from Greece, and the second from France, in like manner the third was the offspring of German literature acting upon the English mind, instead of a spontaneous and natural product. But what had Burns, and Cowper, and Crabbe to do with German literature, either directly or indirectly? Or where is the evidence of its influence in the writings of Southey, Campbell, Scott, and Byron? In this matter, at least, too much homage has been paid, and too much honour attributed to the land of Klopstock and Goethe.

Among the fathers of our modern poetry we have mentioned the name of Crabbe, and to it may be added that of Gifford. They belonged equally to the past and present period, and were fit successors to Cowper, whose daring march they followed. George Crabbe, who was born in 1754, after receiving a very narrow education, commenced his career by writing in the poet's corner of provincial journals; and at the age of eighteen was successful in a prize poem on "Hope," which was given for competition in the *Lady's Magazine*. Thus emboldened for a higher attempt, he threw himself into authorship, and repaired to London with a capital of £3 and a bundle of manuscripts; but the money was soon spent, his poems were rejected by the publishers, and a period of starvation followed, from which he was happily rescued by the patronage of Edmund Burke, and afterwards of Chancellor Thurlow, the latter of whom, in consequence of Crabbe entering into holy orders in 1782, presented him to two crown livings, the duties of which he discharged to the end of his life (1832) with great diligence and fidelity. The first public produc-

tion of Crabbe, the "Library," was published in 1781; two years afterwards followed the "Village," a work which secured the applause of Burke and Johnson, and the substantial patronage of the chancellor; and in 1785 appeared his "Newspaper," by which the fame he had acquired as a poet was permanently established. A long interval of twenty-two years succeeded, which, far from being spent in idleness, were occupied to the full with the sacred duties of his calling; but his poetical career, instead of being ended, burst forth anew, and with greater energy than ever, in his "Parish Register," "Borough," "Tales in Verse," and his last and best work, the "Tales of the Hall," with which the series closed, in 1819. Thus Crabbe, as a poet, was equally identified with the past and the present period, while he occupied a place in the foremost rank of each. The characteristics of his poetry may be easily summed up. He had little imagination, or even fancy, those qualities that constitute the most essential requisites of a poet; but in describing nature as he found it, no poet has ever surpassed, and few, if any, have equalled him. The same quality distinguishes his "Tales," which amply verify the axiom that truth is stranger than fiction; and it is upon this painter-like fidelity of delineation, in the absence of every idealizing tendency, that the charm of his poetry is to be found.

The early difficulties with which Crabbe had to struggle were felt in a still greater degree by William Gifford, who was born in 1756, his father being nothing but a poor sailor, and afterwards a wandering tinker; while William, who was left an orphan at the age of thirteen, had no better patronage than that of the fish-women of his native town, and was almost wholly self-taught. But his thirst for knowledge, and his indomitable resolution, carried him through every difficulty; and while he was but an apprentice to a shoemaker, and unable to purchase writing materials, he worked out his calculations in algebra upon scraps of leather with the point of an awl. In this rude fashion he trained himself in the rudiments of science and literature, until his remarkable acquirements procured him the means of a better education at Exeter College, Oxford; and when he became an author, he so greatly signalized his talents and acquirements by his translations of Juvenal and Persius, and his original poems the "Baviad" and "Mæviad," that he was appointed editor of the *Quarterly Review*, which he conducted from its commencement until 1825. The poetry of Gifford was essentially that of a critic and satirist, while its chief victims were the Della Crusca school of poets, who had started up at this period of literary revolution to charm the ears and vitiate the taste of the public with their

frothy inanities and diseased sentimentalism. Upon these poetical impostors he came down with tremendous power in his "Baviad," which he published in 1794, and its continuation, the "Mæviad," which appeared in 1796. They were discharges of artillery, under which the Della Cruscan school was dissolved like a waterspout. And in good time this exploit was achieved, as the vicious taste which Gifford so mercilessly attacked had begun to infect several young writers, who needed such a disenchantment before they took that place in the world of letters which they afterwards occupied. As may easily be surmised, the poetry that could produce such a result was of no ordinary excellence; but as its object was temporary, it ceased to be remembered after its work had been accomplished, so that in the able and merciless editor of the *Quarterly* the author of the "Mæviad" may be said to have disappeared as a poet.

The short-lived Della Crusca style had scarcely expired when a new appeared, called in derision the "Lake school of poetry," which was neither so worthy of obloquy, nor so easily to be overthrown. Its chief principle, in direct opposition to the extravagant and inflated spirit of its predecessor, was that poetry was nothing more than the real language of men in a state of vivid sensation, reduced to metrical arrangement. In this way, the babble of old age and the stammerings of infancy, the boisterous declamations of the illiterate clown and the lisping twaddle of the milkmaid, were orthodox poetry, if only truly paraphrased in proper rhyme and measure. And loud was the merriment of critics when the first illustrations of this narrow and erroneous theory appeared; they were likened to an anthem on a jew's-harp, or the performance of an oratorio on a penny whistle; while the poems themselves, in spite of their intrinsic excellence, afforded too much ground for the comparison. But the theory was founded on truth, though not the whole truth; its adherents were men of high mark; and when they rectified and enlarged its principles and sphere of operation, they produced such works that the term "Laker" ceased to be a word of derision. How, indeed, could it be otherwise with a school which had Wordsworth for its founder, and Southey, Coleridge, and Wilson for its supporters and advocates?

Of William Wordsworth, the venerable octogenarian, who but lately departed from among us, it is difficult as yet to form a proper estimate. At first he was the object of general ridicule and neglect; afterwards, when his real worth was appreciated, these feelings were exchanged for the opposite extreme, so that he was rated as equal, if not superior, to Milton himself. But now an ebb has again commenced, of which it is

impossible to foresee the limits, or conjecture the precise place which posterity will assign to him among the great poets of the nineteenth century. He was educated at Cambridge; and to his scholarship he added the experience of travel over several countries of Europe, by which he was enabled to divest himself of whatever predilections he may have entertained for the national established style of poetry, and mature his theory by a wide range of observation. On returning home he addressed himself to the purposed work of his life, and in which he persevered to the close—to be the poet of nature and expounder of its high principles, let the world receive or reject them as it pleased. His plan, indeed, as it was finally developed after years of meditation and seclusion, was as vast as it was new and daring. It was to be embodied in a poem in three parts, entitled the "Recluse," of which the large poem, the "Excursion," formed only a single part. The whole was to constitute a "Gothic church," to contain "views of man, nature, and society," and "having for its principal object the sensations and opinions of a poet living in retirement." Not years but ages would have been required for the completion of such a cathedral, if we may judge from the single wing which he lived to complete. But in addition to the "Excursion," Wordsworth considered his other poems as nothing more than little cells, oratories, and sepulchral recesses of the vast whole; and when published collectively, they were given under the following heads:—1. Poems referring to Childhood; 2. Poems founded on the Affections; 3. Poems of the Fancy; 4. Poems of the Imagination; 5. Sonnets, Inscriptions, &c. It would be hard to guess whether such a plan preceded the poems themselves, or was an after-thought of their suggestion.

Like most of those who are born poets, and destined to poetical eminence, the preludings of Wordsworth commenced at an early period, so that some of the poems of his collected works were written at the age of sixteen. But it was in his "Lyrical Ballads," which were published in 1798 and 1800, that he appeared before the world as an author, and announced his new theory of poetry. He declared in the preface of the work, that the purposes of poetry might be effected "by fitting to metrical arrangement a selection of the real language of men in a state of vivid sensation;" and the ballads themselves were given as experiments to ascertain how far this object could be effected. But such a new strain only set the teeth of the public on edge, and provoked the mirth of the critics, who united themselves as one hostile party to hunt down the strange intruder. Seldom, indeed, has a poet been so ridiculed, and more seldom still has so great an outcry been confronted with such tranquil indifference." Con-

fidant in the truth of his theory, Wordsworth persisted in its illustration, but with a selection of higher themes, which demanded a more elevated strain of sentiment and language. The

WILLIAM WORDSWORTH — From a portrait by W. Boxall

perseverance of years was finally too much even for the hostility of critics, and the intrinsic excellence of his poetry compelled them to admire what they had at first endeavoured to write down, and recognize him as one of the best, as well as most original, of British poets. The philosophical style of his principal poem, the "Excursion," its metaphysical disquisitions and lack of incident, will never make it a favourite, except with a chosen few who can penetrate its depth and sympathize with its feelings; but the smaller poems of Wordsworth, such as his "Ruth," "Laodamia," "Yarrow Unvisited and Revisited," "Intimations of Immortality from Recollections of Early Childhood," "Tintern Abbey," and the like, possess in themselves a poetry and a power, independent of the aid of language and the trickery of sentiment, which will continue to secure admiration for their intrinsic excellence, let the fashion of succeeding schools be what it may. With such a conviction the venerable poet himself was gladdened before he departed from a world in which his welcome had been so churlish, and his labours so thanklessly repaid.

A kindred spirit, and friend of Wordsworth, who would have rivalled, and perhaps even have excelled him as a poet, had his energy of purpose been equal to his genius and endowments, was Samuel Taylor Coleridge. This remarkable man was born at St. Mary Ottery, Devonshire, of which parish his father was rector, in 1772, and was educated first at Christ's Hospital, London, and afterwards at Jesus' College, Cambridge. But

at the age of twenty his eccentric disposition induced him to flee from college, and enlist as a private in a regiment of dragoons, where his unfitness for ordinary drill and his learned intellectual conversation betrayed the scholar, and were the means of restoring him to his friends. After publishing the "Fall of Robespierre," a poem which died unnoticed, and delivering a course of lectures on the French revolution, which failed to obtain popularity, Coleridge, in conjunction with Southey, and a young poet named Lovell, dreamed of the regeneration and perfectibility of the human race, until they reduced it to a gospel, under the name of Pantisocracy, which they forthwith began to preach in the commercial town of Bristol. But its thrifty, money-making citizens could see nothing attractive in a form of society in which every man was to be upon the level of his fellows, and all things to be enjoyed in common; and disappointed in their hopes of the regeneration of England, the three resolved to transfer their millennium to the new world of America. The dream was fortunately dissolved, by the marriage of the enthusiasts to three sisters residing in Bristol; and on becoming a husband, Coleridge commenced a newspaper, called the *Watchman*, and began a new career as a preacher in a Unitarian chapel; but these attempts, as well as every subsequent one, ended in failure; for with his visionary habits, and utter want of perseverance and worldly prudence, no attempt could prosper in his hands, or pursuit be continued to its close. Thus especially it fared with his poetry, which was a series of magnificent attempts, that either broke down mid-way, or were hurried to an abrupt and unsatisfactory conclusion. It was unfortunate for him, also, that he betook himself to opium-eating, through which his mind was still farther unsettled, and his power to choose unstrung. From 1816 to 1834, the year of his death, he lived under the affectionate care of a physician at Highgate, where he published the greater part of his works, and delighted the throngs who repaired to him by the witchery of his conversation. His poems—which from their incompleteness showed what he might and could have done, and the perusal of which will always qualify the delight and astonishment of their readers with regret—consist of juvenile poems, odes, ballads, dramas, and translations, in all of which his imagination gleams like the sun bursting fitfully through cloud and vapour, while the language itself is a music that charms the ear, even when the sentiment is tame or defective. Besides being a poet, Coleridge was also journalist, theologian, metaphysician, and political writer; but his writings in these different departments exhibit the same fragmentary character, with a double portion of

that haze and mystery with which his poetical productions are but occasionally obscured. But it was more in his conversations than even his writings that his best and brightest ideas were embodied; he discoursed rather than conversed, while every listener was willingly silent. But these monologues have passed away with the generation that listened, and can leave nothing better than a traditional remembrance.

A very different poet from Wordsworth and Coleridge was Sir Walter Scott, whose poetry has no sympathy with metaphysical speculation, and who had no thought of constructing a poem for the purpose of evolving a theory. To him the rude grandeur and stirring every-day life of a feudal castle, and the dust of the tournament and battle-field, had more attractions than all the philosophical systems which poetry could resolve into tuneful numbers, so that he was the poet of action instead of thought, of the real and visible, rather than mere abstractions. He was born in Edinburgh in 1771, and was the descendant of barons who had figured

in Border raids and Scottish history; and this last circumstance, combined with his early intellectual nurture in the ancient ballads and legends with which his ancestors were connected, may be said to have formed the character of his genius, as well as his career in life. He was to be the poet of ancient Scottish chivalry, and the restorer of the old feudal style of living, which he was so well fitted to illustrate. Even sickness came to aid this destination, by making lively reading necessary for his amusement, and he had amassed an amount of literary and historical fiction before his sixteenth year was completed, which not only served as the incentive of his future path of excellence, but the bountiful source from which it was supplied. When weightier studies had matured his mind and confirmed his choice, he commenced his poetical vocation prudently and cautiously, by translations from the German, a few short original ballads, and the congenial task of editing the "Minstrelsy of the Scottish Border." In 1805 he published his first large origi-

nal poem, the "Lay of the Last Minstrel;" and the ringing of the old Scottish romantic harp, which had been unheard for three centuries, and which had never sounded with such a compass, arrested the public attention, and was listened to with delight and wonder. His genius, thus directed into its right path, was animated by his characteristic industry, and in 1808 appeared his "Marmion," a poem of more elevated character than the "Lay," and in which the stirring description of the battle of Flodden is scarcely

excelled by any picture of a similar kind in the whole range of Homeric poetry. In 1810 he produced the most finished and also the most popular of his works, the "Lady of the Lake;" and independently of the loud commendation with which it was read and re-read, its excellence was signal-ly attested by its effects in making Loch Katrine and the Trossachs — places as yet unknown even in Scotland itself — renowned over Europe for the beauty and grandeur of their scenery, and the favourite haunts of an universal pilgrimage. During the

SIR WALTER SCOTT — From a portrait by Sir T. Lawrence.

next four years he published successively the "Vision of Don Roderic," "Rokeby," and the "Lord of the Isles;" but the high standard established by his previous works had made the public fastidious, and these last productions, notwithstanding their excellence, and their many detached portions of surpassing beauty, could not sustain the untiring wing which his fame had maintained through his first three epics. Of this, indeed, he was himself conscious; and he felt besides, that a young competitor for the throne of poetry had entered the field, with every promise of success. This was Lord Byron, who had already commenced in earnest, and taken the public admiration by storm. Unwilling, however, to resign his supremacy without a struggle, and unable so suddenly to forego those tasks which seemed so necessary for his intellectual existence, Scott published anonymously the "Bridal of Triermain," and "Harold the Dauntless;" but the experiment was enough, for these poems, unsupported by the

prestige of his name, were tried by their own merits, and set aside as mere imitations, and works of ordinary merit. But where the intellectual career of others would have ended, his as yet had but commenced; for he now produced that wonderful series, the *Waverley Novels*, by which a new life of renown—and one of even a higher kind than the old—was secured; and he who had been one among the foremost of our poets became incontestably the first of our novelists. His splendid career in this new field till the close, his other literary performances, and the incessant action of his intellect, until its powers were arrested by utter exhaustion and paralysis, would of themselves require a history, which, however, is too well known to require repetition. Even to the last, his trembling fingers sought the pen which he had no longer strength to guide; and he died in 1832, after an amount and an excellence of literary labour for which it would be difficult in the whole range of modern intellectual history to find a parallel.

Another eminent poet of the period, and also multifarious writer, whose labours were incessant, and who, like Scott, died over-wearied and worn out with intellectual toil, was Robert Southey. He was born at Bristol, and educated at Oxford; but his adoption of Socinian opinions disqualified him both for university honours and the clerical profession, while his early attempts in poetry, and the commendations with which they had been rewarded, pointed out to him a course of action more suited to his tastes and studies. Like Coleridge, also, with whom he associated, he became a Jacobin and apostle of Pantisocracy; but like him, also, as years and experience increased, he learned to abjure his errors, both religious and political. Before this occurred, however, he had published his drama of "*Wat Tyler*," and his epic of "*Joan of Arc*," in which he gave his Jacobinism full and free scope, and which productions were afterwards unmercifully flung in his teeth, when he became the equally zealous champion of high-church and high-tory principles. Notwithstanding his great qualifications, and the allurements of ambition, Southey's love of literature was so confirmed, that he gladly retired from the competition for wealth and office, and gave himself wholly to study and authorship, which he continued to the end of his days. His production of epics, which was as fertile as that of Sir Richard Blackmore himself, and which excited the ridicule of his enemies, would have deserved the outcry it produced, did we not take into account not only the prolific character of Southey's genius, but the systematic diligence and industry with which he turned every day and every hour to account. It must also be confessed, that, with all their excellence, his poems abound

with gorgeous images and a rich flow of language, rather than profound thought or genuine emotion. His poem of "*Joan of Arc*," in which he was assisted by Coleridge, was published at the early age of twenty-two; and in 1800, four years after this production appeared, he gave forth the "wild and wondrous song" of "*Thalaba the Destroyer*," one of the most gorgeous of Arabian tales as well as epic poems, which has for its theme the overthrow of the magicians by whom the world was troubled and seduced, and the ruin of their inaccessible ocean temple, the *Domdaniel*. This was followed in 1805 by "*Madoc*," a poem founded on the tradition of the discovery of America by a Welsh prince of that name, long before the voyage of Columbus. In 1810 Southey published the "*Curse of Kehama*," a tale of Hindoostan, founded upon its strange mythology, of which he avails himself with wonderful power and facility; and in 1814 appeared "*Roderic, the Last of the Goths*," which was also the last of his epics, having for its theme the invasion of Spain by the Moors, and the adventures of the Spanish king, after he was supposed to have perished in the battle of Xeres. But these large works, which might have sufficed for a lifetime, were but a tithe of Southey's productions; for his other volumes, both of prose and verse, the former comprising history, biography, belles-lettres, &c., would be too numerous to particularize, notwithstanding the importance of their subjects, and the admirable style in which they are written. It is enough to mention his "*Life of Nelson*," which from its high acceptance in the navy, and its influence in the cherishing of nautical heroism, may well be called a national work, and invaluable public boon. And yet, with all this fertility, Southey is said to have destroyed more than he ever published. His epics are now generally forgotten, but several of his smaller poems are still as fresh in the public mind, and as affectionately cherished, as when they first appeared. He died in 1843, after having outlived for several years that power of thought which he had wielded with such indefatigable mastery, and that vivid imagination which had given life and wings to his thoughts, and when his eloquence had sunk into the silence of idiocy or the stammerings of childhood. But his mission had been accomplished, and few of his contemporaries had fulfilled their appointed task so virtuously and so ably.

The poetry of the period had now assumed the romantic character, and consisted chiefly of stirring narratives and striking incidents, in which its descriptive spirit was embodied and its inspiration expressed. These narratives, also, instead of partaking of the old epic form, were stories connected with the chivalry of the middle ages,

the events of rural and pastoral life, or the marvels of remote lands and their wild mythology. The poetical world had been so long laid to sleep, and had settled into so deep a repose, that no ordinary interruptions were needed to waken it into life and activity. But while this new spirit was apt at times to run wild from the very exuberance of its youthful energies, there was one poet of the day, and he too of high note and influence, in whom truth and nature were identified with strict classical rule, and who combined the fervour and originality of the new school of poetry with the proprieties of the old. We allude to Thomas Campbell, one of those master spirits of the age, whose place is likely to be long unoccupied. This accomplished scholar, and sensitive, fastidious poet, was born in Glasgow, in 1777. At the college of his native city he was distinguished in boyhood, not only by the great superiority of his classical attainments, but also his early attempts in poetry, and his spirited translations from the Greek tragedians, especially Euripides. After residing for some time among the romantic scenery of the Highlands, he moved to Edinburgh, and there, at the age of twenty-one, published his great poem, the "Pleasures of Hope," which the public welcomed with delight, on account of the grandeur of its thoughts, the fervour of its feelings, and the stately, melodious language with which they were clothed. Although this classical work gives occasional indications of the immaturity of youth, its merits have withstood the test of half a century, a trial in which many of its more ostentatious contemporary productions have failed; it is now recognized as an established standard in our language; and as long as genuine healthful poetry is studied, the "Pleasures of Hope" will maintain its merited ascendancy. Campbell's next work, after a long interval, was "Gertrude of Wyoming," a pathetic tale of an Indian onslaught upon the village of that name during the American war; but although this poem is of even superior excellence to the first, it did not secure the same amount of popularity. The "Pleasures of Hope," indeed, written by one so young, had raised the most extravagant expectations, and when "Gertrude" appeared, the public ear had been already stimulated by the more exciting chivalrous epics of Scott. His last poetical work was "Theodric," a Swiss tale of domestic life, which he published in 1824. It is not, however, upon these productions that the poetical fame of Campbell will especially rest, but rather upon his smaller poems, such as "O'Connor's Child," the "Last Man," and still more, upon the "Battle of Hohenlinden," and the "Battle of the Baltic." Compared, indeed, with the amount of his genius, and the period to which his life was extended, it is to

be regretted that the quantity of his poetry was not commensurate. But the fastidiousness of his taste, which paused at every word and weighed every syllable—that musical scrupulosity which was the fruitful source of his shortcomings as well as his excellencies—made his poetical productions be thus few and far between, where every individual line was a carefully polished gem, over which he could not labour enough. To dash right onward through rough and smooth, like the other poets of the day, was a steeple-chase progress, wholly alien to his nature, and in which he would assuredly have broke down before half the course had been cleared. Like many of his illustrious brethren of the period, also, Thomas Campbell was not exclusively a poet, but a writer upon literature in general; and therefore, besides several original and compiled works in prose which he produced, and a course of lectures on poetry, he was editor for several years of the *New Monthly Magazine*. Literature, indeed, was his profession and source of subsistence, and his exertions were stimulated by the necessity of supporting his mother, sisters, and other relations who were dependent upon his labours. Having repaired to Boulogne for the recovery of his health, he died there in 1844.

Of all the poets we have hitherto mentioned, the undeviating aim of each, whatever might be his sphere of sentiment, was to inculcate the principles of a high morality and sound philosophy. But across this fair and bright horizon Lord Byron passed like a meteor, paling all others by his superior lustre, as well as disturbing them by the eccentricity of his orbit. As if to mark him out, also, for a course different from others, and doom him to follow it to the close, the circumstances of his parentage, early life, and education were different from those of other men, and stamped both upon himself and his works an impress that was exclusively his own. Although of a noble, time-honoured race, his father was an impoverished spendthrift and *roué*, and his mother a tennant; and under the care of the latter—who seems to have been more than half-mad, and of whose management it was doubtful whether her unreasonable fondness or frantic hatred would best succeed in destroying the nursing which it perverted—he was reared from infancy to manhood. In addition to these domestic discomforts, aggravated by such limited means as, to people of name and rank, are the worst kind of poverty, the mind of Byron, nursed into oversensitiveness, was confirmed in misanthropy by a physical defect in one of his feet. He was active, buoyant, and adventurous, but club-footed; and the eyes that admired his remarkable personal beauty, which exhibited the countenance and bust of Apollo, could not fail to rest upon the

incongruity of his deformed foot, and the awkward, constrained gait which it occasioned. Had he possessed an ordinary, or even an ugly visage, he might have passed comfortably on his way unnoticed; but marked, as he felt himself to be among mankind, and separated from them by such glaring contraries, he soon learned to return their look of sympathy or wonder with a scowl, and regard every man with hatred or suspicion. By the death of his grand-uncle he became a lord at the age of eleven; but under the injudicious training of his mother, his accession to rank and fortune only furnished him with the means of escape into wild unregulated courses, which he pursued both at school and college. Still his genius predominated, and his hours of excess were alternated with fits of gloomy seclusion, in which he read and studied, and thus unconsciously laid the groundwork of his future renown. Leaving the college at the age of nineteen, he commenced his career of poet by publishing a volume of his college productions, under the title of "Hours of Idleness;" but this work, notwithstanding the talent which it unquestionably indicated, was fiercely assailed by the Edinburgh reviewers, who were jealous on account of the privileges of the peerage, and resolved that poetry should in no case be classed among them. This welcome into literary life had no tendency to soften Byron's misanthropy, and he requited their satire by invectives more pungent than their own, in his next work of "English Bards and Scotch Reviewers," in which his poetical talents were more than doubled by the inspiration of hatred and revenge. Sated with the profligacies of London, and devoid of means adequately to support his rank, Lord Byron in 1809 travelled for two years in Portugal, Spain, Greece, and Asia Minor, and upon his return published the two first cantos of "Childe Harold." The world was astonished: was this the author of "Hours of Idleness," whom the critics had so summarily extinguished? Even those who had maligned him were now the first to recognize the youthful noble and man of pleasure as one of the foremost poets of the age.

Having thus made so successful a recommencement, and carried the public suffrage by storm, Lord Byron was not slow to improve the advantage; his pen was a rapid one, and travel had stored his mind with such imagery and incidents as were best fitted for the purposes of poetry. The field which he selected, also, was untrodden ground, being the sunny and romantic East, into the confines of which European poetry as yet had scarcely ventured, and whose gorgeous regions were so congenial to his own character and likings. In quick succession he produced the "Glaour," the "Bride of Abydos," the "Corsair,"

and "Lara;" and such was their popularity, that he was now considered as the occupant of Parnassus, without equal or rival. Even Sir Walter Scott was fain to abdicate the throne on which

LORD BYRON

From a portrait by T. Phillips, R. A.

the popular voice had placed him, and seek out for himself that new dominion which he so happily found. Lord Byron at this period married, but the union was an unhappy one; a separation soon followed; and maddened with indignation, as well as penetrated with the deepest grief, his lordship bade farewell to his country for ever, and passed the rest of his years chiefly in Belgium, Switzerland, and Italy, alternating a life of reckless adventure and dissipation with such poetical productions as are seldom equalled, even by men of meditative seclusion, and severe, long-continued study; while his powers, instead of flagging, seemed only to become more vigorous at every successive attempt. In this manner he rapidly threw off dramatic poems, mysteries, tragedies, tales—every variety of poetry, in each of which he showed himself an unrivalled master; while his last and longest production, "Don Juan," besides being the highest specimen of his intellectual talents and powers, was also the concentration of all his moral offences as poet and author. Thus, when as yet he had only reached the age of thirty-five, he had lived a whole century of life, in which sensual enjoyment had been drained to the uttermost, and an intellectual renown attained that had grown and brightened to the last, leaving him almost nothing more either to enjoy or desire. Even at this stage, however, a new life, and one more noble and distinguished, seemed to await him. Greece, the ancient birth-place and home of heroism and poetry, was struggling, after centuries of oppress-

sion, to resume her place as a nation, instead of being a mere degraded province of aliens and barbarians; and Byron generously threw himself into this all but hopeless cause, of which he soon became the best life and promise. But it was the last flash of the lamp, the brightest of his efforts, that was the prelude not of revival but extinction; and worn out and heart-broken by difficulties and disappointments that made his generous sacrifices unavailing, he expired at Missolonghi on the 19th of April, 1824.

Poetry so powerful as that of Lord Byron, and at the same time so acceptable to the general taste, could not fail to produce a striking effect upon the general aspect of society. It was not merely that young men endeavoured to dress and look *à la Byron*; that general conversation became a chatter about gazelles, bulbuls, "pale Phin-gari," and the land of the sun; that unfledged rhymers attempted his style of writing, and produced such travesties as imitation has seldom out-heroded; and that a moping, whining, life-loathing, and world-hating sentimentality became the fashion, in which every one endeavoured to act the part of a woe-begone victim and martyr. These were perversities of taste too annoying to be tolerated, and too ridiculous to endure; and such frothy sorrows were quickly blown away by universal scorn and derision. But there was a deeper and far more mischievous spell in his poetry, which had better intellects for its victims. Lord Byron incessantly declaimed of his unmerited wrongs, until his admirers wept over him as the most injured of men. He thundered his maledictions against the human race at large, and his overwhelmed readers re-echoed the charge. They imbibed his misanthropy with his poetry, and began to fear that benevolence, truth, and justice had either left the earth, or retired into some unknown corner. But besides this negative scepticism, the spirit of his works inculcated a more active immorality. The pirate who scuttled ships and cut throats without scruple, might have his "thousand crimes" in some measure redeemed by his "one virtue." He who ran away with the wife of a Turk, might slay her husband if he was so unreasonable as to punish her infidelity. In love or in hate, the intensity of the passion justified the wildest and worst of its effects. Such a code of morals was accompanied with a correspondent hatred of Christianity, and universal scepticism on all religious restraints; and these, expressed not in the cold dogmatic language of the schools, but the impassioned eloquence of poetry, and with all the seductive powers of despondent doubt or withering sarcasm, were more widely influential than argument and discussion. Thus, stripped of its beauty, the poetry of Byron was a residuum of

misanthropy, profligacy, and irreligion, whose tendency was to corrupt the morals and pervert the religious faith of society at large; and as it was universally admired, these pernicious effects were more or less correspondent with its range. Improved as was the age, it was not yet proof to such seductions, impersonated as they were in that mysterious poet, whose very life was a riddle and a mystery, which all wondered at and none was able to solve. But the evil was not to be lasting. Society awoke, and with a recoil of indignation and shame. They were angry with the deceiver, and ashamed of their own culpable facility; while one of the best symptoms of their repentance was their growing admiration of the pure, tranquil, heavenward poetry of Wordsworth, which Byron had scorned, and fain would have extinguished. The effects of this reaction, also, have been manifested to the present day. Byron is still recognized as one of our greatest poets, and the fame of his genius has nothing less than its due in literary and popular estimation. But his poetry is read with a protest, and his sentiments are viewed no longer with admiration, but with blame and regret.

Another powerful but erratic intellect in the poetry of the day was Percy Bysshe Shelley, the friend of Lord Byron, and whose character and career, though totally different, were yet in many points so similar to those of his more robust associate. Like Byron, he was of an ancient and noble family, and was born to the inheritance of a splendid fortune and a baronetcy; while such was the precocity of his intellect, that before he had attained the legal age of manhood he had astonished society by the splendour of his literary productions, and disturbed it by his daring opinions. For his atheism he was expelled from the university of Oxford; and in consequence of his marriage with a lady of inferior rank, he was disowned and expelled by his family. All this had taken place while he was still in his nonage, but succeeding years only deepened and confirmed these strange tendencies, so that while his fortune, and even his children were taken from him, on account of his avowed belief that all human laws and institutions were nothing else than tyranny, his devotedness to atheism was so intense, that for it he would willingly have gone to the stake, if all religions had been but bound to it along with him. From opinions like these it might be inferred that his conduct would be utterly unscrupulous and immoral; but nothing could be a greater mistake; for with such a creed, or rather, with such an abnegation of all creeds whatever, few men could be more gentle in spirit, more benevolent in action, more pure and upright in daily word and deed, so that his principles and his life were the strangest and most

perplexing of all antitheses. After a short and melancholy life, in which he toiled as the apostle of atheism, and in which he evinced the devotedness without securing the esteem or confidence of a martyr—and feeling as if this world was a desert, while there was no hope or promise of a better—this man of wondrous contrarieties, who had passed a few lonely years of self-imposed exile in Switzerland and Italy, was drowned while on a marine excursion in the Gulf of Spezzia, in 1822. The principal poems of Shelley are “Queen Mab,” the “Revolt of Islam,” “Prometheus Unbound,” the “Tragedy of Beatrice Cenci,” and “Alastor, or the Spirit of Solitude.” The qualities of his poetry are rich exuberance of imagination and unbounded command of language, so that his pictures are brilliant sunshine, and his verses a continual music. His themes, also, and his mode of treating them, are so original that they waft the reader into a new world, where everything promises to be more beautiful than any that can be found in the old. But it is a world in which there is neither God nor temple, neither altar nor worshipper: its inhabitants are phantoms, and its light is not from heaven; and however it may at first allure, the heart seeks to escape from it, and return to a world of reality and creatures of flesh and blood. Even the sensual, under this lack of the spiritual, would have thrown the stir and relief of human life at least into the scene; but this the pure mind of Shelley disdained to impart, so that all, however vast and beautiful, is cold and pulseless, and therefore without sympathy and attractiveness. But what more could the poetry of atheism have achieved? It was as if a great experiment, under its most attractive form, had been tried upon humanity and found wanting, so that, after the example of Shelley, no erring spirit should repeat the attempt, in the hope that it will prove successful. His poetry, in spite of its intrinsic beauty and power, was never popular, and has already fallen into general neglect.

A poet in many respects similar to Shelley was John Keats. He too attempted to find in this material world a paradise that would suffice as a home for immortals; but being no metaphysician like Shelley, and having no religious antipathies to gratify, he endeavoured to fill up the spiritual void which the other had produced by recalling the mythology of the classical ages, and recognizing a divine power under ancient types and names. With him, nymphs, fauns, and dryads sufficed to circulate life and beauty throughout creation, with Pan or Jove to preside over them as father and director. John Keats was born in London, towards the close of 1796, and was of humble parentage, being the son of a livery-stable keeper. He was apprenticed at an early period

to a surgeon at Edmonton; but his delicate sensibility and overflowing imagination unfitted him for the profession, which he quickly relinquished for more congenial studies. He was from earliest life a poet, and a poet he resolved exclusively to be to the close. His first poetical production was “Endymion,” a work that, overflowing with youthful enthusiasm and richness of imagination, and giving token of the wonderful fertility of the soil and the promise of future excellence, was also, as might have been expected, luxuriant even to rankness in errors and redundancies. But instead of hailing this abundance with welcome, and waiting for the season of a more matured experience, by which these natural excesses would have been corrected, the critics fell mercilessly upon the faults of “Endymion,” and overwhelmed it with scorn and derision. This was mainly the work of the *Quarterly Review*, whose ire was kindled by the knowledge that Keats was the protégé of Leigh Hunt and his party; and it was alleged that Gifford, the editor of the *Quarterly*, had expressed his determination to crush the poem, even before it issued from the press. The sensitive mind of the young poet, already morbid from incipient consumption, was lacerated by this iniquitous infliction; and in consequence of his failing health, a residence in a warmer climate was judged necessary: but the remedy was tried too late, for Keats died at Rome in the twenty-fourth year of his age, having thus been allowed to give nothing more than the promise of becoming a poet equal to any of the age, as well as the founder of a new school of poetry. Besides “Endymion,” Keats produced “Hyperion,” a fragment, “Lamia,” and several smaller poems, all pervaded with that enthusiasm for the old Greek classical spirit, which he endeavoured to combine with the simplicity of the Elizabethan period; and in his latest productions there is full indication not only of a larger intellect, but a more refined taste, under which his poetical blemishes might have soon disappeared. But, like Shelley, he was too exclusively the poet of earth and time, of sentimental enjoyment and the present hour; and like Shelley, whom probably in a few years he would have far surpassed, he failed to obtain general popularity. Though it is still the fashion to praise him, the reading of his works is already confined to a very small portion of admirers, whose enthusiasm makes some amends for their fewness.

From these poets we pass to one who was too uneducated to care about Greek mythology, and too simple and straightforward to be entangled among metaphysical subtleties—one who saw nature as it really existed, instead of being be-haloed and be-shadowed by the caprices of imagination; and who, in describing

human emotion, looked inward upon his own heart, and delivered what he found there without addition or change. We allude to James Hogg, or, to call him by the name which he loved still better, the "Ettrick Shepherd." This powerful and original genius was born in Ettrick Forest, in 1773, and was descended from a race of shepherds; while his parents were so poor, that they could not give him even that measure of education which is regarded as the birthright of the humblest of our Scottish peasantry. Indeed, even his reading and writing might be said to have "come by chance," as six months constituted the whole amount of his time of attendance at school. But he thus learned to spell the Bible, which constituted his great and only text-book of knowledge until he had nearly reached the age of manhood; his poetical models and authorities were the Psalms of David, and the ballads of Ettrick Forest; and the art of writing, he acquired by his own industry, while herding sheep upon the hill-side. With such teaching Hogg not only became a poet, but an aspirant for the highest place of poetry—he resolved to be the successor of Burns himself, although with education and opportunities so greatly inferior to those of the Ayrshire ploughman. After having written songs and ballads, and found a poet's reward in hearing them sung by the lasses of the district, he collected and published them in a volume at Edinburgh, whither he had driven a flock of sheep, and sold them in the market. Fortunately for him, his poetical talents procured for him in 1801 the acquaintanceship of Sir Walter Scott, by whose encouragement and advice Hogg published a collection of his imitations of the old Border ballads, under the title of the "Mountain Bard," which not only established his reputation as a poet, but procured him a considerable sum of money. Encouraged by this success, he resolved to devote himself to literature as a profession; but a series of attempts proved unsuccessful, until the publication of his best and most popular poem, the "Queen's Wake," established his position among the foremost poets of the day. After this, Hogg's productions in poems, tales, and novels were numerous, all being equally characterized by rich and vigorous originality; and these he published either in separate works, or in *Blackwood's Magazine*. His collected works amount in all to about thirty volumes, independently of contributions to magazines and periodicals. Still, nothing which he has written, however excellent, is equal to the "Queen's Wake." It describes a competition of Scottish minstrels at Holyrood before Queen Mary, on her return from France; and the subject gave the author a full opportunity for the display of his varied

powers of poetry, and his ample range of legendary lore, both in Highland, Lowland, and Border incidents. But it was in fairy-land, and its wondrous characters and wild events, that his genius shone with its brightest lustre. Nursed in the pastoral superstitions of Ettrick Forest, the beautiful world of fays and fairies had been the beloved home of the shepherd's imagination, and when he writes of it he does it with patriotic fervour, as if he spoke of his own country, in which his happiest days had been passed, before he was exiled into the world of reality. This is especially the case in the beautiful tale of "Kilmeny," where the sentiments are inspiration, and the language the perfection of music, so that it would be difficult, if not impossible, in the whole range of Spenser's "Faerie Queene" to find its parallel. As was his poetry, so was the poet—a vain but simple and original child of nature, whom the fashions of the world could neither polish nor pervert, and whom men were compelled to esteem and love, even when their laugh at him was at the loudest. After a life of literary toil, into which he seemed so strangely dropped, and in which he nobly persevered to the last, James Hogg died at the age of sixty-four.

Another Scottish poet, nursed under circumstances almost as lowly and adverse, was Allan Cunningham—the "Honest Allan" of Sir Walter Scott—who was born in the neighbourhood of Dumfries at the close of 1784. In consequence of family disappointments, he was obliged, at the early age of eleven, to become a stone-mason, and to pick up scholarship as he best might by his own efforts—but thus circumstanced, he became not only an excellent workman, but a young man distinguished beyond those of a far more ample education, by his superior knowledge and acquirements. Poetry, in which he was especially to excel, formed but one of his intellectual pursuits, and the manner in which it was called into notice was somewhat strange and unusual. Cromek, the zealous worshipper of the Scottish muse, while in search of relics of "Nithsdale and Galloway Song," obtained from the young stone-mason several songs and ballads of this character, which when published were found to be by far the best of the collection. Their very excellence, indeed, was thought too much for a period of rude undistinguished antiquity; and on inquiry being instituted, it was found that "Honest Allan" himself had composed these choice specimens, and palmed them on the credulous enthusiastic Cromek as veritable antiquities. The detection, however, of an imposition so harmless, in which the only person to be defrauded of his due was Cunningham himself, made his merits be recognized as a poet of high order, and in 1810 he repaired to London, with

the purpose of devoting himself to a life of authorship. After four years thus spent, his skill as a workman, combined with his natural taste in the arts, his general knowledge, and ingratiating manner, recommended him to the notice of Chantrey, the distinguished sculptor, by whom he was engaged as superintendent of his works; and in this situation Cunningham remained until the close of his life in 1842. His professional duties, however, did not prove a hinderance to his literary aspirations, which were continued in full vigour, and his pen was employed in a variety of departments to the end of his honoured career. His principal works are the "Maid of Elvar," a romantic Spenserian poem illustrative of the old days of Dumfriesshire; "Sir Marmaduke Maxwell," a dramatic poem, in which the character and incidents belong to Cunningham's native Nithsdale; three prose romances, entitled "Lord Roldan," "Sir Michael Scott," and "Paul Jones," and "Lives of the most eminent British Painters, Sculptors, and Architects." Writing in London, his whole heart was in Scotland, and his subjects, whether in poetry or in prose, received their chief inspiration from the remembrances of his native land. But it is through his poems that his memory will be cherished, especially his smaller pieces; and among these, his admirable productions "It's hame and it's hame," "Bonnie Lady Ann," the "Lord's Marie," and "De Bruce," are pervaded with the life and soul of Scottish patriotism and poetry.

In an age so profuse of English and Scottish poets, by whom their respective nationalities were so nobly maintained, Ireland was not defective; and in Thomas Moore she possessed a bard who could make her voice be heard, and her feelings eloquently expressed. Moore was born in Dublin, in 1780, was educated in Trinity College, where he distinguished himself by his classical attainments and his early excellence in poetry, and it was significant of the character of his future productions, that so early as his twelfth year he conceived the design of translating the Odes of Anacreon. This purpose he accomplished before he had reached the age of twenty, and with such success, that his translation was considered to fall little short of the original, while the public admiration was expressed by the name generally bestowed upon him of "Anacreon Moore." His next work, which he published a year after, was a small volume of poems, under the name of Thomas Little; but they were of too licentious a character, notwithstanding their unquestionable genius, either for the author to acknowledge that he had written, or even for the public to confess that they had read them; and Moore himself, when the thoughtlessness of his

non-age had been succeeded by reflection, gladly assented to the oblivion in which they were mercifully buried. He was now by vocation a poet, and soon became one of the highest account; while

THOMAS MOORE — From a portrait by Sir Martin Archer Shee.

his poems consisted of songs, lyrics, and poetical satires, which he produced with marvellous activity, and all of them distinguished by rich poetical beauty. In 1817 he published his largest poem, "Lalla Rookh," which consists of a series of eastern tales, connected together by a slight thread of narrative in prose; and, like the lands over which they expatiate, their sunshine is so dazzling and their richness so overflowing, that less brilliancy and less abundance would be welcomed by the reader as a relief. Seldom, however, is such poetical profusion accompanied with such genius and taste, so that what in another would have been artificial glitter and tawdriness, is with him nothing more than a natural costume and its appropriate adornments. But of all the productions of Moore, his songs, and especially his "Irish Melodies," are the most popular, and promise to be the most enduring; and in the last of these he will always be recognized not only as the poet of Ireland, but the voice of his unfortunate country giving utterance to its sorrows, its indignation, and its hopes. Like the best poets of the day, he was also a prose writer; and in this department his chief works are biographies of Sheridan and Byron, and the religious romance, the "Epicurean."

In this age, so prolific of poets, we have only been able as yet to select the names of those of highest mark, and a few of those of secondary excellence. But many others worthy of commemoration crowd upon us, whose productions delighted the early years of the present generation, and who are still gratefully remembered.

Of these we might instance the Rev. W. L. Bowles, the graceful, classical sonnet-writer, and one of the fathers of modern English poetry, whose numerous poetical productions were continued from 1798 to 1837; and Robert Bloomfield, the uneducated shoemaker, who composed the "Farmer's Boy;" and Samuel Rogers, the banker-poet and beneficent patron of poets, the home of whose genius was the classic land of Italy, and his best theme the "Pleasures of Memory;" and James Montgomery, the author of the "World before the Flood," the "Wanderer of Switzerland," and several hymns of great beauty and deep devotional feeling, whose inspiration was exclusively devoted to the service of humanity, patriotism, and piety; and James Graham, the author of that popular poem the "Sabbath;" and Leyden, the most accomplished of linguists; and Charles Lamb, the "Elia" of the literary world, whose light and graceful productions were equally delightful whether in poetry or prose. To these might be added the names of Proctor (Barry Cornwall), Reginald Heber, Ebenezer Elliot, Leigh Hunt, Henry Hart Milman, and George Croly, most of whom were equally poets of the present and succeeding period, and some of whom still survive as the relics of the poetry of the earlier part of the nineteenth century. Nor must we forget John Wilson, one of the gentlest of poets, soon after to become one of the most dreaded of literary critics. And in contrast to these, who attained an old age of matured celebrity, might be mentioned Henry Kirke White and Robert Pollok, youths whose career of brightness and high promise was arrested at little more than the outset, the first having died at the age of twenty-one, and the other at that of twenty-eight, and both of them martyrs to the intensity of their early feelings, and their aspirations for literary and intellectual excellence. Of this devoted pair Robert Pollok was the most remarkable, as one who dared, when but a comparatively unnoticed young student in the university of Glasgow, to commence a great epic poem, which, through difficulty, sickness, and discouragement, he lived to complete, and be crowned with universal approbation, which served as the dirge of his departure. His "Course of Time," some of the sketches of which combine the graphic power and fidelity of Wordsworth with the grandeur of Milton, will of themselves perpetuate his reputation, even should the general interest of the poem itself share in the fate of many of its contemporaries.

In this brief enumeration it would be unpardonable to omit the poetesses by whom the present epoch was distinguished. One indication of a highly intellectual age is the full development of the female mind, and the frank recognition of

its excellence. In an inferior state of society a poetess could scarcely be produced, or if produced, would be gazed at as an unnatural phenomenon, and heard with envy and dislike. But the British mind had now attained that pre-eminence from which such exclusiveness is discarded—in which intellect is recognized as of no especial sex, and is welcomed alike whether it be in man or woman. The earliest of these distinguished women was the well-known Hannah More, who

HANNAH MORE.—From a portrait by H. W. Pickersgill, R. A.

was born in 1745, who in her early years was the friend of Johnson and his distinguished contemporaries, and who died in 1832, after a long and honoured life, in which she was distinguished by her poetical, moral, and theological writings, and by which she advanced, especially among the higher classes, the cause of religion and virtue more than most of the authors of this age of renovation and upward struggle. Still more exclusively a poetess was Joanna Baillie, who was born at Bothwell, Lanarkshire, in 1762, and who died in 1851. She wrote several Scottish songs of great poetical merit; but her chief predilection was for dramatic composition, so that she wrote many plays, the most remarkable of which were entitled "Plays on the Passions," each passion separately being illustrated by a tragedy and also a comedy. Such an artificial and restricted plan was scarcely suited to the purposes of the stage; but viewed as dramatic poems, her productions are distinguished by more than ordinary merit, exhibiting great depth of thought and power of expression, combined with much origi-

nality and inventiveness. A still more popular poetess, and one better fitted by her writings for universal sympathy, was Mrs. Hemans, whose exuberant genius was such that it overflowed into authorship at the early age of thirteen, and continued to the close of her life, in 1835. This was a range comprising nearly thirty years, in which almost every variety of subjects and play of feelings were her themes, while each successively bore the impress not only of rich original genius, but of careful elaborate study. In this spirit she wrote "Modern Greece," "Wallace," "Dartmoor," the "Sceptic," "Historic Scenes," the "Forest Sanctuary," "Records of Women," &c. Such, however, is the richness of fancy and melody of versification by which her poetry is characterized, that it is in her smaller lays rather than her larger pieces that her genius appears to highest advantage, the latter being too uniformly beautiful for the sustained attention of the generality of readers. The writings of Mrs. Hemans have been still more popular in America than in England, and in the former country have been adopted as imitative models by some of its best poets. The last of the distinguished poetesses of this period was Miss Landon, better known in the literary world during her day by her signature of L. E. L. Like Mrs. Hemans, she was an authoress at a very early period, and like her, she was characterized by an overflow of imagination that seemed to make incessant writing a requisite of her very existence. But with this fertility she had not the regularity and classical polish of her talented predecessor—a defect, however, by which her poetry became more popular with a numerous class of admirers than that of Mrs. Hemans. Her chief poetical works, which followed each other with great rapidity, were the "Improvisatrice," "Troubadour," "Golden Violet," "Golden Bracelet," and the "Vow of the Peacock." Even poetry, however, which she wrote more rapidly than prose, was not enough for her restless intellectual activity; and in addition to these works, she was authoress of three novels, that were characterized by the same play of imagination and vividness of feeling which distinguished her other writings. Having done so much, and achieved a high literary reputation while still young in years, Miss Landon was married to the governor of Cape Coast Castle; and on repairing with her husband to Africa, she went thither with the purpose of continuing in that remote region the intellectual pursuits which had so greatly conduced to her happiness in England, while the improvements of her latest works gave promise that she would even yet surpass whatever she had previously accomplished. But a death sudden, startling and tragical, supposed

to be the result of an over-dose of hydrocyanic acid taken as medicine, terminated her hitherto brilliant career in 1838.

Previous to the commencement of this period, the department of criticism had existed in a very subordinate condition. Magazines, reviews, and newspapers there had indeed been in abundance, so that not less than sixty were published in London at the beginning of the present century. But these productions were little else than worthless straws, that floated passively upon the tide, rather than active and powerful agencies to influence its direction; and, with a few respectable exceptions, their criticisms were rather publishers' advertisements of new works, than influential estimates of their merits and defects. But in an age of such literary maturity, it was impossible that this department should continue in abeyance. This especially was the case when the chief product consisted no longer of writings in the different departments which are regulated by fixed and understood rules, but of works of imagination, appealing to those æsthetic principles which will always be a fertile source of controversy and conjecture. A matured poetry will produce a school of criticism as certainly as a completed language will create a host of grammarians. The critical elements had gathered for action, and the only question was the quarter from which the storm should issue that was to overturn, to purify, and enliven. It was in the Scottish rather than the English capital that the commencement was made. In Edinburgh a band of young men, of high intellectual mark, had become impatient of the old dull routine of periodical literature, which they longed to regenerate; and for this purpose they assembled at the house of Francis Jeffrey, at that time a young and almost briefless barrister, who inhabited a humble domicile in the attic or third story of Buccleugh Place; and while a tempestuous night was raging over the eaves of the house, which only seemed to give spirit to their determinations, they projected the plan of their ominous work, the *Edinburgh Review*, the first number of which was issued on the 10th October, 1802. It was an *avatar* in the literary world; it was a standard and style of criticism such as the public had never dreamed of, and a tribunal before which authorship was constrained to tremble. The succeeding numbers of this wonderful periodical raised its character and established its supreme authority, so that not only in Britain, but over Europe at large, it was recognized as the literary autocrat, whose decisions were irreversible. The chief writers in the *Edinburgh Review*, at its commencement, were such also as no other city in Europe could have surpassed: these were Francis Jeffrey, its editor, and the animating

spirit of its pages; Sydney Smith, the modern Rabelais; Henry Brougham, the universal genius, and who excelled in every department; Francis Horner; Thomas Brown, the metaphysician; Lord Webb Seymour; Mr. Hamilton, the accomplished scholar in oriental literature; Thomas Thomson, the antiquary; Dr. John Thomson, the pathologist—men in the full energy of youthful talent, which ultimately carried them to high literary distinction and influential office; and who were subsequently joined by Mr. (afterwards Lord) Macaulay, who finally attained such fame as poet, statesman, orator, and historian; Playfair, Malthus, Mackintosh, and others, the most eminent writers of the day. It could scarcely be otherwise, therefore, than that the articles of the *Review* should range through a wide variety, and be of chief excellence in their several departments. But it was not merely to literature that their censorship was confined: politics was also included within their survey; and upon the questions of government their principles were those of the new school of reform, of which they became the champions and expounders, and which every year they were making more palatable and more popular. After the first five years of its existence had elapsed, the *Edinburgh Review* commanded such a circulation that Sir Walter Scott, in writing of it, says—"Of this work 9000 copies are printed quarterly, and no genteel family *can* pretend to be without it; because, independently of its politics, it gives the only valuable literary criticism which can be met with." Another extract from the same author explains the causes of this wonderful success, and the admirable manner in which the work was superintended:—"The extensive reputation and circulation of the *Edinburgh Review* is chiefly owing to two circumstances; first, that it is entirely uninfluenced by the booksellers, who have contrived to make most of the other reviews merely advertising sheets to puff off their own publications; and secondly, the very handsome recompense which the editor not only holds forth to his regular assistants, but actually forces upon those whose circumstances and rank make it a matter of total indifference to them. The editor, to my knowledge, makes a point of every contributor receiving this *bonus*, saying that Czar Peter, when working in the trenches, received pay as a common soldier. But there is still something behind, and that of the last consequence. One great resource to which the Edinburgh editor turns himself, and by which he gives popularity even to the duller articles of his *Review*, is accepting contributions from persons of inferior powers of writing, provided they understand the books to which the criticisms relate; and as such are often of stupefying mediocrity, he renders them palat-

able by throwing in a handful of spice—namely, any lively paragraph or entertaining illustration that occurs to him in reading them over. By this sort of veneering he converts, without loss of time or hinderance of business, articles which, in their original state, might hang in the market, into such goods as are not likely to disgrace those among which they are placed. This seems to be a point in which an editor's assistance is of the last consequence; for those who possess the knowledge necessary to review books of research or abstruse disquisition, are very often unable to put the criticism into a readable, much more a pleasant and captivating form; and as their science cannot be attained for the nonce, the only remedy is to supply their deficiencies, and give their lucubrations a more popular turn."

The success alone of the *Edinburgh Review* would soon have created rivals; but it was political rancour and jealousy, rather than literary emulation, which provoked hostility, and summoned an opponent into the field. The cause of Whiggery, lately so odious, was now in the ascendant; the attacks of the great periodical upon Tory measures and Tory ministers were daily becoming more formidable; and while the adherents of the old order of things were writhing under its inflections, they saw the necessity of establishing a counter-periodical, for the advocacy of their cause and the chastisement of their assailants. This originated the *Quarterly Review*, which had Canning and the ministry of the day for its patrons; Gifford, the accomplished scholar and keen satirist, for its editor; and Scott, Southey, and a host of eminent Tory writers for its contributors. Strong in such political influence and literary support, the first number of the *Quarterly* was published in February, 1809; but notwithstanding its great advantages, by which it speedily acquired a high literary reputation, it scarcely attained the popularity of its spirited, ably-conducted rival. Something more trenchant still was needed for the purposes of a party who felt their influence continuing on the decrease, and *Blackwood's Magazine* commenced its existence in April, 1817. As it was a monthly, not a quarterly periodical, it required lighter and shorter articles and a wider range than its more elaborate predecessors; and in its two principal contributors, Wilson and Lockhart, it possessed a fund of genius and variety of intellectual endowments seldom enjoyed by any literary magazine. The consequence was, that it soon outstripped both the *Edinburgh* and *Quarterly Review*, and became the chief mark of popular favour—and this, too, in spite of the sins of its early youth, which were neither few nor trivial. Among the great merits by which it amply redeemed its character, not the least were, that it was the steady advocate of

Wordsworth when the whole critical world was assailing him, and was the earliest of our periodicals to vindicate the character of German poetry, and make its readers conversant with the laws and principles of the German poetical school. The two great parties in politics were thus represented by their respective literary organs; but the third, or radical party, now rising into consequence, was also desirous of entering the intellectual field; and this it effected by starting the *Westminster Review*, in 1825, as the exponent of the principles of Jeremy Bentham and his followers. After having thus mentioned the origin of the four chief periodicals of the nineteenth century, it is unnecessary to notice the other numerous magazines which were called into existence by such prevalent examples: it is enough to state that their general merits were such as would have given them a high place in an earlier stage of our literature, and that they were only inferior, because measured by the standard which their illustrious predecessors had established.

This predominance of magazines during the present period was of the utmost intellectual consequence. Nascent genius struggling into existence, had no longer the publication of a separate volume as its only perilous alternative, but might essay its strength, and imp its wings anonymously, in the pages of a periodical. Talent of a higher description, that eschewed the labour of professional authorship, could thus throw off its superfluous energies, and appropriate the merit of such contributions when their worth was recognized. In this way senators, theologians, men of science, the theorists and speculators of every department, could find a ready asylum for the offspring of their brain, and ascertain whether they were likely to live, and be worth the trouble of nursing. But it was in this form also that authorship in its highest state delighted to put forth its strength; and the articles of Scott, Brougham, Macaulay, Jeffrey, and Wilson, originally published in the *Edinburgh* and *Quarterly Reviews* and *Blackwood's Magazine*, are, in their collective forms, the richest treasures of modern literature. So high, indeed, was the distinction, that to be a writer in any one of these periodicals, was accounted the choicest test of excellence. It was in these works, also, that the great political battle was mainly fought, by which the last relics of feudalism were thrown to the winds, and the reforms in government effected—that the principles of taste, hitherto so uncertain, were in some sort moulded into a regular system—and that the public at large were taught to judge according to rule, and enabled to give a reason for their preferences and dislikes. A barrier was also opposed to that headlong zeal of rushing, unfitted

or unprepared, into the press, which was so necessary a consequence of the revival of literature; and young writers were compelled to bethink themselves of the tribunal before which their works might be condemned, either by stately silence or searching inquest and exposure. It was not always, however, that these self-created and irresponsible courts were governed in their decisions by the principles of abstract justice; and the political opinions of a writer, whatever might be his department of authorship, were too often the criterion by which his work was lauded or condemned. In this way, Byron, in his first attempt, was almost extinguished by the *Edinburgh Review*, because he was a nobleman; and poor Kents was absolutely done to death by the *Quarterly*, because he was the friend and protégé of Leigh Hunt.

In such a spirit-stirring age as that which had now commenced when the great signs of life were thought and action, a new era of poetry and another of journalism might have been deemed a sufficient revolution in the world of intellect and learning. But every man was now a critic not only in literature but in politics: and a long, eventful war, in which the fate of every country in Europe had successively been at stake, had, from the commencement of the present century, made the morning's newspaper as absolute a necessary of life as the morning's breakfast. The political movements on the Continent, the menaces of invasion, the fate of our armies in the Peninsula, and the anxious deliberations of the British senate on the subsidizing of new allies or the imposition of fresh taxes, were matters of more vital and every-day import than the last new poem, or the critical analysis of its qualities; and the broad-sheet wet from the press, fraught with such tidings of life-and-death importance, could not be too rapidly or too frequently issued to meet the feverish, universal demand. Even when the war had terminated, an omnivorous appetite had been created that craved its daily sustenance; and the newspapers which had awoken this new appetite, were bound to stanch it, let the provender be found where it might. But the newspapers were equal to the emergency. Their importance had created able writers; the liberty of the press, that magna charta of authorship, had given them full range and scope; and in the absence of great European events, they could explore every creek and corner of the island, and drag to light the public iniquities or private wrongs that hitherto had been unnoticed amidst the glare and noise of warfare. In this way, the daily prints had become not merely the echoes, but the exponents of public feeling, and the impulse of each twenty-four hours was indicated at the earliest by the first shower of the

morning press. But to direct as well as to indicate the public mind upon the course of political events, was also the great ambition of this species of journalism, and the high assumption was well backed by the authoritative tone that enforced, and the talent that supported it. In illustration of this fact, we need only to compare the numbers of the *Times* at the commencement of this period, with those of the close; or even the leading articles of a country newspaper in 1830, with those of the metropolitan journals in 1800.

The progress of the fine arts during this period was not commensurate with that of literature; the latter, indeed, may be said to have absorbed the attention which would have been bestowed upon the former, and the empire of poetry to have been arbitrary and exclusive. In architecture, the scientific survey by James Stuart of the glorious remains of classical antiquity, and the admirable work which, with Nicholas Revett, he subsequently published, as well as the labours of the Dilettanti Society in the same field, directed national attention to the Greek style, which became predominant at the commencement of this period, in its application to public buildings; but it was unfortunately a cold imitation of colonnades and fluted columns, rather than the genuine inspiration of old Grecian taste, and its accommodation to climate and circumstances. Almost the only exceptions to this censure were the works of Sir John Soane, who at the close of the last, and commencement of the present century, endeavoured to engraft upon this spirit the inspiration of an original genius. After completing his public works, among which were the Bank of England, Buckingham House, Pall Mall, Trinity Church, Marylebone, and his plans for the improvement of the Houses of Parliament, he, at his death in 1837, bequeathed his house in Lincoln's Inn Fields, and its rich collections of art, to the public, as a model in domestic architecture. The contemporary of Soane was John Nash, who accommodated the plans of his buildings to the corrupt taste of the prince-regent, and under this perverse inspiration, amplified the incomprehensible Pavilion at Brighton, and converted Buckingham House into a royal palace. But where he was allowed to follow the bent of his own genius in works of public utility and beauty, his ability was unquestionable, and to him we owe Regent Street and the Regent's Park, the conversion of the morass of St. James's Park into a pleasant place of recreation, and the change of the dull, monotonous brick walls that defaced our streets, into specimens of light, varied, graceful architecture. In his plans for the improvement of the metropolis, he combined the zeal of an artist and the skill of a financier, basing the creation of elegant thoroughfares on the im-

provement of the public revenue. The importation of the Elgin marbles into England, which took place in the year 1814, was a fortunate circumstance for the fine arts in general. These wondrous works of antiquity tended to correct the professional, as well as to enlarge the public taste, and showed how the spirit of Greece might be adopted, without being slavishly imitated or absurdly perverted. From this event an improved taste was introduced into the national architecture. The classic styles, however, had their opponents in architects who directed the public attention to our own noble medieval structures, and to the domestic architecture of the Tudor period. The series of illustrated works by John Britton, which commenced in 1807, and the admirable essay of Rickman, first published in 1816, contributed greatly to the development of a taste for medieval architecture. A decided improvement took place in church architecture, and the "Carpenter Gothic" was displaced by edifices in much better taste. Of the numerous villas which the thriving citizens were erecting by the hundred among the suburban villages round the metropolis, the Elizabethan style of building—or what was intended to be such—became the exemplar; and at the close of this period, the many-cornered and curiously-pinnacled little mansions, however grotesque in themselves, that were to be seen in the great approaches to our principal cities, were a pleasing diversity among the square, tasteless, monotonous dwellings, which all seem to have been cast in one mould, and with which the eye had long been filled to utter weariness.

JOHN FLAXMAN, R. A.—From a portrait by Jackson.

In sculpture, the greatest name at the commencement of this period was John Flaxman, who was born so early as 1755, but whose chief productions belong to the present period, and

who died in 1826. From early boyhood, his whole soul was pervaded by the devotional spirit of his art, that longed to express itself in the subjects of sacred writ, to which Grecian taste was to serve as the hand-maid; and his works of this kind, as well as his illustrations of the Greek poets, have been recognized by general consent as the master-creations of modern art. Amongst these his designs from Homer, his Shield of Achilles, and his group of the Arch-angel Michael and Satan, deserve special mention. The same can scarcely be said of his monumental productions, in which he was confined by conventional rules; but to this stricture, his well-known monument to Lord Mansfield in Westminster Abbey, that to Lord Nelson in St. Paul's Cathedral,¹ and his statues of William Pitt and Sir John Moore,² both in Glasgow, are happy exceptions. But still, it is a melancholy truth, that Flaxman is not even yet so justly appreciated by the British public as in foreign countries, and especially in Italy, where he is considered the greatest designer since Greek times. A far more popular and successful artist was Sir Francis Chantrey, who was born in 1782, and died in 1841, and who, eschewing the imaginative, for which he had no aptitude, confined himself to portrait sculpture, in which he was without equal or rival. His handling of modern costume, the manner in which he imparted to it a grace that was all his own, and the flesh and blood like softness of countenance which he infused into the cold, hard marble, would of themselves secure a perpetuity of remembrance to those who were so fortunate as to be of the num-

ber of his sitters. His busts are universally recognized as of the highest excellence, and his larger works are numerous and well known. Of the latter, it is sufficient to cite the statues of

James Watt and Francis Horner in Westminster Abbey, and that of William Pitt in George Street, Edinburgh,³ as fine examples of the artist's style, and how completely he overcame the difficulties involved in modern costume. Of less distinction than Flaxman and Chantrey, although of high poetical taste, combined with delicate execution as a sculptor, was Sir Richard Westmacott, who was born in London in 1775, and who died in 1856. His cenotaph to Sir Ralph Abercromby in St. Paul's, is the best-known, as well as most favourable monument of his own artistic genius. Discarding every allegorical adjunct, Westmacott had the good taste to represent the old general just as he was, and falling mortally wounded into the arms of one of his brave Highland soldiers. But opposed to allegorical mummeries though he was, this vicious taste had not yet been cast out of the living generation; and Westmacott, in an evil hour, was saddled with the commission of reproducing in bronze one of the marble Colossi, from the Monte Cavallo at Rome, to commemorate the victories of the Duke of Wellington. All the world knows how this

FLAXMAN'S GROUP—MICHAEL AND SATAN.

commission was executed, and what marvel it has occasioned to the present hour; but no one has yet been able to comprehend the connection between this reproduction of such a familiar ancient statue, and the events or the hero which it commemorates. From this nondescript, by which he is too well known, it is refreshing to turn the eye to Westmacott's beautiful imaginative and

¹ See engraving, vol. iv p. 238.

³ See engraving, vol. iv. p. 344.

poetical impersonations, such as his "Euphrosyne," a "Nymph unclasping her Zone," the "Distressed Mother," and the "Homeless Wanderer," where he could give full scope to his native genius and inspiration.

The art of painting during the present period was more earnestly cultivated, and made greater progress than architecture or sculpture; and for this perhaps a prevalent cause might be found in the peculiar character of the age, and the direction which the course of progress had chosen. An age so prolific in poets was likely to be fruitful in painters. The present was also a period in which painting was encouraged beyond all precedent. In 1805 the British Institution was established for the promotion of the fine arts, and the exhibition and sale of the best productions of living artists; and in 1824 the National Gallery was instituted for the collection, by gift or purchase, and the gratuitous exhibition to the public, of the works of the great masters, and their most distinguished followers. With such increased facilities for study, it could not be otherwise than that the principles of art should be more correctly understood, and its highest efforts more generally appreciated; and thus, in addition to the other agencies that were at work, the refining and purifying but silent influence of the glowing lessons imprinted upon the canvas was diffused, like a new element of life, through the public mind, before which the original coarseness and apathy were imperceptibly passing away.

Of the painters who held eminent places in historic art during the latter part of the eighteenth century, Benjamin West, J. S. Copley, and Henry Fuseli still continued to multiply their productions and maintain their merited popularity. On the death of West in 1820, Sir Thomas Lawrence became president of the Royal Academy. This distinguished artist, who was born at Bristol in 1769, had attained even in boyhood such excellence, that his copies in crayons of the works of the ancient masters, when he had reached his twelfth year, created surprise by their spirit and fidelity, while such was his industry, that before he had passed the age of twenty, the same number of his pictures had appeared in the exhibitions of the Royal Academy. His peculiar department was that of portrait painting, in which he became the Reynolds of his day; but while that great master impressed mind, and thought, and character upon his portraits, so that they looked, and spoke, and appeared to be living realities, Lawrence—who seldom aimed at such a high ideal—depended more upon gracefulness of drawing, elegance of attitude, and a masterly style of execution. His pictures are for the most part the likenesses of royal and princely sitters

in the full glow of their beauty, or the highest of their grandeur—the occupants of power and dwellers in palaces, whose look abashed the eye of criticism, and compelled the crowd to approach with reverence. But this brilliancy, however it may fascinate for the time, is at last felt to be too artificial; and the eye turns away from it, to the more sobered, but more intellectual and elevated portraits of Reynolds, or those of the old masters. His chief productions are the portraits of the distinguished personages that occupy the Waterloo Gallery at Windsor, and these exhibit his highest excellences as well as his principal defects.

While Sir Thomas Lawrence had so rapidly risen to distinction as to have seized the highest place almost without an effort, another artist was labouring in the field, by whom he was finally to be rivalled as a portrait painter, and in some respects eclipsed. This was Sir Henry Raeburn, born at Stockbridge, one of the suburbs of Edinburgh, in 1756, who was of humble parentage, and left an orphan when only six years old; and who followed the bent of his genius uncontrolled, by which he became in a great measure a self-taught artist. Circumstances as well as inclination made him a portrait painter; and at the age of sixteen he commenced with miniatures, which were soon exchanged for portraits in oil; and so greatly were his merits appreciated in his own country, that the most distinguished Scotsmen of the past and present period were among the number of his sitters. In this way, his reputation continued silently to grow every year, until it well-nigh matched that of Lawrence himself, whom he equalled in the dignity and gracefulness of his male portraits, while he surpassed him in intellectual character and truthfulness of colouring. It was fortunate indeed for Raeburn that his powers were allowed to develop themselves by natural growth, instead of being fostered into premature fulness by such an atmosphere as that in which Lawrence flourished; and that while the latter enjoyed the patronage of London and the court, the other was contented with his undisputed sovereignty in Edinburgh. His productions are numerous and well known; and although not always successful in delineating female beauty, his power of expressing moral and intellectual dignity, and perpetuating the characters of the truly great and illustrious as they looked, and lived, and were honoured among their contemporaries, will endear his portraits to future generations. The other eminent portrait painters of the period were Sir Martin Archer Shee, who succeeded Sir Thomas Lawrence as president of the Royal Academy; John Jackson, almost the rival of Reynolds in the heads of his portraits; Thomas Phillips, distinguished for his

female portraits. To these, also, may be added the names of William Owen and John Hoppner, who had attained high reputation at the commencement of the present century.

Of the historical and poetical painters of the period, John Martin occupied an important place. His subjects were the grand, the vast, and the supernatural, to which he brought a bold and fervid imagination: his palaces are gorgeous dreams of oriental fancy, his towers are buildings whose tops reach to heaven, and his compositions are peopled with men in nations; while all are crowned by a sun and sky, such as may be supposed to have heralded or accompanied some miraculous event which they lighted or overshadowed. In the same walk, more perfect in drawing, and with more artistic execution, although inferior in power and vastness of conception, was William Danby, whose "Opening of the Sixth Seal" and "Passage of the Red Sea" have been familiarized to the public by engravings. Still greater as an historical painter was William Hilton, whose works were but little appreciated during his lifetime, although they are now held in high estimation. He chose his subjects from Scripture, from English history, and from the poets, and some of them are executed on a great scale. To a rich and harmonious style of colouring, and a refined taste in composition, he added great perfection as a draughtsman, at a time when such an accomplishment was too generally neglected. Passing over other painters of historical and poetical subjects, we can only afford room for William Etty, whose power of delineation and richness of colouring might well give him a place by the side of the great ancient masters of the Venetian school—and Benjamin R. Haydon, whose too high ambition was to restore the grand style of the ancient masters; who, under this inspiration, executed paintings on a colossal scale, in which the defects of the artist were palliated by a certain greatness of conception; and who finally died a martyr in the attempt to which he was unequal, and the public indifference with which his efforts were regarded.

In the painting of domestic and social scenes, Sir David Wilkie attained the highest excellence. Of him it is not too much to say, that he is the Burns of Scottish life in its humble estate. Like Burns, also, he was born and reared among the scenes that inspired his first productions, and upon which his fame was established, being a native of Cultra, in Fifeshire, where he was born in 1785. He commenced his professional career at the age of nineteen with the "Fair of Pittlesie," a village in his own neighbourhood, and all the characters in the painting were veritable portraits which he had furtively sketched from the living originals while they were little aware of the

young artist's purpose. His "Village Politicians," "Blind Fiddler," "Rent Day," "Village Festival," "Distraint for Rent," "Chelsea Pensioners," and other productions both humorous and pathetic followed, in which humble life was delineated with great fidelity and power, while each production, accounted a master-piece of its kind, was employed, like those of Hogarth, to inculcate some homely but striking and useful lesson. It was here, indeed, that his great strength lay; and as a painter of social and domestic scenes and events, the truthfulness and power of Sir David Wilkie, while they come home to the Scot-

SIR DAVID WILKIE, R.A. —From a portrait by T. Phillips, R.A.

tish heart, are recognized as completely by the humble and uneducated as by the most critical and experienced judges in art, both in Britain and throughout Europe, over which his fame is established as the head of our modern school of *genre* painters. In his later years he forsook a department of his art in which he reigned without a rival, for historical painting, in which, notwithstanding his genius, and the power with which many of his later pictures were painted, he failed to enlist the public sympathies. In 1841, returning from a visit to Constantinople and the Holy Land, whither he had gone in quest of materials for the pursuit of his profession, he fell sick on board the steamer *Oriental*, and died on the 1st of June, when nearing Gibraltar, and on the evening of the same day his body was committed to the deep. Next to Wilkie as a painter of domestic life, William Mulready holds the most prominent place; and

it is to the praise of both artists, that their humble subjects of home-life, hitherto so little appreciated in painting, were elevated by the force of their genius into an honoured department that has many followers both in England and France. In general painting, Sir William Allan holds a high rank, whose Russian and Circassian subjects were alternated with events in Scottish history and romance, and Scottish modern life, and whose last productions were two great pictures of the battle of Waterloo, the one as seen from the French, the other from the British lines. In landscape painting, this period was distinguished by the productions of Calcott and Turner, the last of whom drew nature in all her variety of land, and sea, and sky, and was inimitable in them all. Next to these, may be mentioned John Constable, the two Nasmyths, Andrew Wilson, and William Collins, the latter of whom peopled his scenery with living groups admirably executed.

Hitherto, whatever existed in the form of water-colour painting had been rather as applied to miniatures and preparatory sketches for painting in oil, than a distinct and separate branch of art. During the previous period Paul Sandby, who was the first to apply water-colour painting to an accurate representation of scenery and buildings, led the way to what may be termed "Topographical Art." He drew with a firm outline, produced a simple effect of light and shadow with Indian ink, and indicated the local tints with thin washes of transparent colour. His example was followed, and his practice improved by other artists, the chief of whom were Thomas Girtin, Andrew Wilson, and J. M. W. Turner, who, in the early years of the present century, produced water-colour pictures of great power and excellence. By Turner and other artists of eminence, this branch of art continued to be prosecuted, till from its meagre resources in the hands of Sandby and his earlier followers, it had gained almost the power in colour and force of oil-painting, while it inherently possessed means for realizing delicacy and transparency peculiarly its own. In 1804 the Society of Painters in Water-colours was instituted, and the importance of the new art continued to be illustrated by such masters as John Varley, George Robson, Hugh Williams, Samuel Prout, and Copley Fielding, whose individual excellences we cannot from want of space particularize. It is enough to state that in power of effect and colour, fidelity in representation, whether of earth, or sea, or sky—in delicacy of tone and vigour of execution, their productions afford a variety and an excellence that elevates them to a very high rank among the landscape painters of this period. Having thus not only created a

separate department of art, but carried it to a state of perfection, England became the instructor of France through Richard Parkes Bonington, who settled in Paris in 1816, and was there the founder of a water-colour school that now competes, and sometimes not unsuccessfully, with the parent source from which it was derived. The same impulsive spirit by which a new improvement was introduced into painting extended itself to engraving, and during the latter part of this period the use of steel was adopted for plates, by means of which a minuteness of detail and delicacy of finish was imparted that could scarcely be secured by copper, and through which what would otherwise have been rare and costly impressions could be cheaply multiplied for general use. This improvement fostered that fruitful series of works termed "Annuals," which distinguished our lighter literature at the close of this period, and in which the best productions of modern painters were engraved in such a perfect manner as had not hitherto been attained, even in the most finished specimens of the art.

The name of Turner, which we have mentioned only incidentally, and in connection with the painters in water-colour, is too distinguished to be thus briefly dismissed; for in it might be comprised the history of pictorial art during the whole of this period. Joseph Mallord William Turner was born in London in 1775. His taste for drawing was shown even in early boyhood. As he was of humble parentage, he was obliged to turn his talents to some account; and this he did, first by colouring prints, afterwards by filling up architectural designs with skies and foreground, and finally, by teaching water-colour drawing at schools. In 1789 he entered the Royal Academy as a student, and during the ten years that followed he exhibited there not less than fifty-nine, and in the two following years, fourteen pictures, and in 1802 was elected an academician. During this time it was to water-colour painting that he chiefly confined himself, a department which he carried to the highest style of excellence; while his industry in it was so great that his drawings, especially for engravings to illustrate books, are almost beyond numbering. On being elected an academician, Turner, though still continuing to practise in water-colours, directed his attention more to oil-painting, and between that period and 1851, the date of his death, he exhibited on the walls of the Royal Academy more than 200 pictures. Many of his works are familiar to the public by the engravings from them to illustrate the *Scenery of the Southern Coast, England and Wales*, *Rivers of England*, *Rivers of France*, and the *Italy* and poems of Rogers. So completely was Turner imbued with the spirit of art, that it was the living

principle of his existence: to him the world itself was a vast and varied picture-gallery, and in every object over which his keen eye glanced, he saw a beauty which he was impatient to delineate, and which he never afterwards forgot. In this way the smoke of a chimney, a shadow on the wall, a dissolving cloud, were to him no evanescent objects: on the contrary, they left on him as permanent an impression as if they had been electrotyped, and when the time came he could reproduce them in their original freshness, and with all the high accessories which art can lend to nature for the purpose of heightening its effect. It is therefore as a landscape painter that he is distinguished; and in this, he is considered as even the equal of Claude and Poussin, whom he surpassed in range of subject and variety of effect. Turner's rivalry with Claude was also manifested in 1808, when he produced his *Liber Studiorum*, in competition with the other's *Liber Veritatis*. In many of his later works there is at first sight little discernible except a mass of colours; but on retiring to the proper focal distance, these colours assume form and character, and become a beautiful perspective of land and water, valley and mountain stretching into the far distance, and clothed with brilliant sunshine, or surmounted by a cloud-world equally gorgeous and alluring. So long and so productive a life of artistic excellence was divided into three successive stages, like those of youth, manhood, and old age, in which his enthusiastic admirers are unable to decide where the pre-eminence is to be assigned; and although in the last, his eccentricities were both manifold and startling, these have been attributed only to his more exalted conceptions of excellence, combined with his failing power to give them full embodiment and vitality. These epochs of his artistic life have been thus happily characterized by an enthusiastic, intelligent critic:—"He worked in three styles: the best of his early works resemble Wilson and the Poussins; in his second style Claude was his model; and in his third he competed with nature only. . . . As examples of his three styles may be mentioned the 'Garden of the Hesperides,' the 'Shipwreck,' and the 'Sun rising in Mist,' illustrating the first; 'Crossing the Brook,' the 'Morning of the Chase,' and 'Apuleia in search of Apuleius,' his second or Claude style; the 'Rise,' and the 'Fall of Carthage,' 1815 and 1817, showing his transition from this second style to his third and greatest, of which the 'Bay of Baia,' 'Caligula's Bridge,' and 'Childe Harold's Pilgrimage,' painted between 1823 and 1832, are grand examples; and lastly, the 'Fighting Temeraire,' painted in 1839, may

be instanced as the indication of the point of final transition from the sublime to what we must call the ridiculous, in some of those strange productions which occupied the last years of his prolonged life." The close of Turner's existence was in complete keeping with his character and career. From the great demand for his paintings, and the high price given for them, combined with his simple, hermit-like habits, it was known that he was very rich, and surmised that he must be a miser; but his money had been hoarded for the generous purpose of promoting the progress of that art to which his whole life had been so exclusively devoted. For this he had not only saved his best productions, and painted others which he refused to sell, but re-purchased others which he had painted in earlier life, that he might form a collection which he meant to bequeath to his country. And this he did at his death in 1851, on the simple condition that within ten years, a suitable place should be prepared for their accommodation. This splendid gift comprises 100 finished paintings in oil, some hundreds of finished water-colour drawings, and several thousand studies and sketches, ranging over almost the whole of his career, and exhibiting every phase of his style and excellence. Taken merely in their commercial value, this great national bequest of the Turner pictures is a princely donation; but in its artistic worth it is beyond all price, not only from its intrinsic excellence, but the impulse it will communicate to art in general, the emulation it will kindle in his successors, and the taste it will cultivate in the British community at large for the grand and the beautiful in pictorial delineation. In this way, the name of Turner will descend to posterity as one of the greatest and noblest of our national benefactors, while his own professional fame will be perpetuated as one of the best of England's illustrious artists.

It will be seen from this brief notice of the fine arts, and the few names which have been cited for each department, that the art of painting predominated over the others; and in the patronage with which it was fostered, and the wealth and distinction to which it led, we see the motives which inspired its cultivation, and the causes of its superior excellence during the present period of our history. In all these arts, indeed, the progress of Britain had as yet been slow, and even in the nineteenth century she had not reached the excellence which other countries had attained at a far earlier stage. But it is gratifying to think that she had been still better occupied, and that she had secured the substantialities of life, before proceeding to its elegancies and refinements; and if, in some of these she is excelled as yet by other lands, she can console

¹ Wornum, "Essay on the Fine Arts" in the *Popular Encyclopedia*.

herself with her political constitution, her commerce, and her triumphs in science and literature, in which she has established for herself an imperishable name, and laid a firm foundation for future excellence. It is only when the building is completed that the graceful pinnacles should be set up. It is gratifying, however, to mark the proficiency in the fine arts which had already been attained. This was especially the case in painting through all its departments, in which our artists, while as yet inferior in drawing the human figure, were, in landscape and marine painting, superior to those of any other modern school. Even at the close of this period, also, there was the promise of a still greater abundance and a higher excellence, in the fact, that the artistic spirit was now in full vigour, while the most eminent of our artists were still alive, and some of them not yet half-way in their career. The same may be said of sculpture, of which the full promise had not yet been fulfilled. In these, as well as in other congenial departments, the call of "Excelsior" has continued to be heard by the living, as well as by the past generation, and at each call the step has been advancing upward till the present hour.

The cultivation of music as a science made little or no progress in England during the present period; and for this tardiness during a season of such general advancement, two causes may be assigned. Of all the sciences, music seems the most dependent upon court or royal patronage; but when George III. was laid aside from public life, the influence of his encouragement upon its cultivation and improvement was not continued by his successor, who in this, as in other matters, had no inclination to follow the paternal example. But a still greater cause might be found in the plentiful supply of music which was continually issuing from those countries that might be considered as the fountain-head of harmony. By this time, England had learned that a competition with Germany or Italy in the production of rich, original music, was as hopeless

as a trial of these countries would have been to compete with her in manufactures; and accordingly, a mutual exchange took place in their several products in the true commercial spirit of the age: the German and Italian were clothed in the broadcloth of England, and the Englishman in return contented himself with their songs, oratorios, and operas. It was a mutual barter, in which the defects of either were plentifully supplied, and wherein each was the gainer. And thus it has continued even to the present day. Indeed, only one distinguished English composer appeared during the period; this was Sir Henry R. Bishop, many of whose smaller pieces are exquisite productions, and who, but for the incessant demands which obliged him to compose without intermission, and the false taste of the age to which he was compelled to accommodate his style, would have secured a wide and permanent celebrity. But if music as a science was thus neglected in England, it was far otherwise as a practical occupation; for while the stage rejoiced in such transcendent singers as Catalani and Braham, who everywhere commanded overflowing crowds, vocal, and especially instrumental concerts, had become a necessary recreation in every important town in Great Britain. Music had also become as essential a part of female education as Latin for the other sex, and was inculcated with the same indiscriminate application, whatever might be the inclination or aptitude of the pupil; and thus, while the son at school was flogged through the Latin interjections, and compelled perforce to recognize the beauties of Horace, the daughter was weeping at home over the scales, and manipulating the keys of her instrument with abhorrence or despair. As yet, however, we have scarcely become a nation of musicians or linguists. As a necessary consequence of this musical despotism, that choicest of instruments, the piano, had become as essential an article of furniture in the houses of the higher and middle classes during this period as a side-board or a tea-table.

CHAPTER I.—CIVIL AND MILITARY HISTORY.—A.D. 1830—1831.

WILLIAM IV.—ACCESSION, A.D. 1830—DEATH, A.D. 1837.

Succession of William IV.—Revolution in France—Its causes—Expulsion of Charles X.—Louis Philippe becomes King of France—Effects of the revolution in England and Belgium—Coronation of William IV.—Assembling of the new parliament—Cry for parliamentary reform—The Duke of Wellington's hostility to the proposal—Invitation of the king and queen to Guildhall—Their visit postponed—Offence occasioned by their absence—Duke of Wellington resigns the premiership—Earl Grey becomes premier—Formation of the new ministry—Regency bill passed—The first railway and its accident—The French take possession of Algiers—Nature of the demand for parliamentary reform—Causes of its present urgency—Effect of the example of France upon the British advocates for reform—Excitement of the public mind upon the subject—Agitation of political parties at the commencement of 1831—Parliament re-assembled—Government plan of reform brought forward—Its leading principles—Debate on the subject—The bill read for the first time—Reform meetings and their threatening language—The second reading of the bill carried by a majority of one—Question about the dissolution of parliament—Excitement occasioned by the question—Motion against a prorogation or dissolution of parliament—Confusion produced by the king's entrance into the House of Lords—Parliament prorogued and dissolved—Public triumph of the reform party at the event—Political enthusiasm in behalf of reform—Pledges demanded from the candidates for the new parliament—Effects of these demands on the parliamentary elections.

UPON the death of George IV., on the 26th of June, 1830, William Henry, Duke of Clarence, was forthwith proclaimed king by the title of William IV. No immediate alteration took place in the government, his majesty signifying to the Duke of Wellington and the ministers of his cabinet that he was anxious to retain their services. A portion of the Whigs had been for some time contemplating a coalition with the Wellington and Peel party; but their advances were not met half way, and the Whigs more resolutely than before took up the cry for a reform in parliament.

On Friday, the 23d of July, his majesty went

in state to the House of Lords, and, after a most gracious speech, prorogued parliament. The necessary dissolution was made next day by proclamation; and writs were ordered for the election of a new parliament, to be returnable on the 14th of September.

On the 28th of July the throne of Charles X. of France was overturned by the populace of Paris. This unfortunate prince had displayed much less prudence and moderation than his predecessor and elder brother, Louis XVIII. But there had been an incessant plotting against the throne in the time of Louis, and had Charles been a wiser king he would none the less have been exposed to similar machinations. The court party firmly believed that one portion of the French nation was determined at all hazards to get rid of the Bourbons and of monarchy, and to try over again the republic, with its blood-

shedding, spoliation, irreligion, and atheism. On the other side, that great portion of the French nation, having some grounds for its belief, were intimately persuaded that the king and his chief advisers contemplated nothing less than the subversion of the constitutional charter, the suppression of the liberty of the press, and the enforcement of a bigoted intolerant religion under the auspices and guidance of the Jesuits. And this party had long been making and maturing preparations for a rising, while the royalists had made no preparation at all. Those who well knew France in July, 1829, were not much taken by surprise at the events of July, 1830. It was impossible to travel through the country with eyes open in 1829 without seeing that the popular masses and the greater part of the army were ripe for revolt. By fatality or fatuity, the king and his ministers put themselves completely in the wrong, and so remained chargeable as being the aggressors in this inevitable contest, which almost any accident might have brought about at any given moment. Finding themselves unable to manage or control the liberals in the chambers, Charles and his ministers agreed that they must instantly dissolve the chamber of deputies. Instead of losing, the liberals gained immensely by the new election. They were preparing to assemble, when the king, by ordinance, dissolved the newly-elected chamber, introduced a new law of election, and suspended the liberty of the press. The royal ordonnances, which in reality superseded the constitution, were issued on the 25th of July. On the morning of the 26th the gens-d'armes and other agents of the police began to seize the types and break up the presses of some of the refractory journalists, who had long been intimating that a change of dynasty or a return to republicanism was as inevitable as it was desirable, and who would not now be silent at the bidding of an unconstitutional illegal command. It was these journalists, who, during a series of years, had prepared the public mind for revolution. They saw that their moment was now come. Paris was covered with their papers and placards, and they presented themselves boldly to the people as martyrs in the cause of liberty; and, pointing to their invaded houses, their broken presses, and their scattered types, they asked whether these things were to be permitted?—whether Frenchmen would be quiet and be slaves, or fight and be free? The blundering court was taken wholly by surprise. Marshal Marmont had scarcely 5000 men, and not one-half of them could be depended upon. We will not describe the fighting: it began seriously on the afternoon of the 27th. On the 28th the regiments of the line joined the people; and it was all over by three o'clock in the after-

noon of the 29th. The number of the killed and wounded was not very considerable. The people fought under cover of their barricades and houses, and with every advantage in their favour, and they were deservedly applauded for their moderation and clemency in the hour of victory.

The elder branch of the royal line of Bourbon was driven once more to seek an asylum in a foreign country, and to hide for a time its dishonoured head within the walls of Holyrood Palace, in Edinburgh. But the sincere fanatics of republicanism were wofully disappointed when that vain inept old man Lafayette, drawn once more by the accidents and circumstances of the time from solitude and obscurity, passed his arm round the neck of Louis Philippe, son of the Duke of Orleans, or the Philippe Egalité of the former revolution, and, addressing the people, said "*Voilà la meilleure des républiques*"—[Here is your best of republics!] Had these liberty and equality men been duped? Had they been playing the game of others? There was no doubt of it. Republic there was to be none. But Louis Philippe, with monarchy hereditary in his family, was to take quiet possession of the throne from which his aged kinsman had been driven. From that moment the fanatics and the desperadoes renewed against the new king the plots they had kept up against the old one. Louis Philippe had mounted the throne through the barricades; they would try if barricades could not make him descend from it: as for those of the late agitators who were not fanatics in republicanism, but were time-servers and self-seekers, they soon settled down quietly under the re-established royalty, and took the good things which the gods or Louis Philippe gave them.

The ultra-Whigs of Britain hailed the event as the dawning of a new and glorious day in the history of mankind. Public meetings were held to pass resolutions commending the spirit with which the Parisians had shaken off encroaching despotism; deputations were sent to congratulate them on their triumph; and subscriptions were proposed to relieve the families of those heroic citizens who had suffered in the cause. At some of these meetings, and in some of the more radical newspapers and other periodical works, the people were called upon to consider how little was to be feared from military power, and how much could be done by pikes, barricades, and reversed coaches, carts, and omnibuses. As in the year 1790, the French now boasted that their revolution would make the tour of the globe. It very soon travelled into Belgium and into Poland, and it cast a few of its firebrands into Italy, Saxony, Brunswick, Switzerland, and other countries. The Belgians had long been dissatisfied with their union with the Dutch; but that

union might have lasted many a long year but for the events of Paris. On the 25th of August a riot broke out at Brussels, which very soon assumed a character of political insurrection. The flame spread to Liège, Namur, and other cities. The Dutch troops, numerically weak, could not maintain themselves in Brussels—that capital was evacuated after very little fighting; and Belgium was declared to be a separate and independent nation.

On the 8th of September, the coronation of our king, by the title of William IV., was solemnized in the ancient Abbey of Westminster; and even on this occasion, the change of times and fashions as well as sovereigns was marked in the event. In the coronation of George IV., who was eminently a king of shows and pageants, not an iota of the old feudal observances, whether chivalrous or mediæval, had been omitted, and according as the minds of the spectators had been affected, it was the most august and splendid of exhibitions, or the most useless and ridiculous of imitations or caricatures. On the present occasion, it was an observance suited to

the more refined spirit of the times and the serious importance of the occasion. It was mainly a solemn religious service, confined to the interior of the building; and the chief procession was that of the state carriages which conveyed William and his queen Adelaide from St. James's Palace to the Abbey. William was dressed in his naval uniform, the sight of which warmed the hearts of his subjects as the appropriate token of our naval supremacy, and the joyful cry that rang from street to street, as he moved along, was, "God bless our sailor-king!"

It was under circumstances of gloom and anxiety that the new parliament assembled on the 26th of October. The king opened the session in person. In his speech he alluded to the events which had occurred on the Continent; to the continuance of his diplomatic relations with the new French dynasty; to the endeavours which, in concert with his allies, he was making to restore tranquillity to the Netherlands; and to the expediency of maintaining those general

VOL. IV.

treaties by which the political system of Europe had been established.¹ The usual addresses were carried in both houses, though not without very evident signs of a vigorous opposition to ministers. The rallying cry was "Parliamentary Reform," or "Parliamentary Reform and Retrenchment." The Duke of Wellington resolutely declared that he would grant no reform—that no reform was necessary—that the constitution would be spoiled if an attempt were made to amend it. In replying to Earl Grey, he said,

'that he would not hesitate unequivocally to declare his opinion that we possessed a legislature which answered all good purposes, better than any which had been ever tried; and that if he had to frame a legislature for another country, his aim would be to form one which would produce similar results: under such circumstances, he was not only unprepared to bring forward any measure of reform, but ready at once to declare that, so long as he held a station in the government, he should feel it his duty to resist any such measures when proposed by others.' In the commons, Mr. Brougham

brought forward the question of reform even before the address was moved. He reprobated the report that he was desirous of introducing a radical, sweeping innovation. This report was utterly devoid of truth. He for one was resolved to take his stand on the ancient ways of the constitution.

The king and queen had promised to honour the lord-mayor's feast at Guildhall with their presence. The citizens had made magnificent preparations for their reception. Late on the evening of the 7th of November, the lord-mayor

WILLIAM IV.
From a portrait by G. Clint, A.R.A.

¹ When some exclaimed, in reference to the late events in France, "This is the revolution of 1688!" one of the ablest political writers and statesmen in Holland replied: "No, indeed! the difference is remarkable. The two monarchs did not resemble each other in their conduct. James II. had attempted the subversion of the constitution, particularly as respected Protestant ascendancy, and that, too, with the utmost contempt of justice and without any motive for his excuse. Charles X., when self defence seemed impossible by ordinary means, endeavoured, it would appear, in the most imprudent and perhaps irregular manner, to maintain himself and the limited monarchy against the ever-increasing boldness of the foes of the crown and the

received a note from the home secretary (Mr. Peel), stating that his majesty had resolved, by the advice of his ministers, to postpone his visit to the city to a future opportunity, *because*, from information recently received, "there was reason to apprehend that, notwithstanding the devoted loyalty and affection borne to his majesty by the citizens of London, advantage would be taken of an occasion which must necessarily assemble a vast number of persons by night to produce tumult and confusion, and thereby to endanger the properties and lives of his majesty's subjects; and it would be a source of deep and lasting concern to their majesties were any calamity to occur on the occasion of their visit to the city of London." This announcement filled the metropolis with doubt and alarm. Men believed that some atrocious conspiracy against the royal person had been discovered, or that the poorer classes had organized a revolution. The funds fell, and in the provinces it was pretty generally expected that the next mail would bring intelligence that London was in a state of insurrection. By the advice of ministers, the purposed visit of the king was abandoned.

The most was made of the event by the opposition in parliament. It was laid to the account of ministers that his majesty could not meet his faithful commons of London without fear and riot. It was urged that the exceeding unpopularity of the Duke of Wellington had been the cause of so shameful an occurrence; and that that excessive unpopularity had been caused by the fatal declaration of the duke against every species of reform. It was asked whether the duke did not now feel that he had quitted his own proper sphere of greatness? whether a ministry so unpopular could hope to stand?

On the 15th of November, Sir Henry Parnell moved for a select committee to make a thorough revision of the civil list. The debate was a short one. Mr. Calcraft and Mr. Herries, both members of the government, opposed the motion, principally on the ground that it never had been customary to submit the civil list to a committee, and that retrenchment and simplification had now been carried as far as was practicable or prudent. The motion was supported by the Whig Lord Althorpe, and by the Tories Messrs. Banks, Wynne, and Holme Sumner. On the

division there appeared a majority of twenty-nine against ministers, the numbers being 233 to 204. Next day the Duke of Wellington in the lords, and Sir Robert Peel in the commons, announced that, in consequence of the vote of the preceding evening, they had tendered, and his majesty had accepted, their resignations, and that they continued to hold their offices only until successors should be appointed. They afterwards declared that they had come to this resolution, not so much on account of the civil-list vote, as from an anticipation of the result of a division on Mr. Brougham's proposition for reform, which stood for the very day on which the announcement was made.

The Tories and anti-emancipationists had lent their votes to displace the Duke of Wellington, but by themselves they were not strong enough to entertain any hope of setting up a cabinet of their own. The Canning party were far asunder from them, some of them being all for the duke, and some for reform. The king had no choice. He could only take the Whigs. Accordingly he authorized Earl Grey to form a new administration. The earl accepted the office, on condition that he should have his majesty's authority to make parliamentary reform a cabinet measure. In the course of a week the new government was put together: it contained a considerable admixture of those who had been adherents of Mr. Canning and Mr. Huskisson. Earl Grey was first lord of the treasury; Mr. Brougham, lord-chancellor; Lord Althorpe, chancellor of the exchequer; Lord Melbourne, home secretary; Lord Palmerston, foreign secretary; Lord Goderich, colonial secretary; Sir James Graham, first lord of the admiralty; Marquis of Lansdowne, president of the council; Lord Durham, lord privy-seal; Lord Hill, commander-in-chief; Lord Auckland, president of the board of trade; Mr. C. Grant, president of the board of control; Lord Holland, duchy of Lancaster; the Duke of Devonshire, lord-chamberlain; the Duke of Richmond, postmaster-general; Lord John Russell, paymaster of the forces; the Right Hon. C. W. Wynne, secretary-at-war, &c. Mr. Denman became attorney-general; Sir William Horne, solicitor-general. The Marquis of Anglesey was again appointed lord-lieutenant for Ireland. There was a suspension of business in parlia-

ment, and also of the charter and real freedom. The one was held to have abdicated when he took to flight; the other fled because regarded as a dethroned and criminal monarch. In 1688, people started from the principles of acquired rights and legitimate hereditary succession: departing from these as little as possible, and only from necessity. In 1830, people considered themselves as bound to nothing of any sort, and if some of them have succeeded in having the now dishonoured crown placed for a time on the head of the Duke of Orleans, this has been because to many this seemed still a matter of expediency, not because he was regarded as having any rights to it. In 1688, society re-

mained as it had subsisted before—all held each his own right and place; and the respect for laws and customs which has ever been the true stay of England's constitution survived the dissipation of the public alarm. In 1830, franchises, rights, and customs were deprived of their true basis; all was subjected to the caprice of the deplorable sovereign people, cajoled, deceived, and rendered miserable by turbulent, ambitious, and selfish demagogues. Comparisons accordingly must be made, not with 1688, but with 1648 and with 1791.—*Nederlandsche Gedachten*, 2d August, 1830. It is remarkable that the temporary possession of the crown by the Duke of Orleans is here foretold.

ment till the new members should be re-elected. Mr. Stanley, the new chief-secretary for Ireland, encountered a mortifying defeat at Preston, where the right of suffrage was almost universal. He was opposed by Orator Hunt; and by that demagogue, aided by radical reform, the heir of the house of Derby, a member of the new Whig ministry, and the representative of temperate and moderate reform, was completely beaten.

During the remainder of the year no business of importance was transacted, except the passing of a regency bill. This bill provided that, in the event of a posthumous child of the present queen, her majesty should be guardian and regent during the minority. If no such event should occur, the Duchess of Kent was to be guardian and regent during the minority of her daughter, the Princess Victoria, the heiress presumptive. The Princess Victoria was not to marry, while a minor, without the consent of the king, or, if he died, without the consent of both Houses of Parliament: and the regency of the Duchess of Kent was to be at an end, if, while regent, she married a foreigner.

On the 23d of December, parliament adjourned to the 3d of February, ministers having declared that a long adjournment was necessary, in order that they might have time to prepare the different measures which they intended to submit, and more especially to concoct that plan of reform to which they had pledged themselves on accepting office, and by which alone they could hope to retain it.

In the course of this eventful year, there came into operation in England a change far more important than all the political mutations on the Continent put together. The first great railway with locomotive engines—that between Liverpool and Manchester—was finished and opened; and the triumphant success of the experiment led directly to the construction of far more extensive lines. Unhappily the opening of the Liverpool and Manchester Railway was clouded by the lamentable death of Mr. Huskisson, one of the members for Liverpool, who had accompanied the Duke of Wellington to the celebration.

Before the revolution of July, the French government had sent a powerful fleet and a large army to Algiers, in the hope that such an enterprise would draw off the disaffected, and its military glory make the administration at home more popular. Algiers, so strong towards the sea, was very weak on the land side. Marshal Bourmont soon compelled the dey to capitulate, and the French took possession of the city, the forts, and all the neighbouring country. The dey retired to Italy, where he very soon learned that Charles X., who had dispossessed him, had been driven from his throne and country. At

first the French gave out that they intended merely a temporary occupation of Algiers, for the good of humanity and the perpetual suppression of corsairs; but they had not been long there before they announced that Algiers rightfully belonged to France—that the French must have an extensive African empire as a set-off to our Indian empire, and to our sugar and coffee-bearing islands in the West Indies.

Before the close of 1830, the demand for parliamentary reform had assumed a new character and aspect. It was no longer the mere war-cry of a political party, that could be silenced by contradictions or trivial concessions. It was no longer limited to the disfranchisement of a few close or corrupt boroughs, and the transference of the forfeited suffrage to certain towns and communities that were still unrepresented. Neither could it be postponed, as had hitherto been the case, to a convenient season, when circumstances would be more favourable for change, and the public mind in a more tranquil state for its accomplishment. It was to be upon a scale so ample, that instead of being a political step in advance, which the contention of parties might favour or retard, it was to be a national revolution; and not only was it to be granted by wholesale, instead of instalments, but granted immediately—upon the instant. Never indeed was the “omnipotence” of parliament so devoutly believed in as now for the cure of every national evil, and in proportion to the extravagance of such a hope, was the loudness and universality of the outcry.

This urgency for change, and the character it had assumed, might be traced to old causes that had been long at work, but still more especially to new causes that had lately arisen, and were peculiar to this season of trying difficulties and innovations. The sufferings of the lower classes, though considerably abated, had not yet been fully relieved. The public mind had been tantalized with promises of parliamentary reform, that had ended either in empty debates, or partial and trivial concessions. The unpopular character of the Duke of Wellington's ministry had sufficed to complete the general dislike to the Castlereagh and Holy Alliance mode of government, and sharpened the eager desire for a more liberal system of rule. And to all these causes was added the provocation arising from the grant of Catholic emancipation, which, after promising so fairly and so much, had only deepened the wild anarchy and desperate poverty of Ireland, and brought them back, with a heavier recoil than ever, upon the exasperated and over-burdened community of Britain. Still, it is possible that the ferment occasioned by so many powerful agencies might have been stilled by time and

prudent management, had not the French revolution occurred to animate the general discontent and point the way to action. The unanimity with which France had risen against Charles X. and his counsellors, the imposing magnanimity and moderation of the national revolt, and the facility with which the king had been deposed and a new government established, had a charm to the British people, which made them adopt the event as their great pattern for imitation. Was it not, also, a more easy and legitimate task to reform a parliament than to dethrone a dynasty? Crowds hurried from England to France, either to witness the spectacle or learn the lesson of safe successful revolutionizing; and their proficiency was shown by certain events, which, in Britain as in France, preceded and led the way to the great coming change. The mysterious practice of rick-burning—which was carried on during this year in England, and especially in the southern agricultural counties, in spite of every precaution of watch and patrol—by which the food of the people was destroyed, and a feeling of dread and insecurity promoted, was the same method which in France had madened the populace, and driven them into rebellion against their rulers as the best remedy of the evil. This rick-burning, a new crime in England, so that men wondered at first what it meant, was continued till the commencement of 1831, through Kent, Hampshire, Wiltshire, Buckinghamshire, Sussex, and Surrey; and simultaneously with it, went on the more intelligible process of machine-breaking, to which the English labourers had been always too prone. And when fear, discontent, and hunger had fevered the public mind, and unfitted it for dispassionate inquiry, there were reform unions, political clubs, and radical meetings over the country, ready to prove to the people that all these evils originated in our bad government, and that everything wrong would be adjusted by a sweeping thorough parliamentary reform. It was well that even there the demand stopped short; but it was not only English and constitutional, but it had the king himself and his ministers for its leaders and supporters. How far the example of France might have been followed out if William IV. had been like Charles X., and Earl Grey like Peyronnet or Polignac, is too dreadful to contemplate.

While the mass of the nation were thus resolute for a great political reform, in spite of the nobility, the aristocracy, and the landed representation who were generally opposed to it, and while the new ministry was pledged to the fulfilment of this wish, the minds of men were still further agitated by hopes and fears as to the character and amount of the concession. How much

would be destroyed and how much reconstructed? What venerable evils and time-honoured corruptions in the state would still be spared or only modified? A reform indeed there was to be, and to this the new ministry stood committed, with Earl Grey the premier at their head; but when it was remembered that Lord Melbourne, Lord Palmerston, and Mr. Grant, the pupils of Canning, who was the enemy of all change in the constitution, were also members of the cabinet, it was difficult to guess how much the progress of the reform might be impeded, or by what half-way measures it might be compromised. Even the king, too, it was remembered, was still a sovereign, and therefore *ex-officio* a doubtful friend to popular liberty and liberal institutions. All this general suspense, in itself so intolerable, was further racked and tortured by the length of time that was occupied by ministers in forming their plan of reform, and the delay in the opening of parliament. On this account political unions were multiplied and new local associations for town and country created, until the whole kingdom was brigaded and disciplined for the opening campaign; and confident in their numbers, union, and strength, the reformers did not scruple to dictate as well as petition, and use the language of intimidation, and threats of physical force where arguments were ineffectual. Such was the general state of society over the whole island, at the opening of that momentous year, 1831. Nothing equal to it in universal stir and excitement, in magnitude and political importance, had occurred in Britain since 1689, when the whole constitution was remodelled and the ancient dynasty swept away.

On the 3d of February, the appointed day, parliament re-assembled, and Earl Grey in the lords, and Viscount Althorpe in the commons, announced that a plan of parliamentary reform had been agreed to by ministers, and would be introduced at as early a period as possible. It was not, however, until the 1st of March that the plan was introduced in the commons by Lord John Russell. The plan, we believe, had been altered and re-altered during the interval. Lord John Russell now declared that ministers discarded the notion of complying with violent and extravagant demands. Their wish was to frame a measure which would give satisfaction to every reasonable man in the country: they wished to take their stand between two hostile parties, neither agreeing with the bigots on the one hand, that no reform was necessary, nor agreeing with the fanatics on the other, that only one particular reform could be wholesome and satisfactory.

The leading principles of the ministerial plan consisted, first, of disfranchisement of small

places which had hitherto sent members to parliament, and of enfranchisement of large towns and cities which had hitherto been unrepresented: of an extension of the franchise, in order to increase the number of electors in those places which were allowed to retain, in whole or in part, their existing privileges. All voters were to be duly registered—an excellent regulation. In order to diminish the expenses of elections, as well as opportunities for bribery, drunkenness, and corruption of all kinds, the duration of the poll was to be diminished, and that for counties to be taken simultaneously at different places. The good which has proceeded from this regulation is indisputable and great. Lord John Russell said that the general result of the measure would be to create a new constituency of about 500,000; for the increase in counties would be about 100,000, that in towns already represented about 110,000, that in the new boroughs 50,000, that in London 95,000, that in Scotland 60,000, and that in Ireland about 40,000. His lordship declared himself against short parliaments and vote by ballot, and concluded by requesting leave to bring in his bill. This motion brought on

a debate which lasted seven nights, and which called up more than seventy orators. The opponents of it said that the whole essence of the scheme was not reform but revolution; that the measure proposed nothing less than to remove from the House of Commons every alloy of monarchical or aristocratical principle, and convert it into a pure and resistless democracy, which it never had been, and which, consistently with the British constitution, it never ought to be. This new constitution rested on some supposed necessity for increasing the power of the people; but the power of the people was already strong enough: the true danger to be dreaded in our mixed government arose from the influence of the people, and not from the influence of the crown or of the aristocracy. Was it intended to convert these kingdoms into an unrestricted democracy? Were ministers prepared to say that a mob could govern a mob? There was a variety

of interests connected with the country which required to be represented in parliament, and were now represented by means of the boroughs (called rotten) that were to be disfranchised by this bill. If they were so disfranchised, the representation of those interests would be annihilated. Mr. Horace Twiss said he had no objection to any increase of the representation of great trading interests; but he could not see the policy of calling in the wisdom of householders paying £10 of rent. The measure would let in no

great interests: it would promote the influence of shopkeepers and country attorneys. The leader of the country club would now be the important man in his district, and these interests, however respectable in their way, were not the interests which required additional representation. They were interests which would be represented under the proposed change, by those shallow but dogged politicians, with whom relief from taxation was every thing, and public credit and national faith nothing—by whom rent and tithe were regarded as vile incumbrances. And when half the constitution had thus been surrendered, would the violent reformers be sat-

EARL GREY —From a portrait by Sir T. Lawrence

tisfied? They themselves had avowed that they would not; and that, having obtained so much, they would, at a convenient time, demand more. It was not this parliamentary reform that could reduce the present expenditure or pay off the debts of the past. Numerous references were made to the French revolution and to the imitations of it in other parts of Europe. The promoters of the bill more than hinted that the reformers would try a revolution in England, if they were not pacified by this measure: the opposers of the bill denied that there was any such fear—denied that the measure would satisfy the radicals. There was a better security than the moderation or timidity of the radicals for the preservation of order. The widely-spread industry of the country, the stored-up savings even of the lower orders, the dividends of the public stocks, were solid grounds for confidence in the security of the institutions of the country.

The very burdens of the country formed some sort of security for its tranquillity and welfare. The superincumbent weight of the national debt, while it pressed, gave stability. There would be no revolution to fear nor any permanent dissatisfaction to dread. But if we decided on this great question, not according to experience and wisdom, but according to the cry of the day, then we should let in danger, then we should let in revolution, by teaching the people that their impatient will alone could control the course of the legislature. The opponents of the bill, however, permitted this long contest to terminate without a division: and Lord John Russell's bill was brought in, and ordered to be read a first time. Ministers afterwards admitted that if a division had now taken place, they would, according to their calculation, have been left in a minority. But the opposition did not form a combined body; it had no regular plan of operations, and it was guided by no great leader.

Between the first reading and the motion for the second reading, strenuous efforts were made to persuade the radical party to rest satisfied with the bill, and not commit the cause of reform by asking for more than could be granted. Nor were these efforts wholly unsuccessful; the manufacturers of petitions were again set to work, and the same places which a month ago had petitioned for far more, now joined in praying that the bill might pass untouched. During the same anxious interval the political clubs and associations continued their labours and demonstrations. Monster meetings were held, and threats resorted to. The chairman of the Birmingham political union openly declared that that town and neighbourhood could supply two armies, each of them as numerous and as brave as that which had conquered at Waterloo, if the patriot king and his ministers should require them in the contest with the boroughmongers—under which appellation were now comprehended all who differed from themselves in opinion. At a reform meeting held in London, Colonel Evans announced, that he had just arrived from Sussex, where two reform meetings had taken place, and he assured the Londoners that he knew that 10,000 men were ready to march up from Reigate to the support of his majesty's ministers, if they should be defeated in the measure now before the house.

On the 21st of March the second reading of the bill was moved in the commons. The debate lasted two days. It was opened by Sir R. Vyvyan, who moved, as an amendment, that the bill should be read a second time that day six months. At the division there were, including the speaker and the four tellers, 603 members present, the largest number that had ever divided on any

question in that house. Of these 302 were for the original motion, and 301 for the amendment; the second reading being thus carried by a majority of *one*.

On the 18th of April, Lord John Russell moved the order of the day for a committee of the whole house, when General Gascoyne immediately endeavoured to get rid of the bill by a motion for counteracting one of its essential clauses, respecting the proposed diminution of the number of representatives for England and Wales. This motion led to a violent debate, ending in a division on the following night, which left ministers in a minority of eight.

Two days after this division, or on the 21st of April, Lord Wharncliffe in the upper house asked Earl Grey whether ministers had advised his majesty to dissolve this parliament, which had not yet existed quite six months. He put the question, he said, because, if he received a certain answer, it was his intention to adopt some measure in relation to that subject. Earl Grey replied that he declined answering the question. Lord Wharncliffe then gave notice that he would next day move an address to the king, praying that his majesty would be graciously pleased not to exercise his own undoubted prerogative of dissolving parliament. On the same day Sir R. Vyvyan asked ministers in the commons whether they intended to proceed with the reform bill, or to advise his majesty to dissolve parliament, *because the House of Commons would not consent to reduce the number of English members?* The chancellor of the exchequer, Lord Althorpe, replied, "that he had no hesitation in answering one of the questions, or in saying that ministers, having considered the necessary consequence of the division of the house on the bill the other evening, it was not their intention to proceed further with the bill. It would not be consistent with his duty to answer the second question." Lord Althorpe, one of the most honest, amiable, and straightforward of men, must not for a moment be suspected of insincerity or falsehood. When these words were uttered by him in the House of Commons, ministers had made up neither their own minds nor the mind of the king to the unusual measure of so sudden a dissolution. Many things connected with the reform bill were done in such a hurry that they could scarcely have been foreseen the day before. On the 22d, which was the very day after the question was put by Lord Wharncliffe and Sir R. Vyvyan, there was a great ferment in both houses, for the rumour had been spread in the course of the day that king and ministers had made up their mind for dissolution. In the lords the ferment became a storm, a tempest. The order of the day was Lord Wharncliffe's

motion for an address to his majesty against the dissolution. His lordship had uttered only a few words, when the Duke of Richmond, post-master-general in this recently-seated ministry, rose to complain that all the peers were not sitting in their proper places, as was usual on such occasions. Some expressions of dissent being uttered, his grace of Richmond insisted that the standing order should be enforced—that their lordships should keep their places, and that persons present who were not members of that house should be ordered to withdraw. Noise and confusion ensued, and the Marquis of Londonderry was heard to say that ministers were taking the crown off the king's head. The Duke of Richmond would then move another standing order—that against the use of improper language. The Marquis of Londonderry denied that any offensive language had been used, “though the noble duke seemed to think himself the hero of this *coup d'état*, and to be able to smother the expression of their lordships' sentiments on this most extraordinary occasion.” Lord Wharncliffe being allowed to proceed, hurriedly moved—“That an humble address be presented to his majesty, humbly to represent that we, his majesty's most dutiful and loyal subjects, the lords spiritual and temporal, &c., think ourselves bound in duty humbly to represent to his majesty that alarming reports of an intended dissolution of parliament have gone forth; that, dutifully acknowledging the wisdom of the constitution in trusting to the crown that just and legal prerogative, and fully confiding in his majesty's royal wisdom and paternal care of his people for the most beneficial exercise of it, we desire with great humility to represent to his majesty, that it appears to us that a prorogation or dissolution of parliament at the present juncture, and under the present excitement of the public mind both in Great Britain and Ireland, is likely to be attended with great danger to his majesty's crown and dignity, and to every institution of the state, by preventing that calm and deliberate consideration of any question tending to the reform of the representation of the people which the importance of that subject so especially requires.” The lord-chancellor (Brougham) exclaimed—“My lords, I have not yet heard it doubted that the king possessed the prerogative of dissolving parliament at pleasure, still less have I ever known a doubt to exist on the subject at a moment when the lower house has thought fit to refuse the supplies.” And his lordship having uttered these words, hurried out of the house to receive the king, whose near approach was announced. Lord Shaftesbury being called to the woolsack, amidst great excitement and discordant noises, succeeded in restoring some degree of

order. Lord Mansfield then addressed the house. Such a scene as this, he said, he had never before witnessed in that house, and he hoped never to see anything like it again. He had heard from the noble and learned lord on the woolsack, with the utmost surprise, that the House of Commons refused the supplies. The noble and learned lord had, indeed, perhaps with wilful ignorance, declared this to be the case. The supplies had not been refused. He would use no intemperate language, but he would nevertheless assert, as far as God Almighty gave him the means of understanding, that the crown and the country were now about to be placed in a most awful predicament, unparalleled at any previous period. He must accuse his majesty's ministers of weakness and incapacity—of conspiring together against the safety of the state and the dignity of the crown by acting in such a manner upon such a question. He had not stated his opinions generally on the reform bill, because it was not before the house, and he really was always of opinion that the bill would never come there, and that it would necessarily end in a complete abortion. He had himself, as a peer, given his advice to the sovereign—he had told his majesty that if, for the sake of this reform bill, he should give his assent to a sudden dissolution of parliament, it would be a measure pregnant with danger.

Lord Mansfield was yet speaking when the king entered the house and put an end to all discussion. The House of Commons having been summoned, his majesty prorogued parliament with a speech in which he said the prorogation was with a view to immediate dissolution, and that he had been induced to resort to this measure for the purpose of ascertaining the sense of his people, in the way in which it could be most constitutionally expressed, on the expediency of making such changes in the representation as circumstances might appear to require. The speech also thanked the commons for the supplies which they had voted. Next day came forth the proclamation announcing a dissolution and directing a new election. The writs were made returnable on the 14th of June.

The dissolution was celebrated in many places by illuminations. The lord-mayor authorized an illumination of the city of London. At the west-end a rabble vented their fury on the houses or windows of several peers and commoners, because they had opposed the reform bill. Among the windows which suffered most were those of the Duke of Wellington and Mr. Baring. “In political disputes, to place candles in windows is no proof of political opinion or of anything else except a prudent desire to avoid the outrages of a mob; but these illuminations were made use of by the reformers to keep up their ~~indignation~~ ^{excitement}.”

that the inhabitants of the country, from one end to another, were animated by one universal feeling of enthusiasm for the reform bill, and for the act which got rid of a parliament that would never have passed it."¹

During this session Earl Grey's cabinet had not only declared that there could be no reduction in the national expenditure, but they had also increased the standing army by 8000 men, confessing that this increase was rendered necessary by the disturbed state of England as well as Ireland. These facts, however, did not shake the confidence of political enthusiasts in the will and capability of ministers, and it was laid down as a moral certainty that, with a reformed parliament, this cabinet would be enabled to lighten the public burdens to a prodigious extent. The general elections commenced and ended in a popular tempest. All manner of appeals had been made to the people in order to excite them. The antagonists of the bill were represented not merely as the corrupt and profligate enemies of the liberties of the people, but also as dangerous and audacious contemners of the loyalty which they owed to the monarch. It had been assumed all along that the heart of the king was in the bill. The king's name was therefore made the watchword of democracy. Now, too, were begun practices which tended to turn the representatives of the people into mere delegates. Pledges were demanded from candidates that they would vote for "the bill, the whole bill, and nothing but the bill." Men were to be sent to parliament not to exercise their understanding on the principles of reform which ought to be applied, but merely to say "yea" to every proposition which ministers might produce as a part of the bill. Printed

lists of the majority and minority on General Gascoyne's motion were assiduously circulated through the country, and every candidate whose name was found in the majority was denounced as an enemy of reform, although many of those gentlemen were really reformers who were willing to grant representatives to the great towns, and only unwilling that disfranchisement should be carried too far, and the total number of English members diminished. In every respect the reforming electors, instead of merely choosing legislators, set themselves up as such. They did not elect men on whose honesty and understanding they could rely, but they elected men as speaking-trumpets to deliver and re-echo their own opinion. A ministry *in esse* always has and must have a great influence over elections. We need not say how the influence of the Grey cabinet was exercised. Stormy everywhere, the elections were downright riots in many parts of Scotland and Ireland. General Gascoyne found it impossible to make head in Liverpool; Sir R. Vyvyan was expelled from Cornwall; Sir Edward Knatchbull did not venture to contest the county of Kent; Sir Robert Wilson, an ultra-reformer, but who had dared to think that it was not the time to diminish the number of English representatives, durst not show his face in Southwark, where he was succeeded by Mr. W. Brougham, a brother of the new lord-chancellor; Mr. Bankes was defeated in Dorsetshire by Mr. Calcraft, whose sudden conversion to the doctrines of ministers had carried the second reading of the reform bill; Lord Lowther's candidates were defeated in Cumberland and at Carlisle; and in many other directions, returns were made of members who were for the bill, the whole bill, and nothing but the bill.

¹ *Annual Register* for 1831.

CHAPTER II.—CIVIL AND MILITARY HISTORY.—A.D 1831—1832.

WILLIAM IV.

Opening of parliament—The king's speech—Lord John Russell again brings forward the reform bill—It passes through the commons, and is carried into the House of Lords—Debate in the lords at the second reading of the bill—Lord Brougham's appeal in favour of the bill—The bill rejected in the lords—Popular meetings in consequence of this rejection—Mob riots in London—Parliament prorogued—Progress of reform meetings throughout England—Dreadful riot at Bristol—Excesses of the mob—Waste of property—Excessive caution in using military aid—Extent of the havoc and conflagration in Bristol—The riot subsides—Court-martial held on Colonel Brereton—Another held on Captain Warrington—Political unions—Their dangerous doctrines—Impunity allowed to their proceedings—Urgency of the London reformers with the premier—Proposal for the creation of new peers—Parliamentary session opened by the king—He recommends the speedy settlement of reform—Allusions to the disturbed state of Ireland and the reform riots in England—Sir Charles Wetherell's justification of himself in reference to the Bristol riot—Amendments proposed in the answer to the king's speech—Sir Robert Peel's censure of the violence of reform agitation—Lord John Russell moves to bring in a new reform bill—Its alterations upon the old bill—Entrance of the cholera—The second and third readings of the new bill passed—It is carried into the lords—Its second reading—The Easter recess follows—Monster meetings in England during the interval—Their proceedings and demands—Similar meetings in Scotland—Parliament re-assembles—The ministers in a minority in the House of Lords—Earl Grey and the ministers resign—The king petitioned to accede to their proposals—Meetings against the opponents of the reform bill—Resolutions to pay no taxes and withhold the supplies—Earl Grey and the ministers recalled on their own terms—The third reading of the bill in the House of Lords—It passes and receives the royal assent—Parliament dissolved—Foreign affairs—Dom Pedro endeavours to establish his daughter on the throne of Portugal—He receives aid from England—Greece erected into a kingdom—Its crown rejected by Prince Leopold—It is conferred upon Prince Otho of Bavaria—Anarchical condition of Greece—Proceedings of the Belgians in establishing their nationality—Unsuccessful termination of the Polish revolution—Oppression of Poland by the Czar of Russia—Disappointment of France from the revolution of 1830.

AFTER an amount and universality of rioting, that shook the island to its extremities, the election for the new parliament was completed. It was as thoroughly pledged to reform as the most sanguine of the expectants could desire; and from the test that had been established for the candidates when they presented themselves for the suffrage, and the promises exacted from them, the chosen members were styled by their opponents, a company of pledged delegates, and no true House of Commons. Only six out of eighty-two county members were opposed to the bill. London returned four reforming members, and Yorkshire the same number. On the 14th of June the parliament was opened by commission, and Mr. Mannors Sutton was re-elected speaker without opposition; but a whole week was occupied with swearing in the members, so that the session was not opened by his majesty in person until the 21st. The first subject in the royal speech was that of reform, to which the attention of both houses was earnestly called, and the confident hope was expressed that in their measures for its adjustment, they would "carefully adhere to the acknowledged principles of the constitution, by which the prerogative of the crown, the authority of both Houses of Parliament, and the rights and

liberties of the people are equally secured." It expressed the confident hope that peace would be maintained by England, notwithstanding the civil commotions which had disturbed some parts of Europe, and the contests that were existing in Poland. It stated that a British squadron had been sent before Lisbon with a peremptory demand of satisfaction for a series of insults and injuries; that a prompt compliance with that demand had prevented the necessity of further measures, but that his majesty had not yet been enabled to re-establish his diplomatic relations with the Portuguese government. The only dismal parts of the speech were those which referred to the spread in Europe of the cholera, to the scarcity and famine which prevailed in the western counties of Ireland, and to the system of violence and outrage which had for some time been carried on to an alarming extent in that country. As the king returned to St. James's Palace he was vociferously applauded by the people as "the Patriot King," "the Sailor King," "the best king that had ever been."

In both houses the government was severely blamed for not acting with proper vigour in suppressing the disgraceful riotous proceedings at the late illuminations. The addresses were agreed to without any useless division. And then to the reform bill!

On the 24th of June, Lord John Russell again brought forward that bill, admitting that there had been some slight alterations made in it, and insisting that all such alterations were improvements. Sir Robert Peel professed his unaltered sentiments in opposition to the measure. The first reading was allowed to pass, but at Sir Robert's suggestion, the second reading was postponed from the 30th of June to the 4th of July. The alterations which had been made in the bill went rather to enlarge than to limit the number of electors.

On the 4th of July, when the second reading was proposed, Sir John Walsh moved as an amendment that the bill should be read a second time that day six months. The debate, prolonged to very late hours, was continued during the 5th and 6th. At the end the division showed a majority of 136 in favour of ministers; the votes for the second reading being 367, and those for the amendment 231. Other efforts were made to obstruct the passage of the bill into committee, and five distinct motions for adjournment were made and defeated. In committee the bill was discussed clause by clause from the 12th of July to the 15th of September, when it was ordered to be engrossed. On the 19th of September, Lord John Russell moved the third reading, and was backed by 113 against 58. After two more days of debate on the question "that the bill do pass," ministers carried their point by 345 against 236. Next day, the 22d of September, the bill was carried up to the lords by Lord John Russell, attended by about 100 of its stanch supporters in the lower house. The bill was then read a first time on the motion of Earl Grey, without any remark being made, and was directed to be read a second time on the 3d of October.

When that day had arrived, after the presentation of numerous petitions in favour of the bill, Earl Grey moved the second reading. His speech on this occasion was chiefly remarkable by an appeal to the bench of bishops. He said, as they were the ministers of peace, he did most earnestly hope that the result of their votes would be such as might tend to the tranquillity and happiness of the country. And this was a species of intimidation; for, in other words, it was telling the prelates that if they voted against the reform bill, the tranquillity and happiness of the country would be put in peril. Lord Wharncliffe again declared that the bill would destroy the constitution by giving too great power to a most democratically constituted House of Commons. A popular or rather delegated House of Commons had passed this measure, and now the upper house was told that it had nothing to do but to record and register it. His lordship concluded by moving "that the bill be

rejected;" but on being reminded that this mode of proceeding implied disrespect toward the lower house, Lord Wharncliffe withdrew his motion for another, "that the second reading be postponed to that day six months." The lords then adjourned. On the next day the principal speakers were, for the bill Viscount Melbourne, and against it Lord Harrowby and the Duke of Wellington. The debate was again adjourned, to be renewed on the morrow. Lord Dudley and Ward, the Marquis of Londonderry, Lords Wynford and Eldon, argued against the whole bill with great force and with equal excitement. Lord-chancellor Brougham concluded a speech of four hours' duration, by conjuring their lordships to pass the bill, as the only means of preserving tranquillity. "As your friend," said he, "as the friend of my country, as the servant of my sovereign, I counsel you to assist us in preserving the national peace and perpetuating the national prosperity. For these reasons I pray and beseech you not to reject this bill! I call on you by all you hold most dear, by all that binds every one of us to our common country—I solemnly adjure you, yea, even on bended knees, my lords (here the chancellor bent his knee on the woollack), I implore you not to reject this bill!" Their lordships, however, at six o'clock on the following morning did reject the bill by a clear majority of forty-one.

Then ensued an excitement, a turbulence even greater than that of the late general election. Great meetings were instantly convened in the metropolis. One was held at the Thatched House Tavern, consisting of all the members who had voted for the bill in the commons. The common council of London, who counted a majority of reformers, also assembled. There was another meeting at the Mansion-house of merchants and bankers of the reforming party, who passed resolutions approving the conduct of Earl Grey's government, and pledging themselves to its support. There was a tropical rain-fall of petitions to the king, praying his majesty to continue his ministers in office, and to create new peers in sufficient number to carry the bill through the upper house. The mob, who had been taught by the radical newspapers and the harangues of demagogues that there ought to be no peers at all, that nothing in human nature was so detestable as a lord, were now told they must shout for "more lords—more peers." Fifty thousand persons in the train of the lord-mayor, Sir John Key, went up to St. James's Palace to present a petition. Mr. Joseph Hume, M.P., exhorted them to be firm, united, and peaceable. The last part of the advice was thrown away. The mob went and smashed the windows of the Marquis of Bristol and the Duke of Wellington.

Being driven by the police from Apsley House, the duke's residence, they went off by Piccadilly and Park Lane to the mansion of Lord Dudley and Ward, but there they were held in check by a strong body of the police. They then collected in Hyde Park to look out for anti-reforming peers. There the Marquis of Londonderry was severely pelted, and the Duke of Cumberland was dragged from his horse, and was thought in some danger of being killed, when a band of policemen came up and dispersed the cowardly assailants.

The day before these exhibitions of violence, Lord Ebrington, in the House of Commons, moved a resolution declaratory of unabated confidence in the king's ministers, and the determination to adhere to the reform bill. The resolution was carried by a majority of 131. Both houses were occupied for several nights in desultory but violent discussions on the disturbed state of the country, and on the causes which originally led to such disturbance. The friends of reform held that the riotous spirit proceeded from the obstinacy of the lords; the opponents of the bill maintained that the people had been excited and driven mad in order that the bill might be carried, through a dread of their excesses. On the 20th of October the king in person prorogued parliament. On his way to and from the house, his majesty was enthusiastically cheered by the multitude.

Rioting was not confined to London; it raged, with loss of life and property, at Derby and Nottingham. At the latter place the mob destroyed by fire the castle, the splendid seat of the Duke of Newcastle. While the reform bill had been before the lords for its second reading there had been a meeting of political unions at Birmingham; and, if that meeting did not terminate in an actual riot, it filled the minds of peaceable men with alarm, and it became the provocative and cause of riots elsewhere. The numbers that met were roughly estimated as forming a grand total of 150,000 persons. Reform members of the House of Commons presided and spoke. An address was voted to the king expressive of alarm at the awful consequences which might arise from the failure of

the bill, and of indignation at the infatuation of the peers; and containing an earnest prayer that his majesty would forthwith create as many peers as would suffice to carry the bill. Coupled with vehement harangues and the proposition of anarchic resolutions, a vote of thanks was passed to Lord John Russell and Lord Althorpe. The answer returned to this vote of thanks, passed by an illegal and dangerous association, was far too courteous and encouraging; at least it might be interpreted as an encouragement offered by these two noblemen and ministers of the crown to the direct interference of the people with the leg-

islature. And, assuredly, the ignorant populace, for some time, considered that they might do as they pleased, provided that they did contribute, in any way, to terrify the enemies of reform, or to hasten the passing of the bill. Attacks had been made upon Lord Tankerville, upon the friends of Lord Ashley at Blandford, upon Lord Tenterden, and others. At Croydon the Archbishop of Canterbury was grossly insulted while presiding over a meeting for the propagation of the gospel; in Somersetshire the bishop of the diocese was rudely attacked

LORD JOHN RUSSELL.

while consecrating a new church. The Bishop of Exeter and other prelates were burned in effigy.

But all these excesses were mere trifles compared with the devastation committed at Bristol, when, on Saturday, the 29th of October, Sir Charles Wetherell arrived in that city to discharge his official duties as its recorder. Sir Charles, who had distinguished himself by the warmth of his opposition to the reform bill, was hissed, hooted, all along his road from Bath to Bristol. On entering Bristol, although he was surrounded by constables and by 300 or 400 respectable persons, he was assailed by yells, groans, and hisses, and his carriage was pelted with stones. Sir Charles, however, took his station on the bench at the Guildhall. With great difficulty the mob was kept out of that building by the constables. Having discharged his usual preliminary duties, the recorder adjourned the court till eight o'clock on Monday morning. Sir Charles remained in the Mansion-house. For hours the constables were left alone to contend with the mob of 10,000 or more vagabonds, for it was Saturday, and the

colliers and other labourers of the neighbourhood of Bristol, who had received their week's wages, had flocked into the town to get drunk and see the fun. Out of the mob which did all the mischief not one man in ten had come with any higher or better motive, or had any notion of the real meaning of the reform bill. When, at about half-past eleven o'clock, these motley fellows were full of drink, they began to talk of burning Sir Charles Wetherell out of the Mansion-house; but the foremost of them got their heads broken by the constables, and no farther mischief was done until about four o'clock in the afternoon, when the constabulary force was permitted, or took permission, to retire to their homes for the purpose of refreshing themselves. Then, from gin-cellers and pot-houses issued forth a mob full of bold daring. The mayor came forward to beg of them to depart, and to tell them that he should be very sorry to be compelled to read the riot act and call out the troops. It is said that shortly after this gentle admonition the mayor did read the riot act; but the mob, seeing nothing to oppose them except a few constables, rushed upon them, disarmed them, and beat them severely. Then followed a general attack on every part of the Mansion-house, with a smashing-in of windows and shutters, and a breaking open of doors. At this critical moment Sir Charles put on a disguise and effected his retreat through the adjoining premises; but it was not made known until twelve o'clock on the following day (Sunday) that he had left the city. Materials had been collected for setting fire to the Mansion-house; but that edifice was for the present saved from conflagration by the arrival of the troops. But Colonel Brereton, who displayed, all through this crisis, doubt, weakness, and vacillation, would not charge the mob, who greeted him with loud cheers and with a great show of cordiality. The soldiers merely trotted their horses backwards and forwards, and they too were cheered by the rioters, some of whom were heard saying that the troopers were just as anxious for the passing of the reform bill as they themselves were. For some hours the greater part of the multitude withdrew, or were quiet, or only shouted vengeance against the recorder. If the worshipful mayor, or any other magistrate, had assured them that Sir Charles was gone, there is no doubt that many of them would have repaired quietly to their own homes. A little before the hour of midnight the public-houses, cellars, and dens vomited forth their inmates once more; fresh bodies of men, armed with bludgeons, crossed the bridges into the town; and then a concentrated attack was made upon the council-house. As they were smashing the windows and breaking open the doors, the soldiers, for the first time, rode upon

them in earnest. Before this charge the mob gave way at once, making a fearful noise, and running off by all the streets that were open to them. The soldiers followed, wounding a few of the fugitives, but striking more merely with the flats of their sabres. Some of the most determined of the rioters made a stand in alleys and narrow passages, whence they assailed the troopers with stones. A soldier, being severely hit, turned round upon a man and shot him dead upon the spot. This, we believe, was the first carbine or pistol that was fired. In a short time the whole mob vanished. The troopers continued to ride through the streets all night, to prevent the rioters from re-assembling.

On Sunday morning the troops, who had been more than twenty hours on duty, were withdrawn for some refreshment; but no sooner were the soldiers gone than the rioters re-appeared and renewed their operations with greater fury than ever. Everything in the upper apartments of the Mansion-house was destroyed in a trice. The people forced their way into the cellars, and then followed intoxication, wild drunkenness, raving madness! After a short pause, having procured sledge-hammers from the blacksmiths' shops, and adzes and other tools from the ship-yards, they broke into the new jail, liberated *all* the prisoners, and set fire to the building. Exclusive of debtors, above one hundred criminals—some of them convicts of the worst class—were let loose upon Bristol. During these proceedings, *twenty* troopers of the 3d rode up—to see that they could do nothing against such a multitude. From the new jail the rioters proceeded to the three toll-houses, and burned them all. Then they moved off in two divisions, the one going to the Gloucester county jail, and the other to Bridewell. Having released all the prisoners, they set fire also to those two buildings. It was now about eight o'clock of Sunday evening. The soldiers were suddenly called from the front of the Mansion-house to protect the bishop's palace, to which some miscreants were applying their combustibles. The conflagration there was stayed for a time; but while the soldiers were at the palace the mob set the Mansion-house all in a blaze, and before the troops could return to the spot the roof and whole front of that edifice came down with a tremendous crash, burying some of the mad rioters under the burning ruins. As midnight advanced, conflagration, outrage, and ruin advanced with it. The custom-house, with all the back buildings in Little Queen Street, presented one immense mass of fire. Many of the drunken incendiaries were consumed in the flames they had themselves kindled. A small band, chiefly of boys and youths, who seemed to go about their employment as if they

had been systematically trained to it, extended the conflagration, preceding their operations on each house by the giving of a short notice to the inmates to retire, and so escape being burned. In this manner they destroyed one whole side of Queen's Square, and then proceeded to another, commencing with the excise office at the corner. When Monday morning dawned upon Bristol the

flames were subsiding; but the aspect of Queen's Square was truly appalling. Ruins, smoking ruins, on either side! Rioters lying dead-drunk, with countenances blackened by the smoke, and bestialized by their excesses! At *last* that was done which ought to have been done at *first*. The soldiers who had been ordered out of the city were brought back, and ordered by the civil

BRISTOL, from Clifton Wood —From a view by W. Muller.

power to act with all vigour, and clear the streets. This order was executed to the letter, and the rabble poured off in torrents—men, women, and children running, roaring, shrieking, in every direction. By Monday afternoon (November 1st) a mournful tranquillity was restored to Bristol.

A riot so disgraceful and so destructive as this had not been known in England since the London no-popey riots of 1780. Many cases of the wounded must have remained concealed; but the total number of killed and wounded that were known did not exceed a hundred, of whom some were burned in the fires of their own lighting, and some died from excess of drink. About two hundred were taken prisoners during the outrages, and several individuals were afterwards captured with plundered property in their possession. Government allowed nearly two months to elapse before a special commission was appointed to try the offenders. Then eighty-one were convicted, and five left for execution, but only four suffered the extremity of the law. A military court of inquiry ordered that Colonel Brereton should be tried by court-martial. On the 13th of January, being the fourth day of his trial, the colonel shot himself through the heart. Another court-martial was held on Captain Warrington, senior officer of the 3d dragoon guards. This officer's plea was that he had never received

proper directions from Colonel Brereton, nor due assistance from the city magistrates. He said the head of those magistrates had purposely concealed himself when his presence was most needed; and that all the aldermen had declined accompanying the soldiers, *because they could not ride on horseback*. General Sir Charles Dalbiac laid down on this occasion the following doctrine, as applicable to all such occasions, and as being a fundamental principle of the common law of England:—"That if the occasion demands immediate action, and no opportunity is given for procuring the advice or sanction of the magistrate, it is the duty of every subject to act on his own responsibility in suppressing a riotous and tumultuous assembly; and in whatever is done by him honestly in the execution of that object he will be justified and supported by the common law; that law acknowledging no distinction here between the private citizen and the soldier, who is still a citizen, lying under the same obligation, and invested with the same authority, to preserve the king's peace as any other subject." This was the doctrine of the great Lord Mansfield, and is confirmed by the authority of the excellent and humane Lord Chief-justice Sir N. Tindal. It was a doctrine upon which no doubt could be entertained by any man who understood Blackstone; but the

writers of radical newspapers, who had so long been inflaming the minds of the populace, and preaching the necessity of powerful demonstrations and the efficacy of street-warfare and of pikes, brazenly denounced the doctrine as contrary to English law and dangerous to the liberties of the subject. Partial disturbances broke out at Bath, Coventry, and Leicester; but these, being properly opposed by the municipal and military powers, were speedily put down without bloodshed, and without any material injury to property. If the example of the mayor of Bristol and the unfortunate Colonel Brereton had been followed in these places, there would have been in them the same carnage and barbarous devastation.

On the 2d of November, a royal proclamation was issued, exhorting all classes to unite in suppressing such tumults. Soon also it was found necessary to issue a proclamation against the political unions which had been formed for the sole purpose of forcing the acceptance of the reform bill. Birmingham was the great birth-place of these unions, but they had affiliated in London, Manchester, and other great towns, and they were threatening to become as formidable as the Jacobin societies had been in France. In London, the working classes had a union of their own, with officers named by themselves. In a printed paper calling a general meeting of the working classes, these London unionists demanded universal suffrage, annual parliaments, and vote by ballot, declaring at the same time that all men are born free and equal; that all hereditary distinctions of birth are unnatural, and opposed to the equal rights of man; and that they, for their own parts, would never be satisfied with any law or any reform which stopped short of these holy principles! This was going farther than those who had originally got up the unions either intended or anticipated; but such a system once set rolling among the people must always grow into monstrous proportions. Moreover, these London unionists invited their fellow-workmen in all parts of the country to meet for the same purpose on the same day. They also told the working reformers "that union was strength, and that a general union of the labouring classes would be far stronger than any power that could be brought against it." While this paper was in circulation, government received information that sticks, bludgeons, and sword-canes were in great demand in the market. It was time to swear in special constables, to look after the London prisons, and to bring infantry, cavalry, and artillery round the city. This was done by Earl Grey's ministry. The meeting had been called for the 7th November, and was to have taken place at White Conduit House. On

the 5th, the unionists were warned by the magistrates of Hatton Garden that the intended meeting would be illegal and seditious. Hereupon a deputation of the unionists went up to Lord Melbourne, the home secretary. His lordship admitted them to an interview, and told them, in his bland manner, that their printed declaration was not only highly seditious but perhaps treasonable, and that any person attending the meeting with the object for which it was professedly called would be guilty of an act of treason. The leaders then agreed to abandon the meeting; but no step was taken against them either for their seditious publication, or for their misdemeanour in calling such meeting; and the royal proclamation against the political unions in general was not issued until the 22d of December.

The parliament which had been prorogued on the 20th of October, 1831, was again assembled on the 6th of December. The bill had scarcely been negatived, when deputations of London reformers intruded themselves into the presence of Earl Grey, urging the necessity of not prolonging the prorogation beyond a week or two, and of immediately renewing the efforts to accomplish the same kind and measure of reform. Ministers themselves were pledged neither to propose, nor to accede to, any bill "less efficient" than the one which the lords had just rejected. It was possible that they might consider something very different in kind to be equally efficient in its results; but to the ears of their supporters this language must have meant, that the same quantity of actual innovation was still to be enforced; and if so, then it was not easy to see how a different result could be anticipated in the House of Peers. The political unions, therefore, the reforming clubs, and the reforming journals, pressed upon the ministry, day and night, the necessity of constraining the king to create such a number of reforming peers as would render futile all opposition in the upper house; and Earl Grey was told that if he hesitated to take this step he would be regarded and treated as a betrayer of that cause which alone had given him power, and had enabled him to retain it. It was taken for granted that the king, who was himself held forth as the great patron of the bill, was ready to secure its success by making the peers bend to the prerogative; or, if he should be reluctant, then it was plainly announced, the people would find means to bring both his majesty and the peers into a fitting temper of concession.¹

On the 6th of December the king opened the session in person. The first allusion in the speech was to the one absorbing subject. His majesty read—"I feel it to be my duty, in the first place, to recommend to your most careful consideration

¹ *Annual Register for 1832.*

the measures which will be proposed to you for a reform in the commons' House of Parliament; a speedy and satisfactory settlement of this question becomes daily of more pressing importance to the security of the state and to the contentment and welfare of my people."

More regrets were uttered about the disturbed state of Ireland. A systematic opposition had been made to the payment of tithes, attended in some instances with afflicting results; it would therefore be one of the first duties of parliament to inquire whether it might not be possible to effect improvements in the laws regarding tithes. His majesty had the satisfaction to inform them that he had recently concluded with the King of the French a convention for the effectual suppression of the African slave-trade. This convention, having for its basis the concession of reciprocal rights, to be mutually exercised in specified latitudes and places, would, it was trusted, enable the naval forces of the two countries, by their combined efforts, to accomplish an object which was felt by both to be so important to the interests of humanity. Of the riots, the king said or read—"The scenes of violence and outrage which have occurred in the city of Bristol and in some other places, have caused me the deepest affliction. The authority of the laws must be vindicated, by the punishment of offences which have produced so extensive a destruction of property, and so melancholy a loss of life; but I think it right to direct your attention to the best means of improving the municipal police of the kingdom, for the more effectual protection of the public peace against a recurrence of similar commotions." Nor could his majesty avoid speaking of those political unions which had been so menacing, and against which he had issued his proclamation:—"Sincerely attached to our free constitution, I never can sanction any interference with the legitimate exercise of those rights which secure to my people the privilege of discussing and making known their grievances; but, in respecting those rights, it is also my duty to prevent combinations, under whatever pretext, which, in their form and character, are incompatible with all regular government, and are equally opposed to the spirit and to the provisions of the law."

During the debate on the address in the commons, Sir Charles Wetherell entered into some of the details of the Bristol outrages. He complained that he had been directly charged by the daily press as being himself the author of those disastrous events. How stood the facts? A deputation from Bristol, consisting of the sheriff and one of the aldermen, had waited on him in London, and had stated that the person of the recorder, who, in the exercise of his official duties,

should make a public entry into the city, would not, under the circumstances of the period, be safe. He had inquired of the sheriff and alderman if they could not furnish a constabulary force adequate to the maintenance of the public peace; and they had given it as their opinion that a sufficient constabulary force could not be furnished. In consequence of this he desired them to wait upon the secretary for the home department. The deputation accordingly waited on the noble secretary, and military assistance was furnished. He had absented himself from this interview in order that the noble secretary might put any inquiries to the sheriff and alderman of Bristol without the restriction which his presence might possibly have imposed. Subsequently the noble lord requested his attendance at the home office, and he did attend. Now, in the first instance, the information was conveyed to government that military assistance was requisite. On the second occasion it was arranged that everything should go on as usual. Thus, if government thought that military co-operation was necessary, and that it was also necessary to suspend the usual jail-delivery, there existed two opportunities for declaring the facts, one in his (Sir C. W.'s) absence, the other in his presence. Was not this, then, a flat contradiction of the charges which had been so flagitiously circulated against him? It had been further alleged, that he had proceeded to Bristol against the remonstrances of the magistrates, when they sent to Bath beseeching him not to come. This charge, like the other, was utterly unfounded. The magistrates themselves were abused for an irritating display of the military; whereas, in fact, the soldiers were not stationed in Bristol, but were placed under cover in the neighbourhood, and but for the interference of the political union their presence would not have been known to the people of the city. All unnecessary display of the military had been avoided by the judicious plans of the magistrates. He would follow the example afforded by the royal speech, and abstain from going into the consideration of what had subsequently occurred, simply stating that he did not retire until the chief magistrate's feather-bed was taken from its accustomed depository, and used as a barricade for a window of the Mansion-house hall. All the transactions of Sunday and Monday had taken place after his departure from Bristol. He conceived that, under the circumstances which he had laid before them, he might presume that in the eyes of that house he had exculpated himself. It had been said that the occurrences at Bristol did not spring out of reform, but had been perpetrated by delinquents ever ready to take advantage of any opportunity for plunder. He would not inquire

at present how far these outrages were owing to the spirit which reformers had conjured up; he would only draw the notice of the house to a document by which the Bristol political union, a reform association, assumed to itself the power of deposing the magistrates and the recorder. This paper, which had been published on the 25th of October, set forth the surprise of the council at the conduct of the corporation in having called in the assistance of the troops for the purpose of conducting the recorder into the city—a statement which was not true. It then stated, that if the magistrates found themselves incapable of maintaining the public peace without military aid, it was their duty to resign and allow the citizens to elect the municipal authorities. Who the electors were to be was not intimated; but here was an association telling the magistrates that they ought to resign rather than use the aid of the military for the preservation of the public peace. And this document, after recommending sedition, added a recommendation to the reformers to respect the public peace! He could not join in the applause given by the seconder of the address to government for the “promptitude” which they had displayed in appointing the special commission; and had that word been introduced into the address, he must have moved an amendment.

In the upper house, amendments were proposed by Lord Harrowby, and in the commons by Sir Robert Peel, on that part of the address which related to the affairs of Holland and Belgium. In his speech, Sir Robert took occasion to express his thorough detestation of the violence and intimidation which had been resorted to in order to force the reform bill down the throats of the peers. He said, “Has there ever been in the whole history of the last century any period in which such effectual practical restrictions were imposed on the freedom of speech, as have been imposed on it since the agitation of the question of reform? Believe me, sir, there are other tyrannies than those of individual despots. Who can deny their existence? Who can doubt their galling and oppressive character, after having seen the bitter and unrelenting animosity with which the populace have pursued many of those great and illustrious characters who acted the part of good subjects and honest men in the House of Lords? Can it be denied that it was not safe for those peers to travel home to their country-seats after the conscientious votes which they had given in defence of what they considered the true interests of the people of England? What system of government can that be, in which you deny to your opponents the free exercise of judgment and of speech? You cannot propose changes extensive as those of your reform

bill without expecting, if you are reasonable men, that they will encounter opposition. You may denounce that opposition, you may visit it with confiscation, exile, death; but so long as honour and courage exist among men—and in English bosoms I trust these qualities will find an eternal spring—you will not, you cannot deter us from the expression of our honest opinions.” Sir Robert, however, did not divide the house.

On the 12th of December, Lord John Russell moved for leave to bring in a new reform bill, stating that the principles of the measure were to be the same as those of its predecessor. The alterations bore chiefly upon the process of disfranchisement, and upon the qualification of electors. Within the last ten years there had been an increase of fifteen per cent. in the population of Great Britain, yet the preceding bill had gone upon the census of 1821. That very obvious objection was now got rid of, by adopting the census of 1831. Sir Edward Sugden called the whole bill “a bill to encourage the growth of £10 houses in England.” Sir Robert Peel hoped that the bill would undergo a great many more alterations before the house thought of passing it. The debates were long, but not very interesting. The house divided early on the morning of Sunday, the 18th, when the second reading of the new bill was carried by 326 against 162. The house then adjourned for the Christmas holidays. During those holidays, the cry was kept up by the journalists and by the political associations, that the king must create more peers. His majesty’s health was affected by his anxieties on this head.

But it was not the political convulsions alone that now filled every anxious heart, and formed a ground of perplexity and trembling. The cholera had entered our troubled island to deepen the general dread and confusion. This terrible visitant, which at first had appeared on the banks of the Ganges in 1817, had traversed through the chief countries of Europe like a destroying angel, moving so mysteriously in its course that none could tell where it might next alight, but realizing, wherever it came, the worst calamities which the pestilence had been wont to inflict upon the doomed nations of the medieval period. Already it had decimated France, and Britain, even amidst the intensity of her political anxieties, had trembled at the thought that she might herself be the next victim. And this was soon shown to be no groundless fear. In the month of October, it was whispered that the cholera had been seen upon our shores; and before the close of the year, it had established itself in Sunderland and Newcastle, and was advancing to the metropolis. The plague-spot was soon upon the walls of our principal cities, and the fierce

outcries of contention were mingled with the groans of agonized sufferers and lamentations over the dead. It was in vain, also, to inquire into the causes of the disease, or the remedies for its extinction, for, even more than the political troubles at issue, it baffled the wisdom of the wise and the researches of the skilful. Was it contagious or not? Was it the Indian cholera or a new complaint? Was it imported or indigenous? Was it to be a permanent or only a transient infliction? Each was affirmed and contradicted in turn. Happily, however, it was not of the same deadly character which it manifested in other countries, the ratio of deaths being only one in three, while its range also was less universal in Britain than elsewhere. Still, it was a fearful calamity, mixed up as it was with the prevalent confusion and political anxiety, and the most selfish or ambitious were compelled to study the progress of the wasteful destroyer, as well as of those national measures which they had so much at heart.

Parliament met again on the 17th of January, and the bill was at once pushed into committee, as the reformers would allow of no delay. In committee its details were attacked by Mr. Croker, Sir Robert Peel, Mr. Vyvyan, and many others, who fell more particularly upon the clause which proposed to confer eight additional members on the metropolitan districts. It was urged that it would give to the capital a too preponderating influence over the rest of the country. The Marquis of Chandos moved an amendment against the clause; but in a house of 552 members, he was out-voted by eighty. The bill came out of committee about the middle of March, and on the 19th of that month Lord John Russell moved and carried the third reading by a majority of 116 in a house of 594. On the 23d of March the bill was passed; an amendment which went to raise the qualification to £20, in Liverpool, and all new boroughs returning two members, having been negatived without a division.

On Monday, the 26th of March, the reform bill was carried up to the peers by Lords Russell and Althorpe, accompanied by an unusual number of members. Lords Harrowby and Wharncliffe, who had led the opposition in the upper house last session, now announced their intention to vote for the reading of the bill. They were induced to this course by a desire to save the respectability of the house from a band of political agents formed into peers to serve the purpose of the moment. The Bishop of London was so impressed with the dangers hanging over the country, that he resolved to vote in the same way. The Duke of Wellington and the Marquis of Londonderry declared that their opinions were

unchanged, and that they would oppose the bill as they had always done. The bill was read a first time that same day. The number of the waverers was increased by the report, industriously and most confidently spread, that his majesty had at last consented to create as many peers as Earl Grey might think necessary for carrying the bill. The Earl of Haddington, Lord Gage, and others, followed the example of Lords Harrowby and Wharncliffe. Previously to the second reading, the Duke of Buckingham gave notice that if there should be, as he hoped and trusted there would be, a majority against this reform bill in their lordships' house, he would bring in, after the Easter recess, a bill for the purpose of giving members to large towns whose importance entitled them to be represented in parliament; also for conjoining and consolidating certain boroughs, each of which returned now two members, in order to make room for the new representatives, and prevent any man from being deprived of his existing rights; whilst a third provision of his bill would be to extend the elective franchise, so as to prevent its abuse in boroughs.

The second reading of the ministerial bill was moved by Earl Grey; Lord Ellenborough immediately moved as an amendment, "that it be read a second time this day six months." This gave rise to a very animated debate. The Earl of Mansfield and the Duke of Wellington reprobated not the bill only, but the waverers also. A second adjournment took place. In opening the debate next day, the Earl of Winchelsea spoke with great indignation against a wholesale creation of peers, declaring, that if such a measure were adopted, he would no longer sit in the house, but would retire, and bide his time till the return of those good days which would enable him to vindicate the insulted laws of his country by bringing an unconstitutional minister before the bar of the peers. The debate was again adjourned. When it was resumed, Lord Durham, son-in-law of Earl Grey, made a long and vehement speech, pouring invectives upon the head of Dr. Philpott, Bishop of Exeter, who had himself been guilty of much intemperance both in writing and in speaking against reform and its authors. Lord Durham attributed the expenses of the late war and that war itself to parliamentary corruption and profligacy. Reviving the exploded absurdities of many years ago, his lordship spoke as if we had willingly entered into a crusade against the French republicans, and as if Britain would have been left in the full enjoyment of peace, prosperity, and national honour, if she had not girded on the sword against France. At the end of this very long debate, at five o'clock in the morning, minis-

ters divided the house, and found that they had then a majority of nine. The bill having been read a second time was ordered to be committed.

The lords broke up for the Easter holidays on the 17th of April, and the commons the day following; but on the 18th the Duke of Wellington had entered on the journal of the lords a protest against the second reading of the bill. This spirited protest, which dwelt more especially on the violation of chartered rights, and the introduction of an extraordinary degree of democratic influence, was signed by seventy-four other peers, including the Dukes of Cumberland and Gloucester, with six prelates. Lord Lyndhurst did not sign.

During the Easter recess, agitation was carried to its utmost limits. More monster meetings were called: the people of Leeds voted an address to his majesty, whom they designated "their sheet anchor, their refuge in the storm," imploring him to yield to *necessity*, and to create more peers. At Birmingham a special meeting of the political union was held on the 27th of April, when Thomas Attwood, M.P., was again in the chair, and when a series of resolutions was agreed to; in consequence of which, a general meeting of all the political associations from surrounding districts in the counties of Warwick, Worcester, and Stafford, was convened for the 7th of May. On the appointed day, there was such an assemblage of people at the foot of Newhall Hill as this country had never before witnessed. The grand northern division alone was estimated at nearly 100,000. The procession extended along a line of four miles; upwards of 200 bands of music were in attendance, and more than 700 flags and banners waved over this heaving multitude. The commencement of proceedings was announced by the sound of a bugle; the orations delivered were trumpet-tongued, and were all in one tune; for these unionists were merciless to a minority, and would never listen to an opinion opposite to their own. A hot sharp petition to the House of Lords was very soon carried. They told their lordships, or, as they had it, they implored them, "not to drive to despair a high-minded, generous, and fearless people, or to urge them on, by a rejection of their claims, to demands of a much more extensive nature, but rather to pass the reform bill into a law unimpaired in any of its great parts and provisions; more especially uninjured in the clauses relating to the £10 franchise." Other monster meetings were held at Liverpool, Manchester, Sheffield, Edinburgh, Glasgow, Paisley, Dundee, &c., as well as in every great town in the south of England. Their petitions to the king all ran in the same key—more lords, and passing the whole bill! The Edinburgh meeting was 80,000

strong. It was held in the King's Park, near Holyrood House; and from the windows of that palace the exile, Charles X., could gaze upon it. The meeting, however, was very orderly. In the metropolis an extraordinary assembly of the members of the national union took place on the 3d of May, under the presidency of Joseph Hume, M.P. The petition of this London meeting was very menacing: it told the lords that if they rejected or mutilated the reform bill, "there was reason to expect that the payment of taxes would cease, that other obligations of society would be disregarded, and that the ultimate consequence might be the *utter extinction of the privileged orders.*"

It was four days after the concoction of this London petition to the peers, or on the 7th of May, that parliament re-assembled. The peers went at once into committee on the bill. When the house divided, ministers were left in a minority of 35, the votes for an amendment, moved by Lord Lyndhurst, being 151, and those against it 116. Earl Grey then moved and carried that all farther consideration of the bill should be deferred till Thursday the 10th.

On Tuesday the 8th, Earl Grey and the lord-chancellor proceeded to Windsor to demand more peers or to tender their resignations. The king was nervous and unsettled. He hesitated on account of the great number of new peers requisite—he thought the anti-reform peers very obstinate, very wrong, very wrong indeed—but he did not like making a dangerous precedent—the lords would say that he had swamped their house—he was afraid he could not do it! In the end he desired till next day to deliberate. On the morning of the next day, Wednesday the 9th, it was intimated to ministers that his majesty had been pleased to accept their resignations.

This unlooked-for intelligence produced a new hurricane. In the commons, Lord Ebrington gave notice of his intention to move an address to the king, on the perilous state of public affairs, next evening; and Lord Althorpe's well-meant liberal proposal that this motion should be postponed for a short time, to prevent any embarrassment in the formation of a new ministry, met with no acceptance in that agitated and stormy assembly. They would let the Tories know that if they would accept office, they must do it in defiance of that branch of the legislature which commanded the public purse. Accordingly Lord Ebrington's motion, being submitted to the house on the very next day, was carried by 288 against 208; and the following address was speedily carried and presented to the king:—"That it is humbly represented to his majesty the deep regret felt by this house at the change which has been announced in his majesty's councils, by the

retirement of those ministers in whom this house continues to repose unabated confidence. That this house, in conformity with the recommendation contained in his majesty's most gracious speech from the throne, has framed and sent up to the House of Lords a bill for a reform in the representation of the people, by which they are convinced that the prerogatives of the crown, the authority of both Houses of Parliament, the rights and liberties of the people, are equally secured."

In London the national union met on the very evening of the day on which the king accepted the resignations; and 1200 new members enrolled themselves at that meeting. On the morrow, there were 2000 more new members. It was unanimously resolved by these London unionists "That the betrayal of the people's cause was not attributed to Earl Grey, or his administration, but to the base and foul treachery of others; that meetings be recommended in every county town and parish throughout the kingdom, which, by inducing compliance with the unanimous wishes of the people, may prevent the mischief that would otherwise result from the general indignation; that a petition be presented to the House of Commons, praying the appointment of commissioners to receive the supplies; and that, until the bill pass, they be not managed by the lords of the treasury." Resolutions to the same effect were voted by the common council and the livery of London. The liverymen went beyond all bounds. They heaped abuse upon the Duke of Wellington, upon the sailor-king himself, upon almost everybody and everything, but most of all upon the majority of the peers, whom they described as men who would gladly mix blood with corruption—as representatives of Dom Miguel of Portugal and Ferdinand the tyrant of Spain—as prototypes of Russian lords who regarded the people as serfs. The electors of Westminster met at the Crown and Anchor Tavern, where Sir Francis Burdett, who was in the chair, was eclipsed by the portly person and stormy eloquence of Daniel O'Connell. Similar meetings were held in Southwark and Paddington. At the latter place Joseph Hume harangued a congregation of 20,000 persons. But the manufacturing Birmingham, which had become a speech-manufacturing place, was far hotter than the metropolis. Printed placards were stuck up in nearly all the shop windows—"NOTICE. No taxes paid here until the reform bill is passed!" Great accessions of strength were made to the union of that place; and there was another monster meeting at Newhall Hill, where a petition was voted to the commons, containing, in addition to the common prayer to stop the supplies, this ominous sentence:—"Your petitioners find it declared in the

bill of rights, that the people of England may have arms for their defence suitable to their condition, and as allowed by law; and they apprehend that this great right will be enforced generally, in order that the people may be prepared for any circumstances that may arise." Manchester was not much behind Birmingham. Liverpool also had its meetings, its resolutions, and its menacing petitions. The political unions corresponded and fraternized with one another. In Scotland, and still more in Ireland, they talked of battles and wars, unless Earl Grey were speedily restored, and the bill, the whole bill, and nothing but the bill carried through the lords and assented to by the king.

In the meanwhile the bewildered sovereign had sent for Lyndhurst, and had authorized him to adopt measures for the formation of a new ministry, declaring that there could be no basis for any ministry except upon the ground of "extensive reform." Lord Lyndhurst repaired forthwith to the Duke of Wellington, who was willing to make large sacrifices and encounter any degree of obloquy, if by so doing he could extricate his king from embarrassment. His grace desired no office, much less that of prime minister; yet, if necessary for the king's service, he was ready to serve in any way that might be thought fit. The premiership was then offered to Sir Robert Peel, but that cautious statesman refused it; as he felt he could be of no service to the king or to the country at that juncture, and as he was still decidedly opposed to any extensive alteration of the constitution. Men were found that were willing enough to fill the subordinate offices, but a premier could be found nowhere; and on Tuesday, the 15th of May, Lord Lyndhurst was obliged to inform his majesty that the commission with which he had been intrusted had failed. Hereby the king was reduced to the humiliating necessity of calling back the discarded ministers. On Friday, the 18th of May, the reinstatement of Earl Grey and his colleagues was certified in both houses. The fact, often disputed, is now notorious. The king, in recalling the reform ministry, had given Earl Grey *carte blanche*, or the power of making as many new peers as he might think necessary for his object. To prevent this swamping of the house, the Duke of Wellington and about one hundred conservative peers ceased their opposition and their attendance. After this the reformers had it all their own way.

On Monday, the 4th of June, Earl Grey moved the third reading of the bill in the upper house. After a short but spirited struggle, the lord-chancellor put the question; and, for some moments, it did not appear that the house intended to divide; but when the premier went on to move "that the bill do pass," Lord Roden remarked

that the third reading had not yet been carried. A division therefore took place, and the numbers reported were, content 106, non-content 22. After a few verbal amendments had been made, the bill was passed and ordered back to the commons, who agreed to the amendments of their lordships; and on the 7th of June the royal assent was given by commission to the bill. The radical press had previously clamoured for the delivery of the royal assent, not by commission, but in person; and great was the disappointment of the reform party out of doors, and deep their resentment at this refusal of his majesty to consummate and crown their triumph. Another damper upon the scene of their success was the emptiness of the chair of the Archbishop of Canterbury, and of the opposition benches, in which not a single member was present. As if to compensate, however, for this double bereavement of the countenance of church and state, a sunbeam shot into the hall soon after the assent had been delivered, and this was hailed by many as an equivalent for the absence of both king and primate. There were also separate reform bills for Scotland and Ireland. These being carried through parliament with little or no opposition, received the royal assent the first on the 3d of August, the second on the 7th of that month. Festivals and great rejoicings followed throughout the three kingdoms.

Parliament was prorogued by commission on the 16th of October. The registration of the new constituency under the reform bill was then rapidly proceeded with, and other necessary preparations were made for a new general election, which was rendered indispensable by the passing of the bill. On the 8th of December parliament was dissolved; and then began the election, the writs being made returnable on the 29th of January, 1833. Three parties took the field: the Ministerialists, or Earl Grey Whigs; the Tories, who now assumed the appellation of Conservatives; the Radicals, who were already dissatisfied, and were proclaiming that the reform bill did not go far enough, and must go farther, and that they would have universal suffrage and vote by ballot, or wage an eternal war against all governments. Generally, in England and Scotland, the elections were favourable to the ministerialists. Not so in Ireland, for there popular agitation was against them, and Mr. Daniel O'Connell had accused them, and continued to accuse them, of being guilty of injustice and insult towards the Irish.

We must now briefly advert to those affairs of Europe in which England was most interested. Dom Pedro, having renounced the crown of Brazil in favour of his son, came over to Europe in 1831 to fight for the claims of his daughter, Donna Maria, to the throne of Portugal. He found

great countenance from our Whig government, who now cast aside the principle of neutrality and non-interference, and who sanctioned armaments and expeditions fitted out in England, chiefly with English money and by Englishmen, to an extent somewhat exceeding what the law of nations would justify. An English officer of distinction took the command of Dom Pedro's fleet, and manned it almost entirely with natives of this island. English military officers entered the dom's service, recruited for him openly in London and Westminster, and elsewhere; and these recruits, armed and equipped, were sent off by hundreds to fight against the Miguelites and for the constitution which had found so little favour with the mass of the Portuguese population. Having collected his forces in the Azores, Dom Pedro sailed for Portugal on the 28th of June, 1832, with eighty vessels and nearly 8000 men, of whom the best and bravest were about 1200 English and French. He effected a landing, and with great ease took possession of Oporto; but he was soon shut up there by the Miguelites, who bombarded the town, blockaded the Douro, and placed the invaders in an unpleasant and critical situation. Provisions fell short, and not even constitutional sauce could reconcile the stomachs of the English to horse-flesh. In this state matters remained at the end of the year, the dulness of the scene being occasionally relieved by sorties and sharp conflicts outside the town.

There had been much discoursing about the propriety and beauty of reviving the ancient Greek institutions, and of making an ultra-classical federal republic for that country; but, for evil or for good, Greece was now turned into a kingdom. In 1830 an offer of the crown of that country had been made to Prince Leopold Saxe-Coburg. For some time the prince certainly entertained the notion of accepting what the Greeks offered; but he wavered as he made himself acquainted with the distracted state of the country, and the extreme, desperate spirit of the people; and, in the end, a most alarming and yet most truthful letter from Count John Capo d'Istria, who was acting as a pro-tempore president, decided him in the negative. The effect of this letter was indeed galvanic. Capo d'Istria might not have been very willing to descend from the seat of eminence he occupied; but the picture he drew of the hardships to be endured by the first sovereign of liberated but anarchic Greece was not overcharged. Capo d'Istria was atrociously murdered on the 4th of October, 1831, at Nauplia, in open day, on the threshold of a church. His brother, Augustin Capo d'Istria succeeded him in the presidency, but the distractions of the country and an active civil war

obliged him to resign. The crown of Greece was sent a-begging. At last, the allied powers offered it to the King of Bavaria for his younger son Otho, then a minor; and the offer being accepted, Otho, accompanied by a Bavarian council of regency and a body of Bavarian troops, arrived at

Nauplia in February, 1833, and was willingly acknowledged by the Greeks as their sovereign. The government was to be a constitutional hereditary monarchy, with a senate and a house of representatives. For a short time there was something like tranquillity; but still many of the Greeks

THE REFORM BILL RECEIVING THE KING'S ASSENT BY ROYAL COMMISSION.¹

ceased not to be "robbers on land or pirates on the deep." The Bavarian soldiery and Bavarian agents of police were little to the taste of the Greeks; and a great many of those excitable, insubordinate men were led to conceive a dislike for their mild and well-intentioned young king.

The disseverance of Belgium from Holland,

which had been brought about by popular insurrection, remained still a question which embarrassed all the cabinets of Europe. There seemed no chance, no possibility, and indeed (save on the part of Russia and Prussia) no wish, to enforce the arrangement which had been made at the congress of Vienna, and for which Holland had

¹ Drawn and engraved by J. L. Williams, after a large print by Walker and Reynolds, from a picture by S. W. Reynolds, sketched on the spot when his majesty's assent was declared. The scene is the old House of Peers. Seated on the woolsack in the centre, and below the throne, is Lord-chancellor Brougham. On his right hand are the Marquis of Lansdowne and the Marquis of Wellesley; on his left the Earl of Durham, Earl Grey, and

Lord Holland—the royal commissioners. The king's assent is being pronounced by Mr. Courtney, now Earl of Devon, in the old-established Norman form, "*Le roy le veut*," which he exclaims standing up and looking towards the auditory. The opposition benches are empty, and also the cross or independent benches. The commons summoned to attend are in the foreground, and gathered before the bar.

in various ways paid a high price; but the Dutch troops had at least the satisfaction of giving one sound beating to the vapouring, boasting Belgians. The *Braves Belges*, who had conceited themselves into invincible heroes because they had made barricades, and had carried on a successful street-and-house warfare against a very small force that was anxious not to injure the fair city of Brussels, ran away like a flock of sheep when they came to try their valour in the open field. This lesson was really needed, for well-nigh all over Europe the populace had been given to believe that no regular troops could stand against them, and that they had only to make one good *émeute* to insure a successful revolution. Brave old Chassé long kept the Dutch flag floating over the fortress of Antwerp; and there it would have continued to float, if the striking of it down had depended solely on the Belgians.

In February, 1831, the Belgian congress had elected the Duke of Nemours to the throne of the new kingdom; but his father, Louis Philippe, King of the French, having refused the crown on the part of his son, a new election became necessary, and the choice fell upon Prince Leopold Saxe-Coburg. This time the prince did not hesitate. He quitted England, took the oaths prescribed, and ascended the throne on the 23d of July, 1831, not quite three months before Capo d'Istria, the monitor who had warned him from the throne of Greece, came to his untimely and bloody end. The strong objections of Russia and Prussia were gradually removed; and on the 15th of November, 1831, those two powers, in common with Great Britain, France, and Austria, recognized the independence of Belgium, and signed at London a treaty fixing the boundaries of the new kingdom. Thus was made a fearful rent in the grand treaty of Vienna.

In the summer of 1831 the rash, ill-conducted Polish revolution was extinguished in blood. The Poles had done well the single thing which they knew how to do—they had fought bravely; but weak in numbers, wanting organization and the means of sustaining the war, wanting credit, and too many of them wanting common honesty, they could not but succumb. After two days' most desperate fighting, Warsaw capitulated on the 7th of September, 1831, and was taken possession of by the Russians. Europe remained as an inactive spectatress of the struggle. In England, as well as in France, the liberals would fain have made common cause with the Polish patriots. The English sent money and clothes; and when

the *débauche* came, and when the streets of London were crowded by utterly desperate or destitute Polish refugees, they were fed and supported by our government and people. We forgot, in the hour of misfortune, the stanch adherence of these Poles to Bonaparte, and the ferocity of the Polish lancers, of which we had tasted the bitter fruits in Portugal, in Spain, and at Waterloo. The Emperor Nicholas exercised the utmost severity against the patriotic portion of the people; for after all, the patriots were only a portion, and scarcely the major portion, of the nation. Many individuals who had taken part in the insurrection were either condemned to the mines of Siberia, or sent to serve as soldiers in the harassing, destructive war of the Caucasus. Men of the noblest birth, and once of the greatest fortunes, were made to undergo these punishments. The constitution was formally abrogated, and another form of government, called the "organic statute," imposed under the Russian bayonet. The universities of Warsaw and Vilna, together with many minor schools, were abolished, and the public libraries and museums were carried away to Russia. Almost every possible measure was adopted which tended to destroy the nationality of Poland.

The French had found that they had not increased their liberty by the revolution of 1830. The country had been in a most troubled state ever since that period. Trade and industry had wofully declined, and the hunger of the stomach had increased the desperation of the heart and brain. To plots and conspiracies there had been no end. There had been riots and street-fights in Paris, and a fierce civil war at Lyons, with a terrible loss of human life. In 1831 Marshal Soult had not been able to reduce that city to order with less than 26,000 men, and a tremendous train of artillery. In the course of the year upon which we are about to enter, Lyons was again the scene of civil war, carnage, and anarchy; and also in the course of that troublous year Louis Philippe made greater inroads upon the liberty of the press, and upon the personal liberty of the subject, than had ever been attempted or contemplated by Charles X. and his expelled government. Old La Fayette had told the French people that they would find in Louis Philippe the best of republics; but La Fayette was always wrong. They really found in Louis Philippe a powerful and adroit master who could and who *would* rule them; by the charter if they could be brought to be quiet, despotically otherwise.

CHAPTER III.—CIVIL AND MILITARY HISTORY.—A.D. 1833—1834.

WILLIAM IV.

Meeting of the first reform parliament—The great change in parliamentary representation—Predominance of the commons over king and lords—Election of a speaker—The king's speech—O'Connell's attack on the address—His amendment and its rejection—Coercion bill to repress disturbances in Ireland—Opposition to the bill in the commons—It is passed—Measures for the redress and improvement of Ireland—Changes effected upon the Protestant Church of Ireland—Curtailement of its revenues—Negro slavery—Plan of government carried for its total suppression—Compensation granted to the West India planters—Death of Wilberforce—Care of the reform parliament for the interests of trade and commerce—Renewal of the Bank of England charter—Renewal of the East India Company charter—Other parliamentary measures of the session—Affairs of Spain and Portugal—Progress of the Portuguese war of succession—Defeats of the Miguelites—Injudicious proceedings of Dom Pedro—Difficulties of Turkey through the invasion of Ibrahim Pacha—The sultan has recourse to the equivocal aid of Russia—Ibrahim Pacha retires from the Turkish dominions—Treaty of Hunkiar Iskellesi between Russia and Turkey—Opening of parliament in 1834—Attack on our foreign policy by the Duke of Wellington—Irish agitation for the repeal of the union—Troubles occasioned in parliament by Irish affairs—Threats of an examination into Irish church property—Lord Grey resigns and Lord Melbourne becomes premier—New Irish coercion bill passed—Its insufficiency—Tithes bill for Ireland—Its discussion in the lords—Its rejection—Demand of the dissenters for relief from church-rates—Their demand for the abolition of religious tests in the universities—Bill to that effect—Hostility against it—The bill discussed in the commons—Arguments adduced for and against the admission of dissenters into the universities—The bill passed by the commons—It is defeated in the House of Lords—Demands of the dissenters for relief from church-rates renewed—Motion for the commutation of tithes in England—It is abandoned.

THE first meeting of the reformed parliament was of itself an important era in our history. This great national representation had undergone not a partial, but a complete change. The first important struggle, in the seventeenth century, had been to reduce the royal authority below the level of parliament; the second, which had just succeeded, was to elevate the authority of the commons above that of the lords, and constitute the house of the former the real governing power of the empire. King and peers were now to form but a subsidiary part of the constitution, and that, too, only by the consent of the people at large, who recognized such checks as necessary against their own abuses of power; and it was now to be seen whether they would cordially unite with the national representatives, and be content with such measure of dictation as the great change had assigned to them.

The alterations which had been made in the popular representation were such as the reform appeared to necessitate. Of these, the greatest was in the county constituencies of England. Formerly, they had been fifty-two, which returned ninety-four members; but now, by the division of counties, these constituencies were increased to eighty-two, which returned 169 members. As all boroughs having less than a population of 2000 were to be disfranchised, fifty-six of these, which had returned 111 members, were no longer represented. Such boroughs as

had a population of less than 4000, and had sent two representatives, were now only to return one, and under this category thirty seats were made vacant. As the number of members that composed the House of Commons was not to be diminished, these 143 constituencies were transferred to the towns and districts that had increased in population and importance. In like manner, while no change was made upon Ireland, Scotland retained her former number of representatives, but with changes adapted to the increase of the population in new localities, and its diminution in the old. The mode of election was also simplified in town and country, both as to the time occupied, and the registration of voters, as also the qualifications for a vote, inhabitants of towns being entitled to the franchise who paid ten pounds of yearly rental, and of the counties, copy-holders and lease-holders to the value of forty shillings. In this way, it was attempted to combine the privileges of the old agricultural and the new mercantile England; to reconcile the moneyed with the hereditary aristocracy; and so to extend the right of election, as to make the House of Commons what it claimed to be—the representation of the bulk of the people, as well as of its worth and intelligence. The members of a parliament so constituted, and assembled for the first time together, must have met with mutual diffidence, and been as yet not fully aware of their proper course of action, or of what was expected from their proceedings. How they settled into their respec-

tive departments, and whether they justified the general expectation, the history of their sessions will illustrate.

The parliament was opened by commission on the 29th of January, 1833, and the first business was the election of a speaker. Mr. Manners Sutton, who had so worthily held the office for sixteen years, had intimated at the close of the last session his intention to retire, and a pension had been granted to him of £4000, with a reversion of £3000 to his son, but without raising him to the peerage, although that distinction had usually been bestowed on those who had so long filled the chair of the House of Commons. But it was thought that now especially the house needed an experienced guide; and he had allowed himself to be put in nomination, while ministers resolved to support his re-appointment. The chief opposition was from the more violent reformers; and Mr. Hume, who moved that Mr. Littleton, one of the members for Staffordshire, should take the chair, alleged that a reformed House of Commons should have a reformer for its speaker. Mr. O'Connell also, who seconded Mr. Hume, denounced the intention of government, as "another instance of the paltry truckling of the present administration." These were harsh notes at the commencement, but Mr. Sutton was chosen by an overwhelming majority. On the 5th of February, the first session of the new parliament was opened by the king in person. A great part of the royal speech was occupied by the terrible disturbances in Ireland, and by the paramount necessity of immediately adopting measures for repressing them; for controlling and punishing the disturbers of the public peace, and for preserving and strengthening the legislative union between the two countries,—"which union," said his majesty emphatically, "with your support, and under the blessings of Divine Providence, I am determined to maintain by all the measures in my power, as indissolubly connected with the peace, security, and welfare of my people." This roused the fury of Mr. Daniel O'Connell. In the debate on the address, which re-echoed his majesty's sentiments, he called the whole address a bloody, brutal, and unconstitutional document—a declaration of civil war—such a declaration as England once put forth against America, though she reaped from it nothing but discomfiture and disgrace. After seven centuries of oppression there was still to be a call for blood in Ireland! If after so long a lapse of time, during which Ireland had been subject to England, Ireland—a territory so blessed by Providence, but so ~~curse~~ ^{curst} by man—was still in a state of wretchedness and misery, the governors, the English governors, alone were to blame. The Irish people were and ever had

been innocent and blameless. True it was that deeds of violence and crime had increased in that beautiful country; but why had they increased? The mover of the address had ascribed the increase to agitation; but he, and the other friends of ministers, seemed to have forgotten *that it was only last year they themselves had been reproached as agitators, exciting the people to support changes and innovations which the people did not originally desire or care for!* When he and his friends had most agitated Ireland for emancipation, tranquillity had most prevailed. The Whigs had been riding rough-shod over Ireland; increase of crime had always followed, and always would follow, increase of force and violence. Never had there been such a prosecuting government as the present! They had prosecuted the press, the people, and even the priests of Ireland; but had done nothing to restore tranquillity to the country. So long as Ireland had grievances to complain of, he would agitate to redress them. This was what Englishmen had done to achieve reform. An unreformed parliament had passed two acts relative to Ireland which even an Algerine government would not have sanctioned. A reformed parliament, it appeared, was now to be called on to pass another, to put an end to agitation; but he would tell them it would be many and many a day before they could frame an act capable of effecting their object.

The debate was carried on by adjournments four days, or to the 8th of February, when Mr. O'Connell's amendment, for a committee of the whole house on the address, was rejected by 428 against 40.

A coercion bill for the suppression of disturbances in Ireland was introduced into the House of Lords by Earl Grey, and was there carried without opposition. The necessity of such a bill was shown by the fact that the aggregate of crimes during the preceding year amounted to upwards of 9000, connected with the disturbed state of the country, and that the list was on the increase. But long, and loud, and fierce was the opposition it met with in the commons from O'Connell and his well-jointed tail. Some of these Irish members did not hesitate to say in private that the coercion bill was absolutely and immediately necessary. One of the chief of them said, in the hearing of several members of the house,—"*We, as Irish patriots and members, must oppose the bill to the utmost; but if you do not pass it, by heavens there will be no security for property or for life in Ireland!*" Words to this effect being subsequently repeated, created a hurricane which will not soon be forgotten. Mr. Matthew Davenport Hill, one of the members for Hull, who had first disclosed this precious specimen of Irish sincerity, received a

batch of challenges, being challenged by nearly one-half of the members of the O'Connell tail; and *only* Lord Althorpe stood forward like a man of honour, like an English gentleman, to the rescue of Mr. Hill in the House of Commons. At last, on the 29th of March, the bill being slightly altered in the commons, was read a third time and passed. Its effect was materially to decrease the number of outrageous offences that were prevalent throughout the country. Mr. Stanley now resigned the uneasy office of secretary for Ireland, and was succeeded by Sir John Cam Hobhouse. Mr. Stanley became secretary for the colonies, that place being vacated by Viscount Goderich, who was made lord privy-seal and advanced in the peerage by the title of Earl of Ripon.

Concurrent with the Irish coercion bill, measures of redress and improvement for that country were introduced. The total revenues of the Irish Protestant church amounted to about £800,000 per annum—a sum of course entirely absorbed by the Protestant churchmen. On these funds it was the intention of ministers, after abolishing first-fruits, to impose a tax, varying according to the value of livings and bishoprics from five to fifteen per cent.; from the operation of which, however, livings under £200 per annum were to be exempted; while the larger revenues of the primate and the Bishop of Derry were to be reduced respectively to the amount of £10,000 and £8000 a year. The sum collected by this tax would be applied under commissioners to the abolition of church cess; the augmentation of poor livings and building of glebe houses; the division of unions; and the erection of churches. With respect to the offices of deans and chapters, it was proposed, wherever they were unconnected with the cure of souls, to abolish them altogether, or attach them to such cure. With regard to livings where no duty had been done for the last three years, it was proposed to suspend the appointment of ministers at the discretion of the church commissioners. It was also proposed to abolish ten bishoprics, and annex the vacated sees to certain of those that were preserved. Lastly came the lands attached to bishoprics; and here the chancellor of the exchequer, Lord Althorpe, laid down this principle—"That if by the act of parliament to be introduced any new value was given to benefices, that new value, not belonging properly to the church, might be immediately appropriated to the exigencies of the state; he believed that £500,000 a year was the value of all Irish episcopal lands to the lessees or tenants, though the bishops did not receive much more than £100,000; by a different mode of granting leases, his lordship showed that a sum of near £300,000 might be acquired for the state

without any diminution of income to the bishops; and he concluded with moving for leave to bring in a bill to alter and amend the laws relating to the Established church in Ireland.

This scheme gave great dissatisfaction to two parties—to the zealous Protestants and conservative members of opposition, who detested its principle as being destructive to the interest of the church; and to the economists, radicals, and repealers, in whose opinion it left far too much of the church property untouched. Sir Robert Inglis stigmatized the measure as tending to the total destruction of the Protestant religion in Ireland. Some alterations were made in the bill, which was read a third time on the 6th of July, and passed by a majority of 274 to 94. Being sent up to the lords, it there encountered considerable opposition, and was subjected to several alterations. Their lordships finally passed it on the 30th of July, the contents being 135, the non-contents 81. On the 2d of August the commons agreed to the amendments of the lords, Mr. O'Connell observing that their lordships had not made the bill much worse than they found it, and protesting against its being considered in any other light than as the first trifling instalment of the enormous debt due to Ireland.

For a long time there had been no collecting tithes in Ireland without a riot—in many cases they could not be collected at all. A resolution was now passed for exchequer bills not exceeding £1,000,000 to be issued for advancing, under certain conditions, arrears of tithes due for 1831 and 1832, subject to a deduction of twenty-five per cent., and the value of tithes for 1833, subject to a deduction of fifteen per cent., to any person entitled to such arrears or tithes, and desirous of receiving such advances. The amount advanced was to be included in the tithe composition, so as to be repaid in the course of five years by half-yearly instalments. Many people now said that England, besides paying its own tithe, would have to pay the Irish tithe also. Two commissions were issued, one for inquiring into the corporations of Ireland, and the other for investigating the condition of its labouring classes.

An important question during this season was the abolition of negro slavery in the West Indies. It was a subject which the first reform parliament could not consistently avoid, and its final settlement had been confidently anticipated both by the friends and the enemies of the new state of things. It was also found, that the half measures already passed were unsatisfactory both to the slave and the slaveholder; for while the former had enjoyed such a portion of liberty as made him anxious to possess the whole, the latter could no longer compel the amount of labour

which was necessary for the full cultivation of his farms and plantations. The negroes found that they had rights secured for them by the state, and that their slavery had in many cases been exchanged into voluntary service, while the planters endeavoured to evade these restrictions, even at the double risk of provoking the wrath of the home government, and open rebellion among their own black dependants. It was certain also that these negroes were now so elevated in spirit, intelligence, and self-reliance, that they could not be reduced to their former serfage; that they were fitted for the enjoyment of that full freedom of which the previous instalments had been a promise and preparative; and that if it was not freely and peaceably accorded to them, they would soon be in a condition to extort it by force and violence. Such were the considerations, irrespective of those of humanity and duty, which had prepared the public mind of Britain for the full measure of negro emancipation. All being in readiness, Mr. Stanley, now secretary for the colonies, explained the ministerial scheme for the purpose in a committee of the whole House of Commons, on the 14th of May. On the 30th of August the emancipation act was passed in the lords. As yet, it was not found possible, and it was perhaps not advisable, to let loose in an instant the whole negro population of the West Indies from their bondage into the enjoyment of full-grown liberty; and on this account, as well as from the resistance of the slaveholders themselves, the system of *gradualism* had still to be recognized in this great abolition. But the abolition itself was to be soon, and certain, and complete, while little more than the mere name of slavery was to be for a short time retained. On the 1st of August, 1834, the young children of the slaves were to be free. Of those who were still slaves, their servitude was to be changed into an apprenticeship that was to last, in the case of field-slaves for seven, and of house-slaves for five years, during which they were to be considered as free labourers in every respect, except in the right of changing their masters. In this way, negro slavery was speedily to expire throughout the whole British dominions. But while humanity liberated the bondman, justice was equally ready to compensate the master; and here a sacrifice was made which may well serve as an example to future ages, when some great national error is to be revoked and its injuries atoned for. It was at first proposed that the planters should be compensated for their loss of slave-labour by a loan of £15,000,000 sterling; but when it was represented that this sum was inadequate, and that it could not well be repaid, the loan was converted into a gift, and the £15,000,000 into £20,000,000. Such munificence

on the part of an impoverished nation, by whom it was as cheerfully and readily granted as if it had been the expenditure of a great national triumph, will serve as a brand for the foreheads of all future slaveholders to the end of time. If anything could cloud the joy of such an event, it was the circumstance, that only thirty-one days before the emancipation act had passed, Wilberforce, its author and champion, had died. He had struggled through many a year, amidst despondency and despair, and finally amidst the more wasting inflictions of hope deferred, in behalf of a beloved measure on which his whole energies had been concentrated; and now, when the crowning effort was to be made, he was stretched upon a death-bed, without the hope of witnessing the result. But he was cheered with the assurance that the beloved project of his life was safe, and that in a few days the bill would be passed. It was a happy foretaste of that "Well done" for which his whole life had been a preparation; and joy as well as peace illuminated the good man's departure.

Thus far the reformed parliament had made an auspicious commencement, and in the right direction: it had passed a measure to which the courage of former parliaments had been inadequate, and gratified a heroic and disinterested popular wish at the risk of materially increasing the national burdens. But justice to Africa and insulted humanity was not its only claim to favour during the first session of its existence. It also distinguished itself by its attention to the interests of trade and commerce, so that at no former period had these been better arranged or more widely extended. On these accounts, the temporary evils occasioned by the interruption and shock of reform were rapidly passing away; mercantile confidence in the legislature had revived; and mercantile enterprise, which had thriven so successfully during the period of war, but been thrown back by the return of peace, was girt anew for action, and seeking fresh fields of occupation. The principal subjects upon which parliament legislated in these departments were the renewal of the Bank charter, and of that of the East India Company. In the renewal of the Bank of England charter, which was a subject of complex and difficult nature, and had involved many intricate details and occupied much discussion, the following were the chief provisions:—A monthly publication of the bank accounts; the repayment of a portion of its capital; a partial repeal of the usury laws by which its action was hindered; an annual payment of £120,000 in return for the privileges conceded; its notes confirmed into a legal tender, except at the Bank itself or its branches; a quarterly return of the amount of circulation of all other banks; and certain regulations for the im-

provement of joint-stock banks, among which, one of the most important was the power of obtaining a charter from the crown. In renewing the East India Company's charter, most important and radical alterations were made. The trade, as well of India as China, which the Company had monopolized for centuries, was thrown entirely open. The merchant princes ceased to be merchants—they remained as lords of the soil. Some judicious changes were made in the constitution of the board of control, and every office under the Company was thrown open to British subjects without distinction. This was bold legislation, and it now appears to be universally acknowledged to have been as good and wise as it was bold. Other advances were made in the system of free trade. A free trade or commercial commission was also sent over to France. Laudable efforts were made to ascertain the actual condition of our labouring classes, with a view of improving it. The factory bill was elaborately discussed; and an act was passed, which not only reduced the daily labour of children, but made provision for their education, in a way that satisfied all the different religious classes in general. A reduction of taxation was made to the amount of £1,545,000; and finally, as a continuance or completion of reform, the borough system was altered, a sweeping corporation reform being prepared for England and for Scotland. All the evils of an irresponsible monopoly of municipal legislation were however left in Ireland.

Violent attacks were made upon the Church of England by some of the radicals who had been elected to the first reformed parliament. A Mr. Faithfull, from Brighton, proposed a wholesale seizure or confiscation of church property. He was seconded by Mr. Cobbett, but supported by no one else.

The Jews were now the only class of the community whose religion affected their rights as citizens. Mr. Grant brought in a bill to relieve them from all civil disabilities. It passed the commons, but was thrown out, on the second reading, by the lords.

The king in person prorogued parliament on the 29th of August. His majesty regretted that he could not yet announce the conclusion of a definitive arrangement between Holland and Belgium. Events which had lately taken place in Portugal had induced him to renew his diplomatic relations with that kingdom. He hoped that the recent Bank arrangements would sustain public credit and secure the usefulness of that important establishment.

On the 29th of September, an apoplectic fit terminated the life of Ferdinand VII. of Spain. His infant daughter was proclaimed queen, with her mother for regent. The regent was com-

pelled to throw herself into the arms of the constitutionalists and anti-church party. The priests, the monks, and all the ultra-royalists, declared that by the Salic law, which had been established in Spain at the accession of the Bourbon dynasty, a female could not reign; and that consequently the crown devolved to the late king's brother, Don Carlos. Another interminable civil war commenced forthwith.

In Portugal, Dom Pedro's efforts had been crowned with success. Being reinforced by the arrival of more foreign adventurers, chiefly English and French, he succeeded in driving away the Miguelites, and putting an end to their blockade of Oporto about the middle of April. The fleet, under the command of Sartorius, had fought one or two actions, but had never been paid. Dom Pedro, moreover, had treated the English commander with great coolness, which led to a violent and dangerous quarrel. Dom Pedro sent to put Sartorius under arrest; Sartorius threatened to blockade the regent in Oporto, and appeared with his ships before that town. After some long negotiations, means were found to satisfy Sartorius's claims so far that he consented to give up the command of the fleet, and he was replaced in the beginning of June by another British officer, Captain Charles Napier. On the 21st of June, the regent sailed from Oporto with 2500 men for the Algarves, the most southern province of the kingdom, and in less than a week Dom Miguel had the mortification of hearing that the whole province of Algarves was lost to him. But a still heavier blow awaited him. On the 5th of July, Admiral Napier, with a very inferior force, annihilated the Miguelite squadron off Cape St. Vincent. Dom Miguel had now only the land to trust to, and had put at the head of his army the Bourbon royalist, Marshal Bourmont, who had been, in 1830, the conqueror of Algiers, but who was now in disgrace, and an exile from his country. The Duke of Terceira, with the forces of Dom Pedro or Donna Maria, moved from the Algarves upon Lisbon. On the 23d of July, in approaching the left bank of the Tagus, he came in contact with a Miguelite force, commanded by Telles Jordao. The battle was brief, and the victory complete. The Miguelites, instead of making preparations for defence, evacuated Lisbon a night or two after this battle. The Duke of Terceira was received in the capital with transports of joy by the constitutionalists, who, before his arrival had proclaimed "the Senhora Donna Maria II., daughter of the immortal Pedro IV." Admiral Napier came up the Tagus with his victorious squadron; and now the Miguelites and the priests and monks were scampering off in all directions to seek for hiding-places, just as the constitu-

tionalists had been obliged to do when they were the losing party.

While these decisive events were taking place in the south, Marshal Bourmont was endeavouring to drive the Pedroites out of Oporto. He made a terrible attack on the 25th of July, but was finally obliged to retire, after having suffered a very considerable loss, and was obliged to go and look after the Duke of Terceira, who had taken post at Villafranca, a little to the north of the capital. The French marshal concentrated his forces at Coimbra, on the road to Lisbon. The system of defence adopted by the constitutionalists was to protect the capital by a strong chain of works, extending to the old lines of Torres Vedras, where the Duke of Wellington had so successfully kept the French at bay. The Miguelites might break their force against these bulwarks; and the Pedroites might harass them with sorties as opportunities offered, and as new troops and volunteers came in. The position of the Miguelites still kept at their command the northern and eastern provinces; and even when they had withdrawn from the Douro, there was no popular movement in that part of the country in favour of the queen. In sober truth, the common people, in nearly every part of the kingdom, were averse or indifferent to her cause and to the constitution. In the meanwhile, that young sovereign who had been acknowledged both by England and by France, had made a triumphant entrance into Lisbon, where her father, Dom Pedro, was holding the reins of government in her name, and an English ambassador was at once appointed. After some not very spirited fighting, the Miguelites retreated up the right bank of the Tagus, safely carrying off all their baggage and artillery. The last operation of the year terminated favourably for Dom Miguel. On the 2d of November, a detachment of his army gave the constitutionalists a sound beating at Alverca. These constitutionalists, being for the most part volunteers, ran away at the beginning, shamefully abandoning some of Napier's English marines. Upon finding themselves surrounded in their retreat, a great number of these volunteers went over to the enemy, shouting for Dom Miguel.

Dom Pedro could make constitutions—such as they were, but he would not himself observe them when they were made. His acts in many instances were quite as despotic as any which had proceeded from his brother. He quarrelled with the Marquis Palmella, who was almost the only man of real talent in his service, and recalled him from his embassy at London. He introduced into the government men without name, character, or even party influence. By a decree he sanctioned an act of spoliation of the

greater part of the landed proprietors in Portugal. In contempt of the liberty of the press, which was a component part of the constitution, he arbitrarily arrested a peer of the realm, who, in a printed letter, had spoken freely of the unwise acts of the government. The printer of the letter was also arrested in a manner contrary to law.

The Ottoman empire was again in jeopardy; the throne of the sultan being first menaced by a satrap, Mehemet Ali, the Pacha of Egypt; and next endangered by an insidious protecting ally, Nicholas, the Czar of Russia. The victories of Ibrahim Pacha, during the preceding year, had opened to him the passes of Mount Taurus, and the road through Asia Minor to Constantinople. On the 21st of December, 1832, Ibrahim had defeated the grand vizier at Koniah, and had taken almost the whole of the artillery, baggage, and ammunition of the Turks. Between Koniah and Constantinople there was nothing to withstand the Egyptians and Arabs. Ibrahim advanced to Broosa, at the foot of the Bithynian Olympus, and at the distance of not more than three forced marches from Constantinople. Russia could furnish, from the neighbouring ports of the Black Sea, the most prompt and substantial assistance; Russia could send the sultan troops, when France and England could only send ambassadors; and Russia was longing for the moment when despair would compel the Ottoman Porte to throw itself into her arms: this, again, was precisely the state of things which England, France, and Austria were anxious to avert; for it suited not the views and interests of any one of these powers, that the Russians should get a firm footing in European Turkey, or that Turkey should become in everything but in name a mere dependency of the Russian empire. So urgent, however, was the sultan's case, that before the diplomacy of Europe could be set in motion, he was obliged to apply to Russia for assistance both by sea and land; and a fleet from Sebastopol anchored at the entrance of the Bosphorus, on the 20th of February, 1833, to defend the narrow passage from Asia into Europe. The arrival of this Russian force excited the jealousy and alarm of Admiral Roussin, the French ambassador at the Porte, who insisted strongly that the fleet should be immediately sent back. Having failed in this, Admiral Roussin made himself the principal party in framing a treaty of peace, which was to be sent to Mehemet Ali, together with an assurance that he must accept it, or expect to see the combined French and English fleets hostilely arrayed against him on the coast of Egypt. Admiral Roussin's treaty would have left the Pacha of Egypt in possession of St. Jean d'Acre, Jerusalem, and Tripoli, in Syria. The pacha de-

manded the whole of Syria, with the adjoining district of Adana, which would have brought his territories up to the very foot of Mount Taurus; he positively refused to accede to the treaty, and he sent orders to Ibrahim to continue his advance. Constantinople was in dismay—the sultan again applied to Russia for more ships and for troops. Before the end of April, 15,000 Russians were landed at Soutari, the Asiatic suburb of Constantinople, and were encamped between the army of Ibrahim Pacha and the Bosphorus. The Russian fleet guarded the Bosphorus itself; thus completely stopping the passage to Ibrahim, who had no ships, and no possibility of obtaining any. A much more numerous Russian army was marching up from the Danube. It was not the interest of Russia that Ibrahim, by receding from his demands, or the sultan by granting, should shorten the duration of her protectorate. It was the interest of the other powers that every pretext for the presence of the Russians should be speedily removed. Sultan Mahmoud wavered as one party or the other made their strong representations to him. The wishes, however, to get rid of Ibrahim Pacha and the Czar Nicholas, induced him to grant to Mehemet Ali part of his additional demands. M. Varennes, of the French legation, was authorized to proceed to the Egyptian head-quarters, and concede the pachalic of Aleppo. Ibrahim, however, insisted immovably on receiving likewise the district of Adana. The sultan at last found it prudent to comply. Military operations in Asia Minor between the Russians and the Egyptians would have thrown him more completely into the power of the czar. On the 5th of May he gave up Adana, along with the whole of Syria. On the conclusion of this peace, Ibrahim began his retrograde movement. By the end of July he had recrossed Mount Taurus. So soon as it was known that he had quitted Asia Minor, the Russian troops and ships likewise took their departure. The march from the Danube had already been countermanded. Shortly after this, the sultan was led into the dangerous and disgraceful treaty of Hunkiar-Iskellisi. By this treaty the czar was to aid the sultan in repressing all future disturbances; and the sultan, at the demand of the czar, in particular circumstances, was to shut the passage of the Dardanelles against the ships of all other nations. England and France complained that such a treaty should have been concluded without their concurrence, and each of them had a fleet at the time near the Dardanelles; but their remonstrances were unheeded, and their fleets returned. They had, in fact, been blaming the sultan for faults of their own commission or omission. They had sent him no aid; they had stood aloof at the moment of crisis; and they had

left the Porte nothing to do, but to throw itself into the arms of Russia. If a British fleet had been sent up the Dardanelles and to the Bosphorus in the month of January, the sultan would have had no need of the Russians, and Ibrahim would have suspended his march upon Constantinople. If a combined French and English fleet, or a fleet of either nation singly, had appeared off the Egyptian coast at the opening of the year, the pacha would have recalled his conquering son. But our ministers had promised a reduction of taxes, and were led to reduce the navy at a time when they ought to have strengthened it.

The free states of South America continued to demonstrate how little they were fitted for the enjoyment of freedom, and how slow they were to learn the first principles of government. They were nearly all rent by conspiracies, insurrections, and intestine warfare.

His majesty opened the session of 1834 on the 4th of January. A war of succession was raging, and was likely long to rage, in Spain; but his majesty intimated that, immediately on the death of the late king, he had recognized the succession of his infant daughter. In the debates on the address, the foreign policy of government was particularly attacked by the Duke of Wellington. To the risk of the repose of Europe, Holland and Belgium stood in the same situation now as they did two years ago. In Portugal the war was notoriously carried on by the subjects and with the capital of this country, yet the King of Spain had been told, "In this contest you must be neutral; and if you are not, we will interfere and support Dom Pedro." Under the protection of our fleets in the Douro and the Tagus, our boasted neutrality had been shamefully violated. In Spain, King Ferdinand thought proper to make an alteration in the succession to the crown, and Don Carlos was expelled. Don Carlos was required to retire to Italy. He refused, but he went to Portugal to seek assistance there, so that, in fact, the civil war in Spain grew out of the civil war in Portugal which was fomented by us. He had formerly ventured to advise the government to issue a proclamation recalling his majesty's subjects from the service of both parties; but his advice had been disregarded. In the East, too, a most unfortunate line of policy had been adopted. Why had Ibrahim Pacha been allowed to overrun the dominions of the sultan? On a former occasion, when the Pacha of Egypt was desired by this government not to carry into execution certain measures which he wished to effect, and when he was positively told that he must not proceed, he at once desisted. If this country wished to prevent him from carrying on war,

we needed only to have a fleet there. If in 1832 or 1833 our ministers had plainly told Mehemet Ali that he was not to carry on hostile operations against the sultan, they would have put an end to the war. But, instead of taking a commanding position in the Levant, our fleets were in the Douro and the Tagus protecting civil war; and in the Channel blockading the fleets of the Dutch, because that ill-used people would not yield to every demand made upon them by the Belgians. The consequence was, that our old allies, Holland, Portugal, Spain, and Turkey, were placed under the protection of other powers.

Ever since the passing of the Catholic emancipation, Ireland had been agitated for a repeal of the union. On the 22d of April, Mr. O'Connell rose in the House of Commons, and moved in form that the union should be abolished. The agitator was well answered by Mr. Spring Rice and Sir Robert Peel. Sir Robert repeated the well-known exclamation of Mr. Canning: "Repeal the union! Re-enact the heptarchy!" The security of the empire depended on the maintenance of that union, without which England would be reduced to the condition of a third-rate power, and Ireland to the desolation of a wilderness. Only 38 were found to vote for O'Connell, while 523 voted against him. With a single exception the minority consisted of Irish members.

A most disproportionate share of the time of parliament continued to be taken up with Irish affairs, and the harangues, and quarrels, and mutual recriminations of Irish members. The government was guilty of the folly of yielding too much to the demands of these impatient, long-tongued men. This led to dissensions in the cabinet. It was demanded that the Protestant establishment in Ireland should depend on the comparative strength or weakness of the Romish church; and Mr. Ward made a motion for reducing the temporalities of the Protestant establishment as far exceeding the spiritual wants of the Protestant population. Ministers tried to get rid of the proposal by appointing a commission to inquire into the state of the Irish church. This expedient necessarily implied that, if facts turned out in a particular way, the cabinet would no longer oppose Mr. Ward's principles, and an attack would be made on all church property in Ireland. With this conviction Mr. Stanley, Sir James Graham, the Duke of Richmond, and the Earl of Ripon resigned office. Their places were soon filled up: the Marquis of Conyngham became postmaster-general, and the Earl of Carlisle privy seal; Lord Auckland succeeded Sir James Graham at the admiralty, and Mr. Spring Rice succeeded Mr. Stanley in the colonial office. Mr. Abercromby and Mr. Cutler Ferguson, who had not previously held office, were appointed re-

spectively master of the mint and judge-advocate; and Mr. Poulett Thompson was now made president instead of vice-president of the board of trade.

While the cabinet was thus shaken and weakened by internal dissensions, publicity was given to a declaration made by the king to the Irish prelates—a declaration by no means favourable to an attack upon the church. Lord Althorpe informed the commons that a lay commission had been appointed to inquire into the whole state of church property and church affairs throughout Ireland; also into those of Roman Catholics and dissenters; into the number of schools in each parish, the different religious persuasions of those that attended them, &c. Ministers would not have advised the crown to adopt such a measure as this, without being prepared to act on the report of the commission, as circumstances should point out, and as the information procured by the said commission should warrant. Accordingly Lord Althorpe trusted that Mr. Ward, satisfied with what government had done, would withdraw his motion. Mr. Ward refused so to do, saying, he was afraid that the present ministers would not long continue in office; and that if they were removed, the commission would be inoperative. Lord Althorpe then moved the previous question, and carried it by 396 against 120.

The O'Connellites now called for something very like the total abolition of tithes; but they could count but a very few votes in a full house, and ministers carried another bill to amend the tithe system in Ireland. The state of that country rendered it absolutely necessary that the coercion bill, which was to expire in August, should be renewed for another year. The lord-lieutenant, the Marquis Wellesley, vacillated in his opinions, and then recommended that the severity of the bill should be in part mitigated. Mr. Littleton, now secretary for Ireland, held the same opinions, and had committed the fatal error of negotiating with Mr. O'Connell unknown to the head of the government; and Lord Durham, Mr. Spring Rice, Mr. Abercromby, and other members of the government, objected to a renewal of some of the clauses. Worried by the O'Connellites, Mr. Littleton tendered his resignation, which was refused, Lord Althorpe stating that his colleagues could not dispense with his valuable services. This stormy and complicated business ended in the resignation of Lord Althorpe; and this resignation speedily determined that of Earl Grey. No other resignations, however, followed. Lord Melbourne was put at the head of the government in lieu of Earl Grey, and kissed hands on the 16th of July. He was succeeded as home secretary by

Viscount Duncannon; and Sir John Cam Hobhouse now took the woods and forests, with a seat in the cabinet. Some time after this, Lord Carlisle resigned, and the Earl of Mulgrave took the privy seal. The new premier was obliged to declare that he did not intend to proceed with the coercion bill now before parliament; but that another measure, omitting certain clauses, would be immediately introduced in the commons. This announcement produced a vehement discussion, wherein the Dukes of Wellington and Buckingham, the Earl of Wicklow, and other peers, maintained that since the Revolution no instance had occurred of such weakness, inconsistency, and tergiversation. The new or modified coercion bill was rapidly carried through both houses; but it did not pass the lords without a strong protest, signed by the Duke of Cumberland, the Duke of Wellington, and twenty-one other peers. The modified bill was so framed as to have not the least effect upon agitation and agitators. The protesting peers held that this agitation was the real source of nearly all the violence and crime which disgraced Ireland; and those who would dream over a different view of the case must first shut their eyes to facts. Uncontrolled and undeterred the Irish agitators plied their trade—a profitable trade for some of them—with even more than their former boldness.

The ministerial tithes bill for Ireland was now taken up in earnest. Lord Melbourne, in moving its second reading in the upper house, plainly intimated that if it was lost, government would propose no other grant for the relief of the Irish Protestant clergy. Although he admitted that there might be reasons for viewing with jealousy and distrust the quarter whence certain alterations made in the bill subsequently to its original introduction proceeded, yet he thought the arrangement itself not a bad one for the clergy. The tithe in future was to be received by the crown and paid by the landlord, who, in return for the burden thus imposed on him, was to have a deduction of two-fifths, or forty per cent., of the original composition. The incomes of the clergy, however, were not to bear the whole deduction, which was only to be twenty-two and a half per cent. on them; that is, twenty per cent. for increased security, and two and a half per cent. for the expenses of collection: incumbents therefore would receive £77, 10s. for every £100, without trouble, without the risk of bad debts, and without any of that odium which had hitherto attended the collection of tithes. Another consequence was, that the clergy would be relieved from the payment of sums already advanced to them from the treasury, as that charge would be laid on the landlord.

The revision of existing compositions, made under the acts of 1823 and 1832, he thought also a proper enactment. The bill underwent a complete discussion, the Tory lords seeing no security for the rights and interests of the Irish clergy in yielding to what they considered an

LORD MELBOURNE

From a portrait by Sir George Hayter

act of injustice; while their opponents thought that it would be much more advantageous to the clerical body to obtain the sum proposed without risk, than to recover a smaller, if they recovered any at all, through scenes of blood and slaughter. "But the bill," said Lord Brougham, "was to be rejected because Mr. O'Connell approved of it and had amended it: that was to say, a man whom they disliked had only to advise them how to save the country from a civil war, in order to insure the rejection of such a suggestion! It was very easy for such politicians to say, 'Am I to degrade myself by taking a leaf out of Mr. O'Connell's book? Shall I permit him to dictate to me?' But he did dictate to them; and the only difference was, that instead of taking the thing honestly and directly as a beneficial suggestion, they submitted to take the law from him, by enabling him to decide what they should not do." The Earl of Ripon and the Duke of Richmond wished the bill to go into committee, with an intention of restoring it to its original state; and, if unsuccessful in that, they would vote against the third reading. On a division, however, the second reading was rejected by a majority of sixty-seven; and the Irish Protestant clergy were thus thrown on the charity of the British public, who subscribed largely for their relief.

Some of the dissenters of England would have fain left the clergy of the Established church at home as hungry as their brethren in Ireland. They begged to be relieved from the necessity of supporting an establishment, in the advantages of which, they said, they did not participate. Many petitions were presented to parliament, praying to be relieved from church-rates; and in many instances urging the separation of church and state, or recommending a general establishment of the voluntary system. They did not want advocates in parliament, for the radicals had long been looking at the great prize which might be gained in church property if the Establishment should be overthrown. The petitions did not lead to any result, except that of producing a strong expression of opposite opinion, and calling forth numerous anti-petitions, praying parliament to preserve the church inviolate: ministers also fulfilled their declarations, that they would listen to no proposition for its destruction. Nevertheless, a motion made by Mr. Rippon, the new member for Gateshead, to expel the bishops from the House of Lords, found a minority of fifty-eight voices in a house consisting of 183 members.

Among the grievances of which the dissenters complained in their numerous petitions, none were more strongly dwelt on than their practical exclusion from degrees at Oxford and Cambridge, in consequence of being required to sign a declaration of conformity with the Church of England, or to subscribe her articles. They demanded, as a matter of civil right, that religious tests should be abolished, and the universities thrown open for education, and a certain extent of graduation to men of any creed. It was clear that their chance of success would be greatly increased if they could state a feasible case of concurrent opinion in these learned bodies themselves; and fortune at this time favoured their exertions at Cambridge. Great pains had been lately taken by some of the medical professors in that university to advance the interests of their particular science; and, being alarmed at the exertions made in the metropolis, not only to establish a medical school, but to obtain the power of granting degrees, they felt anxious to ward off the mischief which might thence accrue to their *alma mater*, by opening her doors wider to students of medicine. For this purpose, however, it was necessary to admit others with them into the sanctuary: and, as a considerable body existed in the senate who thought the time had now arrived when dissenters from the Established church might safely be admitted to such academical degrees as were unconnected with theology, and who, instead of seeing danger to the Establishment from the introduction of a few young men

of the higher class of dissenters into the academical body, thought rather that the dissenting community had reason to fear for the conversion of their youth—a petition was got up without much difficulty, and signed by sixty-three resident members of the senate, praying for the abolition of religious tests offered to candidates for degrees in arts, law, and physic. At the same time, in making this request, the petitioners stated, "That they were only asking for a restitution of their ancient laws and laudable customs; since the restrictions complained of were imposed on the university in the reign of James I., most of them in a manner informal and unprecedented, and grievously against the wishes of many then members of the senate, in times of bitter party animosities, and during the prevalence of dogmas both in church and state which are at variance with the present spirit of English law, and with the true principles of Christian toleration."

This petition, which simply asked the removal of subscription—neither seeking the admission of dissenters as such, nor their participation in college fellowship, nor any change on their account in lectures or discipline—was presented on the 21st of March by Earl Grey in the House of Lords, and on the 24th by Mr. Spring Rice in the commons, being considered as a convenient instrument to try the temper of the two houses, and ascertain the views of different parties by the discussion which it was sure to produce. No motion, however, was made till after the Easter recess; when Colonel Williams moved an address to his majesty, praying him to signify his royal pleasure to the universities of Oxford and Cambridge, that those bodies should act no longer under the edicts or letters of James I., 1616. It was however thought, for many reasons, more advisable to proceed by bill; and Mr. Wood, one of the members for Preston, moved an amendment to that effect, which was carried.¹

Though the Cambridge petition had been presented in both houses by members of the cabinet, and government had declared its entire concurrence in the prayer of the petitioners, no proposition on the subject was brought forward by ministers. Favourable as they were to the measure of relaxation, they expressed their hopes, that, as a portion of one of the universities was already inclined to it, the object, if not pressed too eagerly, might be effected with the concurrence of those learned bodies in a much better form, and to much better purpose, than if they were made to act reluctantly under the compulsion of a statute. They wished, therefore, that neither parliament nor government should be driven to interfere in the business before they could engage with a prospect of terminating it in

¹ *Annual Register for 1834.*

the best and most satisfactory manner. The dissenters, however, and their partizans, took the matter into their own hands, and pressed on with such violence as soon disgusted their best friends. Ministers would not run the risk of preventing them, but took no lead in the measure, though they supported it by their speeches and votes.

Before the bill was brought in, the sentiments of the great mass in the two academical bodies became fully expressed. It was soon discovered that the sixty-three petitioners at Cambridge, by offending the honest principles of many, and the rancorous party spirit of a few, had raised a storm which no argument or explanation, though it engaged some of the ablest pens in that university, could allay. Meetings were held almost daily, pamphlets were showered forth like hail, the public journals gave up their pages to the contest, and the university pulpit resounded with the most awful denunciations. During the excitement thus provoked, a counter-petition was signed by 258 members, resident and non-resident, comprising eleven heads of houses, eight professors, and twenty-nine tutors; while a second was signed by 755 under-graduates and bachelors of arts. These were presented, on the 21st of April, by the Duke of Gloucester, as chancellor of the university, in the House of Lords; and by Mr. Goulburn, one of its representatives, in the House of Commons. On the 9th of May, Mr. Estcourt presented a similar document from the university of Oxford; and a second petition was sent from Cambridge, signed by many members of the senate who had not signed the other.

Although Mr. Wood brought in his bill soon after the Easter holidays, it was not till the 20th of June that he was enabled to move the second reading. Mr. Estcourt then proposed, as an amendment, that it should be read a second time that day six months: he argued that the course of education pursued at Oxford and Cambridge was essentially a religious one, and the supporters of the bill could not succeed in their object without destroying the religious part of the system. "This indeed," he said, "was the aim of the dissenters; to introduce a system of education which would lead to a dissolution of the connection existing between the church and state; or, in other words, to the destruction of the established religion of the country." Mr. Herbert, who seconded the amendment, enforced the argument:—"It had been suggested," he said, "that persons of all denominations might be taught the leading doctrines of morality and religion without touching on debatable questions; but he doubted if this were possible; and he expected no advantage from so vague a system of theology—an emasculated kind of instruction in Christianity and morals, producing no feeling of confidence

or reverence in the minds of its pupils: a bill like the present would operate as a direct exclusion of the clergy from the universities, and every parish in England would feel the consequences!" In addition to this argument, the honourable gentleman asked why the dissenters, who were an opulent and intelligent body, did not found colleges of their own, in which they might adopt that system which pleased them best; and if they hedged in their institutions with religious tests calculated to exclude churchmen, the latter would not complain. The answer to this was given in the speech of Mr. Potter, who, with Messrs. Ewart and Poulter, spoke in favour of the bill; contending that the alteration required was necessary, no less for the benefit of the universities than in justice to the dissenters: by the present system the latter were impeded in their progress to the bar by having to keep terms for five years instead of three, and were prevented from becoming fellows of the College of Physicians for want of academical degrees; and this could not be remedied by degrees of their own. With regard to subscription of the thirty-nine articles, it was said, that instead of insuring sincerity in religion, it generated hypocrisy and indifference to religion altogether; it was also declared that the exclusive spirit of the universities, being no longer in accordance with the spirit of the age, could not much longer be preserved, especially when so large a body of dissenters had grown up, actuated by a desire of obtaining their just rights. Mr. C. W. Wynne was convinced that the present bill was but the first of a series of measures, which, if not checked in time, must lead to the subversion of the Established church and the destruction of all our institutions. On the other hand, Mr. Spring Rice complained that it was unfair to treat the bill, not according to its own deserts, but in reference to other supposed measures which might or might not be connected with that under discussion: in the course of his argument, he asked what could be more inconsistent and unjust than the practice now prevailing at Cambridge, where dissenters were admitted so far as instruction was concerned, but excluded from everything to which instruction ought to lead? They were admitted to the fullest and most complete course of study until the twelfth term; when, on being brought into fair competition with their fellow-students, the odious principle of exclusion intervened, and the dissenter was told, that however obedient he had been to college regulations, however high the eminence he had acquired, still he should not be allowed the badge or symbol of his acquirements, simply because he was a dissenter. He really thought that, so far from deteriorating or endangering the church establishment, the approxima-

tion of dissenters to its members in a course of education might bring many within the pale of that church who would otherwise continue to dissent from it; and he denied that the mixture of persons differing in religious persuasions at Cambridge had been injurious either to the university or any other institution of the country. The house had the benefit of experience, for in Dublin dissenters were admitted to degrees, though excluded from fellowships and all participation in the internal management of the university: and what mischief had followed the admission? Was the university less orthodox in its principles, or less a Protestant foundation than before? Had the zeal of its public instructors been lessened, or their sphere of usefulness narrowed by this interference? It had been said that the dissenters ought to found universities of their own: he concurred in that argument; but the English universities would not allow them to do so: when they proposed such a step, in order to educate the youth of their own persuasion, and reward them with those honours which the universities denied, and thus sought to secure to themselves academical honours and privileges, the universities stepped forward and said—We will not only exclude you from our seats, but will also prevent your enjoying the advantages and privileges of a university of your own. This double ground of exclusion and prohibition was what no one could defend.

The colonial secretary was answered by Mr. Goulburn, who argued that in proportion as the advocates of the bill enforced the danger of excluding dissenters, they rendered manifest the ruinous consequences of concession; if the dissenters deemed it so hard to be deprived of the empty honour of a degree, what would they say if they were admitted to degrees and found a bar raised against their admission to college emoluments and distinctions? When it was said by the right honourable gentleman that Dublin afforded an example which they might safely follow, it was an unhappy one in itself, and unfairly stated; in Dublin the degree conferred on its possessor no power of government, and on this point all the merits of the intended comparison turned: besides, an Irish member had a motion now on the order-book requiring that dissenters should be placed on the same footing with members of the Establishment, in respect to scholarships and fellowships in that university; and his plea was, that, as we were about to admit dissenters to degrees in England, he saw no reason why dissenters in Ireland should not have the advantages which those degrees conferred in England. In speaking of the course pursued at Cambridge, the broad distinction had been forgotten, that a dissenter was not admitted as such, but as a member

of the university willing to submit to its regulations; and, till the period for taking his degree arrived, he followed the rules prescribed by that body; but if he were brought to college openly as a dissenter, either he was absolved from the restraints of religious discipline, or was forced to proclaim his own hypocrisy. Under the proposed bill, every class of dissenters, Jews, Turks, infidels, Socinians, men of any denomination, would be admissible to degrees; it repealed *ipso facto* all the statutes which regulated the internal government of colleges, and did away with all that religious attendance which had been justly lauded: now religious instruction should never be disjoined from general education; and there had been a time in our history when opposite sentiments would have drawn down universal reprobation. The right honourable gentleman went on to show the evil consequences of a system of education without a religious test, drawn from foreign universities; and implored the house to abstain from depriving Christianity of the advantages which it derived from the discipline and constitution of our own—from dis severing religion and learning.

Mr. Stanley said, that when the first Cambridge petition was presented, he had been disposed to concur in its prayer, so far as might be consistent with the safety of the Established church; but he would not conceal his feeling, that the tone subsequently assumed, and the principles asserted by the dissenters, had tended to change in some respects his opinion, and rendered it necessary for the house to view their whole claims with more jealousy than before: still he would vote for the principle of the bill, but not as declaring for a change in the system of university education. It was only in Oxford that subscription to the thirty-nine articles was required from a student entering the university; though a member of that university, he wished to see this part of the system altered, for he could not bring himself to believe in that gloss which had been put on it—that such subscription was merely a matter of form, and that no real adhesion to those articles was implied until the party was instructed in their meaning.

Sir Robert Peel, after a long speech, in which he characterized the bill as an enactment intended to give to Jews, infidels, and atheists—to the man who professed some religion, and to the man who professed none—a statutable right to demand admission into our universities—declared that, after a removal of all civil disabilities from dissenters by the repeal of the corporation and test acts, and from Roman Catholics by the act of emancipation; and after a vast change effected by the reform bill in the constitution of parliament, the question at last was, Were we, or were we not, to maintain an estab-

lished religion? In all those measures of relief alluded to, there never was an intimation that they would lead to further demands, and lay a foundation for ulterior claims. To concede the demands now made, he asserted, would not be for the advantage of the dissenters themselves; to whom, as well as to all Christians, the preservation of the Established church was an inestimable benefit, to protect them as well from superstition on the one hand, as fanaticism on the other; and secure to them and their posterity the decent observance of divine worship, and the substantial benefits of toleration; which could be secured only by such an establishment. What, he asked, constituted the union between church and state? What was the essence of an established church? What, but a legislative recognition of it on the part of the state? Parliament, therefore, was entitled to say to the dissenters—"With that legislative recognition you shall not interfere."

Sir R. H. Inglis and Lord Sandon also opposed the bill, which was supported by Lord Althorpe, who strenuously contended, that by such support he would be guilty of no hostile act against the Established church. He maintained that interference with divine worship was no necessary consequence of the bill, neither would it interfere with the education of members of the Church of England; for if it passed into a law, it would only entitle dissenters to take a degree without subscription to any articles of religion, or any declaration of faith; neither investing them with fellowships, nor with the power of instructing youth. For the principle of the bill therefore he was prepared to vote; and in committee, all changes might be effected for limiting that principle to the extent required. The house then divided, and the second reading was carried by 321 votes against 174. In the committee, the speaker gave his decided opposition to the principle of the bill, and some amendments having been made, it was read a third time, and passed, on the 28th of July, by a majority of 164 against 75. The Earl of Radnor took charge of the bill in the House of Lords, where the arguments for and against it did not vary from those used in the commons. The Duke of Gloucester, chancellor of the university of Cambridge, after denouncing the bill not only as uncalled for, but most unjust and mischievous, moved, as an amendment, that it be read that day six months. His royal highness was followed by the Duke of Wellington, chancellor of Oxford, who argued forcibly on the same side. Lord-chancellor Brougham supported the bill, because he thought it went to remove a practical grievance, without affecting the discipline of the universities or the safety of the church; and the discussion was

closed by a long and ingenious speech from the Bishop of Exeter; when a division took place, and the amendment was carried by the overwhelming majority of 187 against 85 who voted for the second reading.

The dissenters generally, who had materially aided the Whig ministers at the last general election, put a very high price on their services, and seemed to consider that they could not ask

LORD ALTHORPE
From a portrait by T. Phillips R.A.

too much from ministerial gratitude. They demanded to be released from the payment of church rates. Mr. Divett made a motion in the House of Commons to that effect. Some of the friends of dissent, in supporting the motion, said that if practical grievances were not removed, the Established church would possess little security, as the dissenters had become so formidable in numbers. In this estimate noise was made to pass for numbers. Lord Althorpe said that, as he had himself given notice of a motion on this subject, and as he did not think the present a desirable occasion to adopt the principle contained in the resolution, he should move the previous question. Mr. Divett was willing to wait for the government plan, and withdrew his motion. On the 21st of April, Lord Althorpe brought forward that plan in the shape of a resolution, "That, after a fixed time, church-rates should cease; and in lieu thereof, a sum not exceeding £250,000, should be granted from the land-tax, to be applied as parliament should direct." His intention, he said, was to provide for the fabrics of the church, and to relieve the dissenters at the same time. This scheme, however, did not at all suit the views of the dissenters. Mr. Hume led the attack against it,

calling it a contemptible juggle, founded on the old financial principle, that if money were taken out of the pockets of the people by indirect means, they would not be sensible of their loss. On a division, the motion was indeed carried by 256 against 140; but government found it expedient to proceed no further with the measure.

Ministers were not more fortunate in another attempt to gratify the dissenters, by allowing them to celebrate the marriage ceremony in their own chapels. A bill to this effect, brought in by Lord John Russell, was refused by them, principally on the ground that it required the banns to be published in the parish church, which, they said, involved a principle that rendered them inferior to their fellow-subjects.

Lord Althorpe moved a resolution touching the

commutation of tithes in England. He set out with two propositions—"First, that whatever difference of opinion might exist as to the abstract right of tithes, they did not belong to the landlord; secondly, that the revenues of the Established church were not larger than its purposes required: tithes, therefore, must be treated as property belonging to the church, and consequently they could not be taken away without a fair equivalent." What his lordship would have altered, was the mode of collecting the tithes. This, he said, was a source of irritation, and not unfrequently of unpleasant collision. It might be avoided by commutation. But the principles and details of the method he proposed were relished neither by the clergy nor by the landholders; and the measure was dropped for the present.

CHAPTER IV.—CIVIL AND MILITARY HISTORY.—A.D. 1834—1835.

WILLIAM IV.

Proposed amendment of the poor laws—Necessity of the measure—Committee of inquiry appointed—Its report—Statement of evils to be remedied—The new poor laws—Their beneficial effects—Motion of Lord Chandos for the alleviation of taxes on agriculture—Mr. O'Connell's proposal on the subject—Sir Robert Peel's indignant reply—The motion of the Marquis of Chandos defeated—Mr. Cobbett moves for the repeal of the malt-tax—His motion rejected—Mr. Hume's motion for an alteration of the corn laws—His statement of their evils—His remedy—The motion rejected—Parties for and against it—Other taxes reduced—Parliament prorogued—Burning of the two Houses of Parliament—Breaking up of the Whig ministry—Sir Robert Peel in his absence appointed premier—The Duke of Wellington holds the office until Peel's return—New ministry appointed—State of affairs in Portugal—Dom Miguel obliged to abandon Portugal—Affairs of Spain—The Biscayans adopt the cause of Don Carlos—Successes of his general Zumalacarrégui—Sir Robert Peel commences office as premier—His resolution not to interfere with the reform bill—Commission to examine the state of ecclesiastical affairs in England and Wales—Meeting of the new parliament—Trial of strength among the parties—The king's opening speech—The Duke of Wellington attacked for holding the interim-premiership along with his other offices—The duke's explanation and defence—He is attacked by Lord Brougham—The Duke of Wellington's discharge of the duties of premier justified by the lord-chancellor—Debate upon the same subject in the commons—Irish affairs—Orange societies—Motion for a repeal of the malt-tax defeated—The Marquis of Londonderry appointed ambassador to the court of St. Petersburg—Opposition to the appointment—Arguments of Mr. Shiel against it—Mr. Ferguson's objections—The marquis charged with having stigmatized the Poles as rebels—Sir Robert Peel's statement of the fitness of the marquis for the embassy—The Marquis of Londonderry resigns his appointment—Report of the commission of inquiry into the state of the church—The Irish tithe question—Plan proposed for its settlement—Debate on the subject—Various motions in parliament—Lord John Russell's motion on the Irish church temporalities question—Irish church affairs.

LITTLE comparatively was done during this session, though one act was passed, the importance of which cannot be too highly estimated. It was the act for the amendment of the poor laws. The alarming increase of pauperism had been complained of from year to year; the remedies hitherto adopted had all been found useless; and when at last the annual poor-rate had grown to more than £7,000,000; a more decisive remedy

than any as yet attempted could no longer be delayed. There was previously needed a more searching investigation of the evil than the parliamentary committees had been able to carry out; and in 1832 a commission of inquiry had been appointed by the crown, consisting of nine persons, among whom were the Bishops of London and Chester, who were to draw up their report, after a strict investigation into the state of every parish in England and Wales. The result, after two years of inquiry, was overwhelm-

ing. It was found that the poor-rate was little else than an incentive to pauperism, and a fund for idleness and crime. In consequence of this provision, which was looked upon as inexhaustible, all who were disinclined to labour applied to it, as to a common property which belonged to them of right; and thus, while the idle folded their hands until they were qualified for a claim upon the fund, thoughtless boys and girls married, and the profligate went on untrammelled and unchecked, in the knowledge that public resources were provided for the maintenance of their numerous broods whether lawfully begotten or illegitimate. Where there were so many claimants, also, it was difficult to send any away empty: bullying and importunity could extort where modest necessity would have been unavailing; and there were parish guardians enough who loved their own ease, and country justices greedy of vulgar popularity, to scatter the doles abroad without stint or question. In this way the £7,000,000 were but a drop in the bucket, which was dried up none knew how. In such a state of society what were industry and property worth? The labourer might work additional hours, but he knew that this extra labour went to feed the idle and improvident. The farmer might sow and reap, but the goodness of his crop would be visited by a heavier assessment. The landed gentleman reduced his establishment and expenditure, and found that his estate, which had sunk to half its value, would soon be worth nothing. Such were the general facts established by the poor-law inquiry, and it was illustrated by such a mass of particular statements as left no further ground for doubt or cavil. It was evident that, whatever might be the apparent grandeur or prosperity of Britain, a worm was at the root, which nothing short of the severest applications would extirpate; and it was to avert these evils that Lord Althorpe, on the 17th of April, after the printed report of the commission had been distributed among the members of both houses, moved for leave to bring in a bill to alter and amend the laws relating to the poor.

The report, which had been ably drawn up by Mr. Edwin Chadwick, by whom the inquiry had been chiefly conducted, went far to simplify the work which parliament had now on hand. Relief of the poor was still a Christian and national duty, and therefore must be continued; but the old mode of relief had become so corrupt, that a new one must be adopted. And for this change the season was not too late, for the worst faults were scarcely older than the beginning of the present century. So great at that time was the destitution and discontent among the working classes, that the levelling principles of the French

revolution had obtained ready access among them. It was then that, to assuage this suffering and appease this discontent, the 36th of George III. was enacted, of which the principle was, that the relief to paupers ought to be given them in such a manner as to place them in a situation of comfort. It was, indeed, a humane principle in the abstract, but its effect was to empower the magistrates and overseers to order relief to be given to the poor on the road-side or in their own dwellings. This was enough to open the flood-gates of abuse; the poor, or those who called themselves such, crowded in multitudes for relief, until pauperism itself became the prevalent trade, and all shame and independence of spirit was destroyed. Another, and a still worse mode of relief, because more liable still to abuse, was the allowance plan, through which a labourer was supported by the parish paying one part of his wages, and the farmer who employed him the other—an investiture of pauperism with the fruits of industry and the show of honest independence. And to show that this evil system could even yet be altered, examples were not wanting. Already, in about 100 parishes, the inhabitants had taken alarm at the wasteful increase of the poor-rates, and adopted more discriminating modes of giving relief; and in every instance the experiment had succeeded. But very different was it the while under the old plan; there, the rates were so heavy and the mismanagement so great, that in some places the cultivation of the soil had been abandoned, and the support of their poor thrown upon the neighbouring parishes. Besides this change in the mode of administering relief which now occupied attention, the question was, To whom was relief to be administered? Who were the poor? Those who could work but would not—those who could satisfy their consciences with half-work, and take out the other half of their support in charity—those who improvidently rushed into marriage without providing for a family's support—such, and others less deserving still of aid, were applicants for the weekly allowance of bread and money which was wrung from those industrious poor who were too proud to beg, and who preferred to work and starve. Such worthless characters who loudly trumpeted their wants, had hitherto been called "the poor," and been sustained by the fund that was levied for the support of real and inevitable poverty. But a weeding-out was to ensue that would throw them aside in heaps. Relief was now to be administered only to those who were suffering under accidental or natural helplessness, and not to the sturdy and the idle, for whom occupation could be found.

It was under the light of this experience furnished by the poor-rate inquiry, and for the

removal of these abuses, that the government bill now brought forward by Lord Althorpe for the amendment of the poor law had been framed. The first principle which it recognized was that of the old—that every necessitous person had a claim to relief. But, that their numbers might be lessened, by the free circulation of labour, it was necessary to simplify the law of settlement and removal. Accordingly, settlement by hiring and labour was to continue no longer, and labour was free to come and go wherever it was most in demand. Relief to the able-bodied at their own homes was to be discontinued, and the allowance system was to terminate, so that whosoever sought for public relief must repair for it to the workhouse, and become an inmate there, instead of an easy sojourner in his own home, or a vagabond at large. When the poor were thus gathered within the common workhouse, instead of being distributed over the parish, care was to be taken that these free quarters should not be tempting receptacles for idleness and self-indulgence, but mere shelters for absolute destitution; and therefore the workhouse rules were necessarily of a stringent character. Those who were able-bodied were still to work for their living within its walls, and bestow an equivalent in labour for every meal. The aged and infirm were to be separated from the able-bodied, that they might enjoy greater quiet and fare better suited to their conditions. But the most terrible of workhouse separations, and that which was calculated to deter applicants except under very urgent necessity, was the regulation by which the husband was compelled to live apart from the wife, and the parents from the children. It was at first sight a savage and unnatural requirement; but by no other plan could these institutions be guarded from becoming mere nurseries of an increasing pauper population, and in no other way could the children who were already inmates be properly educated, and trained to habits of regular industry. As it would have been impossible to carry out this plan with the little workhouse attached to each parish, these were superseded by an union of several parishes with one large central workhouse, which sufficed for the whole union. Finally, as such a system could not be carried out by the magistrates, whose prejudices it would have offended, and whose local popularity and influence it would have greatly impaired, its whole government was to be managed by a central board of three commissioners, having twenty-one assistant commissioners under them, these being afterwards diminished to nine when the new organization was completed.

These were the remedies devised for the relief of our overgrown and overwhelming pauperism,

as well as for the gradual diminution of its amount. But even this was not enough as long as the illicit sexual intercourse among the lower orders was encouraged by the trivial penalties with which it was visited, and the facilities which the poor law had provided for the support of their illegitimate offspring. Hitherto, it had been thought enough for the mother to establish a father for her illegitimate child by oath; after this she was absolved from all expense of its maintenance, which was devolved upon the man, or, if he was not forthcoming, upon the parish; and in such cases the female was often tempted to affiliate the child upon some substantial householder, who was able to support it, and who had a character to lose. It was by no gentle, easy measure that this encouragement to immorality and boundless source of pauperism could be checked, and therefore the new law went at once to the root of the evil, by making every woman the guardian of her own virtue. It was proposed that the law should take no cognizance of the father at all, but compel every woman to support her own illegitimate offspring. It was here that the opposition to the new system was at the loudest, and it was thought hard that the whole burden of the offence should be laid upon the weaker offender. But its working, even with many modifications, showed that the benevolent complainers were in the wrong. Parents became more careful of their daughters, and females of themselves; and while a higher tone of morality was thus cultivated among the lower orders, society in general was astonished at the sudden diminution of illegitimate births that had taken place, in comparison with former years.

Such was the new poor law, at which all were astonished and many offended; which required no ordinary amount of courage to propose, and had no common measure of opposition to encounter through whole years of obloquy and trial. But before two years had expired, its fruits were such as might have satisfied the most sceptical. Marriages where the parties were little more than children, with the prospect of the parish for their support, had greatly abated. Instances were becoming rare in which clergymen had to celebrate hasty unions where the female was on the point of becoming a mother. The decrease of illegitimate births throughout England chargeable upon the parish, was to the number of nearly 10,000, or nearly thirteen per cent. Farmers were able to employ more labourers, and redundant labour had its fair occupation. Able-bodied beggary was transformed into active useful industry. The rates, which had increased nearly a million annually during the five years that preceded the new law, had, five years after it, diminished from upwards of seven

millions, to very little above four. Such a result was one of the most glorious of those successes which distinguished the commencement of the reform administration.

While the condition of the labourers was to be so greatly improved by these new poor laws, it was evident that this benefit would ascend to the landowners, whose burdens would be lightened, while their property would become more valuable. But this was too slow and gradual a process, and they wished for something more speedy and more direct. The subject was brought before the commons on the 21st of February, by the Marquis of Chandos. The distress of the agriculturists, he stated, was neither local nor of short standing; on the contrary, it was extended over the whole class, and had continued since 1821, when the returns of capital employed in farming had been considerably below the ordinary rate of profit. He also showed how the prices of agricultural produce had fallen, while wages had risen and burdens been increased, so that the farmer found it impossible to make both ends meet. He therefore moved, "That in any reduction of the burdens of the country, which might be rendered practicable by the remission of taxes, due regard be paid to the necessity of relieving the distress of the agriculturists, which had been alluded to in the speech from the throne." In reply, the chancellor of the exchequer admitted that the agricultural interest was in a very depressed state; but he held that the relief which had been generally granted to the other classes of the community, would also extend to farmers and landholders. The same view was followed by those members who opposed the motion. The government, it was alleged also, did not anticipate a greater surplus of revenue than £1,200,000, and even if the whole of it were impartially applied to the reduction of general taxation, the share of relief which would fall to the agricultural interest would scarcely be felt. Moreover, in making their demand, the supporters of the motion were far from being at one as to the mode in which relief should be afforded, some of them requiring a repeal of the malt-tax, and others a revocation of the change that had been made in the currency. Upon this idea Mr. O'Connell fastened, and he proposed to reform the currency, by arbitrarily striking off at least one-sixth of the national debt. "Talk," he exclaimed, "of the cant of national faith indeed!—national faith, so called, is national injustice. We must at last come to the reduction of the interest of the debt, and, therefore, the minds of all persons ought to be made up to some such measure." Mr. Stanley congratulated the house on the abhorrence it had manifested at so absurd and profligate a

proposal; and Mr. Peel, after an indignant rebuke of O'Connell and his doctrine, said, "You have decided the question of the repeal of the union by this preliminary declaration. Know every man who has property of any description—who has any interest in the national funds, that on such slender pretences of state necessity rests the doctrine which justifies a violation of national faith—a doctrine under which, if once established, no description of property is any longer safe." The motion of the Marquis of Chandos had been ventured, in consequence of a rash declaration of the chancellor of the exchequer that the national funds were exceedingly prosperous; and from this, the agriculturists had been led to hope that certain burdens affecting their interests would be repealed; but although the motion was lost, and that, too, in a full house, it was only by a majority of four. Encouraged by this success, the marquis once more brought forward the subject, on the 7th of July, by moving a petition, to be addressed to his majesty, on the continuance of agricultural distress in the country, and that the attention of government should be directed to it with a view to its immediate relief. But on this occasion, ministers had a majority of sixteen, 174 having voted for the motion, and 190 against it.

Ten days afterwards, a more specific application in behalf of the agriculturists was made by Mr. Cobbett, who moved that the malt duty should cease from and after the 5th of October following. He supported his motion, not only on account of the great numerical superiority of the agricultural over the manufacturing classes, but the vast numbers of all classes both in town and country who drank beer, and would be benefited by the repeal. He stated that if there were no tax, the four million quarters of malt, which cost the people £14,400,000, would only cost them £5,600,000. The tax therefore took from the people nearly nine millions of money, of which sum only four millions and a half went into the exchequer, while the rest was a monopoly of the extensive maltsters. He alleged also, that, on the score of public morals, such a change would be desirable, as the peasant and the workman, if enabled to use their own home-brewed, would be freed from the temptations of the ale-house. But though these arguments were distinct and forcible, they were opposed, as tending to unsettle the financial measures of the country, and diminish the revenue by five millions, for which no substitute could be found. The motion was rejected by 142 to 59.

While the demands of the agriculturists were thus opposed, the corn laws had been quoted against them by their opponents as an answer to all complaints. But now the conflict was changed,

and the corn laws attacked in turn. On the 6th of March, Mr. Hume commenced a discussion which lasted during that and the following day, by moving "That this house do resolve itself into a committee of the whole house to consider of the corn laws (Geo. IV. c. 60), and of substituting, instead of the present graduated scale of duties, a fixed and moderate duty on the import at all times of foreign corn into the United Kingdom, and for granting a fixed and equivalent bounty on the export of corn from the United Kingdom; with the ultimate view of establishing a free trade in corn." It was well known that the poor law had been framed on the supposition that the corn laws would be relaxed, and several members of government voted on the present occasion with Mr. Hume. Still, the motion was premature, although it served as a preparation for the changes which afterwards followed. It was to these laws that Mr. Hume traced all the existing distress to be found in the country: they occasioned the want of employment, and this want he ascribed to the obstacles which the corn laws presented to the consumption of manufactures, both by raising the price of production, and impeding their export to countries willing to take them in return for corn. Since 1770, when England ceased to be an exporting country, the population had nearly doubled, while the land upon which they would be thrown back under the present system, would soon be unable to support them. By an equalization of the price of food with that of other countries, our tradesmen and operatives would have it thirty or forty per cent. cheaper than it was at present, and would have no longer to work fifteen or sixteen hours a day in order to compete with the foreign producer. The defence of the corn laws had mainly been the necessity of protecting the agricultural interest; but instead of being beneficial to that interest, they had been injurious to it; and even if they were beneficial, it would be inexpedient to confer such a benefit at the expense of all the rest of the community. They had injured both landlord and farmer, in consequence of having missed their aim of keeping the price of corn steady, and this failure was owing to the variations they had undergone to meet emergencies, twelve of these having occurred since 1815. Since that year, when the ports ceased to be open, the average price of corn had become lower upon the Continent than in Britain; but why should the agriculturists claim to be supported in a monopoly which was then granted to them by a parliament of landholders? The plea was, that they had been granted as a counterpoise to particular burdens imposed upon our agriculture; but of these burdens some had been attached to land from time immemorial, some had been lessened,

and the rest were only shared in common with the manufacturing and other classes. In the meantime, our manufactures had been excluded from the American ports, from Prussia, and from Germany, in consequence of our refusal to receive their corn. On every sound principle, therefore, the system should be changed for one which should give steady prices, and at the same time permit free commercial intercourse. We must either relieve the agricultural interest from its exclusive burdens, or confer upon it an equivalent protecting duty. In the present situation of the country, he thought that the duty on wheat should commence at tenpence a quarter, to be reduced one penny on each successive year. This would be a slow mode of relief, but it would perhaps be better than a sudden and extreme alteration. It would be impossible within our limits to give even a summary of the objections with which the motion was encountered; and we can only advert to one of them in passing. Mr. Hume had correctly stated that his proposal would reduce rents thirty per cent., and occasion the transference of two-thirds of the landed property of England into other hands. But had not the landholders suffered enough already? Under the operation of Mr. Peel's bill, a large share of land had passed into the hands of the fund-holders, and numerous families been reduced from opulence to beggary; but by this proposal, the evil would be increased to such an overwhelming extent, as to make it equivalent to an agrarian law. Mr. Hume's motion was rejected by a majority of 312 against 155. Mr. Poulett Thompson, though a member of the government, voted for Mr. Hume, or for free trade. Both Lord Morpeth and Lord Howick took the same course, contending that it was the corn laws which kept the agricultural interest in a state of depression, when all other interests were prospering; that protection had injured, was now injuring, and would for ever continue to injure the protected. The Irish members did not exhibit themselves as advocates of free trade: all those who spoke were decidedly adverse to the proposition, and hoped that all their colleagues in the representation of Ireland would be equally so; for they maintained that a repeal of the corn laws would deprive Ireland of the market for three-fourths of her produce, and render her incapable of consuming the manufactures of England.

Some further slight reductions were made in taxation, but it was again somewhat to the injury of the strength and efficiency of the great national defences. Mr. Hume, who would have been casting up totals or clamouring for little savings if the French navy had been riding triumphant in the Channel, ready to cast on shore an invading

army of 100,000 men, would have still farther reduced our navy estimates, if he had been able.

On the 15th of August his majesty prorogued parliament. The speech dwelt with satisfaction on the numerous and important questions which had engaged their attention, alluding more particularly to the new poor laws, and the establishment of a central court for the trial of offences in the metropolis and its vicinity. It lamented the still unsettled state of Holland and Belgium, but expressed a lively satisfaction at the termination of the civil war in Portugal. It mentioned the quadripartite treaty which had been formed by his Britannic majesty, the King of the French, the Queen-regent of Spain, and Dom Pedro the Regent of Portugal; affirming that the said treaty had already contributed to produce a happy result.

Although the "Parliament of Great Britain," like that of the "Senate of Rome," was now an august name in history, its place of meeting had become utterly inadequate to its grandeur, and St. Stephen's Chapel, although a venerable structure, was too small, as well as inconvenient and unhealthy for those members who honoured it with punctual attendance. There was a general feeling

that the pile had become useless for the purpose, and even Mr. Hume, disregarding the expense, had declared that the commons ought to have a better house to meet in. The wish was gratified, and by one of those accidents to which large cities are liable. The old exchequer tallies had accumulated into such a mass, that to get quit of it, it was used as firewood in the stoves of the House of Lords; but the workmen, who were in haste to finish the job, made such large fires, that on Thursday evening (October 16th) the whole building was in a blaze. The king's sons, the ministers, and such members as were in town, hurried to the spot, but they could do nothing more than witness the conflagration, at which an immense crowd looked on with feelings that no ordinary burning could create. The neighbouring law courts and Westminster Hall were fortunately saved, but the two Houses of Parliament with their chambers and committee rooms were soon reduced to a heap of ruins. The chief loss, however, was among the articles of historical and antiquarian value, although the best

VOL. IV.

portion of these was preserved or afterwards recovered.

By this time the Whig ministry was falling to pieces: it had rapidly lost much of its popularity. The radicals and Irish agitators had converted themselves into very active enemies, and the retirement of Earl Grey had greatly weakened the cabinet. The *Times* newspaper, which was exercising a greater influence over popular opinion than any mere journal ought to possess, had singled out the chancellor, Lord Brougham, for its bitter and incessant attacks. His lordship also had disagreed with several of his colleagues. The crisis was precipitated by the death of Earl

ST STEPHEN'S CHAPEL,¹ Westminster, with part of Westminster Hall
From a print in the Crowle Pannant, British Museum.

Spencer on the 10th of November. This called up Lord Althorpe to the House of Peers, making it necessary to find a new chancellor of the exchequer, and a new leader of the House of Commons. On Friday, the 14th of November, when Lord Melbourne waited on the king, for the purpose of submitting to him some necessary changes in official appointments, his majesty informed him that he need not be at the trouble of completing his arrangements, as he intended to apply to the Duke of Wellington. On the following day the duke advised his majesty to intrust the government to Sir Robert Peel, and this was what the king was prepared to do. Sir Robert, little expecting to be so suddenly made premier,

¹ This was the House of Commons from the reign of Henry III. to its destruction by fire in 1834; and was the scene of Cromwell's dismissal of the parliament. St. Stephen's Chapel was founded by King Stephen. It was rebuilt in the reign of Edward II., between 1320 and 1352; and was always looked upon as an excellent example of Decorated architecture of very fine and rich work. The House of Lords, also destroyed by fire in 1834, was the old Court of Requests.—Cunningham's *Hand book of London*.

had gone on a journey into Italy, and was now at Rome. The Duke of Wellington undertook to carry on the public business till his return, and was temporarily appointed first lord of the treasury, and sworn in as one of the principal secretaries of state. The radicals and some of the more violent or most disappointed Whigs accused his grace of unconstitutional conduct in monopolizing in his single person all the powers of the state. The displaced attorney-general for England (Sir John, now Lord Campbell), at a public meeting in Edinburgh, menaced his grace with impeachment. The duke laughed and did his work, and the illustrious son of the Lancashire cotton-spinner made the best haste he could to get back to England.

By the end of December, the official arrangements were completed—Lord Lyndhurst was chancellor, the Earl of Rosslyn became president of the council, Lord Wharnccliffe privy seal, the Duke of Wellington secretary for foreign affairs, Mr. Goulburn for the home department, and Lord Aberdeen for the colonies; Mr. A. Baring was made president of the board of trade, Sir G. Murray master-general of the ordnance, Sir E. Knatchbull paymaster of the forces, Earl de Grey first lord of the admiralty, and Lord Ellenborough president of the board of control; Lord Maryborough, the Earls of Jersey and Roden, Mr. C. Wynne, and Mr. Herries came also into office; Mr. F. Pollock and Mr. Follet were made attorney and solicitor general; the Earl of Harrington went as viceroy to Ireland, with Sir E. Sugden as the lord-chancellor, and Sir H. Hardinge as chief secretary. Sir James Scarlett now received the reward of his adhesion to a Tory administration, being appointed to succeed Lord Lyndhurst as chief baron of the exchequer, with the title of Lord Abinger.

On the 30th of December, a proclamation was issued, dissolving the parliament, and convoking a new one to meet on the 19th of February.

In Portugal it was not the Pedrites by themselves who had put down the Miguelites. If the two factions had been left alone, the civil war might have lasted for many years. Early in the year, Leira was taken for Dom Pedro by Marshal Saldanha; and in April, a Spanish army, under General Rodil, entered Portugal for the alleged purpose of seizing Don Carlos, the pretender to the Spanish crown, who, with a few followers, had crossed over the frontier and taken refuge with Dom Miguel. On the approach of the Spanish troops, the important town of Almeida set up a shout for the constitution, and declared for the young queen. Shortly after this, the quadripartite treaty was signed at Lisbon. It had for its object the pacification of Spain and Portugal, by the expulsion of Don Carlos and

Dom Miguel from the Portuguese territory. On the 26th of May, after the surrender of Santarém, Dom Miguel was obliged to capitulate and sign the convention of Évora. He was permitted to leave Portugal and to embark for Italy. This event ended the struggle, and the young queen was firmly seated on the throne, the regency being continued in her father. Dom Pedro suppressed the monastic establishments and seized their property. This was no more than what the monks had always expected from the establishment of the constitution; and it was to avoid the doom that they had fought for Dom Miguel, and armed the people in his cause. The property was badly sold, and the money soon wasted. The regent attempted to call in the discredited paper-money, and to establish a metallic currency; but he was not very successful, and ever since his time, the finances of the country have been in a lamentable state of decay.

In Spain the civil war, which had its principal seat in the Biscayan provinces, continued to rage, and with even more fury than commonly attends such internecine contests. The Biscayans had merely made of Don Carlos what the priests and monks had made of Dom Miguel. They had set him up as a rallying point, and as a defender of their ancient rights and privileges. For the pretender, personally, they cared very little; they would have quietly submitted to the young queen, if the constitutionalists had been content to leave them in the possession of their own ancient and solemnly-guaranteed privileges. The Biscayans, who had been for many centuries a very free people, and whose privileges and immunities were well worth fighting for, said no, and proclaimed Don Carlos. An incredible amount of ignorance and nonsense was displayed in England on this subject by rhetoricians and journalists. It was said to be the duty of England to support the cause of liberty wherever it was in jeopardy, and that the Englishmen who went over to fight for Queen Isabella and the constitution were engaged in a holy warfare; yet, in those Biscayan provinces, the war was a war against liberty—a conflict into which no Englishman ought ever to have entered. The insurrection had spread to Catalonia and other provinces. On the 24th of July, Christina, the queen-regent, opened the session of the cortes. They easily voted a bill for excluding Don Carlos from the throne; but they could not so easily drive him out of Spain; for, after a short visit to England, he had thrown himself among the bold mountains and brave men of Biscay, and he possessed in Zumalacarreui a general of extraordinary abilities and resources. The queen-regent found, to her very great perplexity, that her soldiery were very mutinous, that the people would not pay taxes, and that no minis-

try she could form was capable of standing much more than three months. Mina, who had gained celebrity as a guerilla chief in the time of Bonaparte's intrusion, was sent against Zumalacarregui, to be beaten, and foiled, and out-manœuvred.

In taking office as first lord of the treasury and chancellor of the exchequer, Sir Robert Peel had adopted the resolution not to interfere with the reform bill. In his well-known address to his constituents at Tamworth he said:—"With respect to the reform bill, I will repeat now the declaration which I made when I entered the House of Commons as a member of the reformed parliament;—that I consider that act as a final and irrevocable settlement—a settlement which no friend to the peace and welfare of his country would attempt to disturb, either by direct or indirect means." After deprecating such a use of the reform bill, or any such extension of it as would lead to a perpetual vortex of agitation, and the overthrow of ancient rights and institutions, Sir Robert further said:—"If the spirit of the bill implies merely a careful review of institutions, civil and ecclesiastical, undertaken in a friendly temper, combining, with the firm maintenance of established rights, the correction of proved abuses and the redress of real grievances—in that case I can, for myself and my colleagues, undertake to act in such a spirit and with such intentions."

Before the meeting of parliament there appeared in the *London Gazette* of the 3d of February an announcement that the king had issued letters-patent, appointing the Archbishop of Canterbury, the lord high-chancellor, the Archbishop of York, the Earl of Harrowby, the Bishops of London, Lincoln, and Gloucester, the Right Honourable Sir Robert Peel, H. Goulburn, C. W. W. Wynne, H. Hobhouse, and Sir Herbert Jenner, to be commissioners for considering the state of the several dioceses in England and Wales, with reference to the amount of their revenues, to the more equal distribution of episcopal duties, and to the prevention of the necessity of attaching by commendam to bishoprics bene-

fices with the cure of souls; for considering the state of the several cathedral and collegiate churches within the same, with a view to the suggestion of measures for rendering them most conducive to the efficacy of the Established church; also for devising the best mode of providing for the cure of souls, with special reference to the residence of the clergy on their respective benefices.

Immense exertions had been made at and previously to the general election by conservatives, Whigs, and radicals. The conservatives were rather successful in the counties, and rather unsuccessful in the boroughs. If the radicals should stand by the Whigs, it was pretty clear that the Peel administration must soon fall.

On the appointed day, the 19th of February, the new parliament assembled in full force, and a trial of strength presently took place. Lord Francis Egerton moved the re-appointment of Sir Charles Manners Sutton; Mr. W. J. Dennison moved that Mr. Abercromby should be speaker. Sir Robert Peel and Lord Stanley supported Lord Francis; Lord John Russell supported Mr.

Dennison. When the house divided, there appeared for Sir Charles M. Sutton 306, and for Mr. Abercromby 316 votes; Mr. Abercromby was then conducted to the chair, which neither before nor since has had a worthier occupant. There are other duties attached to the office of speaker than those which pass before the eyes of the public in the House of Commons. These duties had been but indifferently performed, and in most cases they had been left to clerks and secretaries. Mr. Abercromby did everything himself; he attended most scrupulously to every official duty; and he was never known to keep a parliamentary agent or a deputation waiting. Hence the speed and facility with which the public business was transacted, and an immense and ever-increasing number of private bills got passed.

Three days having been spent in administering the oaths, the king, on the 24th, went in state to the House of Peers to open the new parliament. The two houses having been burned down in the

SIR ROBERT PEELE
From a portrait by Sir Thomas Lawrence

preceding month of October, as has been already mentioned, temporary rooms had been fitted up for the accommodation of the peers and the commons. After alluding to the flourishing state of trade and commerce, as well as of the public revenue, his majesty lamented the depressed state of agriculture, and earnestly recommended the consideration of it to parliament, with a view to relief. Having adverted to various projected measures of domestic policy, such as the Irish tithe question, the commutation of tithe in England and Wales, the improvement of civil jurisprudence and administration of justice in ecclesiastical causes, provision for the more effectual maintenance of ecclesiastical discipline, relief of dissenters from the marriage ceremony, and the corporation and church commissions; his majesty expressed his confidence in the willing co-operation of parliament, as well as in their caution and circumspection, regarding the alteration of laws which affected very extensive and complicated interests, interwoven with ancient usages, and conformable to the habits and feelings of his people.

The address in the lords was carried without a division, though not without a debate. The debate turned chiefly on the late change of administration. Lord Melbourne severely censured the recent dissolution of parliament, and attacked the Duke of Wellington for having held at one and the same time the office of the first lord of the treasury and the seals of the three great departments of the state. He admitted that his grace had assumed these offices only for a temporary purpose, and that his doing so might be defended on the ground of necessity and urgency of the case; but it lay with the Duke of Wellington to justify that necessity. The duke calmly replied, that when the king empowered him to form a ministry, he had declined the offer, however flattering it might have been to ambition; he did not act as one who had a personal object to serve; he refused the office of prime minister, and recommended to his majesty to send for Sir Robert Peel, as the individual most capable, in the present times, of discharging the duties of king's first minister. It was necessary, both that some person should be in the government till Sir Robert's return, and that whoever carried it on should exercise no patronage, nor take any step which might prevent the new minister, on his arrival, from acting with perfect freedom. He had therefore advised his majesty to place him (the duke) provisionally at the head of affairs as first lord of the treasury and secretary of the home department. It was true that in the latter capacity he held the seals of the three secretaries: but whoever was appointed to any one of these three offices was competent to hold the seals

of the other two in the absence of those to whom they had been confided; and he had exercised no more authority than if he had been one of the three principal secretaries, and his colleagues absent. No inconvenience had resulted from the arrangement. During the time he held the seals there was not a single office disposed of, or act done, which was not essentially necessary for the service of the king and of the country; and Sir Robert Peel found all things as nearly as might be in the same situation in which they had been when the change of ministry took place. It might be true that there was an incompatibility between the secretaryships and the office of first lord of the treasury, if these offices were held by the same individual for any length of time; but everybody knew that the arrangement was merely temporary. He had only held the government provisionally for another individual who had been sent for by his sovereign. Mr. Canning had been named first lord of the treasury on the 12th of April, while he was yet foreign secretary, and he did not resign the latter office till the 30th of April.

His grace repelled likewise the charge which had been made of his being in any degree responsible for the dissolution of the late government. All the idle stories which had been propagated about court intrigues were now laid aside; it was now fully admitted on all hands that no such thing had existed. For his own part he had had no communication of any description with the court for between two and three months before he received his majesty's message; and, although he was satisfied that some great change in the administration must follow the removal of Lord Althorpe from the House of Commons, that message was as much a matter of surprise to him as it possibly could be to any of their lordships. The late administration had been dissolved by the impossibility of going on longer, from the time they lost their leader in the House of Commons. When Lord Althorpe had resigned on a former occasion, Earl Grey had stated that he could not, under such circumstances, continue at the head of the government, for, by the resignation of Lord Althorpe, he had lost his right hand, and it would be impossible to carry on the government with advantage from the time that that noble lord had quitted power. When, then, the question of the government came before his majesty, it was fairly put to him, whether he would seek for other counsels, and whether he would consent to other arrangements for the formation of a government, or whether he would be content to abide by that particular administration which at that moment existed. Let their lordships only observe the situation in which the king was placed, and ask themselves what he

was to think of the new position in which he found himself. Earl Grey had been under the necessity of resigning, when Lord Althorpe, then chancellor of the exchequer, resigned. The noble viscount, too, had declared that he considered the noble lord's assistance essentially necessary to him. But when his majesty was left by Earl Grey, and when Lord Althorpe was removed from the other house, his majesty, forsooth, was not to be permitted to consider whether his position was not materially altered by these events, and whether it would not be expedient for him to make some other arrangements for the carrying on of his service. Everybody, indeed, but his majesty was to be allowed to consider the alterations which had taken place by the loss of Lord Althorpe in the House of Commons. Their lordships, however, he was convinced, would not acquiesce in this exclusion. Lastly, as to the dissolution of parliament; it was true that a ministry who advised the dissolution of a parliament was liable to be called on for some reason which might have induced them so to do; but he had seldom heard of such a course of proceeding as that ministers should be told, on the first day of the assembling of parliament, "Give me some reason why you thought fit to dissolve, and justify your dissolution of parliament, by showing that the effort you have made has been a successful one." And now as to this success, he wanted to know, after all, how great was the measure of success which the late ministry enjoyed in the late parliament, when it appeared to rest solely and exclusively on the shoulders of a single individual, from which, too, there was no mantle to fall for a successor? So that, when he was removed to the upper house, the government to which he belonged had found it impossible to go on. As to himself, he was convinced that the course which had been pursued was correct, and by it he was ready to stand or fall. He believed there were a great number of persons determined to support the administration, and he hoped the house would have the patience to wait and see what were the measures they had to propose for the benefit of the country.

Lord Brougham, on the other hand, maintained that the Duke of Wellington was responsible for the dismissal of the late ministry, not as having advised or produced it, which he certainly had not done, but as having succeeded to it; for whoever, he argued, takes the place of a dismissed ministry becomes answerable for that dismissal. For many acts of a government a minister might be held responsible, and would by law be held responsible, although ignorant of those acts, and albeit he did not advise them. The reason was simply this—the king could do no wrong; he must, however, have some adviser, and therefore

some responsible adviser. Now, the noble duke stood in this position; he was peculiarly, he was emphatically, responsible for the change of his majesty's advisers. For who could be responsible but he who came into the space which the change had made vacant! If the king thought proper to take the seals from one man to give them to another, the man who took the seals became responsible for the change; he was responsible in point of fact as well as in law; but for his assistance the act could not have been committed. His lordship then argued that nothing like a tangible or intelligible reason for the change of ministry had been ever hinted at. The king's speech, he maintained, admitted that the late ministers had not been dismissed on account of any misconduct of their own. According to that speech, peace had been maintained abroad and prosperity at home. The scheme for the emancipation of the negroes had been successful. The commission for inquiring into municipal corporations, instead of being denounced as illegal, was to be allowed to proceed, and its results were to be submitted to the legislature. The revenue was flourishing, trade was most prosperous, an eulogium was delivered upon the happy state of our commercial concerns, and the clearest evidences were afforded of the general prosperity of the country without a particle of blame being attached to—without the least imaginable imputation being cast on—the policy of the late administration. It was not for a single moment pretended that the dismissal of the late administration arose from any incapacity on their part; it was not from any want of success in their measures; it was not from any failure of any sort or description that, on the 14th of last November, the late administration was dissolved. But, forsooth, it was dissolved because Lord Althorpe had been called from the House of Commons to the House of Lords, and without him, it was said, the government could not go on.

Passing to the dissolution of parliament, his lordship said that the reason given for that proceeding, and the assertion which was made the pretext for dismissing the ministry, were contradictory and destructive of each other. Ministers were turned out because the House of Commons would not follow them after they had lost Lord Althorpe, and then the House of Commons was turned out because it would follow them too much although Lord Althorpe had left them. The reason, and the only reason for getting rid of the late parliament, was, that the late ministers were still its favourites, and that the new ministers durst not allow that house to meet; knowing, as well as he knew, that their first vote would have been, not that they could no longer trust the late ministers because of the loss of Lord Althorpe, but that although they regretted

that event, they still confided in them. Lord Brougham then pronounced a long invective against what he considered the inconsistency between the former policy of the members of the existing administration, and that which they now professed themselves willing to adopt. It was the result, perhaps not more of reason and experience than of a sort of instinct, that men mistrusted all sudden, unaccountable, and miraculous conversions, of which this was one. That a man who had been the enemy of change, and the vituperator of all innovations—who had confounded with revolution, anarchy, and political

LORD LYNDBURST —From a portrait by A. Wivell

insanity, if not depravity, any attempt to touch even one of the outworks of any of the venerable institutions of the country—who had signalized these opinions by years of uninterrupted hostility to every species of reform, and whose protests had stigmatized it in the boldest terms on their lordships' journals; that such a man—without any event having happened, or any change in public affairs—should have so decided a change produced upon him all at once, appeared to him one of the most unaccountable phenomena in human nature which he had ever been called on to contemplate. This was the Duke of Wellington's second conversion; and Lord Lyndhurst likewise had given an example of the nimbleness with which he could be converted. It was always suspicious when people changed their principles and gained something.

The lord-chancellor (Lyndhurst), after repelling the insinuations of Lord Brougham, that the ministry which had carried the Catholic question had abandoned their principles on that occasion for the sake of retaining their offices, which, in fact, were endangered by the course

which they then adopted, adverted to the responsibility which the present ministers were supposed to have incurred, in virtually advising the dismissal of their predecessors by having consented to succeed them.

His lordship next referred to the blame thrown on the Duke of Wellington, as having usurped all the great offices of the state. It was necessary, he said, either that the old government should have remained in power till the return of Sir Robert Peel, or that a new government should be formed provisionally. If the former course had been adopted, where would the new government have been? The late ministers would have used their continued power only to prevent a new ministry from being formed. Even as it was, symptoms of that kind had shown themselves. No lord-chancellor had ever been in the habit of inserting names in the commissions of the peace without consulting the lord-lieutenants of the respective counties; but Lord Brougham, when he was out of office, did that which he could not have done if he had been in office—he had sent for the commissions of six counties, and made out the fiats for the insertion of certain names, not only without application to the lord-lieutenants of the counties, but in direct opposition to their known wishes. He did not say that this proceeding was absolutely illegal; but was it right that such powers should be left in the hands of ministers who would exercise them even after their removal from office? It was necessary that the government should be taken up by some person; and who more fit for the task than the Duke of Wellington? There were repeated instances of such a plurality of offices. Lord Liverpool had been first lord of the treasury and secretary of state at the same time. When the chancellorship of the exchequer was vacant, who was to hold the seals? The law itself said, the Lord Chief-justice of the King's Bench, who also held another high office. He himself, too, had taken on this occasion the great seal, while he was still chief-baron of the exchequer; but in that there was nothing illegal—nay, Lord Brougham himself had told him to do it, and had declared to him it was the best course he could take.

In the commons, also, there was a long and obstinate contest. Lord Morpeth moved an amendment to the address, proposing that words should be substituted, "expressing a trust that his majesty's counsels would be directed in a spirit of well-considered and effective reform, and that in the same liberal and comprehensive policy which had dictated the reform of the representation and the abolition of negro slavery: that the municipal corporations would be placed under vigilant popular control; all the well-

founded grievances of the Protestant dissenters removed; and the abuses in the church, which impair its efficacy in England, and disturb the peace of society in Ireland, corrected; also representing to his majesty that his faithful commons begged submissively to add, that they could not but lament that the progress of these and other reforms should have been unnecessarily interrupted and endangered by the dissolution of the late parliament." This amendment being seconded by Mr. Bannerman, gave rise to a debate which lasted three nights. The principal speakers for the original address were Messrs. Pemberton and Richards, Sir Robert Peel, Lord Stanley, Messrs. Robinson, Goulburn, and Praed, Mr. Serjeant Goulburn and Sir James Graham; for the amendment, Messrs. Grote, Poulter, and Ward, Dr. Lushington, Lord John Russell, Messrs. Harvey, Fox Maule, and Gisborne, Lord Howick, Mr. T. Duncombe, and Mr. O'Connell. On a division the opposition had a majority of seven in an assembly of 625 members; when Sir Robert Peel insinuated that it was possible he might take the sense of the house again on the question of bringing up a report; but next evening he stated that, after having made due inquiries, he felt convinced he could not succeed in that measure. It was understood, indeed, that Sir Robert would not have been supported in it by Lord Stanley, who, in the course of the debate, declared that he would go the whole length of the amendment on the subject of corporation reform. His lordship also said, that the omission of any particular notice of that subject, both in the speech from the throne and the exposition of ministerial intentions, which Sir Robert had given to the house, induced him to regard the government with a more jealous eye than he should otherwise have been inclined to view it. Lord Howick stated, he did not consider that the necessary effect of carrying the amendment would be to remove the present administration; for he should scarcely give the vote he intended to give, if it were likely to have that result; but though he did not desire the immediate retirement of Sir Robert Peel and his colleagues, he should regard it as a great calamity if the present government continued without any change.

On the 28th, when the order of the day was read for the house going into a committee of supply, the premier stated in answer to questions put by Lord John Russell, that he had not felt it his duty, in consequence of the vote on the address, to tender his resignation. Sir Robert further said, that, with respect to the church, he was still of opinion that ecclesiastical property ought not to be diverted from ecclesiastical purposes, although any measures not inconsistent

with this principle should have his best consideration; that he had no motive or intention to obstruct corporation reform; and, finally, that in regard to a rumour which had been spread abroad about another dissolution, and an alleged intention of government, in case the mutiny bill should not pass, to keep up a standing army in defiance of parliament—the first he never sanctioned directly or indirectly, and the second he never heard a whisper of until it fell from Lord John Russell's own lips.

The majority of the opposition party was still mainly dependent on the Irish members, who had by no means improved in moderation. The following evening was occupied by discussions respecting the state of Ireland and bribery at elections; but the sitting on Wednesday produced a debate which was of much greater importance to the stability of the administration. This arose from a question put—Whether it was true that 182 addresses from Orange societies had been presented to the king, and whether answers had not been returned to the parties, stating that the addresses had been most graciously received? The question seemed to take ministers by surprise; and the only defence they offered to the charge of returning such answers to Protestant societies, alleged to be illegal, was, that the illegality of the Orange lodges had never been judicially declared; and that the addresses had been received and answered, merely according to the usual form. On the following Friday, Mr. Shiel moved for the production of copies of the said Orange addresses; also for the copy of a letter written by Lord Manners, when Chancellor of Ireland, relative to the illegality of Orange societies, and for the opinions of the Irish attorney and solicitor general on the same point. The latter part of this motion was resisted by ministers; and it was finally withdrawn; but the production of the addresses and answers was agreed to.

On Tuesday the 10th, in a very full house, the Marquis of Chandos moved his resolution for the repeal of the malt-tax. The debate lasted till near one o'clock in the morning. Sir Robert Peel delivered an admirable and most convincing speech. The numbers upon a division were 192 for the resolution, and 350 against it. On this occasion most of the adherents of the late Whig ministry voted in the majority. Mr. Charles Wood declared he was happy to give the present government that support which he and his friends had received in similar circumstances from Sir Robert Peel.

A terrible storm was raised by the rumoured appointment of Lord Londonderry as ambassador at the court of St. Petersburg. The Irish members saw in this appointment nothing but a proof that ministers intended to forward the designs

of despotism and tyranny. On the 13th of March, Mr. Shiel moved an address to his majesty for a copy of any appointment made within the last four months of an ambassador from the court of London to St. Petersburg, and of the salary and emoluments attached to such embassy. He entered into a statement of the aggrandizing policy which Russia had been pursuing towards Persia and Turkey. He blamed the English government for not having interfered on behalf of Turkey during the war between her and Russia, which was terminated by the peace of Adrianople in 1829; and disapproved of the conduct of the late ministers in not having stopped the progress of Ibrahim Pacha in 1833, and in allowing a Russian army to be landed on the Asiatic side of the Bosphorus. By the treaty at Constantinople, in 1833, ratified by that of St. Petersburg, in January, 1834, Russia had gained great advantages. Turkey was now united with her defensively and offensively. If Russia went to war with England, Turkey would be compelled to do the same, and the English would find the Dardanelles closed against them. Russia had likewise assembled a large army on the frontiers of Persia, where she seemed to be only waiting a pretext for invasion. In the west of Europe the influence of that power was felt in every cabinet, tending to countervail the great principle to which Englishmen were attached. From these considerations he inferred the great importance of a proper person being appointed to the embassy at St. Petersburg. He clearly ought to be wise, sagacious, firm, and discreet. He should be inflexibly attached to those principles to which the great mass of the people of this country were devoted, qualified to protect the commercial interests, and to represent, in his own calm dignity, the honour of this empire, and, perhaps it might be added, to raise his voice in favour of neglected and unfortunate Poland. Lord Londonderry did not possess these qualities. He might be qualified to act as an orator in the county of Down, but was not competent to perform the part of a diplomatist at St. Petersburg.

Mr. Cutler Ferguson likewise objected to the appointment, principally on account of the opinion which the marquis had expressed in regard to Poland. He believed that noble person to be the first individual who in this country had ventured to call the Poles rebels. The Poles were not rebels; they had been driven into resistance. He did not ask that any person should be sent to St. Petersburg to remonstrate with Russia on her conduct towards Poland; the time for such a proceeding had perhaps gone by: but of this he was convinced—that we ought not to send as ambassador one who had spoken of the Poles in the terms which he had stated. That house had

admitted, and the late foreign secretary had admitted, that the resistance of the Poles to Russia was justifiable. Ought, then, a person to be sent as ambassador to Russia who entertained a decided feeling against the cause of that gallant but unfortunate nation, and who maintained that the British government had already gone too far in its favour? Lord Stanley expressed similar opinions.

In reply, Sir Robert Peel said he was in no degree surprised that the intended appointment had occasioned dissatisfaction on the opposite side of the house; for no one appointment of the government had as yet produced in that quarter any satisfaction. He had taken the attorney-general for Ireland of the late government, but even that was objected to. The appointment, too, of paymaster of the forces had been blamed; yet it had been confidently stated, and not contradicted, that Earl Grey's government had offered to that very gentleman the office of secretary at war. He had not a doubt, therefore, of the appointment of Lord Londonderry being unsatisfactory to those whose policy he opposed; but he wanted to know from the course of the present debate what were the allegations which had been made against Lord Londonderry? Was it fair, in this manner, to come down against a public man with a single extract from a speech which it was said he had at some time or other delivered? Lord Londonderry was on the staff of the Duke of Wellington from 1809 to 1813, and filled the office of adjutant-general during that time; he had besides served in a diplomatic character from the year 1813 until the year 1823. He was appointed minister to Berlin in April, 1813; he was appointed ambassador to Vienna in 1814, and he retired from the service in 1823 at his own request. Surely, the question, after all, was the manner in which he had conducted himself, not indeed in his military capacity, not even in his office of adjutant-general, although that office had civil as well as military duties connected with it, but in his diplomatic situation, which he had held with the utmost credit to himself in Vienna, during a very critical time, for a period of ten years. When Lord Londonderry expressed his wish to resign the situation he held at Vienna, this was the letter he received from Mr. Canning:—"My lord—Having laid before the king your excellency's despatch of the 26th ult., requesting his majesty's gracious permission to retire from the eminent post of his majesty's ambassador at the court of Vienna, I have received his majesty's commands to signify to your excellency the permission which your excellency solicits, accompanied with the expression of his majesty's deep regret for the loss of your excellency's services, and of his full and entire appro-

bation of the manner in which your excellency has, for a series of years, and in times of the most critical importance, conducted the affairs of the embassy intrusted to your charge, and maintained the intimate, cordial, and good understanding so happily subsisting between his majesty and his imperial ally." This was the testimony borne by Mr. Canning to the conduct of Lord Londonderry. Yet his lordship was to be excluded from the public service on account of a single expression, said to have been used on one particular occasion. Sir John Cam Hobhouse replied to Sir Robert Peel, insisting that the prime minister having in his manifesto to the electors of Tamworth, in the king's speech, and in his explanatory address in that house, intimated his determination to adhere to the foreign policy of the late government, it would be imprudent, indiscreet, if he sent to St. Petersburg a nobleman entertaining the opinions which the Marquis of Londonderry was known to entertain.

As the motion was for the production of a copy of the appointment, and no appointment had been made out, the motion itself was withdrawn; but the effect of the discussion, although Sir Robert Peel had declared himself ready to maintain the nomination, was to induce the Marquis of Londonderry to decline the situation. The debate in the commons was published on Saturday the 14th; on the following Monday, his lordship stated in the House of Peers, that he felt, so soon as he had read the discussion in the other House of Parliament, that he had but one course to follow, as a good subject, and one attached to the public service. Situated as he now was, were he to depart from this country after what had passed in the House of Commons, he should feel himself, as a representative of majesty, placed in a new, a false, and an improper position. He would go with the remarks and animadversions of one branch of the legislature so strongly imprinted on him, that his efficiency would be impaired, and it would be impossible for him to fill the office to which he had been called with proper dignity and effect. It was on these grounds, standing, as he did, upon his sense of duty to his sovereign, and not meaning to succumb to faction, though he should be devoid of feeling if he were insensible to the scoffs and scorn with which he had been so unjustly attacked, that he had determined, upon no consideration whatever to accept of the appointment. He had had no communication directly or indirectly with the government. He had neither sought advice, nor had advice been proffered. He had taken this position firmly and after due deliberation. The Duke of Wellington, besides defending the appointment, and acknowledging the delicacy which had led Lord Lon-

donderry to withdraw rather than injure or embarrass the public service, questioned the legality of what the House of Commons had seemed inclined to do. There was no part of the prerogative of the crown so important as that of sending ambassadors to foreign courts; nor was there any branch of that prerogative which ought to be kept more inviolate. But the ministers of the crown were responsible for those nominations. They were responsible for the instructions under which ambassadors were bound to act. They were, moreover, responsible for the proper performance of those duties (by the ambassadors whom they selected) to the other House of Parliament, and to the country at large. It was impossible, therefore, for him to believe that the House of Commons would proceed so far as to interfere with that peculiar prerogative, and to say that the person nominated should not fill the situation, inasmuch as, by so doing, the House of Commons would not only take upon itself the nomination of the officer, and the direction of the particular duties which he was to discharge, but would also relieve the minister from the constitutional responsibility of the appointment. He did not think that sentiments of such a description were general; and he could not bring himself to believe that a vote, affirming such a violation of the royal prerogative, would have passed the House of Commons.

The ministry was clearly going to pieces; but the premier introduced his measure for the relief of persons dissenting from the Established church in regard to the celebration of marriage. The chancellor presented the first report of the commissioners appointed to inquire into the state of the Established church; and Sir Henry Hardinge, in the commons, brought forward the ministerial plan for settling the Irish tithe question. The plan was this: that in future Irish tithes shall be recoverable only from the chief landlord, or person having the first estate of inheritance in the land; that the owner shall be entitled to demand only seventy-five per cent. on the amount to which he at present has a right; that the tithe shall be redeemable by the landlord at twenty years' purchase, calculated on the diminished rate; that the proceeds thus arising shall be invested in land or otherwise, for the benefit of the tithe-owners; that present incumbents shall be indemnified against any loss accruing in the amount of their incomes below the seventy-five per cent., but that their successors shall receive only the income, whatever it may be, which the investment shall produce; that all litigation for the recovery of tithes due shall be carried on through the incorporated commissioners of the ecclesiastical fund; that the repayment of sums granted under the million act shall not be called

for; but that the residue of that sum shall be further distributed among tithe-owners, in lieu of tithes due to them for the year 1834, which they have not been able to collect.

A long debate followed the proposal of these resolutions. Lord John Russell contended, that in principle they were perfectly identical with the bill brought in last session by the late ministers, and which had been thrown out in the House of Lords by the present government and their friends: his lordship said that of course he had no opposition to offer to the measure. Mr. O'Connell, on the contrary, endeavoured to show that the two measures were entirely dissimilar: in point of fact the main distinctions between them appeared to be, that the bill of last session made the landlords a present of two-fifths of the tithes, or of £40 in every £100, securing to the clergyman seventy-seven and a half per cent. of his legal income, and devolving an annual charge equal to seventeen and a half per cent. of the whole tithes on the consolidated fund; while it was now proposed to give the landlords only one-fourth of the tithes; to secure to the clergyman only seventy-five per cent. of his legal income, and to devolve no charge on the consolidated fund. In the course of the debate such strong objections were taken to the clauses dispensing with the repayment of the sums distributed and to be distributed under the million act, that ministers consented to withdraw them. On the 23d the report of the committee was brought up, and the bill, embodying the resolutions which had been agreed to, was read a first time; when Sir R. Peel intimated that he should move for the reinsertion of the rejected clauses relating to the million act when the measure had arrived at a subsequent stage. In the course of a conversation which arose out of this subject, Mr. Barron denounced what he described as inconsistency and abandonment of principle in Sir R. Peel and his colleagues, whom he charged with being merely actuated with a base desire of office: for these expressions the honourable member was directed by the speaker to apologize to the house, which he accordingly did. Mr. Finn then brought forward his motion for a select committee to inquire into the nature, extent, and tendency of Orange lodges, which was agreed to without a division.

On Tuesday the 24th, in the House of Lords, a select committee was appointed, on the motion of the Duke of Richmond, to consider the subject of prison discipline in England and Wales; and the same evening in the commons, the house having resolved itself into a committee, Sir R. Peel brought forward his plan for effecting a commutation of tithes in England by a voluntary

agreement between the owner and payer of tithe in each parish; when, after a short debate, a resolution, embodying the leading principle of the plan, was agreed to. On the 26th, Mr. Tooke moved that an address should be presented to the crown, to grant a charter to the London University; and, after a debate of some length, the motion was carried against ministers by a majority of 246 to 110. His majesty's answer, which was returned in a few days, stated that the address had been laid before the privy council, and that he would, without delay, call for a report of its proceedings, in order that he might be enabled to judge of the best means of carrying into effect the wishes of his faithful commons.

On the 27th, the army and ordnance estimates were carried by large majorities, though not without a fierce struggle with that champion of economy, Mr. Hume, and his partizans; and on Monday the 30th, after the house had been called over, Lord John Russell brought forward his motion on the Irish church in the form of a resolution:—"That the house should resolve itself into a committee of the whole house to consider respecting the temporalities of the Church of Ireland." A debate ensued, which was continued by adjournments over the three following nights. The house divided at three o'clock in the morning of Friday the 4th of April, when there appeared for the motion 322, and against it 289. On the evening of the same day the house went into committee on the motion of Lord John, who moved—"That it is the opinion of this committee, that any surplus which may remain, after fully providing for the spiritual instruction of the members of the Established church in Ireland, ought to be applied to the general education of all classes of Christians." When the debate had continued for some time, Mr. Peter Borthwick moved an adjournment, but the motion was negatived. Shortly after, however, the house adjourned to Monday the 6th. On that day the debate was resumed, and the resolution was finally carried by 262 against 237. The house then went into committee on the navy estimates. On Tuesday the 7th, the report of the committee on the Irish church was brought up, when Lord John Russell rose and moved—"That it is the opinion of this house, that no measure on the subject of tithes in Ireland can lead to a satisfactory and final adjustment, which does not embody the principle contained in the foregoing resolution." The house divided after another long debate, when 285 voted with Lord John, and 258 against him.

In all these divisions, it was the collective weight of the Irish Catholic members that told on the side of the opposition.

CHAPTER V.—CIVIL AND MILITARY HISTORY.—A.D. 1835—1837.

WILLIAM IV.

Causes of the resignation of the ministry—Sir Robert Peel's statement on the subject—Lord Melbourne becomes premier—Members of the new cabinet—Failures in elections of ministers belonging to parliament—The few measures designed by the new ministry—Lord John Russell's statement on the subject—Changes in the municipal elections through the reform bill—Explanation given of the plan of municipal government—Settlement of the boundaries of boroughs—Demand of the Church of Scotland for church extension—Unsatisfactory committee appointed for inquiry—Dissatisfaction of the General Assembly with the appointment—Their resolution on the subject—Motion for vote by ballot in parliamentary elections—The motion negatived—Parliament prorogued—Affairs of Spain—Affairs of France—Fieschi's infernal machine—Opening of parliament in 1836—The king's speech—Committee of inquiry into agricultural distress—Plan for the commutation of tithes—Passing of the bill for the registration of marriages, &c., and amendment of the marriage laws—Plan of reform for the English church—Union of old bishoprics and creation of new—Newspaper stamp tax—Its reduction—Reduction of the duty on paper—Irish municipal bill passed—Irish tithe bill lost—Opposition to the new poor law—Motion against it rejected—Parliament prorogued—Foreign affairs—Aid of British ships and troops to the Queen of Spain—Atrocities of the Spaniards in the civil war—Revolutions in Madrid—Modifications in the Spanish constitution—Revolutionary insurrections in Portugal—Quarrel between France and Switzerland—Parliament of 1837—Bills brought before it—Its attention called to the affairs of Spain—Amendment of our criminal law—Postponement of the Irish municipal bill—Death of William IV.—His character—The Duke of Cumberland succeeds to the throne of Hanover.

HE question of the temporalities of the Irish church, by which the strength of the ministry was tested, was the crowning defeat that left them no alternative but retirement from office. Sir Robert Peel had declared that under no circumstances he would consent to the appropriation of ecclesiastical funds to any but strictly ecclesiastical purposes, and in justification of this resolution, he alluded to the compact with the church in the act of union with Ireland. There were circumstances, he granted, under which all compacts must be broken, and even constitutions themselves dissolved; but the necessity for such moral sacrifices must be inevitable, and as yet, he saw no proof for any such necessity. Before any convulsive proceeding could be honestly proposed, the innovators should be ready with a comprehensive and complete new policy to supersede the existing compact; but no such policy had been prepared. And here he was in the right. The appropriation principle had taken no hold of the public mind, and when it was carried, the Whig leaders had bitter cause of complaint that the people in general cared little about it. On the 8th of April, Sir Robert announced his resignation, and the causes that had led to it. "Considering all that has occurred," he said, "since the commencement of the present session—the little progress we have been able to make from the want of the support and confidence of the house—that ministers have had the misfortune, on each of four successive nights, to be left in a minority, although

on that question they had received the support of those who, not having a general and unlimited confidence in the government, yet have given it their cordial and honourable assistance on every occasion on which it was consistent with their public principles to give it—adverting to all these considerations, in my opinion, the time is come when it is incumbent on us to withdraw from the responsibility which office, under such circumstances, imposes. The vote, too, of last night implies, I conceive, a want of confidence in his majesty's government; because, in my opinion, it was not necessary, for any public purpose, to come to that vote. It was tantamount to a declaration, that the house has not that confidence in the present government which would entitle its members to submit to the consideration of the house the measures of which they had given notice. An intention has been announced likewise, if that vote did not lead to the result which it had led to, to follow it up with an address to the crown. As embarrassment to public affairs would have arisen from the presentation of that address, . . . I have been anxious to give this explanation in a manner the least calculated to give offence or to excite angry feelings. For myself, the whole of my political life has been spent in the House of Commons—the remainder of it shall be spent there; and whatever may be the conflicts of parties, I, for one, would always wish to stand well with the house, whether in a majority or in a minority."

Beth houses remained inactive until the 18th, when Lord Melbourne announced in the lords

that he had been appointed first lord of the treasury, and that the new administration was formed. To a question asked by Lord Alvanley, the new premier replied, that he did not know whether he should have the assistance of Mr. O'Connell or not, but that he had taken no means to secure it, and had entered into no terms whatever with that honourable and learned gentleman. His lordship added, that to Mr. O'Connell's opinions, in favour of a repeal of the union and the abolition of the House of Peers, he was entirely opposed. The house then adjourned to the 30th of April, but on an understanding that no public business should be undertaken till the 12th of May. The same evening, in the commons, there was a motion for new writs on account of vacancies occasioned by the appointment of seventeen members of the house to offices under the crown; and the commons also adjourned to the 12th of May.

This was the construction of the new cabinet:—Viscount Melbourne, first lord of the treasury; Lord Palmerston, Lord J. Russell, and Mr. C. Grant, secretaries respectively for the foreign, home, and colonial departments; Lord Lansdowne, president of the council; Lord Duncannon, privy seal and chief commissioner of woods and forests; Lord Auckland, first lord of the admiralty; Sir J. C. Hobhouse and Mr. Poulett Thompson, presidents of the board of control and of trade; Lord Howick, secretary at war; Lord Holland, chancellor of the duchy of Lancaster; and Mr. Spring Rice, chancellor of the exchequer. Sir John Campbell and Mr. R. M. Rolfe were made attorney and solicitor general, and Mr. Cutler Ferguson, judge-advocate; the Earl of Mulgrave went as lord-lieutenant to advance the popularity of ministers in Ireland, where Lord Plunkett was made chancellor, and Lord Morpeth chief secretary, with Mr. Sergeant Perrin and Mr. O'Loughlin as attorney and solicitor general. The lord-advocate of Scotland was Mr. J. A. Murray. Among other appointments were those of Sir Henry Parnell as paymaster of the forces and treasurer of the navy; the Marquis of Conyngham, postmaster-general; and Marquis Wellesley, lord-chamberlain. The great seal was not restored to Lord Brougham: for the present it was put in commission, the commissioners being Sir Charles Pepys, master of the rolls; Sir Lancelot Shadwell, vice-chancellor; and Mr. Justice Bosanquet.

In the interim, the new ministers who belonged to the House of Commons had to be re-elected; and, although they were in general successful, they encountered failures, some of which were extremely discouraging, and gave symptoms of the alarm which they had excited in the public mind. Mr. Littleton being raised to the peerage by the title of Lord Hatherton, a vacancy occurred

in the county of Stafford. A conservative candidate took the field, and was returned. Mr. Charles Grant was likewise called to the House of Lords as Baron Glenelg; and Inverness-shire, for which he had been chosen at the general election, immediately returned a conservative candidate. But the severest stroke of all occurred in the case of Lord John Russell himself. He again presented himself to the electors of the southern division of Devonshire: Mr. Parker took the field against him, and beat the secretary of state by a majority of 627 votes. These three elections disposed of six out of the seven votes which had carried the amendment on the address. Lord John Russell did not procure a seat till after parliament had re-assembled: Colonel Fox, member for Stroud, accepted the Chiltern Hundreds in his favour, and became secretary to the ordnance. By a similar negotiation, Mr. Kennedy, member for Tiverton, made room for Lord Palmerston. In Yorkshire, Lord Morpeth was opposed, but carried his election by a very great majority.

When the new ministers proceeded to explain what they intended to do, it was found that the only measures which they meant to bring forward, were a bill for the reform of municipal corporations, and a bill regarding tithes in Ireland, founded on the late resolutions of the commons. Nothing was to be done in relation to the dissenters. The bill brought in by Sir Robert Peel, and which the dissenters had received with so much satisfaction, was to be dropped: no other was to be proposed in its place; for Lord John Russell had not had time to consider the details of the measure, which he thought would require considerable alterations in order to effect its purpose, or to make up his mind as to the changes which he would be inclined to adopt. There was to be no measure of English ecclesiastical reform, nor any use made of the commission which the late ministry had appointed for that purpose. Commutation of tithes in England and the conversion or abolition of church-rates were not to be brought forward. Lord John Russell said, that if he had learned anything by the experience of the last three years, during which he had been a member of the government, it was that they frequently fell into difficulties by undertaking too great a multiplicity of matters, so that there were questions with which, at the end of the session, they could not proceed from want of sufficient time for due consideration. He was perfectly inclined to consider any question that had been brought before the house by the late ministry; but still he would not undertake, on the part of the government, to go further than municipal reform in England and Wales, and the regulation of tithes in Ireland. The new opposition admitted that it was much wiser to proceed with

caution than bring forward measures hastily, to abandon them as hastily. But, they asked, Did you not complain, in the amendment which you carried upon the address, that besides the questions of municipal corporations and Irish tithes, "the progress of other reforms had been interrupted and endangered by the unnecessary dissolution of a parliament earnestly intent upon their prosecution?" These other reforms undoubtedly meant commutation of tithes, abolition of church-rates, and the removal of some, at least, of the grievances of the dissenters. It now turned out, that, instead of these having been endangered or interrupted by the accession of the late ministry, that ministry was prepared to have brought them all forward; and they were to be laid aside, in the meantime, by the new administration, who had complained that their progress would be stopped.

Great changes in the mode of electing municipal authorities, and in the general government of borough affairs, had become inevitable from and after the passing of the reform bill. It was difficult to exclude from the election of their new town-councils the inhabitants of boroughs who were everywhere trusted with the election of the members of the legislature. The boroughs of Scotland had already undergone the system of purification, without even waiting for the report of a commission of inquiry. The election of the magistrates and the town-councillors had been vested in the ten-pound householders. England had been more leisurely dealt with. In accordance with a recommendation of a committee of the House of Commons in 1833, a commission had been appointed to inquire into the state of corporations in England and Wales. In the royal speech at the prorogation of parliament in that year, the object of the commission had been thus stated:—"The result of its inquiries will enable you to mature those measures which may seem best fitted to place the internal government of corporate cities and towns upon a solid foundation in respect to their finances, their judicature, and their police;" and in the speech at the opening of last session, his majesty had said, in reference to the expected reports, "they cannot fail to afford you much useful information, by which you will be enabled to judge of the nature and extent of any existing defects and abuses, and in what manner the necessary corrections may, in due season, be safely and beneficially applied." On the 5th of June, Lord John Russell detailed the plan of municipal government which ministers intended to provide for 183 corporations, including a population of more than 2,000,000. He maintained that, having extended considerably to the people the right of choosing the members of the legislature, the inferior right of choosing

their own local authorities could not consistently be withheld. Hitherto there had been a close monopoly of those local authorities. A few persons composing the corporation for their own benefit were connected with a portion of the lower classes of the people, whose votes they bought, whose habits they demoralized. The abuses resulting from this were enormous. In the distribution of the charity funds of such places, it would be found that two-thirds or three-fourths of the whole were distributed to those who belonged to the governing body. It would appear in the case of some of the corporations that funds intended to be used for the general benefit of the towns, were partly devoted to the private benefit of individuals, partly applied to defray the expense of feasts and entertainments provided for the mayors, corporations, and municipal officers.

Many difficulties presented themselves in settling the boundaries of the boroughs, and in deciding whether the right of such settling belonged to the legislature or to the crown. Sir Robert Peel complained of the too strong democratic spirit of the measure—complained that ministers did not undertake to alter the reform bill explicitly, but were proceeding to effect their purpose indirectly. He had always prophesied, when his friends expressed their willingness to accept the reform bill as our constitutional charter, and to abide by it, that any proposal for its modification was much more likely to come from the authors of the measure than from its opponents. The question was carried entirely by the majority of Scotch and Irish members. Among the English members there was, on one division, a majority of fifteen against ministers. On the 20th of July, the bill was read a third time and passed, without any further division. In the House of Lords, counsel were heard against the bill, and several very important alterations were made in it. The most important clause they inserted, was one preserving the rights of property and parliamentary franchise of the freemen. The commons debated long upon some of the alterations, but, on the 7th of September, they agreed to the bill as it had been returned to them from the lords; and in that shape it was finally passed.

Lord Morpeth introduced a bill for regulating the Irish church, by suppressing benefices to create a surplus, &c. The bill passed the commons; but the lords, though agreeing to some of the clauses, stickled at the appropriation of the funds; and ministers were compelled to abandon the bill.

The Church of Scotland, finding the means of spiritual instruction in many places very disproportionate to the amount of the population, had made application to former governments for

a grant in aid to a very limited extent, and their application had been favourably entertained. Mr. P. M. Stewart stated in the House of Commons, on the 20th of May, that he had been one of a deputation who had waited on Lord Brougham, when lord-chancellor, and Lord Melbourne, regarding this matter within the last two years; and the impression made on himself, as well as on all the other members of the deputation, had been, that these two noblemen were favourable to the grant. The request, indeed, was a very moderate one. All that was done, however, was to appoint a commission, composed of persons who were Whigs or more than Whigs; the Earl of Minto, Mr. Mountstuart Elphinstone, and the member for the county of Dumfries, being considered as merely the ornamental part of the commission. This gave great offence to the General Assembly, who passed an all but unanimous resolution—"That the commission of the General Assembly feel it incumbent on them, in the discharge of their duty to the Church of Scotland, to state to the government the sentiments they entertain of the constitution of the commission; that they do not consider it entirely friendly to the church, individual members having publicly professed opposition to the connection between church and state; and further, that, with few exceptions, it does not contain the names of individuals of experience, or men interested in the church, and that on those grounds the commission is not entitled to the confidence of the church." This resolution, however, produced no change in the composition of the commission. The great body of the church, though dissatisfied with the conduct of government, would not give their adversaries any advantage by appearing to be afraid of inquiry or of the commissioners. They held another meeting of the commission of the assembly on the 30th of September. It was attended by no fewer than 155 members, of whom eighty-five were clergymen, and seventy lay elders. They unanimously passed the following resolution: "The commission having maturely deliberated on the instructions to the royal commissioners for inquiring into the means of religious instruction and pastoral superintendence afforded to the people of Scotland, express their deep regret that his majesty's ministers have not been pleased, in consequence of the judgment of the last meeting of the commission of the General Assembly, to make any change in the composition of the said royal commission. And whereas that commission, from its authorizing the commissioners to inquire generally into the opportunities of religious worship, the means of religious instruction, and the pastoral superintendence afforded to the people of Scotland, may be, and has been,

interpreted as at variance with the principles and policy of the Established church, and as calculated to weaken or to overthrow it, particularly in so far as it seems to involve in it a principle subversive of this and all other ecclesiastical establishments—viz., that whenever religious instruction and pastoral superintendence are found to a certain extent afforded by any sect or denomination whatever, there the services of an Established church are not required, and may be dispensed with; the commission of the General Assembly publicly and solemnly protest against whatever has such a tendency, and declare that they consider it to be the sacred duty of the legislature to support and to protect the national church, and to secure accommodation and religious instruction to the people of Scotland, so that they may attend regularly upon divine ordinances, and may profit by the pastoral exertions and superintendence of its ministers. With a view to these most important objects, and under the protestation herein contained, they approve of such members of the church as may be required to do so by the commissioners nominated by his majesty, furnishing accurate information as to all statistical matters; and also approve of all church courts allowing inspection of, or giving extracts from their records, of all entries relating to the same matters; it being clearly understood that the commission of the assembly hold, that it is not competent to the commissioners to put to individual members any questions relating to the doctrine, worship, government, or discipline of the church."

A select committee was appointed to inquire into the extent and tendency of the Orange societies.

On the 2d of June, Mr. Grote made his annual motion in favour of vote by ballot, by proposing a resolution—"That it is the opinion of this house that the votes at elections for members of parliament should be taken by way of secret ballot." The motion was supported on the same grounds which had been urged to the house on former occasions; but a new feature in the discussion consisted in the admission, made by some of the friends of the ballot, that a majority of the landed property, at least, of the country, was opposed to the ministry, and that the ballot was necessary and would be effectual to prevent the continued influence of that property from being exercised against them. Sir W. Molesworth, member for Cornwall (East), who seconded the motion, said, that ministers ought now to be aware of the fact, to them undoubtedly a most mortifying fact, that amongst the gentry of England their party was decidedly in the minority; they ought now to be aware that the great majority of the aristocracy, of the landed gentry, and all the clergy to

a man, were their determined and irreconcilable foes, who would spare no efforts, who would use every species of intimidation and undue influence to compass their destruction. They could not, with the same weapons, successfully contend against their too powerful antagonists; if they could not protect their friends—and they were too weak to do so without the aid of the ballot—if they left their supporters exposed to the tender mercies of the Tory party, they would by degrees be ejected, like Lord John Russell, from the representation of all the counties of England. Did they remember their fatal losses in the counties during the last general election? Did they remember that their friends were ejected and replaced by their antagonists in Berkshire, Buckinghamshire, Cambridgeshire, Denbighshire, Derbyshire, Devonshire (South), Essex (South), Gloucestershire (West), Hampshire (South), Lancashire (South), Leicestershire (South), Lincolnshire, Norfolk (East), Suffolk (West), Surrey (East), Surrey (West), Warwickshire (South); that within the last few weeks they had been again dismissed from Devonshire, Invernesshire, and Staffordshire? Was this list not a sufficient proof to them of the absolute necessity of the ballot? Did they prefer to be utterly annihilated as a party in the house rather than have the ballot? If so, their fate was nigh at hand, and they would well merit it. In the same spirit, Mr. C. Buller, member for Liskeard, in arguing that an election conducted by ballot would be attended with less popular excitement than at present, said, that he objected to having that excitement carried to any degree beyond that which was absolutely necessary; but, under existing circumstances, feeling, as the liberal party did, that the majority of those enjoying wealth, property, and influence was against them, it was essential that they should endeavour to excite a fervid feeling in the breasts of the multitude; and therefore it was that they were obliged to resort to popular agitation, to counterbalance the force that was marshalled against them. The original motion was negatived; 317 voted against it and only 144 for it. Various notices of motions were given for leave to bring in bills for preventing bribery and corruption, for reducing expenses at elections, for protecting electors against intimidation, for indemnifying witnesses giving evidence in case of bribery, &c.; but the only legislative measure carried through was a bill altering the reform bill, in so far as it allowed two days for taking the votes at a contested election; and limited the poll to one day, unless it should be found necessary to adjourn it in consequence of riot.

An unsuccessful motion was made for the relief of the agricultural interests; debates took

place on that most perplexing subject, the currency, and a motion was made for a repeal of the window-tax. This last led to considerable discussion, in the course of which a general revision of our taxation was strongly and properly recommended.

Parliament was prorogued on the 10th of September, his majesty lamenting that the civil contest in the northern provinces of Spain had not yet been brought to a termination.

This year Donna Maria, Queen of Portugal, achieved something new in politics. She dismissed and recalled a ministry all in one day! Unable to form a new administration, she was compelled to accept the services of her former advisers, with Saldanha at their head. In a week after Saldanha was a second time dismissed, and Marquis Loulé appointed prime minister. The change was satisfactory to the mob and to the national guards, who now ruled the country. In Spain as well as in Portugal the ultra-liberals, the first of all bad politicians, seemed to be gaining the ascendancy; from their former intolerant Catholicism both these countries were fast falling into irreligion and materialism, and were ready to prove, as their exemplars the French Jacobins had done before them, that atheists can be as intolerant as bigoted Papists.

In France many attempts had been made to assassinate the king. If Louis Philippe had not worn a charmed life he must have perished long ago. The most terrible attempt against him was reserved for this year. On the 28th of July, during the festivities of the annual commemoration of the revolution of 1830, he narrowly escaped assassination. It was the second day of the rejoicings, and appointed for a military review. As Louis Philippe was riding along the line of the national guard, on the Boulevard du Temple, accompanied by his three sons and a splendid suite, an explosion like a discharge of musketry took place from the window of an adjoining house. The effect was terrific. Marshal Mortier, General de Virigny, several grenadiers, besides lookers-on, among whom was a child, were shot dead upon the spot, some of them having received two or three bullets. Upwards of forty were killed and wounded, of whom fourteen were killed; yet the object of this indiscriminate slaughter escaped—the king was unhurt. The police, guided by the smoke, rushed into the house whence the explosion proceeded. They seized the assassin covered with blood, in the act of letting himself down by a rope from the back window of the apartment. He was himself severely wounded by the bursting of some of the barrels of his "infernal machine," and his wounds had delayed his escape. The machine consisted of twenty-five barrels, arranged hori-

zontally side by side upon a frame, the back part of which could be raised or lowered according to the angle requisite to reach and sweep the space below. Each barrel was loaded with deadly missiles; the touch-holes communicated by means of a train of gunpowder, and the lighting of one simultaneously discharged them all. The window, at a little distance from which the machine was placed, stood open, but the machine itself had been screened from observation by Persian blinds which were not withdrawn till the instant of explosion. It was conjectured that the time required to open the blinds had not been calculated, which omission saved the king, for the discharge took place immediately behind him, one of the bullets wounding his horse. The assassin turned out to be a Corsican named Fieschi, who had gone through many disreputable vicissitudes—had been a soldier—stood in the pillory for forgery—suffered two years' imprisonment for theft—and had been a spy of the police. He made no attempt to deny his guilt; he acknowledged no motive except dislike of the king. His trial showed that two persons as obscure as himself had been privy to his enterprise, but not the slightest thread of connection could be traced between the desperado and any formidable conspiracy or political party. A momentary stupor followed the explosion; but as soon as it was known that neither the king nor the princes were hurt, it gave place to tumultuous expressions of joy, mingled with rage against the author of the crime. The forms of the review were gone through by the king, but the rejoicings of the revolutionary anniversary were suspended; the tri-coloured flag was veiled in crape; the victims of the massacre were buried with the honours of a public funeral, which the king and his family attended; and pensions were voted by the chambers to the poor persons who had been wounded, and the relatives of those who had been killed.

Parliament was opened by the king in person on the 4th of February, 1836. The speech expressed regret at the continuance of the civil war in Spain, and a hope that our mediation between France and the United States of America would be attended with success. The quarrel which had arisen between those two governments was entirely a money-quarrel. The Americans, who had submitted to be plundered by Bonaparte, had been clamouring for restitution and indemnity ever since the restoration of the Bourbons: the French had been very slow in recognizing the justice of their claims; and, after acknowledging them, had been still slower in paying. There had been a terrible blustering on the other side of the Atlantic, with threats of going to war for the recovery of the money. Our mediation

did in the end prove successful. The king's speech affirmed that the state of commerce and manufactures was highly satisfactory, but that difficulties continued to press on agriculture. Attention was directed to measures that would be submitted for increasing the efficiency of the church, for the commutation of tithes, and for alleviating the grievances of dissenters. The necessity of maintaining the maritime strength, and of giving adequate protection to commerce, had occasioned an increase in the naval estimates. Improvements in the administration of justice were recommended, especially in the Court of Chancery; a just settlement of tithes in Ireland; a remedy to defects in the municipal corporations of Ireland, founded on the same principles as the municipal acts passed for England and Scotland. Finally, the condition of the poor of Ireland was alluded to, and an intimation thrown out that the experience afforded of the "salutary effect" of the poor-law amendment act in England might guide them in their approaches to this difficult subject. In both houses amendments were moved to the ministerial address, by the Duke of Wellington and Sir R. Peel, with a view of avoiding a specific pledge to reform the corporations of Ireland on the same principles as those of Britain. In the upper house, where opposition by ministers would have been unavailing, the amendment was agreed to without a division. In the commons the house divided, when the original address was carried by 284 against 243.

The paragraph relating to agricultural distress in the king's speech having been read, Lord John Russell moved for a select committee to inquire into the causes of the depression of that interest. His lordship, however, confessed that he did not anticipate any satisfactory result from the investigation. It appears that the principal problem to be solved was, why the price of wheat was at present so much lower than it used to be, in relation to the price of barley; but, if this be an evil, it was one that was likely to puzzle parliament to cure. The landed interest was left to solve the difficulty in their own way, for the proportion of country to town members in the committee was nearly four to one. The committee sat four months, but was unable to agree to a report, and merely laid before the house the evidence they had taken.

On the 9th of February, Lord John Russell brought forward the cabinet plan for the commutation of tithes in England. It was easily carried, and became an act. By this act, which extends to Wales, provision was made for the final extinction, within two years, of the right of exacting tithes in kind, and for commuting them into a corn rent-charge, payable in money according to the value of a fixed quantity of corn, as

yearly ascertained by the average of the preceding seven years. If the parties could not agree among themselves upon a permanent commutation before October 1st, 1838, commissioners were to proceed to make an award, which should be binding for ever after.

On the 12th of February, Lord John Russell submitted to the commons two measures of great importance: the first being a bill for a general registration of marriages, births, and deaths; the second a bill for the amendment of the marriage laws. They both became statutes. By the second of them dissenters were allowed to be married in their own chapels or meeting-houses, or wherever else they might think fit, instead of being forced, as heretofore, to comply with the rites of the Established church; or any person that chose might be lawfully married without any religious ceremony at all, or any other form except that of making a declaration of the act before a public officer. The dissenters, who had clamoured for this boon, seemed in very many cases to be averse to it when it was conceded.

On the 8th of July, Lord John Russell explained the ministerial plan for the reform of the English church. It was founded on four reports made by the ecclesiastical commissioners. In its full scope it went to a new arrangement of dioceses and their revenues; to the creation of two new bishoprics; to the appropriation of the redundant revenues of the deans and chapters; to the improvement of poor livings, and to the diminution of non-residence and pluralities. Only one of the four bills intended was brought forward, namely, that respecting the sees. The house seems to have been taken by surprise, and the bill was read a second time without opposition or special notice. At this stage the radicals evinced such a determined hostility to the ministers' scheme of church reform, that they were only able to carry the Established church bill during the short remainder of the session. By this bill the bishopric of Bristol was to be united to that of Gloucester; that of St Asaph to that of Bangor; and that of Sodor and Man to that of Chester; and two new bishoprics were to be erected, one at Manchester and the other at Ripon. The income of the Archbishop of Canterbury was to be reduced to £15,000; that of the Archbishop of York to £10,000; that of the Bishop of London to £10,000; that of the Bishop of Durham to £8000; that of the Bishop of Winchester to £7000; that of the Bishop of Ely to £5500; that of the Bishop of St. Asaph and Bangor to £5200; and that of the Bishop of Worcester to £5000. These reductions amount altogether to a sum of about £28,500 per annum. The other bishoprics were to have incomes ranging from £4000 to £5000. No ecclesiastical dignity

Vol. IV.

or benefice was to be in future granted to any bishop to be held *in commendam*. These regulations, it was expected, would lessen translations, by leaving only three or four sees objects of temptation. Acts were also passed for separating the palatine jurisdiction of the Archbishop of York and the Bishop of Ely in certain districts, and for imposing restrictions on the renewal of ecclesiastical leases. Finally, on the abandonment of the other church bills relative to residence and pluralities, and a new appropriation of the revenues of cathedral and collegiate churches, a bill was introduced for suspending for one year appointments to dignities in those establishments, and to sinecure rectories.

For some time a war had been vigorously carried on against the newspaper-stamp tax. On the 15th of March, Mr. Spring Rice, as chancellor of the exchequer, stated that it was the intention of government to revise the whole of the law respecting stamp-duties; first, by consolidating into one statute the 150 acts of parliament over which the law was at present distributed; secondly, by the apportionment of the various rates on a new principle—namely, by the simple and uniform rule of making the price of the stamp in every case correspond to the pecuniary value involved in the transaction for which it is required. The effect of this change would be to reduce the stamp-duty upon indentures of apprenticeship, bills of lading, and many others of the more common instruments, and to increase it somewhat upon mortgages and conveyances of large amounts of property; but it was not expected that it would make much difference upon the entire produce of the duties. The consolidation act which was in preparation, it was intimated, would contain no fewer than 330 sections; but it was suggested by some members that it might probably be a more convenient plan to divide all this matter into a short series of acts, one for each class of stamp-duties. With regard to the stamp on newspapers, Mr. Rice stated that it was proposed to reduce it from its present amount of 4*d.* with the discount, to 1*d.* without discount. This would be a reduction of exactly 2½*d.* on all newspapers sold for 7*d.* or less, and of rather more than 2½*d.* on all sold for more than 7*d.* A portion varying between two-thirds and three-fourths of the whole tax would thus be remitted. To this remission parliament assented; by which the illicit circulation of unstamped newspapers, which had long been followed, was at once rendered so profitless as to be entirely abandoned. Some members were opposed to the retention of the penny stamp, considering it the duty of government to remove every obstacle to the diffusion of political information. But this would have made a postage

necessary, to which the newspaper-proprietors were opposed as practically inconvenient; and which, moreover, would have been virtually a tax on the country reader of a London newspaper, from which the town reader would have been exempt. The transmission of papers at the public expense, without either stamp or postage, appeared an inadmissible proposition. It would have evinced a desire to spread political intelligence to the exclusion of literature and science. Some were in favour of the repeal of the duties on paper in lieu of the stamp-duty on newspapers. The reduction of the newspaper-tax was the only proposition of Mr. Rice on the stamp-duties that was carried.

Shortly after this the chancellor of the exchequer, after stating that the income for the year would exceed the expenditure by £662,000, reduced the duty on first class paper from 3*d.* to 1½*d.* per pound, and altogether abolished the duty on stained paper; he remitted the South Sea duties, and proposed the reduction of the duties on insurances of farming-stock, taxed carts, &c.

The lords went into committee on the Irish municipal bill, when an amendment, moved by Lord Lyndhurst on the second clause, which went to raise the whole question between the plan of the reform of the corporations as proposed by ministers, and that simply of abolition brought forward by the opposition, was finally carried on a division by 107 against 15. All the rest of the clauses of the bill to the 21st inclusive were then struck out on the motion of the said noble lord, except the 3*d* and the 10*th*, which were agreed to.

On the first of June, on the second reading of the Irish tithe bill, Lord Stanley moved an amendment, the object of which was to get rid of the appropriation clause, and preserve to the church undiminished its revenues. The discussion lasted three nights, during which all the leading members on both sides addressed the house. Lord Stanley intimated that the adoption of his amendment would obtain for the ministerial bill the support of those whose co-operation never could nor would be otherwise obtained. Lord John Russell in reply contended that, in legislating for Ireland, it was necessary to consult the interest and feelings of the great body of the people. The real question in controversy, both in regard to the church and corporations, in the future government of Ireland, was, whether the old Protestant ascendancy or the national interests should be consulted. On the other hand, it was urged by a third class of reasoners, that the ministers' bill was weak, and remote from a final settlement. If, for example, according to their own position, the Church of Ireland were in future to be regulated according to the

prevailing taste of a majority of its inhabitants, the mere abstraction, as proposed, of £90,000 from its present revenues, would not obtain that object. The debate was very long; but on a division, Lord Stanley's amendment was rejected by 300 against 261. Lord John Russell's bill was then read a second time. In the lords great alterations were made in the bill; the commons refused to concur in their lordships' amendments, and in the end the bill was allowed to drop. Precisely the same fate befell the Irish corporations reform bill.

Loud complaints had already been raised against the new poor-law statutes, and still more against the harshness with which the government functionaries had administered those laws. On the 1st of August, Mr. Walter moved for a select committee to inquire into the operation of the new poor-law, particularly in regard to outdoor relief and the separation of husbands from wives, and children from their parents. Lord John Russell, recurring to arithmetical figures and not to the domestic affections, affirmed that the country was saving nearly £2,000,000 per annum by the present mode of treating the poor. This was considered so very satisfactory that the house rejected Mr. Walter's motion by a majority of nearly two to one.

For a considerable number of years the public had obtained admission to the Houses of Parliament only by written orders of peers of the upper house, and for the commons by the speaker's order to a seat below the gallery, and either by a member's order, or by the payment of 2*s.* 6*d.*, to the gallery. But it was now regulated that admission to the commons' gallery by paying the 2*s.* 6*d.* should be abolished, and that the written order of a member should be made the only passport. This was certainly not a change for the better. It has had the effect of restricting the number of those who frequented the commons' gallery, and it is constantly felt as an inconvenience.

On the 20th of August, while Mr. Hume was in the middle of a vituperative speech directed against the House of Lords, the usher of the black rod summoned the commons to the upper house to hear the prorogation speech. His majesty congratulated parliament and the country on the flourishing state of commerce and manufactures.

For some time a considerable body of British troops, called the Spanish Legion, in the pay of Spain, and under the command of Colonel Evans, had been fighting for the young Queen Isabella against the Carlists in the Basque provinces. It cannot be said that they or their gallant commander had much raised the military reputation of our country, or that they had done much

good for the cause which they were supporting. Colonel Evans either proved that he was no strategist, or that his men and the Spaniards co-operating with them were incapable of executing combined movements, or any difficult evolution or movement whatsoever. The minds of these Englishmen became familiarized with scenes of horror and Spanish cruelty. Lord John Hay, commander of the British naval squadron stationed off the Basque provinces on the northern coast of Spain, received orders from the British government to co-operate with Queen Isabella's army and the auxiliary forces of Evans. In the month of May his lordship rendered very important services, by sending in two armed steamers, which, by a well-directed fire, opened a passage through the Carlist fortified works near Hernani. Evans' legion carried those works, but not until they had lost in killed and wounded from seventy to eighty officers and nearly 800 men. The Carlist general was killed in the action. At other points Lord John Hay's squadron rendered efficient aid, discouraging the brave Basques far more than any other force or any other circumstance could have done. These men were perpetually declaring, that, if England would keep her ships of war neutral, and recall Evans and his legion, they could easily maintain their provinces, and the liberties which they had so long enjoyed in them, against their Spanish enemies. The Spanish constitutionalists were broken up into desperate factions, and there was an almost total want of morality and common honesty among the functionaries of their government. The most atrocious cruelties were being perpetrated all over the kingdom. At Barcelona the populace massacred all the Carlist prisoners, and then shouted for the constitution of 1812. At Tortosa, General Nogueras, who commanded the queen's troops, ordered the governor to seize the aged mother of the Carlist partizan Cabrera, and to put her to death in retaliation for the cruel deeds of her son. The governor refused to comply with this monstrous command, on which General Nogueras applied to General Mina, who, having entirely failed in the Basque provinces, was now captain-general of Catalonia. Mina directed that the orders should be immediately executed, and the very old and infirm woman was actually shot in one of the public places of Tortosa. Mina did not long survive this detestable act: he died in his bed, leaving a name which had once been honoured covered with everlasting infamy. Cabrera took vengeance into his own hands. He issued a sort of proclamation, ordering his troops to put to death every prisoner they made; and he began his reprisals by shooting the wives of four constitutional officers. Other victims were soon added to this list, Cab-

rera declaring that thirty at least must fall to expiate the murder of his mother.

The Spanish government was deplorably weak, and hurried on its destruction by an attempt to appear strong. Being left in a minority, ministers dissolved the cortes. At Malaga, Cadiz, Seville, and Cordova, the constitution of 1812 was proclaimed, and provincial juntas were established, wholly independent of the queen's authority. On the 3d, a movement commenced in Madrid; but it was put down, and the capital declared in a state of siege. But on the 12th the insurrection became more serious, and a regiment of provincial militia doing duty at St. Ildefonso demanded the constitution of 1812. They forced themselves into the apartment of the queen-regent in spite of the remonstrances of the French and English ambassadors, and obtained from her a promise of the acceptance of the constitution. This produced a revolution in the metropolis. Isturitz, the prime minister, made his escape, reached Lisbon, and from thence proceeded to England. General Quesada, the military governor of Madrid, was not so fortunate, being taken by the populace about three miles from the capital, and savagely put to death. Ultimately, the constitution was proclaimed by the queen-regent, subject to the revision of the cortes, and a new ministry of decided liberals was formed. The new government commenced with vigour. A forced loan to the amount of £2,000,000 was sought to be raised; a conscription of 50,000 soldiers was called for to send against the Carlists; the property of emigrant Carlists was confiscated; and the example of France and Portugal was proposed to be followed, by the extinction of the remaining moiety of tithe, leaving the clergy stipendiaries of the state, or dependent on voluntary contributions. Early in the ensuing year some modifications in the constitution of 1812 were proposed and adopted by the cortes. It was, however, impossible to make anything good out of a constitution so fundamentally and so thoroughly bad. The new ministry, who were indebted for their possession of office to an insurgent sergeant of the guards, soon tottered on their seats, and felt how much more easy it is to go along with a fierce democracy than to check or control it. It was made visible that no government could be made permanent in Spain. A fearful waste was made of the church and monastic property. In the remote country districts, where there were no inns, the reign of hospitality was over. It ended with the suppression of the monasteries, at whose gates the wayfarer, let his religion be what it might, had never applied in vain. A revolution in Spain was usually a prelude to a revolution in Portugal. At Lisbon serious disagreements had arisen between

the court and the assembled cortes, on account of the appointment of the young queen's husband to the command-in-chief of the army. The cortes were about voting an address against the army being under the command of a foreigner, when they were abruptly dissolved by the queen. Then came news of the revolution of Madrid. The political clubs put themselves in motion, and an insurrection was speedily organized. On the 9th of September, a motley band of troops of the line, caçadores, volunteers, and national guards, proclaimed the constitution adopted by John VI. Donna Maria would have resisted; but the non-commissioned officers of the regular troops, exercising the chief authority, as in Spain, refused to march, and joined the insurgents in calling for a change of government. The Duke of Terceira, Cavalho, and other individuals, took refuge from the popular fury on board the English squadron in the Tagus; and a new ministry was set up, to be speedily knocked down again. The Portuguese peers addressed a formal protest to the queen against this revolution. The Duke of Palmella, the first in influence as in ability, headed the protest. The provinces expressed by deputations their approval of the proceedings in the capital.

Switzerland, which had never been quiet since the Paris revolution of 1830, was now involved in a serious quarrel with France, and was jealously and anxiously watched by the troops of Baden, Würtemberg, Bavaria, Piedmont, and all the contiguous states. M. Thiers threatened the Swiss with an "hermetic blockade." The Swiss replied, that all the troubles of their country, and all the political conspiracies which France complained of, had been hatched by an agent of the French ambassador. This charge was founded on the confession of the spy himself, who had been arrested while going about Switzerland with a passport signed by the French ambassador's chief secretary. The British government offered its mediation, and the quarrel was made up before the end of the year.

In France another unsuccessful attempt was made upon the life of Louis Philippe, as he was passing to open the chambers.

Parliament was opened by commission on the 31st of January, 1837. The speech from the throne was not gloomy, although the aspect of affairs was far from being cheerful. A mania for speculation and over-trading had created great commercial embarrassments, and there had been one of those money-panics which periodically visit the country. His majesty's speech recommended a renewal of the inquiry into the operation of joint-stock banks, which had contributed to create the existing disorder.

On the 13th of February, Lord John Russell

detailed, in a committee of the whole house, the government plan for introducing poor laws into Ireland. It was favourably received by the house, though strenuously opposed by Mr. O'Connell. The progress of the bill was interrupted by the dissolution of parliament.

Mr. Walter again moved for a committee to inquire into the operation of the poor-law act. An amendment was proposed by Lord John Russell for a committee to inquire into the administration of the relief of the poor, under the orders and regulations of the poor law commissioners. This was carried, and a committee, having power for a full inquiry, short of calling in question the principle of the bill, was agreed to.

Ministers found themselves compelled to abandon their bill for the abolition of church-rates. They entertained the project of appointing a committee to inquire into the mode of leasing and managing the real estates of the church.

On the vote for the navy estimates, Lord Mahon called the attention of the house to the wretched state of Spain, and to the manner in which British forces had been employed in a civil war. Lord Palmerston defended the course of policy adopted by the present government. His lordship maintained that an interference would put an end to the civil war, and so carry into effect the quadripartite treaty of 1834. Sir Robert Peel in the commons and the Duke of Wellington in the lords censured the whole of this policy. The duke had never approved of the treaty. He thought that there should be no intervention in the internal affairs of Spain. Indeed the notion of forcing any system of government in Spain was impracticable: to do so we must take into pay, not only our own army, but the Spanish—a proposition which he suspected would not be very palatable to a House of Commons or a chamber of deputies. He deprecated, therefore, any such attempt as absurd and ruinous to ourselves, and still more so for the sake of Spain herself. He could say, to his certain knowledge, that three several parties had already been ruined in Spain by our intervention. Individuals had been induced to take a certain line of action by the assurances of our government: they had afterwards, of necessity, been abandoned by their own, and were so left with their families ruined, their properties sacrificed, and their prospects blighted for ever.

Prior to the Easter recess Lord John Russell obtained leave to introduce a series of bills for the further amendment of the criminal law. These were eventually passed into statutes. They were to a great extent a realization of the humane views which Sir Samuel Romilly had so ably and so earnestly advocated a quarter of a century before this period. They removed the

extreme penalty of the law from all offences except seven of the most heinous kind. Lord Morpeth brought forward a resolution for the settlement of the Irish tithe question; but the measure had no better success than in the preceding session. The conservative party had greatly gained in parliamentary strength, and the Whigs in a good many cases could not depend upon their radical allies, although to them they had owed the possession of office.

On Lord Melbourne moving that the house go into committee on the Irish municipal bill, the Duke of Wellington said that the bill had a direct tendency to injure the Protestant church establishment in Ireland, which, for 300 years, it had been the policy of England to uphold; and that, as there were several other measures pendent in the House of Commons which affected the interests of the church, their lordships ought to wait till they had all the bills together. His grace therefore moved to postpone the bill to the 9th of June; and this was carried by 192 against 115. On June the 9th, Lord Lyndhurst moved a further postponement to the 3d of July.

On the 20th of June his majesty William IV. expired in Windsor Castle. He had expressed a wish to survive the anniversary of the battle of Waterloo on the 18th, and so far he had been gratified. He was in the seventy-third year of his age, and in a few days would have completed

the seventh year of his reign. His character presented few distinguished traits to mark him out from the common class of sovereigns, and but for the passing of the reform bill his reign would have been one of the most uneventful in our history. In politics he had no system of government, or firmness to adhere to any system whatever; but this defect, which might have been fatal to the ruler of any other kingdom, was in his case so far fortunate, that it enabled him to drift quietly onward upon a tide of events where resistance could only have ended in civil strife and national calamity. He was thus popular as the "reforming king," a title he earned without the sacrifice and trouble which such a proud distinction has entailed upon other sovereigns; and this popularity, his frankness, warm-hearted affections, and domestic virtues were well fitted to retain. By his death, and consequent accession to the throne of his niece the Princess Victoria, the crowns of the United Kingdom of Great Britain and Ireland and of Hanover became dis-severed, as the operation of the salique law excluded females in Hanover. The throne of that country therefore devolved to the Duke of Cumberland, the next heir male. By parliamentary provision made in 1831, Adelaide, now queen-dowager, had £100,000 per annum for her natural life, with Marlborough House and Bushey Park for residences.

CHAPTER VI.—CIVIL AND MILITARY HISTORY.—A.D. 1837—1838.

VICTORIA.—ACCESSION, A.D. 1837.

Accession of Victoria to the throne—Interest excited by the event—Her royal declaration—Conduct of the Whig ministers—Parliamentary elections unfavourable to their cause—Disloyalty of Lower Canada—Review of disturbances in that colony—Discontent of the Canadians with the government concessions—Lord John Russell's bill for the colony—The subject discussed in parliament—Sir Robert Peel's statement of the support of Canadian discontent by the radical members of parliament—The subject debated in the House of Lords—Statements of Lord Glenelg and Lord Brougham—The Canada bill passed—Its provisions—Violence of the Irish members of parliament—Turbulent discussion about a reprimand to O'Connell—Annual motion for vote by ballot—Ministerial discords—Bill passed for the protection of voters—Bill passed for the extension of right to a seat in parliament—Motion for a vote of censure on Lord Glenelg—Amendment of the act for the abolition of slavery—Bills of Irish poor law and Irish tithes commutation—Debate on the annual grant to Maynooth college—Our policy criticised in reference to Spain—The quadruple treaty discussed—Reduction of the volunteer yeomanry cavalry—Bill passed for the abolition of arrests for debts on meane process—Copy-right bill for authors carried—Bill for alteration in administering oaths in courts of justice rejected—Complaints of the lord-chancellor's nomination of magistrates—Motion for the reappointment of a committee on church lands—Other parliamentary motions—The queen's coronation—Wild and fanatical outbreak at Canterbury—Account of Thom, the pretended prophet—His violent proceedings and death—Events in Canada—Open rebellion of the disaffected—It is suppressed in Lower Canada—Rising in Upper Canada—The rebels invest Toronto—They are defeated—They are aided by the American "sympathizers"—Affair of Navy Island and the *Caroline* steamer—Inroads from the United States upon the Canadian frontiers—Lord Durham's arrival in Canada—Proceedings against the leaders of the rebellion—Proclamation of the Canadian government—Attack on Lord Durham in the House of Lords—Lord Durham leaves his government without an official recall.

HE accession of a female sovereign to the throne of our country was of itself a popular event. It was a change and a novelty for the unthinking multitude. It was an omen of national prosperity to the more cultivated, and all who had read our national history, called to mind how England had become great and glorious under the reigns of Elizabeth and Anne. The circumstance of an interesting youthful female, only eighteen years old, suddenly ushered into such a responsible station, awakened the chivalrous feelings of every class and party, by which political strife was composed, and loyalty invested with a more ardent feeling and nobler devotedness. All was enthusiastic gladness for the present and joyful anticipation for the future, when on the 20th of June, Victoria was proclaimed queen with the usual solemnities; and when the ceremony of signing the act of allegiance had been performed by the privy council at the palace of Kensington, the manner so gentle and yet so dignified, and the clear, unflinching tones with which her first royal declaration was delivered, were as the prelude of an universal harmony among her hitherto discordant people. "This awful responsibility is imposed upon me so suddenly, and at so early a period of my life, that I should feel myself utterly oppressed by the burden, were I not sustained by the hope, that divine providence, which has called

me to this work, will give me strength for the performance of it, and that I shall find in the purity of my intentions, and in my zeal for the public welfare, that support and those resources, which usually belong to a more mature age and to long experience.

"I place my firm reliance upon the wisdom of parliament, and upon the loyalty and affection of my people. I esteem it also a peculiar advantage that I succeed to a sovereign, whose constant regards for the rights and liberties of his subjects, and whose desire to promote the amelioration of the laws and institutions of the country, have rendered his name the object of general attachment and veneration.

"Educated in England, under the tender and enlightened care of a most affectionate mother, I have learned from my infancy to respect and love the constitution of my native country.

"It will be my unceasing study to maintain the reformed religion as by law established, securing at the same time to all the full enjoyment of religious liberty. And I shall steadily promote, to the utmost of my power, the happiness and welfare of all classes of my subjects."

Fortunately the money panic was over, and the country was tranquil. The popularity of the Whig ministers was declining, and there was a rumour that the young queen would dismiss them. But she retained all those she found in place. They ostentatiously proclaimed that the queen

entered warmly into their views, and had espoused their political creed without reservation. After the necessary dissolution of parliament, the ministerial candidates traversed the country placarded as it were with her majesty's name, and inviting the electors to show their loyalty by supporting her majesty's ministers. Lord John Russell, as well as the other ministers, took especial care to identify the queen with the cabinet, and to convince the country that the young sovereign was so thoroughly enamoured of Whig principles, and of the Whigs personally, that it would be impossible for her ever to tolerate Tories or conservatives. Yet it can scarcely be said that ministers gained ground at the elections. The demonstration of public opinion was still less in favour of the radicals. Bath, Liverpool, and Hull rejected their late radical members, and returned conservatives. In the city of London, Mr. Grote, once the favourite member, found himself in

a bare majority of six over the conservative candidate, Mr. Horsley Palmer. Mr. Hume was unseated in Middlesex, and driven to the necessity of appearing in the House of Commons as Daniel O'Connell's nominee for the city of Kilkenny. Generally the Whigs lost the county elections; yet Sir James Graham, the conservative candidate, was rejected by East Cumberland. Some new joints were added to the O'Connell tail.

The loyalty of England did not reach to Lower Canada. The French or French-descended portion of the inhabitants of that province had long been in a very turbulent state; and the beginning of the reign of a youthful female sovereign seemed to these people a very proper period for driving on to the extremities of democracy, agitation, insurrection, and civil war. The sub-

ject engaged the attention of parliament, and vexed and perplexed ministers. Mistakes were committed in the cabinet, and the hands of the resident governors of Canada were tied up.

A recapitulation of these annoying events is necessary for the better understanding of the parliamentary discussion they occasioned, and the rebellious outbreak in which they terminated. In 1828, when a committee appointed for the

purpose had given in a report of the state of Canada, and the measures that were necessary for its welfare, the assembly of Lower Canada had themselves characterized this report as "an imperishable monument of the justice and profound wisdom of the committee—an authentic testimonial of the reality of their grievances, and of the justice of their complaints, faithfully interpreting their wishes and their wants." It might have, therefore, justly been supposed, that after the people and the government of this country had proved themselves an-

QUEEN VICTORIA
From the portrait by Winterhalter

xious to perform all that was asked for, and that was indicated by the report of the committee, some satisfaction would have been produced in the minds of the Canadians, and some expression of cordiality towards the British government might have been elicited. But the reverse was the case. On the 6th of December, 1828, the house of assembly resolved, that on the permanent settlement before-mentioned being effected, it would be expedient to render the governor, lieutenant-governor, or person administering the government for the time being, the judges and executive councillors, independent of the annual vote of that house, to the extent of their present salaries. Also, that amongst the questions not particularly mentioned on that occasion, that house held, as most essential to the peace, welfare, and good government of the province, the

independence of the judges, and their removal from the political business of the colony; the responsibility and accountability of public officers; a greater independence of support from the public revenues, and more intimate connection with the interests of the colony in the composition of the legislative council; the application of the late property of the Jesuits to the purposes of general education; a removal of the inconvenience attendant upon the crown and clergy reserves; and a diligent inquiry into, and a ready redress of all grievances and abuses that may be found to exist, or which may have been petitioned against by the subjects in the province.

These were extensive and truly dangerous demands, especially when the state of the colony was taken into account; but still, much was done in order to remedy the particular grievances complained of. With respect to the independence of the judges, Lord Ripon (then colonial secretary) fully concurred in the reasonableness of the proposal, and himself suggested a method for carrying it into effect. But the house of assembly, instead of following out that suggestion, tacked to the law by which the independence of the judges was to be secured, certain provisions relating to the hereditary revenues of the crown, and to the establishment of a court of impeachment for the judges. And yet, the independence of the judges was simply and of itself a positive good, and the annexation of perplexing conditions was a pretty good proof that it was not their wish to rid themselves of the grievance complained of. With respect to the accountability of public officers, Lord Ripon also proposed a measure which the house of assembly would not allow to pass, though it was planned with a view to secure the most beneficial results.

As regarded the subject on which the widest difference between the assembly and the imperial government existed, no opposition had been offered. The judges were forthwith informed, that, with the exception of the chief justice, it was no longer desirable that they should sit in the legislative council; and a number of persons, for the most part of French extraction, were added to that body, totally independent of the crown, and giving a great majority in the council to those who were unconnected with the government. The assembly might indeed say, that they were none of them persons agreeable to their wishes, or acquainted with their wants, but the question was, whether they were not independent of office, and closely connected with the interests of the colony. Of the forty members of the council, not less than eighteen were French Canadians; many of the members of English origin had quitted the province, and but seven remained in official connection with the govern-

ment. As to the property of the Jesuits, it had actually been ordered to be applied to educational purposes, and the only grievance connected with that point now remaining was, that the estates had been leased to persons other than those whom the assembly desired to see in possession of them.

Another question related to the crown and clergy reserves. Lord Ripon had declared his readiness to put an end to the old system, and only differed from the assembly in wishing to prevent an undue facility from being afforded to poor and improvident purchasers of the waste lands.

The next grievance arose out of the much-contested question of the duties collected under the earlier acts, and which the crown had, according to law, the right of appropriating. The committee of 1828 had been of opinion, that these duties should be submitted to the appropriation of the assembly; but they recommended that this measure should be accompanied by a permanent settlement for the salaries of the judges and other functionaries. Government, however, had in 1831 carried a bill through the imperial parliament which entirely repealed the power of appropriation by this country, and left it to the assembly without condition, without stipulation, to dispose altogether of those duties.

The Canadians made but a poor return for these concessions. In the year 1833, the house of assembly tacked to a supply bill some very unusual conditions, providing that the persons holding certain offices should not be allowed salaries, unless they relinquished other offices. This strange bill was rejected by the governor. In 1834, the same house of assembly adopted a new course which had led directly to the present difficulties. It passed ninety-two resolutions, some of grievance, some of eulogy, some of vituperation, and amounting in the whole to a vehement remonstrance against government; and, after spending an entire session in framing this remonstrance, it separated without passing any supply bill whatever. At this period the more able and more respectable of the party in opposition detached themselves from their former associates, for they saw that their policy was violent and aggressive, and that they were aiming not at reform, but at convulsion and revolution. Yet were there some Englishmen who continued to adhere to the French Canadian radical faction, and went with that faction to such lengths as would, under a less lenient government, have been construed into treason. Since 1834, no supplies were voted. During the very short administration of Sir Robert Peel, Lord Amherst was sent out, not merely as governor, but also as commissioner, to investigate and redress griev-

ances. That appointment had been made null by the dissolution of Sir Robert's administration. Returning to office, the Whigs despatched Lord Gosford to fill the place of Lord Amherst. The new governor and commissioner could not alter the temper of the house of assembly. The supplies continued to be refused.

Such was the difficulty that encountered parliament at its reassembling on the 16th of January, 1838; and after these events were recapitulated by Lord John Russell, he proposed a bill to suspend for a certain time the existing constitution of Lower Canada. He also moved an address to the throne, pledging the house to assist her majesty in restoring tranquillity to her Canadian dominions. He proceeded to give an outline of the intended bill, and announced the person who was to be sent out to Canada to carry it into effect: this was the Earl of Durham, who, having accepted the office, would in due time proceed to the performance of its important duties. Lord John Russell concluded his long discourse by declaring that although, in his opinion, a time might arrive when he would not be indisposed to give the 1,400,000 of our present fellow-subjects living in Canada a participation in the perfect freedom enjoyed by the mother country, he thought that the day for separation was still at a distance.

Sir Robert Peel protested against the doctrine that the manifestation of a rebellious spirit on the part of a colony was reason sufficient for releasing it from its allegiance; and he promised his cordial consent to the address, because, in his opinion, this country had acted with justice and liberality towards Canada. But in supporting the address he begged that he might not be understood to place confidence in ministers, or to be satisfied with their past conduct. Measures of precaution had been neglected. The military force in the colony ought to have been increased last year. Mr. Hume, with Mr. Roebuck, had been one of the loudest performers on the trumpet of revolt and insurrection. Sir Robert Peel did not forget the fact. He agreed, he said, with the observation Mr. Hume had just made in the house, that the blame rested with those who had drawn an innocent and harmless people into a hopeless insurrection; and then he reminded the ex-member for Middlesex and present member for Kilkenny of an inflammatory letter which in the year 1834 he (Mr. Hume) had addressed to Mr. Mackenzie in Upper Canada, and which contained the following passage:—"Your triumphant election of the 16th, and your rejection from the assembly of the 17th, must hasten that crisis which is fast approaching in the affairs of the Canadas, and which will terminate in independence and freedom from the

baneful domination of the mother country, and the tyrannical conduct of a small and despicable faction. The proceedings between 1772 and 1782 in America ought never to be forgotten; and, to the honour of the Americans, and for the interest of the civilized world, let their conduct and the result be ever in view!" "Surely," continued Sir Robert, "Mr. Mackenzie, who has dragged the people into insurrection, may say, 'I acted on the authority of the honourable member for Kilkenny; visit not therefore this delusion and its consequences upon me!'"

An amendment to the address was rejected by 188 against 28. On the following day the new bill was presented to the House of Commons by Lord John Russell. The leading object of it, as stated by him, was to enable the governor-general and council (that council not to be limited in number, but of which five might be a quorum), on the motion of the governor, to pass any laws which might be considered necessary during the present suspension of the legislature of the province. In addition to these means for suppressing the insurrection, the governor-general would be authorized to grant a general amnesty. The powers conferred by the bill were to be vested in Sir John Colborne till the arrival of Lord Durham. With respect to the future government of the province, it was the intention of ministers that the governor-general should be invested with power to convene a certain number of persons—namely, three from the legislative councils of each of the two provinces, and ten "representatives" from each—to form a council to concert with the governor-general as to the measures which might be deemed advisable for the adjustment of the affairs of the two provinces. This was a power that might be given by the prerogative of the crown alone. The persons to be named from the legislative councils would be chosen by the governor-general; while those "who were to be convened having a representative character" might of course be taken from the legislative assembly; but as in Lower Canada it was almost impossible that the assembly could be brought to act beneficially, it would be competent to the governor-general, both in the upper and lower province, to hold elections for persons, amounting to twenty in the whole, to concert with him upon the general state of affairs.

In the House of Lords there had been some preliminary skirmishing about Canadian affairs. The Duke of Wellington, after expressing his hope that ministers would call upon parliament for the means of bringing the mad contest to a certain and speedy conclusion, let drop one of his concise and not-to-be-forgotten oracles—"A great country like England can have no such

thing as a little war." Lord Glenelg moved an appropriate address to the queen. His lordship considered that the main cause of the disturbances which prevailed in Lower Canada might be found in the division of the two races which inhabited the province—a division which circumstances had not mellowed, but embittered. Lord Brougham accused ministers of weakness and vacillation, and delivered a speech which, in many points of oratory, has never been surpassed. He called attention to the position of Lord Gosford, sent to the advanced posts of our empire, without instructions, unprovided with any but the ordinary force of the colony, to meet a crisis brought on by his employers! His lordship directed the most glowing invective against the ministerial policy which had provoked the Canadians, and yet adopted no step by way of precaution against the inevitable effect of the outrage offered. He exclaimed—"Tyranny and oppression have here appeared stripped of their instinctive apprehension, and habitual circumspection. Compared with the conduct which we are now called on to contemplate, the most vacillating and imbecile, the most inconsistent and impotent rulers rise into some station commanding respect—King John, and Richard Cromwell himself, become wise, politic, and vigorous princes."

The address was agreed to.

In the commons the Canada bill was subjected to some important amendments, and it was eventually carried through that house by immense majorities on the 29th of January. It was coercive and severe enough. After coquetting with insurrection, ministers now seemed determined to show no mercy to the insurgents. In the upper house the Duke of Wellington dwelt on the hardship to Upper Canada of bringing that tranquil and well-affected province within the operations of the bill. On the 8th of February the bill came on to be read for the third time. It was opposed by Lord Ellenborough, Lord Brougham, and Lord Fitzwilliam. Lord Ashburton animadverted on the rapid and seemingly capricious manner in which the governors succeeded each other in the Canadas. Sir John Colborne had been removed to make way for Sir Francis Head; Sir Francis Head for Sir George Arthur; and now Sir George Arthur must retire before the supreme authority of Lord Durham. The third reading was carried, and the royal assent was given to the bill. Its most important provisions were in substance the following:—The constitution of Lower Canada was suspended till November, 1840. Her majesty in council was empowered to constitute a special council, and to appoint or authorize the governor to appoint such and so many special councillors

as she might think proper. It was declared that until November, 1840, it should be lawful for the governor, with the consent and advice of the majority of the said councillors convened for the purpose, to make such laws or ordinances for the peace, welfare, and good government of Lower Canada, as the legislature of that province, at the time of passing the act, was empowered to make; and that all laws or ordinances so made, subject to the provisions thereafter contained for disallowance thereof by her majesty, should have the like force and effect as laws passed before the passing of the act by the legislative bodies. The governor was to have the initiative of all measures proposed to the council, five of whom were required for a quorum.

Then followed certain restrictive provisoes before noticed.

It was then directed that a copy of every such law or ordinance be transmitted to the home government, and her majesty was empowered by an order in council at any time within two years from the receipt thereof, to disallow the same.

Irish affairs, or rather Irish orations, again occupied a disproportionate time in parliament. The Hibernian violence infected other members. On the 6th of December the House of Commons was turned into a bear-garden. On the following evening Mr. Abercromby, the speaker, after commenting in a tone of temperate rebuke on the insubordination of the house, solemnly declared that he would resign if such disgraceful scenes were repeated.

Mr. O'Connell, after a fearful tirade of abuse, charged some Tory committees of the House with having been guilty of "foul perjury." Lord Maidstone moved that he should be reprimanded in his place by the speaker. A turbulent discussion ensued, and ended in the adjournment of the house. On the following day the debate was resumed. Upon a division the numbers were, for the reprimand 226, against it 197. As had been the case on more than one recent occasion, ministers were found voting with the minority. They pretended that a simple reprimand was not punishment enough—but they assuredly never thought of moving for any more severe penalty. On this occasion Lord John Russell was guilty of unusual heat and indiscretion. When Lord Maidstone first announced his intention of calling the great Irish agitator to account, he (Lord John) gave notice that, should that complaint be entertained by the house, he would bring forward on the same day an allegation of perjury made by the Bishop of Exeter, against certain members of the house.¹ This

¹ The obnoxious passage occurred in a charge to the clergy delivered by Dr. Philpot, the Bishop of Exeter, in 1836. He

strange and inconsiderate menace entangled his lordship in considerable difficulties. A "Free-men and Parliamentary Electors Bill," which had dropped in the preceding session, was re-introduced before the Christmas recess. It had two objects—the one to relieve householders entitled to the elective franchise, by extending the time fixed by the reform bill for payment of their rates and taxes from April to October; the other, to remove the stamp-duty payable by freemen on their admission. The former branch of the bill met with considerable opposition on the conservative side of the house. In committee, Mr. Thomas Duncombe moved an amendment which, in effect, would have altogether annulled the rate-paying clauses of the reform bill. He was supported by Mr. Warburton, Colonel Evans, and Mr. Hume, but his motion was negatived by 206 against 107. The bill itself, as originally framed, was carried through the commons by slender majorities, but was rejected by the lords on the second reading, on the 8th of March. The House of Commons, nevertheless, passed another bill, conceding the desired relief to freemen alone; but the session closed before the lords could take it into consideration.

Mr. Grote made his annual motion for vote by ballot, and was out-voted by 315 to 198. It was noticeable that, although four cabinet ministers voted with Lord John Russell against Mr. Grote, yet Mr. Powlett Thompson, president of the board of trade, the two attorneys-general, the lord-advocate, Sir George Grey, colonial under-secretary, Sir Henry Parnell, treasurer of the ordnance, Mr. J. Parker, a lord of the treasury, and Mr. E. J. Stanley, the very *whipper-in* of the Whigs, absented themselves from the division; while Mr. Bernal, chairman of committees, Mr. Robert Steuart, a lord of the treasury, and Sir Hussey Vivian, master-general of the ordnance, voted for Mr. Grote against ministers. In consequence of this, and of other indications, rumours of ministerial discords and resignations became very current.

Mr. Slaney moved for leave to introduce a bill for the protection of voters, by making it a misdemeanour, with a summary process before magistrates, for any landlord, customer, master, or other person to interfere with the independent exercise of the elective franchise. The motion was carried in a thin house by a majority of more than two to one: and there the matter rested.

A bill was introduced by Mr. Warburton, and passed before the session closed, which had for

its object to extend to personal property the privilege hitherto confined to real property, of conferring a qualification for parliament. By this enactment an estate for life, or a term of years, of which thirteen shall be unexpired at the time of election, or personal estate and effects of any kind, within the United Kingdom, or the interest of dividends of such, may constitute the whole or part of the annual sum required to qualify a member. In the amount (£300 per annum) no alteration was made. The members for universities, and the eldest sons of peers, and of persons qualified to be knights of the shire, were, as matter of course, excluded from the scope of this statute.

The events which had taken place in Canada had drawn down severe criticism upon Lord Glenelg (formerly Mr. C. Grant), the colonial secretary. Sir W. Molesworth moved for an address to the queen, declaring that her majesty's present secretary for the colonies did not enjoy the confidence of the House of Commons or of the country, &c. Lord Palmerston said this was an attack, not upon Lord Glenelg alone, but upon the whole government. Lord Sandon moved as an amendment that an address should be presented to the queen, expressing the regret of the house at the treasonable movements in Canada, and their determination to support her in the suppression of the revolt, and the establishment of a sound constitution for those colonies; but representing also the opinion of the house that the present evil state of things in Canada was mainly owing to the want of foresight and energy, and to the ambiguous, dilatory, and irresolute course of her majesty's ministers. The debate occupied two nights; and, on a division, Lord Sandon's motion was negatived, but by a majority for ministers of only twenty-nine, the numbers being 316 to 287.

The anti-slavery agitation had not been set at rest by the abolition bill. Complaints were raised against the negro-apprenticeship system, and a cry was made for the immediate admission of the emancipated slaves into all the rights of free labourers. Public meetings and petitions were put very actively in operation. Lord Brougham opened the parliamentary discussion on the 29th of June, and before the session closed there was passed "An act to amend the act for the abolition of slavery," containing various provisions giving further protection to the negro-apprentices, and enforcing such regulations of the former act as had been disregarded by the planters.

There were very long and very warm debates on the Irish poor-law bill. Mr. O'Connell violently opposed the measure. He declared that he was opposed to the introduction of any poor laws whatsoever into Ireland. After various

said, in reference to the Irish temporalities bill, "In the discussion of the measure in parliament, I felt it my duty to rest my resistance to it on this point—to denounce as treachery, aggravated by perjury, such an exercise of rights acquired under an oath not to weaken or disturb the Protestant religion."

amendments, the bill, however, was carried through both houses. The Irish municipal corporations bill, having struggled with difficulty through the commons, was so altered in the lords, particularly by an amendment of Lord Lyndhurst's, that it came to a dead stop. The amendments were altered in the commons; a useless conference was held between the two houses; and finally the commons rejected their lordships' amendments. The Irish tithes commutation bill was finally carried during the session, but without the appropriation clause, which ministers had abandoned. In the course of the debates on this subject, Sir Robert Peel frankly acknowledged that he was quite ready to support a moderate reform of the established Anglican church in Ireland. Lord Brougham censured ministers for abandoning the appropriation clause, which, if properly carried into effect, might have greatly increased the means of popular education in Ireland.

In the course of a debate on the customary annual grant of £8928 to the Irish Catholic college of Maynooth, Lord Morpeth made the first allusion in parliament to the new Oxford school of divinity which we now denominate Puseyism. He said that these doctrines, which of late had become very fashionable at Oxford, had a strong savour of Romanism; and he read some extracts from a book which proceeded from that university, entitled the *Remains of the Rev. R. H. Froude*, and which certainly contained much that was adverse to Protestantism.

The policy of the government with respect to Spain was once more severely criticised. Colonel Evans, who had been recently appointed a knight commander of the Bath, was present in the house to vindicate his own conduct, and the conduct of his legion. He extenuated much that had been set down in malice, or carelessness, or sheer ignorance; but he could not disguise the facts that the expedition had been a calamitous failure, and that great and cruel wrong had been done to the brave people of the Biscayan provinces. Sir Henry Hardinge contended that Sir De Lacy Evans had by no means made out his case; and he proceeded to quote passages from various books and documents published by officers who had served in the legion, all tending to corroborate the prevailing opinion on the subject, and to show that the dreadful sufferings of that corps were of the most revolting nature, and that both the insubordination of the legion, as well as the punishments it provoked, were excessive.

In the upper house the quadruple treaty, and the constructions put upon it by ministers, were censured by the Duke of Wellington, Lord Brougham, the Earl of Aberdeen, and others. It was contended that that treaty did not oblige

us to blockade the coast of Spain as we had been doing. "Ministers," said the duke, "ought to explain what they mean by the obligations of the treaty." The premier, Lord Melbourne, was obliged to confess that it was in no respects a treaty of alliance offensive and defensive with the Queen of Spain against the rest of the world—that any power had a right to assist Don Carlos. But, he added, whether the exercise of such right would lead to a war was another question.

Ministers had conceived a prejudice against our volunteer yeomanry cavalry. This force had been reorganized in 1831, and at that period it consisted of 18,330 men; it was this year reduced by government by the amount of 4709 men. This step excited a good deal of dissatisfaction, more especially in the rural districts. Sir Robert Peel censured the reduction of this truly national and inexpensive force. He denied that the yeomanry would be useless in time of war. It was true they could not garrison towns. But was there no danger of collision with the people at such a period? One of the most valuable points in this force was, that so long as it continued in existence, there was a dormant spirit in being, which might at any moment be called into activity for the protection of property. On the one hand, the loyal enjoyed a consciousness of strength and security; on the other, there was a dread of force, which awed the turbulent into peace. With respect to the inconvenience of summoning the vicinage in aid of the civil power, he had heard it alleged with great surprise; for it was one of the Saxon principles of the British constitution to impose on the vicinage the maintenance of the public peace.

Lord John Russell spoke of promoting a far more efficient and constitutional force—a good militia; but he did nothing in this direction, and when the Whigs left office, little more remained of our old militia than a scarcely visible staff.

A bill was carried through both houses for the abolition of arrests for debts on mesne process. Mr. Serjeant Talfourd introduced a bill for extending the duration of copyrights to authors; but it met with no success. An international copyright bill was, however, passed during the session. It empowers her majesty in council to direct that the authors of books published abroad shall have a copyright here, provided there be a reciprocal protection in favour of this country, in the state in which such publications first make their appearance.

A bill was brought in by Lord Denman, the lord chief-justice of the Court of Queen's Bench, which aimed at a considerable alteration in the practice of administering oaths in courts of justice. It was divided into two parts, the first being framed with a view to declare and restore

the common law of England, which allows any person who offers to speak the truth, according to the form binding on his conscience, to be admitted as a witness. Such an enactment was

LORD DENMAN — From a portrait by E. U. Eddis

rendered necessary by reason of certain difficulties which existed in Ireland, in the case of Presbyterians, who are sworn after a form of their own, and whose testimony could not on that account, according to the construction put upon a certain Irish statute passed in 1783, on some occasions be received in a court of justice. The noble and learned lord said, that the second and more important part of his bill, which provided that persons believing an oath to be unlawful, should be permitted to make affirmation in lieu thereof, was founded on a similar principle with the first. If it were not fit to impose on a witness an oath in a form which he thought unlawful, or which he did not consider to be binding, it was equally wrong and impolitic to impose any at all upon an individual whose conscience would not permit him to be sworn. The best principle was, in the learned lord's opinion, to elicit the truth in the form the most binding upon the consciences of the witnesses, and he appealed to the example of the Quakers and Moravians, whose affirmation was found by experience to answer all the purposes of the most solemn oath. He then presented a petition from certain inhabitants of London, who, though neither Quakers nor Moravians, thought oaths opposed to their duties as Christians, and in some cases had suffered severe hardships in consequence of their conscientious scruples.

The House of Lords, however, was not prepared to sanction so sweeping an innovation as would be

implied in the entire abolition of the sanction of the oath; and after an endeavour upon the part of Lord Denman to modify his measure, with a view to diminish the prevailing objections, the bill was lost by a majority of thirty-two to sixteen.

The first clause of the bill was afterwards embodied in a separate statute, and passed the legislature in the course of the session. And the principle of the second clause was, by another act, extended to persons who *had been* Quakers or Moravians, though they might have since seceded from those sects.

Several complaints were made in the House of Lords during the session respecting the mode pursued by the lord-chancellor in the nomination of magistrates in England and Scotland. It was more than insinuated that the noble and learned lord had no other than political motives for many of his appointments, and considerable dissatisfaction was the result amongst the conservative lords-lieutenants of counties. Being attacked on this point by Lords Harewood and Warwick, the chancellor, Lord Cottenham, defended himself with great spirit. He said he fully approved of the old-established custom of the lord-chancellors consulting the lords-lieutenants with respect to appointments to the magistracy, but that he could not consent to be told that he was not to exercise his own discretion, or that he was to put the great seal to any list that might be forwarded to him. But his lordship could not disprove the fact that he had almost invariably preferred Whig to Tory magistrates—even as the Tories when in power had preferred men of their own party to Whigs.

The new poor laws again came under discussion in the House of Commons; but ministers would allow of no mitigation to their severity.

Lord John Russell moved the re-appointment of a committee on church lands. He estimated the net revenue of the Church of England at £3,439,767, and calculated that this income would admit of a considerable increase. He denied that he had any intention of subtracting from this fund for education of the people, or for any other lay purpose. Mr. Liddell observed, "that government had been driven on to this mischievous question, which would unsettle men's minds and properties, by the clamour of persons strongly their supporters, but little distinguished as friends of the church;" and he moved two sweeping amendments, the latter of which was lost only by a majority of eleven, the numbers being, *ayes* 254, *noes* 265. And here, for the present, the matter rested.

Reprobating any *compulsory* system, Lord Brougham addressed himself to the subject of an improved national, universal education, and moved two bills, by the provisions of which he hoped to remove the jealousies and antipathies

of the dissenters. One of the bills (both were conceived in a fair, impartial, enlightened spirit) was read a first time, but did not again come under the consideration of parliament during this session.

The appointment of Lord Durham, and that nobleman's conduct in Canada, had been very far indeed from giving universal satisfaction. Complaints were raised in parliament against the enormous expenses of his mission, and, in defending his lordship, ministers were well-nigh left in a minority. But the most terrible castigation inflicted on ministers and their nominee was inflicted in a single speech by Lord Brougham.

The minor proceedings in parliament, and an infinitude of debates, unattended by any important result, must be passed over in total silence.

On the 28th of June, the coronation of the young queen took place, amidst universal rejoicing. London had never witnessed so gay a sight, or seen so many approving happy faces. The country had half emptied itself into the capital; the multitude assembled all along the line of procession, from Buckingham Palace to Westminster Abbey, was countless; yet was there no disorder, no accidents; and, on that day, even the pickpockets seemed to have suspended their operations, for fewer offences than ordinary came within the cognizance of the police. Next to her majesty and the Duke of Wellington, the personage most cheered by the English people was the duke's old adversary, Marshal Soult, who had been sent over by Louis Philippe, as ambassador extraordinary, to attend the coronation.

About a month before the coronation, some astounding and almost incredible occurrences took place in the neighbourhood of Canterbury, where a madman had set himself up as a saint and prophet, and more. John Nicholls Thom, a respectable yeoman and maltster and corn-factor of Cornwall, had become deranged in his intellect. Some years ago he had abruptly left his home, and made his appearance in the county of Kent, under the style and title of Sir William Courtenay, Knight of Malta. He had a tall advantageous person, which he set off by a rich and unusual costume; his countenance was strikingly handsome; he had received a tolerable education, and his insanity and frenzy made him eloquent. He soon became famous among the men of Kent; the populace, attracted at first by his romantic appearance, flocked around him with enthusiasm, and even the superior classes of society furnished him occasionally with partizans. In the year 1833, he became a candidate for the representation of the city of Canterbury, and actually found plenty of people mad enough, or thoughtless enough to support him, for he polled 350 votes on the conservative interest. Shortly after this

he was convicted of perjury, and sentenced to six years' transportation. Thom re-appeared in Kent, in the spring of the present year (1838), where his conduct was far more extravagant than before; and the infatuation of the peasantry kept pace with it. To his political pretensions he now added others of a religious character; and his claims to a divine mission, and even to divine attributes, were implicitly recognized by some of the poor Kentish boors, so that he was acknowledged as another Messiah; and to the farm-labourers he made very inflammatory speeches, representing to them that they were oppressed by the laws in general, but more particularly by the new poor law. He told them that if they would place themselves under his command he would soon be king of Kent, and they should sit on his right hand on the day of his coronation. A farmer having had his men seduced from their employment, at this time made an application for their apprehension, and a constable of the name of Mears, assisted by two others, proceeded on Thursday morning (the 31st) to execute his mission. After a little parley, Courtenay inquired which was the constable, and on Mears replying that he was, he immediately produced a pistol, and shot him; after which he inflicted a wound upon him with a dagger, and then with the assistance of some of the excited labourers, he threw the body into a ditch. The two other constables rode hastily back to the magistrates, who deemed it expedient to send off to Canterbury for military aid. A party of soldiers soon arrived, accompanied by several magistrates. But by this time the whole body of rioters had retreated into the depths of Bossenden Wood, where the pseudo-prophet was shouting, and encouraging his followers to behave like men. On perceiving the soldiers coming up through the glades, he advanced to meet them, and deliberately shot the commanding officer, Lieutenant Bennett, of the 45th regiment, who was a few paces in advance of his party; whereupon the soldiers fired and killed his murderer. As Thom fell to the earth, he exclaimed—"I have Jesus in my heart!" In a few seconds ten lives were lost, and several of the rioters badly wounded. After the maniac had fallen, a woman was seen kneeling over him, washing his face, and endeavouring to pour water through his hard-closed lips. She said she had followed him with a pail of water, because he had told her, that if he fell, and she put water between his lips, he should arise again in a month. One of the prisoners told Major Armstrong, that they would have attacked 2000 soldiers, having been persuaded by the prophet that, while following him, they could not be shot. Some of his followers affirmed that they had seen the prophet shoot at a star in the heavens and hit it,

and that they had seen the star fall plump into the sea. He had told them that he had come to earth on a cloud, and that on a cloud he should some day be removed from them.

Dense must have been the cloud of ignorance which overhung these fair, rural districts, scarcely fifty miles from our capital, and barely four from Canterbury, the metropolis of the Anglican church! The delusion of those Kentish peasants was so great that for some time after the poor madman's death and burial, they expected to see him rise again and place himself at their head. Further tumults were apprehended, but none took place. The peasants retired quietly to their wonted labours, and soon began to wonder why they had quitted them. It is said, however, that even now, after the lapse of more than twenty years, a few enthusiasts make pilgrimage to the green sward in Herne-hill Churchyard which covers the mortal remains of their reputed saint.

A few years earlier the case might have been otherwise, but now judge and jury shrank from visiting the temporary insanity of the poor boors with condign punishment. Two were transported for life, one was transported for ten years, and six were sentenced to be imprisoned for one year with hard labour and one month's solitary confinement.

The great event of the year was the entire suppression of the unjustifiable, mad insurrection in Canada. The resolutions passed by the British parliament in reference to Canadian affairs during the preceding year brought matters to a crisis, and in Lower Canada the colonists broke out into open revolt. For the purpose of dispersing the insurgents and arresting their leaders, the government authorities sent Colonel Gore with a strong military force to the villages of St. Denis and St. Charles, both on the right bank of the Richelieu, where they were collected; but on arriving at St. Denis on the morning of the 23d of November, after a very fatiguing march of twelve hours, the colonel found the revolvers, to the number of 1500, advantageously posted in the village, with a large stone house strongly fortified at the entrance, and other formidable defences. He attacked them, but was met with such a stout resistance that he was compelled to retire, with a loss of sixteen men in killed and wounded, and a field-piece, the only cannon he had brought along with him. Two days after, Lieutenant-colonel Wetherell attacked St. Charles, only seven miles distant from St. Denis, and succeeded in burning the village, and putting its defenders to the rout; upon which, the successful rebels at St. Denis abandoned their position, and fled with their compatriots into the United States, leaving their bravest leader, Wolfred Nelson, a prisoner. These successes enabled Sir John Colborne, the

British commander-in-chief, to march his whole disposable force against the county of the Two Mountains, on the north of the Ottawa, where the disaffection had commenced, and was in greatest force and violence. On the 14th of December he reached the fortified village of St. Eustache, on the left bank of the Ottawa, upon which the greater part of the rebels fled; but 400 fortified themselves in the church and adjoining buildings, and defended them against the whole British force, until both church and village were set on fire, when they retreated, after losing more than half their number in killed, wounded, and prisoners. Awed by this defeat, the rebellious *habitans* of that district made an unconditional surrender, and were allowed to escape unpunished, notwithstanding the injuries they had inflicted upon the British residents. Of the chief leaders of this unfortunate outbreak, four were killed, eight were taken, and nine escaped, among whom were Mr. Papineau, the principal author of the mischief, who fled to New York as soon as hostilities commenced.

This rising in Lower Canada had been the signal of revolt in the upper province, where the discontented were summoned to action by a manifesto in which the wildest proclamations of the old Puritans of England were outdone. It told the Canadians that they had been hood winked by Baal's ministers, and tampered with by wolves in sheep's clothing; and it summoned them in the name of the Lord of hosts to buckle on their armour, and go forth to make the crooked paths straight, and the rough places plain. Instead of suppressing this rebellion at the outset, the dangerous plan of Sir Francis Head, the governor, was, to allow it to gather to a height and then crush it; and for this purpose, he had cleared the province both of soldiers and warlike munitions, thereby inviting the enemy's approach. They fell into the trap, and on the 4th of December (1837) Toronto was suddenly invested by a body of armed rebels, numbering, as was supposed, about 3000, commanded by M'Kenzie, the editor of a republican newspaper, Van Egmont, a Bonaparte officer, Gibson, a land-surveyor, Louut, a blacksmith, and others of a similar stamp. But the militia were speedily assembled, the townhall put in a state of defence, and the rebels attacked with such spirit, that they were effectually routed and dispersed.

By these vigorous proceedings the rebellion would have been conclusively extinguished both in Upper and Lower Canada, had not the embers been fanned and kept alive by the "sympathizers" of the United States. M'Kenzie, Papineau, and their associates, who had taken shelter in New York, could find recruits in abundance among the Americans; and on the 13th of De-

ember, several hundreds of their citizens, under the command of a certain Mr. Van Rensselaer, took possession of the small wooded island called Navy Island,¹ in the Niagara river, about three miles above the falls, and within the territory of Canada, where they proceeded to fortify themselves, and open their fire upon the Canadian shore, which was only 600 yards distant. As the communication of this hostile garrison with the mainland was kept up by a small steamer, called the *Caroline*, Colonel M'Nab, who was appointed to keep watch upon Navy Island, resolved to capture or destroy the vessel; and for this purpose sent a party of militia in boats, who boarded the *Caroline* after a desperate struggle, set it on fire, and sent it in flames down the river, to be extinguished in the mighty waterfall. Soon after, Navy Island itself was invested, and the garrison, instead of resisting, hastily and silently decamped on the 14th of January (1838). Thus dislodged from their stronghold, the American sympathizers and Canadian patriots attempted a border warfare, and made incursions across the boundary at various points; but wherever they tried to establish a footing they were dislodged, and as often as they attempted an open fight they were defeated. It was a petty, but most annoying warfare, commenced on the part of the Americans not only without cause, but without formal proclamation; and although their own government endeavoured to suppress these outrages, and sent troops to the frontier for the purpose, these free-born citizens laughed at the prohibitions of their rulers, and continued to carry on this war of brigandage by their own sovereign and irresponsible authority.

While matters were in this state in Canada the ministry at home were not satisfied with Sir Francis Head, who resigned, and was succeeded by Sir George Arthur till the arrival of Lord Durham. When Lord Durham arrived in Canada with his great powers, his object was not to punish but to conciliate these revolutionists. His lordship landed at Quebec on the 29th of May, and expressed himself highly gratified "with the more than friendly feeling which seemed to animate the assembled multitude." Like Sir Francis Head and other governors, Lord Durham received contradictory instructions from Lord Glenelg and the colonial office. On the 28th of June his lordship appointed a special Canadian council, which consisted of only five members—namely, Vice-admiral Sir Charles Paget, Major-general Sir James Macdonnell, Colonel Couper, the governor's military secretary and principal aide-de-camp; Colonel Grey, and Mr. Charles Buller. This council thought fit to take proceedings against a few of the most notorious of

the rebels. They issued an "ordinance" importing that Wolfred Nelson and seven others therein named, had acknowledged their participation in high treason, and submitted themselves

LORD DURHAM — From a portrait by Sir T. Lawrence

to her majesty's pleasure; and that Papineau, with fifteen others also named, had absconded; and that it was enacted, that it should be lawful for her majesty to transport Nelson and his seven associates to Bermuda during pleasure, there to be subjected to such restraints as should be deemed fit; and further, that if any persons of either of the above parties were found at large, or within the province without permission, they should be deemed guilty of high treason, and, on conviction of being so found at large, or coming within the province, should suffer death. The ordinance further empowered the governor for the time being, to grant, whenever he should think fit, permission to all or any of the above-named individuals to return to the province and reside therein. By a special clause, two other classes of persons, respectively implicated in the murders of Lieutenant Weir and of one Joseph Chartrand, were excluded from the operation of the ordinance, and also from the benefit of any amnesty which might hereafter be proclaimed.

The ordinance was accompanied by a proclamation of amnesty, which declared that, with the exception of the persons named therein, and whose cases were thereby provided for, all persons then in custody and charged with high treason, or other offences of a treasonable nature, or who had withdrawn themselves from justice beyond the limits of the province, should, on giving proper security, be at liberty to return to

¹ See plan, vol. III p. 332

their homes. It also announced that no further proceedings would be taken against any persons, with the above exceptions, on account of political offences theretofore committed.

The gazette which communicated these instruments to the public contained also the following notification:—"We are authorized to state that his excellency the governor-general is actively engaged in the preparation of measures, which will, as soon as it may be possible, be embodied in ordinances of the governor and special council, relative to a jury law, a bankrupt law, municipal institutions for the whole province, general education, the establishment of registry offices, and the equitable commutation of feudal tenures." The exception in point of law was immediately seized upon at home, and objections of a more popular and general nature were raised in parliament, in the country, and by the newspaper press. All this led to Lord Durham's entire overthrow.

Meanwhile the prisoners excepted from the amnesty were deported to Bermuda. Sir Stephen Chapman, the governor of the Bermudas, was at once struck with his own want of legal authority in the matter; and the law-officers of the crown in that colony assured him that he had no power to impose, nor legal means to enforce, any restrictions upon the said prisoners with a view to their detention or otherwise. With this opinion before him, Sir Stephen at first doubted whether it would be expedient to allow the prisoners to be even landed on the island. He, however, resolved to receive them, and was content to exact from them their parole of honour, that, during their residence in the Bermudas, they would confine themselves within such limits as might from time to time be prescribed by the authorities. But Sir Stephen wrote to implore Lord Durham to remove these troublesome *detenus* as soon as possible, and not to send him any more.

The main attack upon Lord Durham was opened in the House of Lords by Lord Brougham, on the 30th of July. His lordship showed how utterly the Canadian ordinance was at variance with the law. No power, he contended, to inflict pains and penalties upon individuals who had not been brought to trial was conferred upon Lord Durham. General laws for the good government of the colony he might make, but subject to an exception which restrained him from altering any act of the British parliament. Now the ordinance in question contravened the provisions of the Act 7 Wm. III., "For the trial of treasonable offences." If Lord Durham had the power of dispensing with that act, he might condemn, in every case, as traitors, men against whom no witness had been examined, and into whose alleged offences no inquiry had been made.

Lord Glenelg observed that Lord Durham had been placed in a situation of extreme difficulty. On one side were parties calling for extreme punishments—on the other there was a demand for a complete amnesty. Lord Durham adopted a middle course; and when his decision was announced it gave general satisfaction throughout the colony.

Lord Brougham replied, that whatever the noble earl was desirous of doing in this respect might have been accomplished without a breach of the law. If he had said to parties accused or suspected, "I won't bring you to trial if you conduct yourselves properly," he would have effected his object in a legal manner. But instead of doing this, he said, "I shall send you to Bermuda, and if you leave that island I declare you guilty of high treason."

Lord Melbourne, after adverting to the very extraordinary circumstances of the country which Lord Durham was called upon to govern, said it was not fair to the steps they had already taken, or just to the interests of this great empire, to dwell with such rigid criticism upon the first anomaly which might appear upon the face of these measures, or to lay stress upon every disparity which might exist between the practice in Canada and in this country. If the house considered that the powers intrusted to Lord Durham had been imprudently or unjustly exercised, it behoved them unquestionably to interfere. But if they did not see ground for such interference, then, said the noble lord, there is but one other course—to exercise some confidence, to place some reliance, instead of constantly interrupting proceedings by perpetual comments on them, and weakening your own authority by condemnations which it is not intended to follow up. All governments, continued Lord Melbourne, had their faults and their errors, their *ingenita vitia*; and, in consequence of party spite, of political attacks one upon another, of personal dislikes and animosities, the enemies of the country, whether foreign or domestic, have always found their greatest assistance and encouragement in the bosom of the legislative assemblies of this country. His lordship gave up all that part of the ordinance which related to Bermuda, as illegal; but he contended that the rest was perfectly legal and warranted by the powers which parliament had conferred on Lord Durham.

Lord Brougham brought in a bill "To make temporary provisions for the government of Lower Canada," and for indemnifying those who had acted under the ordinance. This bill in the end became in fact a bill of indemnity. The entire ordinance was annulled; and those who had been sent to the Bermudas were set at liberty, and allowed to return to Canada, without suffer-

ing any further penalty, without giving any further security for their good behaviour.

The pride of Lord Durham was wounded, was cut to the quick. Conceiving that ministers had not supported him as they ought to have done, his lordship—without having been recalled, without having obtained leave to return, without so much as giving notice that he would return—hurried down to Quebec, and there embarked for

England in the month of November. And for this precipitate conduct some there were who thought that Lord Durham was amenable to impeachment. The only way in which government resented his unprecedented step was to order that the usual salute with which the governors of colonies were welcomed at their return, should not be fired at his landing. He in consequence made his wife resign her place in the queen's household.

CHAPTER VII.—CIVIL AND MILITARY HISTORY.—A.D. 1838—1841.

VICTORIA.

Radicalism succeeded by chartism—Origin and causes of chartism—Chartist meetings—Meeting on Kersal Moor—Inflammatory harangue of the principal speaker—Weakness and unpopularity of the ministry—Opening of parliament—The queen's speech—Canada affairs—Duke of Wellington's opinion of them—Lord Melbourne's statement on the corn laws—Lord Brougham's declarations on the Afghan war—Assassination of the Earl of Norbury—Motions on Irish affairs—Discontent of the Jamaica planters—Mr. Labouchere's bill for Jamaica—It is opposed by Sir Robert Peel—Sir Robert's apology for the discontented of Jamaica—His dissuasion of violent measures—Parliamentary discussion of the Jamaica bill—It is lost by a small minority—The Melbourne cabinet resigns—Sir Robert Peel commissioned to form a new ministry—His failure—His explanation of the causes—Ministerial plan of national education proposed—Its unpopularity with churchmen and dissenters—Royal message on the affairs of Canada—A new Jamaica bill passed—Portuguese slave-trade—Statements in parliament regarding it—Bill for its suppression rejected—Lord Brougham's proposal for a new bill agreed to—It is produced and passed—Motion for vote by ballot rejected—Establishment of the uniform penny postage—Parliament prorogued—Changes in the cabinet—Chartist insurrection in Monmouth—Attack of the chartists on Newport—They are defeated—Troubles in Afghanistan and China—The queen's marriage—Provision for Prince Albert decreed by parliament—Motion for a vote of want of confidence in ministers—Statement of their injudicious policy—The motion defeated by a small majority—Other parliamentary proceedings—Parliament prorogued.

NEW political element, under the name of Chartism, was now to enter upon the scene. Great as were the concessions of the reform bill to the popular demands, they had not satisfied the general craving; and those who are, in modern phrase, termed the "masses," and who numerically constitute the bulk of the nation, felt as if their wants and their claims had been overlooked. They alleged that the suffrage had not been sufficiently extended, the durations of parliament shortened, the voters protected from the pressure of undue influence, and their representatives placed under proper control. The reform was not a radical one, and could not be such, unless there were annual parliaments, universal suffrage, vote by ballot, and dutiful representatives, who should be paid a daily wage like themselves, and be the implicit mouth-pieces of their constituents; and without such parliaments, they declared it impossible that the will of the nation could be sufficiently expressed, or its collective interests promoted. These views, also, were not confined to one particular class, but comprised the disap-

pointed and discontented of all ranks and parties, who found at least some one point in the people's charter upon which to take their stand. Thus, besides comprising the old radical reformers, who felt that their progress had been arrested mid-way, there were Tory chartists in abundance who hated the new poor law, with its work-houses, its stinted diet, and separation of parents and children, and who were opposed to a repeal of the corn laws, which they regarded as the best check upon the despotism of the mill-owners, and the preponderance of the manufacturing over the agricultural interests. The same ranks comprised indifferently the men who thought that the reform had gone too far and that it had not gone far enough. To these might be added the destitute peasantry by the thousand, who felt that, be the government what it might, they were still in starvation, and still consigned to neglect; and factory operatives, and the miners of our collieries, who squandered their weekly wages by the week, and had nothing in reserve when an evil day arrived. Such was the spirit which had been gathering and growing among the people since the passing of the reform bill,

but which, not until the present year (1838), was publicly recognized under the name of Chartism.

It was in autumn that this spirit began to display itself among the working classes of the manufacturing districts. The great political evil which they felt was starvation, and they had been taught that this could only be removed by universal suffrage and the other four points of the "people's charter," which was now drawn up and put in circulation. Their favourite form of meeting was in the open air, and at night by torchlight, by which such an aspect of mystery was imparted to the occasion as allured the weak and daunted the apprehensive. The doctrines usually propounded at their meetings can be best understood from a specimen of those held forth at a monster meeting which took place at Kersal Moor, near Manchester, where the numbers assembled did not fall short of 200,000. Mr. Fielden, the member for Oldham, was called to the chair, while the principal speaker was Mr. Stephens, a dissenting clergyman. "The principle of the people's charter," said this reverend orator, "was the right of every man that breathed God's free air, or trod God's free earth, to have his home and his hearth, and to have happiness to himself, his wife, and his children, as securely guaranteed to him as they are to every other man whom the Almighty has created. The question of universal suffrage," he added, "was after all a *knife and fork* question. If any man asked him what he meant by universal suffrage, he would tell him, he meant to say that every working man in the land had a right to have a good coat and hat, a good roof over his head, a good dinner upon his table, no more work than would keep him in health, and as much wages as would keep him in plenty, and the enjoyment of those pleasures of life which a reasonable man could desire." Whatever might be thought of these principles in the abstract, there could be no doubt of the interpretation they would receive from a fierce, lawless, and hungry mob. And the hearers were not left in ignorance of the manner in which such doctrines should be enforced. "I am speaking," he continued, "to hundreds of thousands, three out of four of whom have, in all likelihood, left their arms at home to-day. And why have they left them at home? Because you were afraid to bring them. [Here the speaker was interrupted by cries of "No."] No! why then have you left them behind you? Why? because the borough-reeve and constables of Manchester have declared that they repose the fullest confidence in the peaceable and loyal character of the people. If they had not made that declaration, I should have come myself armed to this meeting; I should have brought 10,000 armed men with me;

I should have moved, had there been a necessity for it, an adjournment of this meeting for a month, and I should have exhorted every man in the country capable of bearing arms, to flock to his standard, and under it, to fight the battles of the constitution."

Such belligerent sentiments as these, when uttered by a minister of religion, were not likely to be modified by secular orators; and accordingly at the various meetings, which became more numerous during the following year, the people came to the rendezvous armed with muskets, stakes, and bludgeons, ready alike to resist the royal troops should they assail them, or to become themselves the assailants, and establish their doctrines by physical force, if such should be thought necessary by their leaders and advisers. Musters for military discipline were frequent, in which the workmen at night were divided into parties, each under the command of a captain, put through the regular evolutions, and informed that all this marching and counter-marching was designed for something very different from mere amusement and empty parade. Warlike tracts and broadsheets were also sent forth upon the art of street warfare in towns, in which it was shown how a mob armed with pikes, and standing shoulder to shoulder, would be an equal match for the regular infantry, and able to drive any amount of cavalry before them. The general impression among them was, that forbearance and petition were useless, that government had conceded its utmost and would grant nothing further, and that the "five points of the charter" must be established, not in a faithless House of Commons, but on the field of battle, and through the death-struggle of a civil war. And besides these demonstrations by which the insubordination and violence of the former radicalisms were outdone, a new mode of annoyance was devised by these chartists, either to show their contempt of religion or hostility to the Established church: this was, to march in large bodies, and with an air of military bravado, to the parish church, and take possession of the pews, to the exclusion of the regular congregation, while in several cases they previously announced their purpose to the clergyman, and intimated to him the text from which it was their will that he should preach to them.

While this formidable appearance of chartism at the beginning of the year 1839 was enough to perplex the ministry, another subject of trouble was the combination of the manufacturing interest against the corn laws, and the great struggle upon the subject which was evidently at hand. Having failed also to secure the confidence of the adverse party, and lost that of their own, the shifts to which the ministers had re-

course in their unpopularity only made their cause more unpopular, and their tenure of office more precarious. They endeavoured to identify the youthful sovereign with their cause; and it was noticed with general reprobation, that the premier was incessant in his attendance upon the queen, and had all but established himself as a regular inmate of the royal dwelling. Another unfortunate step by which the ministry endeavoured to strengthen themselves, was their close alliance with O'Connell; for although this union secured for them the support of the Irish representation, the agitator and his party were so unpopular both in England and Scotland, that the price for such uncertain support was too great for the sacrifice, as they thereby lost the confidence of the Protestant community. It was by these Irish members that the ministerial majorities had for some time been effected, and such a circumstance could not fail to wound alike the national and religious spirit of England and Scotland. Chartist insurrections, corn-law agitations, and Protestant jealousies, were now the predominant subjects of popular feeling, as well as parliamentary debate, and they continued to pervade the course of public events until time, conciliation, and new interests had produced their usual effects. For the present, however, the Whig government was weak and tottering, and the public tranquillity interrupted.

Such was the state of government and the nation at large when the parliament met on the 6th of February, 1839, and was opened by the queen in person. After announcing our relationships with foreign countries, and the prospect of peace which continued uninterrupted, our troubles in North America were thus alluded to: "I have to acquaint you, with deep concern, that the province of Lower Canada has again been disturbed by insurrection, and that hostile incursions have been made into Upper Canada by certain lawless inhabitants of the United States of North America.

"These violations of the public peace have been promptly suppressed by the valour of my troops, and the loyalty of my Canadian subjects.

"The president of the United States has called upon the citizens of the Union, to abstain from proceedings so incompatible with the friendly relations which subsist between Great Britain and the United States."

In advertising to the more imminent but more delicate subject of our internal troubles, the speech thus touched upon them: "I have observed with pain the persevering efforts which have been made in some parts of the country, to excite my subjects to disobedience and resistance to the law, and to recommend dangerous and illegal practices. For the counteraction of all

such designs, I depend upon the efficacy of the law, which it will be my duty to enforce upon the good sense and right disposition of my people, upon their attachment to the principles of justice, and their abhorrence of violence and disorder."

Before the commencement of the debate upon the address in the House of Lords, and even before the speech had been read, Lord Durham asked the premier when he intended to lay upon the table that information respecting the affairs of Canada which was referred to in her majesty's speech. Lord Melbourne replied that it would be produced as soon as ministers had an opportunity of examining its contents. This intimation of delay, however short, gave great dissatisfaction to Lord Durham; and means were presently found for printing and publishing his famous "report," which was given in its original state, unmutated by official caution.

In the debate on the address, the Duke of Wellington said that, although hundreds after hundreds of the persons who assailed the loyal portion of the Canadian population had been captured, so ineffectual seemed the laws, that there had been no punishment, and no abatement put to the outrages. "Unless vigorous steps are speedily taken," said his grace, "you will find your province of Upper Canada treated much as Texas has been!" He entreated government to consider this as a great national war; to remember that it involved the highest national interests; to remember that it behoved them to proceed on a large scale of action if they desired to bring it to a safe and satisfactory conclusion. Without entertaining any doubt of the intentions of the president of the United States, his grace could not but feel regret when he saw American citizens coming armed into our territories, armed, too, with cannon belonging to the United States; nor could he avoid feeling astonishment when he was assured that it was out of the power of the American government to prevent such transactions.

The corn laws were prematurely forced into debate. Lord Melbourne stated that these laws had been, ever since the formation of the present government, an entirely open question, a question on which the members of the administration had formed distinct opinions. "Unquestionably," said he, "the majority of these gentlemen are favourable to a change in the present system; but I am not willing to go into any debate on the corn laws now; I strongly wish to avoid it; but I have no reluctance to state my individual opinion on the subject: that opinion is, that though I am not prepared to pledge or bind myself to the maintenance of the present system as the best possible, I am not, at the same time,

prepared, either as a member of parliament or as a member of the government, to pledge myself, from any information which I have, to an alteration of the law as it stands."

In the preceding year, which had witnessed insurrection and civil war in Canada, an Anglo-Indian army had been marched into the country of the Afghans, and a struggle had been commenced with the Chinese. Lord Brougham, having some anticipations of the manner in which the Afghanistan war would terminate, called the attention of parliament to the extensive operations of this war. His lordship said that because the King of Persia had done something that our East India statesmen did not like, they must, forsooth, march an army to dethrone the King of Cabool. "Of these Afghan kings he would say nothing. It would not be possible to say much good of any of them. But what kind of man were we now about to set up? A pretender—a mendicant pensioner on our charity—a man twice dethroned because he was hateful to his people in Cabool! The only reason for preferring him to Dost Mohammed, now on the throne, was, that the one was the legitimate and the other only the popular sovereign, whom the people preferred. Very different was our policy on this side of the Cape of Good Hope, where men recognized particular sovereigns because they happened to be the choice of the people, while they countenanced the rejection of others, who, possessing a legitimate character, were expelled by their subjects. Our empire in India was founded on opinion. He hoped sincerely that this opinion would not now be weakened by its being found that we had marched six hundred miles to the north-west of India on a speculation of dethroning one king and putting another in his room."

In the month of February a great number of petitions began to appear, in either house, against the continuance of the corn laws. Lord Brougham moved that they should "be referred to a committee of the whole house, and that evidence be heard at the bar." The motion was opposed by Lord Melbourne and the Duke of Wellington, and was negatived without a division. A similar motion was made in the House of Commons by Mr. Villiers, but this was rejected by a large majority. Several members of the government voted with Mr. Villiers on this question.

An event had occurred on the first day of this year, which compelled the attention of parliament to the troubled condition of Ireland. The Earl of Norbury, while walking with his steward in the shrubbery near his own house at Kilbeggan, in the county of Meath, suddenly fell down, mortally wounded by a shot that was fired by some assassin from behind a hedge. This ami-

able nobleman had not only kept aloof from the political questions of the day, but was distinguished by his acts of kindness and charity to persons of every creed and party; and notwithstanding the most active search, and large rewards offered by government for the apprehension of the murderer, the culprit and the cause of the crime remained equally undetected. A deed so foul and so audacious could not be passed over in silence in parliament. Lord Roden moved for a committee on the state of Ireland. He was supported by the Duke of Wellington and by Lord Brougham, and opposed by Lord Melbourne and Lord Plunkett. Upon a division there appeared for Lord Roden's motion sixty-three, and against it fifty-eight; ministers were thus outvoted by five. This proceeding in the House of Lords gave them singular dissatisfaction. On the very next day Lord John Russell rose in the commons and announced his intention of taking the opinion of that house on the government of Ireland in late years. This subject, together with the Irish municipal corporations bill, &c., occupied the house for a very long time. In the course of the debates Mr. O'Connell, and most of his tail, disclaimed the duty of obedience to ministers, and were exceedingly personal and intemperate.

The interference of the legislature on the subject of West Indian slavery had irritated the minds of the legislative assemblies in several of our West Indian colonies. In Jamaica the planters had become almost as mutinous as the Lower Canadians. The governor, Sir Lionel Smith, had been compelled to prorogue that assembly, who had declared that the parliament of Great Britain had violated their inherent rights, &c. A ministerial bill to suspend the existing constitution of Jamaica for five years was intrusted to the hands of Mr. Labouchere, and was now brought into the House of Commons as a specific for the cure of Jamaica insubordination. This brought matters to a crisis. The increase of unpopularity to the Whig ministry was incalculably great. Sir Robert Peel could put his foot upon this tyrannical bill, and stand out as the champion of liberty against Whiggish despotism. Sir Robert admitted that the conduct of the Jamaica assembly was open to censure, but, in his opinion, a far greater amount of blame was attaching to the course which had been taken by the ministry. It was impossible not to be aware of the serious consequences involved in the mode of proceeding now projected by ministers. It was proposed to suspend in a free colony the popular form of government which had existed for 200 years, and after a short interval of abeyance to revive it again. But was this so very easy of accomplishment? In a country, moreover, which

had always been accustomed to impose its own taxation, it was in contemplation to vest in a governor and council, with three commissioners appointed by the crown, the authority of levying taxes to the amount of £500,000 of money; and this at the same time that Lord Durham, in his report on Canada, recommended them to make the executive officers responsible to the control, not of the crown or home government, but of the popular colonial assembly. Another matter for grave consideration was, whether by exhibiting the emancipation of the negro as incompatible with a representative form of government, those who were desirous of the complete abolition of slavery were not deterring the slave-holding portion of the United States from the adoption of their experiment. This was, moreover, a measure calculated, in no slight degree, to alarm other colonies that were in the enjoyment of a similar form of government. Many important considerations, said the right honourable baronet, called upon them to consider most maturely whether no other alternative could be adopted than the abolition of the constitution. The insolent language used by the assembly had been pleaded in justification of those proceedings; but could there be a more dangerous ground for legislation than the intemperate demeanour of a popular assembly? No popular government could be maintained for an hour if that ground were held to be justifiable. The assembly of Jamaica had possibly no inconsiderable grounds for provocation. When it was proposed last year to abolish the remaining term of negro apprenticeship, ministers very justly met the demand with a refusal, alleging that the national faith was pledged to the maintenance of the bill, or rather it was pledged to the full term of service, and that, independently of this consideration, it was better for it to continue till its proper expiration. This was right. But what did the house think of the governor of Jamaica holding language to the assembly, to the effect that though parliament had refused to curtail the apprenticeship, they ought, nevertheless to terminate it of themselves? When they found the executive authority combining with, perhaps he ought not to say physical force, but with the influence of numbers, no option was left them but to do that which the government at home refused to sanction, and abolish the apprenticeship. The colonial assembly was then entitled to some little indulgence.

On the 23d of April, Sir Robert Peel stated that he would allow Mr. Labouchere's bill to be read *pro forma*. Counsel could then be heard at the bar against the measure. Counsel were then heard, as, indeed, was the case on almost every stage of this bill, and the one which was after-

wards substituted for it. On the 3d of May, in opening the debate upon the question that the speaker do now leave the chair, Sir Robert Peel could not help expressing his disappointment that it had not been found practicable to come to some arrangement with regard to the government of Jamaica, without any party conflict, or even any serious division of opinion on the course to be pursued. He had looked in vain for any message delivered to the house lamenting the necessity, while it recommended the measure of suspending the functions of the representative assembly of Jamaica. The temporary abrogation of a popular form of government in Canada in the preceding year was by no means a precedent to be followed, lest it might seem to be a practice of the parliament to suspend a popular constitution every session. Up to this very hour, said the right honourable baronet, the colonists were entirely unaware of the heavy penalty about to be inflicted on them; they were without any intimation of these heavy accusations, and a most careful examination of all the papers bearing on the subject, enabled him to declare his most sincere opinion that there was no vindication in justice or in equity for the method upon which they were on the point of entering. "There are," said Mr. Canning in 1824, "three possible modes in which parliament might deal with the people of Jamaica. By the application of direct force we might crush them with a finger; we might harass them with fiscal regulations, restraining their navigation; or we might pursue the slow and steady course of authoritative admonition. Now, I am for trying first that which I have last mentioned. I trust we shall never be driven to the second; and, with respect to the first, I will only now say, that no feeling of wounded pride, no motive of questionable expediency, nothing short of real and demonstrable necessity, shall induce me to moot the awful question of the transcendental power of parliament over every dependency of the British crown. That transcendental power is an arcanum of the empire which ought to be kept back within the penetralia of the constitution. It exists, but it should be veiled. It should not be produced in cases of petty refractoriness or temporary misconduct, nor, indeed, on any occasion short of the utmost extremity of the state." Adopting the sentiments of that great statesman, he was not prepared to admit that the necessity had arrived for bringing the transcendental power from the penetralia of the temple; and only wished the house would be made to perceive the probable consequences of the double precedent now about to be set up, and the general uneasiness that would be caused in other colonies, with half the force of his own deep conviction.

Sir Robert severely criticised every part of the bill. The adjournment of the debate was moved by Mr. M'Lean, who opened the discussion on the Monday following, maintaining that in this measure, as in Mr. Fox's India bill under Geo. III., the real object of the Whigs was to lay hands on the colonial power and patronage. Mr. Grote declared he was unable to discern in this bill any prospect of benefit to the blacks, while it betrayed many tokens of severity towards the white population. Mr. Goulburn observed that none of its supporters had defended the bill upon the grounds on which it had been introduced. They all maintained that it was not possible for a body who had been accustomed to rule over slaves to make the laws necessary for those persons who had been emancipated. Gentlemen in that house were called upon to support this bill on the grounds that it favoured the interests of humanity—a delusive expectation; for it is well known that in the United States emancipation had been combated with redoubled acrimony since this country had given freedom to the slaves in her colonial possessions. Was it, indeed, to be hoped, continued Mr. Goulburn, that Virginia, Carolina, or Maryland, could ever be brought to liberate their blacks, when the people of those countries were given to understand by the British parliament that emancipation was not possible without the abolition of existing free institutions—that emancipation and constitutional government could not go together? Lord Stanley called this one of the most arbitrary measures that had ever been presented to a British House of Commons. Lord John Russell closed the debate with a declamation against some former adherents who were about to desert him. The house then divided, when there appeared, against the bill 289, and for it only 294. Upon this majority of five, the Melbourne cabinet sent in their resignation.

A week was allowed for the formation of a new cabinet. On the 13th of May, after the lapse of those seven days, Sir Robert Peel proceeded to detail all the facts necessary for the explanation of his failure in forming it. At the queen's desire, he had waited upon her so soon as Lord Melbourne had resigned. Her majesty had already invited the Duke of Wellington to assist her in the formation of a government, and the duke had advised her majesty to send for him (Sir Robert) as the person best qualified to undertake the duties of prime minister. He had accordingly waited upon her majesty; and it was not until the following day that any difficulty or misconception arose to lead to his relinquishing his attempt to form a new administration. That difficulty related exclusively to the portion of the royal household which is filled by the ladies in

her majesty's service. With reference to all the subordinate appointments below the rank of a lady of the bed-chamber, he should propose no change to her majesty; and, with respect to the superior class, he took it for granted they would relieve him from any difficulty by at once relinquishing their offices. At the same time he thought it of great importance, as an indication of her majesty's confidence, that certain offices in the household of the higher rank, if not voluntarily relinquished by the ladies holding them, should be subject to some change, although in several instances the absence of all political feeling might render any such change unnecessary. But to this proposal he had received by letter her majesty's reply in the negative.

Upon receipt of this letter, he (Sir Robert) had written a long letter to the queen, explaining why he considered it indispensably necessary that he should have that public proof of her majesty's entire support and confidence, which would be afforded by the permission to make some changes in that part of the household which her majesty had resolved on maintaining entirely without change. "Could I," continued Sir Robert, "look around me at this stormy time, and not see that it was my absolute duty to this country, and above all to her majesty, to require that every aid that could be given me should be given? What were the questions which would immediately press for my decision? The state of India—the state of Jamaica—the state of Canada—would all require my immediate consideration. I also considered the internal state of this country; I looked at the chartists—I saw insurrection in our provinces—I saw the letter of the noble lord opposite (Lord John Russell), inviting the respectable part of the population to form themselves into armed societies for resisting outrage. Surely in addition to the ordinary difficulties besetting the course of a prime minister, there are circumstances that render that position at the present moment peculiarly onerous and arduous. I should have had to begin the government in a minority. Who can conceal from himself that my difficulties were not Canada; that my difficulties were not Jamaica; *but my difficulties were Ireland*—(ironical cheers). I admit it fully, and thank you for the confirmation of my argument, which those cheers afford. And what is the fact? I, undertaking to be a minister of the crown, and wishing to carry on public affairs through the intervention of the present House of Commons, in order that I might exempt the country from the agitation and possibly the peril of a dissolution—I, upon that very question of Ireland, should have begun in a minority of upwards of twenty members. A majority of twenty-two had decided in favour of the policy

of the Irish government. The chief members of the Irish government, whose policy was so approved of, were the Marquis of Normanby and the noble lord opposite, the member for Yorkshire (Lord Morpeth). By whom are the two chief offices in the household at this moment held? By the sister of Lord Morpeth and the wife of Lord Normanby.

"But the question is, Would it be considered by the public that a minister had the confidence of the crown, when the relatives of his immediate political opponents held the highest offices about the person of the sovereign? My impression decidedly was that I should not appear to the country to be in possession of that confidence, and that impression I could not overcome; and upon that impression I resolved to act. Who were my political opponents? Why, of the two I have named, one, the Marquis of Normanby, was publicly stated to be a candidate for the very same office which it was proposed I should fill, namely, the office of prime minister. The other noble lord (Lord Morpeth) has been designated as the leader of this house; and I know not why his talents might not justify his appointment in case of the retirement of his predecessor. Is it possible—I ask you to go back to other times; take Pitt or Fox, or any other minister of this proud country, and answer for yourselves this question—is it fitting that one man shall be the minister, responsible for the most arduous charge that can fall to the lot of man; and that the wife of the other—that other his most formidable political enemy—shall, with his express consent, hold office in immediate attendance on the sovereign? Oh, no! I felt it was impossible—I could not consent to this."

Lord Melbourne's cabinet was, therefore, restored; but it was weakened and without prestige. On the 27th of May, as soon as the ministry had been reconstructed, the house met for the election of a new speaker in the room of Mr. Abercromby, who had three weeks previously declared his intention of resigning, having no longer sufficient strength to perform the arduous duties imposed on him by the office. He had on that occasion received through Sir Robert Peel and Lord John Russell the highest testimonies as to the esteem in which he was held by the two great parties, not only for his conduct in the chair, but also for his strenuous exertions to improve the mode of conducting the private business of the house. This worthy son of the brave, good, and morally great General Sir Ralph Abercromby, had since been called to the House of Peers by the title of Lord Dunfermline.

Mr. Shaw Lefevre, member for North Hants, was proposed for the vacant chair by the ministerialists, and Mr. Goulburn, member for the

university of Cambridge, by the opposition. The former gentleman was chosen by a majority of eighteen, the numbers being 317 against 299.

Since the year 1833, the sum of £20,000 had been annually granted by parliament in aid of the great work of national education. It was now felt that much more ought to be done for this important object. Lord John Russell presented a ministerial plan. He proposed that the president of the council and other privy councillors, not exceeding five, should form a board, to consider in what manner the grants made by parliament should be distributed. He also stated that, in his opinion, the first object of such a board should be, the establishment of a good normal school, and that in order to make such a school as perfect as possible, attention should be mainly directed to four objects: 1st, religious instruction; 2d, general education; 3d, moral training; 4th, habits of industry applied in learning some trade or profession. The project was opposed by the high-church party, who considered that sufficient security would not be given to the church; and it was opposed still more vehemently by the dissenters, who conceived that in a state education, in a country where church and state were linked together, sufficient consideration would not be paid to their several tenets. After some very interesting debates in both houses, the matter was left to rest nearly as it was before. Lord Brougham brought forward a plan of his own, but the consideration of it was adjourned until the next session.

The affairs of Canada long engaged the attention of parliament. On the 3d of May, Lord Melbourne presented the following message from the queen:—

"Her majesty thinks it proper to acquaint the House of Lords, that it appears to her majesty that the future welfare of her majesty's subjects in Upper and Lower Canada would be promoted by the union of the said provinces into one province for the purpose of legislation, from and after the period to be fixed by parliament.

"Her majesty therefore recommends it to the house to consider such measures as may be submitted to them for that purpose.

"Her majesty is persuaded that the House of Lords will be careful to combine a due regard for the peace and security of these important provinces with such provisions as may be conducive to the welfare of England, and the permanent freedom and prosperity of her North American provinces."

The act for the union of the provinces was not, however, passed until the 23d of July, 1840, ministers in the meanwhile having recourse to temporary measures, which were most severely criticised by Lord Lyndhurst.

A second Jamaica bill was passed, after it had undergone important amendments in the upper house, by which it was restored to the form originally proposed by Sir Robert Peel. It allowed time to the assembly to re-enact the annual laws, without which the affairs of the island could not proceed; and invested the governor in council with power to renew those laws, if, after the expiration of two months, the assembly should have separated without re-enacting them. This measure, which was declared by the ministers to be only better than none, was finally passed on the 9th of July.

The question of the Portuguese slave-trade—a trade still actively pursued—was brought under discussion in the commons by Sir Robert Inglis. Lord Palmerston, secretary for foreign affairs, confessed that, after four years spent in negotiation, a note had just been received from Lord Howard de Walden, our ambassador at Lisbon, in which it was stated that he no longer entertained any hopes of procuring the assent of the Portuguese cabinet to a treaty for the suppression of the traffic. It was therefore the intention of the government, after having laid on the table the whole of the papers relating to their intercourse with Portugal, to introduce a bill, which should give to her majesty's cruisers and commissioners the same right of search, with regard to slave-trading vessels met with below the line, which they already possessed in the case of those which were found north of the equator. A bill was accordingly introduced on the 10th of July, and passed throughout all its stages *sub silentio*, until it arrived at the second reading in the House of Lords. On this occasion the Earl of Minto thought it necessary to make a short statement of the present condition of the law relating to the slave-trade, and the existing treaties between Great Britain and Portugal, before he entered into any explanation of the objects of the present bill. The most important treaty was that of 1815. The slave-trade was declared illegal, and Portugal undertook to bring about eventually its entire abolition, consenting in the meantime not to suffer her flag to be employed in that traffic for any other purpose than to furnish slaves for her own transatlantic dominions. In consideration of this concession, Great Britain agreed to remit the balance of a debt, amounting to £800,000, due by Portugal to this country; which was thus paid down to Portugal as the price of her compliance. Lord Minto went on to say that notwithstanding this and other solemn engagements, the traffic had been almost entirely carried on under the flags of Portugal and Spain. With the latter country, however, we had concluded a very efficient treaty, which gave us the power of seizing vessels equipped for the slave-

trade, without waiting till they had taken on board their miserable cargo, and there were hopes that this would have the effect of thoroughly extinguishing it. It was therefore extremely desirable that we should obtain similar conditions from Portugal.

The Duke of Wellington admitted that the object of all the treaties of 1810, 1815, and 1817, was to arrive at the total suppression of the infamous traffic in question, nor could there be any doubt but that this country had a full right to call upon Portugal to carry the obligation she had contracted effectually into execution; he contended, however, that the right of enforcing the due observance of such provisions did not lie within the province of parliament.

When the house divided, the bill was rejected by thirty-eight against thirty-two.

On the following evening Lord Brougham moved, "That an humble address be presented to her majesty, praying her majesty, by all the means within her majesty's power, to negotiate with the governments of foreign nations, as well in America as in Europe, for their concurrence in effectually putting down the traffic in slaves; and also that her majesty will be graciously pleased to give such orders to her majesty's cruisers, as may be most efficacious in stopping the said traffic, more especially that carried on under the Portuguese and Brazilian flags, or by Brazilian and Portuguese ships; assuring her majesty that this house will cheerfully concur with the other House of Parliament in whatever measure might be rendered necessary, if her majesty shall be graciously pleased to comply with this prayer." Lord Brougham assured the Duke of Wellington that in voting for this address he could not possibly stand committed to anything beyond a general declaration of readiness to countenance the government in any legitimate attempt to abolish the slave-trade. The resolution was agreed to, and ordered to be communicated to the other House of Parliament. In the commons Lord Palmerston brought in another bill, in the place of that which the lords had rejected; and this was eventually carried through both houses, after an amendment introduced by Lord Lyndhurst. The Duke of Wellington protested against the bill, as a breach of the law of nations, as a violation of national treaties, and as tending rather to encourage than to prevent the traffic against which its enactments were directed. And, in fact, the slave-trade has scarcely been diminished since the passing of the act, while new horrors have been added to it, in order that, at whatsoever risk, it might still be rendered profitable to those engaged in it.

Mr. Grote made another unsuccessful motion for the ballot. Mr. Attwood moved for a committee

of the whole house to take into consideration what was called the "national petition." The honourable agitator explained that this enormous instrument was signed by no fewer than 1,200,000 persons, the *élite* of the working classes, who put forward five demands—1. Universal suffrage. 2. Vote by ballot. 3. Annual parliaments. 4. Remuneration of members for their attendance in parliament. 5. The abolition of the property qualification. The proposal was rejected by 235 against 189. There followed very alarming riots, attended with extensive destruction of property at Birmingham; and ministers found themselves obliged to advance £10,000 out of the consolidated fund, for establishing an efficient police force at Birmingham, and to call for an addition of 5000 men to the army. Bills were also passed to improve the police in Manchester and Bolton, and to give more power to the justices of the peace for appointing constables, &c.

The chancellor of the exchequer, Mr. Spring Rice, took a cheerful view of the commercial prospects of the country. Our exports had considerably increased. The amount of deposits in the savings' banks had also very much risen, notwithstanding the insubordination of the chartists, and the attempts which had been made to create a run upon those banks. After these explanations Mr. Spring Rice introduced the scheme for a uniform penny postage. This plan had been formed and matured by Mr. Rowland Hill, the brother of the late member for Hull, who had so excited the fury of the Irish members: after many objections, and a long and stern opposition, the measure was carried. It has proved an inestimable blessing to the community.

Many other projected reforms were postponed by ministers, who felt that they had not parliamentary strength enough to carry them. At the close of the session, Lord Brougham affirmed that the country would be glad to see the conservatives restored to office; for they would, as a matter of course, be compelled to grant reforms, and they would possess the power of passing measures of administrative improvement, which the present cabinet had neither the will to introduce nor the means of carrying.

The queen prorogued parliament on the 27th of August. Her majesty's speech announced that, at last, a definitive treaty between Holland and Belgium had settled the differences between those two countries, and had secured the peace of Europe from dangers to which it had been so long exposed.

Shortly after the close of the session very considerable alterations were made in the cabinet, in the hope of gaining strength. The Marquis of Normanby changed places with Lord John Russell; Mr. Francis Baring was made chancel-

lor of the exchequer in lieu of Mr. Spring Rice, who was raised to the peerage by the title of Baron Montague, and soon after succeeded Sir John Newport, who was induced to retire upon a pension, in the post of comptroller of the exchequer, with a salary of £2000 per annum; Mr. Poulett Thompson was appointed to supersede Sir John Colborne in the government of Canada; the Earl of Clarendon took the privy seal; Mr. Thomas Babington Macaulay was made secretary at war, with a seat in the cabinet. Lord Howick, who had retired from the office into which Mr. Macaulay was placed, and who, while in it, had given great satisfaction to the army, now offered very satisfactory explanations of the reasons which had induced him to quit this enfeebled government. Mr. Charles Wood, secretary of the admiralty, and brother-in-law to Lord Howick, resigned shortly after, and was succeeded by Mr. More O'Ferrall. Two other Irish members were brought in, Mr. Wyse filling the vacated seat among the lords of the treasury, and Mr. Shiel being created vice-president of the board of trade. Sir George Grey was taken into the cabinet; Mr. Labouchere became president of the board of trade in the room of Mr. Poulett Thompson; and Mr. Vernon Smith became under-secretary for the colonies.

On the 23d of November, her majesty announced to the members of the privy council assembled at Buckingham Palace, her intention of contracting a matrimonial alliance with the Prince Albert of Saxe-Coburg and Gotha.

The chartists had created more or less confusion in all our manufacturing districts. Towards the close of the year, Frost, a bankrupt linen-draper, of Newport, in Monmouthshire (who some years before had been created a magistrate by Lord John Russell, in spite of a strong remonstrance), stirred up a miserable commotion in Monmouthshire. He persuaded a most uneducated rabble that they would all be made wealthy and happy by and through the charter, with its vote by ballot, annual parliaments, salaried members, division of property, &c.; that the charter was not to be obtained except by revolution beginning in civil war; and that he, John Frost, the broken linen-draper, was the man to conduct this revolution. He had correspondents; he had friends and allies among the chartists and unionists of Birmingham, Manchester, Bolton, Sheffield; he had "sympathizers" all through the north, and surely these hardy men would not be inactive when he had struck his first good blow. The stoppage of the mail-coaches would be the signal—as agreed upon—for these heavy-handed heroes of Lancashire and Yorkshire to rise and be doing. One company of regular troops, commanded by a young lieutenant, and a few con-

stables under the orders of Sir Thomas Philips, the mayor of Newport, knocked Frost and his grand scheme on the head. On the evening of Sunday, the 4th of November, the insurgents, to the number of 4000 or 5000, moved down, through Tredegar Park, upon Newport. They marched in something like martial order, five abreast, armed some with guns, others with bludgeons, others with pikes or pick-axes. The troops were stationed in the Westgate Inn, on the market-place, the door of which was guarded by special constables. The insurgents called upon them to surrender, and, receiving a refusal, the word was given by Frost, or one of his superior officers, to fire; and a volley was forthwith discharged against the bow-window of the room wherein the military were stationed. At nearly the same moment, the rioters broke open a door of the inn, and poured through the hall into the house. Now was it time for the soldiers to look to themselves; a moment's delay might have ended in a massacre. The word was given in the room to fire, and the soldiers fired down the passage through which the Frostites were advancing. At the same moment Lieutenant Grey, with the worshipful mayor, who behaved with much more than common civic gallantry, and Sergeant Daley, opened each one of the shutters of the window that looked upon the street. A shower of slugs was immediately poured in by the insurgents, and the mayor and several other persons were wounded; but the oblique sides of the windows enabled the soldiers to open a severe raking discharge upon the mob, who, after standing a few rounds, broke away and fled in all directions, leaving behind them a good many killed or severely wounded. Frost was captured in the course of the evening in Newport. Zephaniah Williams, and one Jones, who were bringing up other columns of attack, but who arrived too late to take part in the action, and had no heart to begin a new one when the first was over, disbanded their men and fled. They were both captured shortly after, and were indicted with Frost and several others for high treason. A special commission, presided over by Sir Nicholas Tindal, the admirable chief-justice of the common pleas, was sent down to Monmouth to try the rioters. Sentence of death was recorded against Frost, Williams, and Jones: but the punishment was ultimately commuted to transportation for life.

The coming events in Afghanistan were casting very black shadows before them. The sanguine and uninformed were looking only to the easy advance our armies had made to Cabool; the wary and well-informed—the Duke of Wellington and the few men like him—were thinking how that army would ever get back to the banks

of the Indus. The troubles in China went on increasing.

The parliament was opened by her majesty in person on the 16th of January, 1840. The first paragraph of the speech announced her approaching marriage. Her majesty congratulated

PRINCE ALBERT

From a portrait by Sir W. C. Ross R.A.

the parliament on the satisfactory termination of the civil war which had so long desolated the northern provinces of Spain; and mentioned as a subject of great satisfaction the *success* of the European and native troops in India, in the expedition against Afghanistan.

Both houses congratulated her majesty on her happy choice of a consort. With very little loss of time Lord John Russell moved "That her majesty be enabled to grant an annual sum, not exceeding £50,000, out of the consolidated fund, for a provision to Prince Albert, to commence on the day of his marriage with her majesty, and to continue during his life." Mr. Hume said that £21,000 per annum would be quite enough; and he moved an amendment to that effect, which was negatived by 305 against 38. Colonel Sibthorp then moved that the grant should be for £30,000; and he was supported by Sir Robert Peel, and by all the conservative members, except Sir Robert Inglis; and upon a division this amendment was carried by 262 against 158. This was considered as a remarkable triumph over ministers, and as a plain proof of the uncertain tenure by which they held office. This auspicious marriage, a union of affection and mutual spontaneous choice, instead of a mere political and state alliance, was solemnized on the 10th of February, and gave that satisfaction to all parties, which has continued to the present hour.

The government was very severely censured for the riots at Newport, and for the disorders in Yorkshire and elsewhere. Sir John Yarde Bul-ler moved a vote of want of confidence in ministers, assigning, as the chief ground for such vote, the disturbed and unsatisfactory state of the country—a state which he mainly ascribed to the system of popular agitation which ministers had themselves nurtured and encouraged in preceding years. He said that in Ireland a similar system had been pursued, and had been carried much farther than in England; that, instead of checking or discouraging the chief author of these most unconstitutional proceedings, government had placed some of his family and connections in situations of trust and emolument, and he had himself been received as a guest at the lord-lieutenant's table. Another ground which rendered her majesty's ministers, in Sir John Y. Buller's opinion, undeserving of the confidence of the country, was the apparent coalition with those who were uniformly hostile to the Established church of this realm. On first taking office these ministers had declared that they would put an end to all sinecures and unfair pensions, and they had endeavoured to bring all former governments into disrepute by denouncing their corruption and extravagance in these matters. "And yet," said Sir John, "in spite of all their professions, they had really made a more corrupt use of the patronage of the crown than any of the governments which preceded them. Only the other day they granted £1000 a year as a pension to a gentleman who retired from his sinecure office, in order that he might be succeeded by the retiring chancellor of the exchequer." Another ground of complaint was the uncertainty attending all their measures. Lord John Russell voted last session against the introduction of the vote by ballot, and regretted that the honourable member for Edinburgh should not have more maturely considered his opinions on this subject. And now, what was the case? The honourable member for Edinburgh (Mr. T. B. Macaulay) *was secretary at war, and a member of the cabinet.* The honourable baronet alluded to another point as being important. Lord Melbourne had recently presented at court to the young and virtuous queen, just about to enter the holy state of matrimony, the notorious Robert Owen, who was opposed to marriage, who was opposed to every branch or portion of Christianity—who entertained, and who had long been publicly lecturing upon, projects and views identical with those entertained by the chartists and John Frost! The honourable baronet was seconded by Alderman Thompson. The motion was defeated, but

only by a majority of twenty one, the numbers dividing being 287 against 308.

By this time dreadful news began to arrive from India—news of events which had scarcely a parallel in British history. Hence fresh discredit fell upon the existing government. At the same time ministers were warmly attacked for the conflicting instructions they had sent out to our officers and authorities in China. Sir Robert Peel most convincingly demonstrated that government had not furnished our chief superintendent there with proper powers. Upon this China question the ministerial majority sank to nine.

The affairs of Ireland were still more embarrassing. They carried through both houses the Irish municipal corporations bill; but they were obliged to let drop their English and Irish registration bills, and their scheme for settling the poor law in Ireland.

The finances of the country now presented such an aspect that the commons were obliged to look the affairs of the nation fairly in the face. An alarming deficiency was apprehended. There had been already, in the course of three years, an actual deficiency of six millions; and the chancellor of the exchequer (Mr. Baring) seemed not ready with any measure by which to make this up.

Mr. Ewart made an unsuccessful motion for the total abolition of capital punishments. Mr. Serjeant Talfourd brought in a bill for securing to authors and their families a longer enjoyment of the profits of copyrights. He was opposed by Mr. Warburton, by Mr. Joseph Hume, and others, and found himself under the necessity of dropping the measure. The bill was not the wisest which might have been framed; but it certainly contained more generous principles than Lord Mahon's bill which Mr. Macaulay helped in carrying through parliament in 1842.

In consequence of a message from the crown, a bill was passed appointing his royal highness Prince Albert regent, in the possible event of her majesty's decease, during the minority of her children. On the 11th of August the queen went down to the lords and prorogued parliament. The speech stated that she was engaged, in concert with the Emperor of Austria, the King of Prussia, the Emperor of Russia, and the sultan, in measures intended to affect the permanent pacification of the Levant, and to maintain the integrity and independence of the Ottoman empire—that the violent injuries inflicted upon some of her subjects by the officers of the Emperor of China had compelled her to send to the coast of China a naval and military force.

But the absorbing subject now was the terrible disasters in Afghanistan.

CHAPTER VIII.—CIVIL AND MILITARY HISTORY.—A.D. 1840—1842.

VICTORIA.

Dread of a Russian invasion upon our Indian possessions—Lord Auckland appointed Governor-general of India—His participation of the popular apprehension—Improbability of a Russian invasion of India—Former wars of the Afghans—Successes of the "Lion of Lahore"—The Persians brought into the country by the Indian wars—Dread of the influence of Russia upon India through her predominance in Persia—The Persians besiege Herat—The governor-general's plan to defend India against the Persians and Russians—The Simla proclamation—British expedition to Karrack—The siege of Herat raised—Preparations for a campaign in Afghanistan—Imprudence of the measure—It is disapproved of by Sir Henry Fane—Unpropitious opening of the campaign—Faithlessness of the Ameers of Scinde—Military errors in the advance of our army beyond the Indus—Deceitful tokens of success at the commencement of the war—Sir John Keane, the British commander, raised to the peerage—Forebodings of a reverse—Continued errors and mismanagement of the campaign—Afghanistan apparently subdued—Proceedings in the British parliament at the opening of 1841—Decline of the Whig administration—The Jewish disabilities bill rejected—Motion for the appointment of a minister of public education—The motion withdrawn—Statement of finance—Its unpropitious aspect—The question of the corn laws introduced—The ministry out-voted—It continues in office—New parliament assembled—Continued unpopularity of the ministers—They resign—Members of the new cabinet—Sir Robert Peel appointed premier—His first proceedings—Birth of an heir to the British throne—Events in India—Conspiracy and outbreak against the British in Cabool—Assassination of the British officials—Disasters to our army in Cabool—Its fatal retreat—Its ignominious surrender—Treaty with the Afghans for a safe retreat—Disgraces and miseries with which the campaign closes—Affairs of Turkey—Mediation of the allied powers between the sultan and Mehemet Ali—A treaty signed—Aid given to Turkey—Mehemet's army driven out of Syria.

T was in the East that the chief interest of British history was now contained, and it was to the disasters of our arms in Afghanistan that the attention of our statesmen was principally confined.

At this period our Indian empire was bounded by the great sandy desert which extends from the jungles on the Ghara, in the hill territories of Gurwal, to the sea. To the north-west, beyond this desert, lay the Punjab, of which Runjeet Sing was the sovereign. Beyond the Punjab, and south of Independent Tartary, was the region called Cabool or Afghanistan, lying directly between the Punjab and Persia. It was to this remote and ominous spot in the map of India that the attention of our Anglo-Indian rulers was now directed, and apparently not without reason; for it was through the plains and mountain passes of Cabool, that the tide of conquest from the Caspian, the Black Sea, or the Mediterranean had hitherto overflowed the fertile regions of India; and the histories of Alexander the Great, Tamerlane, Baber, and Mahmoud, the conquerors of Hindoostan, who had all entered by this route, had confirmed the ancient proverb, that no one can be king of India without first being lord of Cabool. Here, then, was the question at issue: Might not Russia, which had now obtained a predominant influence in the government of Persia, be tempted to use that influence for the invasion of our Indian possessions? Her armies being once introduced into the friendly

territory of Persia, nothing interposed between them and our Indian empire but Cabool and the Punjab.

When this epidemic dread was at the strongest, a civilian was Governor-general of India. Hitherto, the natural practice had been adopted of ruling our eastern empire by a soldier, and thus maintaining by the sword the conquest which the sword had won. Had this principle been adopted on the present occasion, a military viceroy's experience would have taught him to treat this fear of Russian invasion as a bugbear. He would have calculated from the difficulties of the march the improbability of such an attempt being made, or the impossibility of its success even if it should be hazarded. But the present governor-general, Lord Auckland, a very amiable nobleman, who, since the accession of the Whigs to power, had passed through the various offices of president of the board of trade, master of the mint, and first lord of the admiralty, had seen no military service. It was supposed on this account that he would be sure to prefer the pacific and non-interfering system to every other. But he had not been long in India when he was infected with the prevalent dread, and driven by his inexperience into an unnecessary war—a war attended not with conquest and aggrandizement, not with an increase of security to ourselves and to our allies and dependants, but with defeat, frightful disasters, and such an amount of disgrace as never fell upon our arms in any part of the world.

His lordship admitted into his entire confidence

Captain Alexander Burnes, and other stirring over-confident officers of the Company, who were impatient for opportunities of distinguishing themselves as soldiers or diplomatists, or as both, and whose groundless alarm had been worked upon by Russian emissaries, who confidently predicted the speedy invasion of India by their countrymen, and the reduction of the whole country within the dominion of the czar. As a boast, the threat should have been despised; as a political device and snare, it should have been carefully investigated and exposed, instead of being adopted as a ground of the most hazardous expedition to which the British arms in India had ever been summoned. It had been pointed out by a foreign writer¹ that if all the powers of the Russian empire were exerted in equipping an army for the invasion of India, and if that mighty army, overcoming obstacles that were scarcely to be overcome by an army of any size, reached the western borders of Beloochistan in safety, with its complete appointments, a descent by the British on Bushire would put us in possession of all the communications of that army, compel Persia at her peril to act against it, and place the rear of that army and the line of its advance and relief completely at our mercy. Moreover, it had been shown pretty clearly, that for Russia to send an army as far as the eastern border of Persia was impossible; and our own experience has now convinced the most sceptical, that were the Russians *there*, the mountain tribes, without our intervention, would cut off their supplies, destroy their cattle, and seize their baggage. We could, any day, cut an expedition from the westward to pieces, by landing a force at Bushire, where the coast country, with our commanding fleets and uninterrupted supplies, would furnish a base of operations from which Europe and Asia united together could not drive us. It had further been shown that a Russian army would take twice the time to march from their farthest to our nearest Indian frontier, that the armies of England would occupy in being wafted from the banks of the Thames to the banks of the Indus: and that during the interval, our fleets might annihilate the navy of the czar, or blockade it, and render it utterly useless in the Baltic and in the Black Sea.² But these simple considerations were despised or overlooked by Lord Auckland and the incompetent diplomatists whom he had taken into his counsels, and it was the Russian bugbear that was the primary cause of all our woe, and of all our shame. As the Mahrattas had been thoroughly conquered, the Pindarees extirpated, the Nepaulese and Bur-

messe checked, driven back, and reduced to order, and as even the Jauts and Bhurtpoor had been disposed of, there seemed absolutely nothing to fear from any of our neighbours or old foes; but still our Indian statesmen looked for possible foes 600 or 1200 or more miles beyond our frontier—to the mountains of Afghanistan, the plains of Bokhara, the deserts, the frontiers of Persia, and the shores of the Caspian Sea.

Although in former years, the Afghans had frequently spread devastation through the upper provinces of India, they had ceased to be an object of alarm ever since the mission to Cabool of the Honourable Mountstuart Elphinstone in 1809. They had never been enabled to cross the Indus. Instead of descending in that direction, they had been driven back considerably to the north by the Ameers of Scinde and Runjeet Sing, the Lion of Lahore. The same state of constant war and anarchy which Mr. Elphinstone saw in Afghanistan, had continued ever since, or rather, it had become much worse. In fact, the Afghan monarchy had been dismembered.

In 1809 Shah Sujah had been vanquished in battle, and had been compelled to flee for refuge into the territories of Runjeet Sing. The authority of the usurper, Shah Mahmood, was acknowledged in part of Afghanistan, the rest of the country submitting to the misrule of divers chiefs or princes, who were frequently at war with each other. Shah Mahmood's brothers revolted against him, and his authority was soon confined to Herat and its dependencies. Cabool, Kandahar, and Peshawer, were held by different brothers of Mahmood, who soon fell out amongst themselves. During this decay of the monarchy, Runjeet Sing, the Lion of Lahore, was rapidly improving the discipline of his army by means of European officers. The final downfall of Bonaparte, in 1815, broke up the trade of war in Europe, and drove a considerable number of adventurers, Frenchmen and Italians, to the East, to Persia, and even into India. Some of these men found their way to Lahore, and under their care the troops of Runjeet Sing were trained. The Lion³ became irresistible: he took Cashmere, Mooltan, Leia, Upper Scinde, and the nearest part of Damaun, and reduced all the Afghan tribes south of Cashmere. After this, taking advantage of a quarrel and war between the Dooraunee prince of Cabool and his brother at Peshawer, and of an expedition which he enabled the expelled Shah Sujah, who had long been his guest, to make against Kandahar, Runjeet Sing succeeded in conquering Peshawer for himself, with all the level country which the Afghans had occupied between the mountains and the river Indus. The Ameers of Scinde seized upon other terri-

³ Runjeet Sing.

tories which had belonged to the Dooraunee monarchy. Balkh threw off its nominal dependence, and in other territories of vast extent and thin population which lie between India and Persia, and which had all obeyed Zemaun Shah, various chiefs and princes asserted their independence. Dost Mahomed, however, maintained himself at Cabool, and his brother, or half-brother, after a sharp contest with the Shah Sujah, remained master of Kandahar.

Their brother Mahmood died, or was secretly murdered, at Herat, and was succeeded by his son Khamran or Camraum, who appears to have made some fruitless attempts to recover from his uncle, Dost Mahomed, the dominion of Cabool. The unfortunate Shah Sujah, having failed in other expeditions and enterprises undertaken in concert with Runjeet Sing, was at one time perfidiously seized and barbarously treated by the ungenerous Lion of Lahore, whose main object was to extort from him the famous Afghan diamond called the Kooli Noor: he was delivered from his cruel captivity by the spirit and ability of his queen. After all these adventures, Shah Sujah again found a safe asylum beyond the river Sutlej, in the British cantonment of Loodiana, where a liberal pension was allowed him.

War followed between Dost Mahomed Khan and Runjeet Sing. A victory, gained by the Afghans in 1836, was thrown away through the feuds and jealousies of the chieftains; and the Lion of Lahore, instead of losing territory, soon began to make new conquests. Dost Mahomed had been constantly seeking for the friendship of the British government; but by the treaty made between Lord William Bentinck and Runjeet Sing in 1831, Runjeet was allowed to do what he pleased in the country beyond the Sutlej; and all notion of our succouring the distracted Afghan monarchy was given up. Dost Mahomed had then applied not only to the Persians and to the Tartars, but also to the *Russians*, for aid and assistance. The young Shah of Persia, who had succeeded his grandfather in 1834, had lost no time in responding to Dost Mahomed's desired alliance. The court of Teheran hoped that whilst Runjeet Sing and the Sikhs were pressing upon Afghanistan on one side, a Persian army, favoured still further by the dissensions of the Afghan rulers and chiefs, might easily make conquests on the other, recover Herat, and establish the dominion of the young shah at least over the whole of Khorassan and Kandahar. Khamran, the Afghan ruler of Herat, on the death of the old Shah of Persia in 1834, had made a predatory incursion into the Persian territories, in concert with Turcomans, Hazarees, and other robbers, and had captured some thousands of Persian subjects for the purpose of sell-

ing them as slaves in Central Asia. Although this wholesale kidnapping was a very ancient practice, it certainly seemed, of itself, to justify the young shah in marching an army against

RUNJEET SING — From an oriental painting on glass, in the Museum of the East India House

Herat and the Afghan ruler Khamran. At the same time, he was invited and pressed to the enterprise by most of the Afghan sirdars of Kandahar, who had long been engaged in a blood feud with Khamran, and who, for the gratification of their vengeance, were willing to bring their old enemies, the Persians, even into the heart of Afghanistan Proper. But when it was found, or rather suspected, by our mission at Teheran, that the young Shah of Persia had been encouraged and promised pecuniary assistance by the Russians, who, it was reasoned, must know that the conquest of Herat and Kandahar by the Persians would be, in fact, an advance gained for the Russians towards India, if not for the purpose of actual invasion, certainly for that of intrigue and disorganization, great alarm was felt by our mission, and was by them communicated from Teheran to Downing Street. In short, our ministers at home, and our diplomats in Persia, were suddenly excited by all that jealousy and dread of Russia which had been diffused through the greater part of our Indian government by Burnes and others. The cabinet of St. Petersburg must have laughed at this groundless panic. It was quite in keeping with the crooked policy of that cabinet to resort to sundry paltry and secret measures in order to keep up the panic, while they were publicly assuring Lord Palmerston that they

entertained no designs of aggrandisement on the side of India. In spite of all the remonstrances of our ambassador, the young shah, in July, 1837, put himself and an army of 40,000 men, with seventy pieces of artillery, on their march from Teheran to Herat. Owing to their empty treasury, defective commissariat, and want of discipline, this Persian army frequently threatened to melt away before they had seen an enemy; and when they approached Herat, they were but a miserable and half-starved rabble. Nothing could be more unlike the vanguard of a mighty force competent to overthrow our empire in the East. At this moment, Captain Burnes was at Cabool, and there, came in contact with a certain Captain Vicovich, who gave himself out, among the Afghans, as an envoy from the court of St. Petersburg. This drove the previous alarm of our Indian statesmen into downright consternation. Cost what it might, Dost Mahomed must be driven out of Cabool, or we should soon see a Russian army there! Yet, after this, the Dost offered to ally himself with us if we would only protect him against the Persians. Lord Auckland declared, in a minute, that he would not oppose the hostile advance of Persia either by arms or by money. His lordship must have known by this time, that the Persians had no chance of making such advance, and that the operations contemplated by his government in the Persian Gulf would make the young shah at once retreat towards Teheran, even though he should have reduced Herat previously.

On returning to the governor-general, Captain Burnes, whose opinions seem to have varied according to times and circumstances and the opinions of other men higher in office than himself, declared that Dost Mahomed was an irreconcilable enemy; that our guest, the dethroned Shah Sujah, had many friends in the country; and that with a little aid of men and money, he might advance to Cabool in triumph, and without bloodshed. Yet, not long before this, Burnes had represented Shah Sujah as an imbecile prince, without a party in his own country, and Dost Mahomed as the best ally the governor-general could find. Had there been wisdom in these Indian councils, it would have been felt that we ought to have nothing to do either with the dethroning or enthroning of these rulers. But in a most fatal hour, it was decided to carry Shah Sujah back to Cabool, as the best means of barring the approaches to the Indus against both Persians and Russians!

Our warlike preparations went on the while, but it was not until the 1st of October that his lordship issued his famous Simla proclamation. At this moment, if the governor-general did not know that the siege of Herat, the first alleged

great cause of our inquietude, had been raised, and the reduced Persian army forced into a disgraceful and ruinous retreat, he might at least have known that the young shah had no chance of success, and that the British expedition sent to the Persian Gulf could not fail in its proposed object. Persia had derived nothing but disaster and shame from the rashly undertaken expedition, and ill-conducted siege. Lieutenant Eldred Pottinger, who threw himself into the place, directed the defence. The ignorant besiegers could scarcely maintain so much as a blockade; they knew nothing about regular approaches, and in all their attempts to storm they were beaten back. In one assault, the shah lost 1800 men in killed and wounded, and altogether his casualties exceeded 3000. He was as remote from his object in September, 1838, as in November, 1837, when he first came in sight of Herat. His army was short of provisions, and without clothing and pay; and, rather than have continued through another winter before a fortress which had so repeatedly defeated them, the Persians would, in all likelihood, have dispersed themselves, in spite of all their shah could do to retain them.¹

Our expedition from Bombay landed at Karrack in the Persian Gulf, in the middle of June, when Macnaghten and Burnes were preparing for the Afghanistan war by negotiating with Runjeet Sing at Lahore. The possession of Karrack, an island belonging to Persia, and in the centre of the shah's dominions, showed him how completely those dominions were within our grasp; showed him that we could disembark any force we pleased at Bushire within a fortnight of its quitting Bombay, and possess ourselves of some of the chief towns of Persia, before the people at large could be made aware that hostilities were intended.

From the moment that our troops landed on his island of Karrack, the eyes of the Persian shah were turned more anxiously in that direction than upon the siege of Herat; and at the end of September, when he gave up that siege altogether, and put his diminished and rabble army in motion for a retreat into the heart of his own country, he declared that he did so in consequence of the presence of our armament, and that if Karrack had not been seized by us, Herat would have been taken by him. It is true that the possession of Karrack, and the descent we might so easily have effected on Bushire, were calculated to induce a rapid retreat, even if the Persians had been on the eve of victory and conquest: but it is not true that our menacing attitude at Karrack was the sole cause of the shah's

¹ Buist, *Outline of the Operations of the British Troops in Scinde and Afghanistan*.

hasty retreat; his army was not on the eve of victory, but on the very brink of dissolution. After many defeats, it was half famished and wholly disheartened, and it could not by any possibility have continued its stupid operations round Herat through another winter, or so much as through another month.¹

Well! Herat was safe; that key to the British dominions in India could not be given by Persia to Russia, for Persia could not get it. All the dispositions for a grand campaign beyond the Indus and in the heart of Afghanistan were made (badly enough, no doubt!), and marching orders were given, but it appears that not a single regiment had yet begun to march, when Lord Auckland received official intelligence of the retreat of the Persians from Herat. But this intelligence had no apparent effect on the counsels and conduct of men who had made up their minds for war, and who could not rest until the British flag should be carried over the snowy mountains and through the deep defiles of Afghanistan. These men did not see, or would not feel, what a bulwark nature and fortune had opposed to a successful invasion of British India from the westward, and that they were going to weaken by their aggression, the most formidable portion of this bulwark. Long before the fearful catastrophe in which all this blindness, or rashness and obstinacy, ended, and while unthinking people were shouting for the victories our arms were obtaining, a sensible writer at home said: "We are making the false movement of a general who, finding a broad marsh between himself and his opponent, wantonly crosses it with great loss and inconvenience, posts himself on the opposite margin, and, cutting himself off from his supplies, affords his opponent, at the first favourable moment, an opportunity of driving him into the swamp, or starving him to death, or compelling him to surrender at discretion. Such is a fair view of our present adventure, nor can we see any termination, utter discomfiture excepted, to the course into which it leads, until it brings us to the very thing we deprecate—contiguity and collision with the power of Russia in Persia."²

In the month of October, 1838, when Lord Auckland issued his warlike proclamations at Simla, the army of India was raised to 203,000 men. Sir Henry Fane was at this time commander-in-chief of all India. He disapproved both of the principles of policy and of the arrangement of the details of the expedition; and viewed with alarm the prospect of having our armies so far removed from our own frontier. Sir Henry was, besides, in indifferent health when the first campaign was announced. Colonel

Fane, the son of Sir Henry Fane, said, after his father's death, "I am prepared to prove that the military head in India, and second member of council of that country, did oppose, or perhaps rather point out to the governor-general, the extreme danger of this wild and unmeasured expedition. . . . He insured Lord Auckland of the success which did at first appear to attend us, but warned him, that to maintain large bodies of troops in countries so distant, and which scarce produced food sufficient for the scanty population, was next to impossible."³

As a foretaste of what might be expected from him, Runjeet Sing, in despite of a treaty which had been drawn up at Lahore by Macnaghten and Burnes, refused to allow our troops to cross his territories in the Punjab. Our principal rendezvous was therefore appointed to be Shikarpoor in Scinde. The Ameers of Scinde had faithfully promised to provide supplies and the means of conveyance for our armies; but our commanders found that they had provided nothing but jealousy, hatred, and enmity, and that the mass of the Scinde population were eager to attack our troops. Sir Henry Fane, whose health was growing worse, resigned the command. Lord Auckland nominated Sir John Keane, a brave and experienced officer, but said to be headstrong, passionate, and domineering, to the direction of the whole force, and instructed him to send his own orders to Sir Willoughby Cotton, who, as senior officer, had succeeded to the command of the Bengal column as a temporary measure until its junction with the Bombay troops. This also gave the temporary command of a division to Major-general Nott, and of a brigade to Colonel Dennie. We can trace, even at this moment, some of the jealousies and heart-burnings which helped to destroy the discipline of the whole army.

Sir Alexander Burnes (he had been made knight-commander of the Bath and lieutenant-colonel for his previous services on the Indus, in Afghanistan, &c., and, perhaps, in part for his ample contribution to the unlucky scheme now in process of execution) had been employed to collect at Shikarpoor camels for the use of the whole army. The governor-general had calculated that 45,000 camels might be obtained; but Burnes could never collect 20,000. Everywhere the forebodings of calamity thickened, and warned men—who would not be warned—to stop their advance and retrace their steps. There was no dependence to be placed either on the Ameers of Scinde or upon the Lion of Lahore; there was little security for our communications and supplies; and such means as were adopted for the obtaining of some such security were in-

³ Letter published in the *Times* of 5th June, 1842.

adequate to the end, were slovenly, unsystematic, unworthy of British officers at this time of day.

Numerous and unpardonable military errors were committed on the advance. The several divisions of the army were accompanied by an amazing number of camp-followers, who could not shift for themselves in the countries beyond the Indus: thus provisions were made to run short even before our troops entered the mountain country. The camels died rapidly, the horses of our artillery were shot to prevent their falling into the hands of the enemy. The com-

AFGHANS OF THE DOORANKE TRIBE
From Elphinstone's Cabool.

munications between the front and rear division—left one hundred miles apart—were completely cut off by the fierce tribes in the mountain pass. The robbers in the pass were incessantly harassing our soldiers, and pouncing down from their rocks and hills upon the baggage. Savage and unwise orders were carried into execution by our harassed and exasperated troops: whenever these Afghans were captured they were shot or hanged, *no quarter being on any occasion given to them.* Shah Sujah, the dethroned sovereign, whom we were to substitute for Dost Mahomed, was allowed to put to death thirty-six out of thirty-eight captives he had made, and that, too, in the presence of at least one British field-officer, Major Macsherry. If the Afghans had concentrated their forces, and had acted under the command of any officer endowed with common sense, the progress of Sir John Keane must have been stopped before he got to Ghuznee. That last-named place was, however, stormed and taken, and the fall of Ghuznee opened the way to

Cabool. As Sir John Keane drew nigh, Dost Mahomed quitted his throne and his capital, and fled with only 600 horsemen to seek a refuge in the wide, wild country beyond the Oxus. On the 7th August, 1839, Shah Sujah, Sir John Keane, the general officers of the army, Burnes, Macnaghten, and other officers of the mission, or of the staff, made a pompous and triumphant entrance into Cabool. Considering the work as done, Sir John Keane hurried back to India, and from India to England, to be raised to the peerage by the title of Baron Keane of Ghuznee and Cappaquin (with a pension of £2000 a year), and to receive the thanks of parliament and of the court of directors. The shouts of triumph and applause were, however, mingled with the expression of many doubts and some severe criticism. In the lords the Duke of Wellington said that he had never doubted but that the valour and discipline of our troops would secure victory to our arms in Afghanistan; but that it was when we had completed our first conquests that our difficulties would begin. Lord Ellenborough declared the war to have been a folly, and said it remained to be seen whether it might not prove a crime. Lord Auckland, as governor-general, received his meed: he was raised in the peerage to the rank of an earl: and the court of directors and the court of proprietors honoured him with their vote of thanks "for the sagacity and promptitude with which he had planned the expedition, and the zeal and vigour he had displayed in preparing the troops to take the field"¹

Part of the army—the Bombay column—quitted Cabool on the 18th of September, and the Bengal troops were recalled in October. Independently of the shah's contingent, paid and officered by the English, about 8000 men, British troops and sepoys, were left in that cold and inhospitable country. Enormous errors were committed by Macnaghten and Burnes, who were left at Cabool, as envoy, and assistant to the envoy. Shah Sujah made bad worse by selecting a low-born, rapacious old scoundrel to be his prime minister. On the return of spring, the Ghilzies and other powerful tribes began to unite their cavalry and to attack our outposts. At the same time the people dwelling on the hills and in the glens not only refused to pay any taxes or tribute to Shah Sujah, but also refused to sell provisions to our commissariat. As the ice and snow melted, and left the roads and mountain tracks passable, a fierce war of posts commenced. Insurrections broke out among the tribes that inhabit the country to the east of the Bolan Pass. At the same time some of the Ameers of Scinde called their followers to the field, united their bands, and threatened all our communications

¹ C. Macartine, *Our Indian Empire*.

between Afghanistan and the Punjab. Several most serious disasters were sustained by our troops; and the brilliant capture of Khelat, and other achievements, could not disguise the fact that we had embarked in a ruinous contest.

Our army up the country was repeatedly reinforced. At the end of the year 1840, we had more than 16,000 men in Afghanistan; and at the first outbreak of the great insurrection in November, 1841, we had upwards of 14,000 men, besides the shah's contingent. The number of our political agents, scattered all about the country, as if it were conquered and submissive, and to be organized, like annexed provinces in Hindoostan, by means of the pen, exceeded thirty. All these men (and not a few of them appear to have been young and inexperienced) were paid large salaries by the Company. Sir William Macnaghten, as envoy and minister, had £11,220 per annum; his assistant, Lieutenant-colonel Sir Alexander Burnes, £3000. Among them they received more money than could be realized by taxes and duties in any one province of the Afghan empire. Everything was on a prodigious scale of expense. It was costing us more than £3,000,000 a year to occupy a country for Shah Sujah which never could render him £300,000 a year. The Russo-mania had abated; we had obtained substantial proofs of the difficulty of any army traversing Afghanistan, even if it could get so far; and we ought by this time to have learned that the Afghan tribes were neither to be depended upon in their own country, nor to be feared by us behind the Indus: but there our army was left, without any adequate arrangement either for its victualling or for its safe return; and there our money continued to be lavished without any security for its repayment.¹

A.D. 1841. On the 26th of January parliament was opened by her majesty. The speech dwelt upon the affairs of the Levant (of which we shall presently give a continuous though necessarily brief narrative), on the gallantry and skill displayed by our naval forces on the coast of Syria, and on the struggle still going on in China. On the subject of the Afghan war not a word was said—an omission which was afterwards noticed by Sir Robert Peel. The address was agreed to without a division.

On the 4th of February a vote of thanks was given in the House of Lords to Admiral Stopford, Commodore Napier, and the captains and officers of the fleet under their command during the operations conducted on the coast of Syria, and particularly for the decisive attack on St. Jean d'Acre. The Duke of Wellington declared that he considered this achievement one of the greatest

of modern times. On the following day a similar vote of thanks passed the House of Commons. The ministry, however, seemed to be weaker than before, and unable to carry any important legislative measure. After very long and angry debates on a bill for the registration of voters in Ireland, they were outvoted by a majority of eleven; and then Lord John Russell threw up the bill. This was taken as a striking illustration of the decline and approaching downfall of the Whig administration.

Mr. Divett, one the members for Exeter, brought in a bill for removing the Jews' civil disabilities. It was opposed on the second reading by Sir R. Inglis, who protested against surrendering that principle of the constitution by which magistrates had hitherto been confined to persons professing Christianity. He was answered by Lord John Russell, who supported the bill, and declared his readiness to go further, and admit Jews to seats in parliament. The bill was carried through the commons, but rejected by the lords.

After wearying debates on the claims of the Church of Scotland, on the Catholic college of Maynooth, and on church-rates, Mr. Ewart moved for the appointment of a minister of public education. The honourable member wished that such minister should be a member of the House of Commons, and should annually lay before it a statement of the condition and prospects of the education of the people. A minister of public instruction was to be found in almost every foreign kingdom, who regularly made such reports to the crown. Such a minister ought to mix and associate with the educational institutions of the country, but by no means to control them. He regretted the niggardliness of the grant now made by the state for education, amounting to only £30,000 a year; and called on the house to be more liberal. Ministers opposed the whole motion, not, they said, because they objected to its principle, but on account of the difficulties attendant on its execution. They promised, however, soon to lay before the house, for the education committee of the privy council, information which they thought would go far to fulfil, for this year, the object of the motion. Mr. Ewart acceded, and the motion was withdrawn.

A further mitigation of the criminal code was carried in the course of the session.

The state of the finances was still very unsatisfactory; and the chancellor of the exchequer, who had erred in his calculations the preceding year, was compelled to acknowledge a deficiency of nearly two millions. The expenditure had amounted to £49,285,000; the income had only reached the sum of £47,443,000. To make up

¹ Buist; and MS. journal of a young officer on the Bombay establishment.

this deficiency Mr. Baring proposed extensive alterations in our timber and sugar duties, not in the way of augmentation, but in that of reduction on timber and sugar imported from other countries or from colonies not our own. He calculated on a vast increase of consumption, on the benefits derivable from making England the one great mart and dépôt for sugars, &c., and on the chance of the countries on the Baltic taking more of our manufactures if we took more of their timber, and reduced the amount of protection we gave to Canadian timber. The chancellor of the exchequer also suggested the expediency of altering the corn laws, as another sure means of increasing the revenue.

It was not until they were at the last extremity that ministers fairly took up the corn-law question. It was not long since Lord Melbourne, the premier, had solemnly declared that he would not agitate it—that he did not think that the advantages to be gained by the change were worth the evils of the struggle—that the corn laws could not be altered without a most violent struggle; without causing much ill blood and a deep sense of grievance. But the country was now nearly as much agitated for the repeal of the corn laws as it had been a few years ago for the passing of the reform bill; and the cabinet saw no other chance of recovering their popularity and making up the deficient revenue than in altering the corn laws together with the timber and sugar duties. But they found themselves unable to carry any of their proposed measures. On the sugar duties they were outvoted by a majority of 36, there being for the motion 281, and against it 317. Hereupon it was fully expected that ministers would resign. Great, therefore, was the surprise when, on the following day, the chancellor of the exchequer rose in his place, as if nothing had occurred, and gave notice that, on the Monday following, he would move *the usual annual sugar duties*. Lord Darlington said that “it was plain that ministers meant to stay in office with a tenacity—he must be allowed to say—unparalleled in the history of governments, and with the deliberate decision of the House of Commons unequivocally declared against them.”

A few days after this, Sir Robert Peel moved a resolution of want of confidence in the government, and carried it by 312 against 311. But still these most tenacious of Whigs would not resign. They would first try the effects of a dissolution of parliament, hoping to gain an augmentation of force through the anti-corn-law agitators. On the 22d of June, parliament was prorogued by the queen in person; and on the following day it was dissolved by proclamation.

The new parliament was opened by commission on the 19th of August. Many objections

were taken to the royal speech, which was read on the 24th. The Earl of Ripon moved a vote of want of confidence, proposing to represent to her majesty that the public expenditure had for several successive years exceeded the annual income, and that the House of Lords were convinced of the necessity of adopting measures for the remedy of so great an evil, &c. He was warmly supported by the Duke of Wellington, who delivered a short speech condemnatory of the conduct of ministers as well abroad as at home. Ministers were here left with a majority of seventy-two against them. It was not better for them in the commons, where, after four nights of stormy debate, Lord John Russell found that he was out-voted by ninety-one. At last, on the 30th of August, Lord Melbourne announced that his cabinet was no more.

Sir Robert Peel as premier, and the Duke of Wellington, speedily formed a new cabinet. Lord Lyndhurst became lord-chancellor, Mr. Goulburn chancellor of the exchequer, Lord Wharcliffe president of the council, the Duke of Buckingham privy seal, Sir James Graham home secretary, the Earl of Aberdeen foreign secretary, Lord Stanley colonial secretary, the Earl of Haddington first lord of the admiralty, Lord Ellenborough president of the board of control, the Earl of Ripon president of the board of trade, Sir Henry Hardinge secretary at war, and Sir Edward Knatchbull treasurer of the navy and paymaster of the forces. These formed the cabinet. Among the appointments, without seats in the cabinet, were those of Lord Lowther, postmaster-general; Sir George Murray, master-general of the ordnance; Lord Canning, under foreign secretary; Sir F. Pollock, attorney-general; Sir W. Follett, solicitor-general; and Sir Charles Bagot, Governor-general of Canada. A change, as extensive as any that had been usual, was made in the queen's household. Earl de Grey became Lord-lieutenant of Ireland.

The re-elections of the members of the new government by their respective constituencies having taken place without the loss of a single seat, the House of Commons re-assembled on the 16th of September. The Whigs, who were now sitting on the opposition benches, attempted to bewilder Sir Robert Peel by a multiplicity of questions, and to force from him a premature disclosure of his intentions respecting the revenue, the corn laws, &c. The premier kept his own counsel until his own proper moment arrived. He had distinctly stated, at the close of the last session, that if called to power, he would not bring forward any premature declarations as to the intentions of her majesty's government. This declaration he had made repeatedly, and the sense of the country had been taken at the

general election under the distinct announcement that such was his intention. Moreover, the season was far advanced, and the house was thinning. Meeting the difficulty boldly in the face, and finding that the deficiency was even greater than had been believed, he demanded and obtained an addition to the ways and means of £2,467,432. So soon as the business of immediate urgency was despatched, the parliament was prorogued by commission. This was on the 7th of October. On the 9th of the following

month an event occurred which served to unite our beloved sovereign still more closely if possible to the hearts of her devoted subjects. This was the birth of an heir to the British throne, at Buckingham Palace; and as it was on lord-mayor's day, the pleasure-loving citizens of London were enabled to double the congratulations of their time-honoured festival on account of such an auspicious national occurrence. May Albert Edward realize the best hopes which so often have been formed in favour of those who

BUCKINGHAM PALACE, as at the time, from the Inclosure St James's Park—Drawn and engraved by J. L. Williams

have borne the title of "Prince of Wales," and when the crown devolves to him—though late be that event—may he rule as his predecessor has ruled, and be honoured as she has been!

While the Whigs were sustaining the discomfitures which drove them from office, the sad effects of their policy beyond the Indus were becoming more and more apparent; and before the close of this year the Afghan tragedy was completed.

As early as the month of May, 1841, Major Pottinger prognosticated the coming storm, representing to Macnaghten the envoy the insufficiency of our military force in some places, and the badness of their cantonments in nearly all places. The major was looked upon as an alarmist. Sir A. Burnes was quite confident there was no danger. At the end of October, Cabool was surrounded by predatory bands, and our communication with Hindoostan was cut off. In October, General Sale cleared the pass of Khoord Cabool, but not without hard fighting and considerable loss. Yet all through that month our officers were insulted in their cantonments at Cabool, and many attempts were made

to assassinate them. On the 2d of November, an attack was made on the house of Sir A. Burnes in the city; and he was massacred, together with his brother, Lieutenant Burnes, Lieutenant W. Broadfoot, and every man, woman, and child found on the premises. Sir William Macnaghten, who was in the cantonments, thought and said the storm would soon blow over of itself. Instead of blowing over, it increased in violence, while every minute that was lost in inaction raised the numbers and the audacity of the insurgents. The chief command of our astounded and bewildered army (bewildered much more by the inactivity and stupor of their leaders than by the proceedings of the Afghans) was at this time held by Major-general Elphinstone, a most amiable and at one time a gallant officer, but who had been suffering a long and painful illness, which had affected his nerves, and worn out his mind as much as his body. He was utterly incapable of acting in this sudden emergency with the promptitude and vigour necessary for the preservation of his troops, and the officers next in command under him seem to have been—without the same physical

and unavoidable causes—as incapable as himself, and to have shrunk from all responsibility. The cantonment occupied by the army for so many months was as bad as it could be, and the magazine of provisions was placed in the most exposed and least defensible part of it, detached from our works of strength. All the calamities which befell our ill-starred force might be traced more or less to the defects of our position; and whether we look to its situation or to its construction, this cantonment at Cabool must ever be spoken of as a disgrace to our military skill and judgment.¹

On the 3d of November, the day after the outbreak in Cabool, 3000 savage Ghilzies rushed towards our cantonments, and other numerous bands began to collect on the surrounding hills. We turn with shame from the details of the fearful humiliating story. Our commanding officers continued in their imbecility until our troops were infected with downright cowardice. On the 4th of November our people ran away from the commissariat fort, abandoning to the enemy all our stores, clothing, and provisions, except two days' supply of provisions in cantonments. On the 9th, General Elphinstone's weak state of health induced him to give up the command to Brigadier Shelton. A quarrel or wide difference of opinion immediately arose between Shelton and Macnaghten. How provisions had been obtained we know not; but our army was still motionless in its cantonments on the 22d of November, when the terrible Akbar Khan arrived at Cabool with some hundreds of well-mounted warriors. Shelton made a sally, committed no fewer than six capital military errors, and was beaten back with loss. On the 26th it was proposed by the enemy that the British should quietly evacuate the country, and leave the Afghans to themselves. On the 8th of December, Macnaghten requested General Elphinstone to state whether the only alternative left was not to negotiate for our safe retreat. The despondent dying Elphinstone gave a fatal response in the affirmative. On the 11th of December, Macnaghten went out to meet Akbar Khan and certain great khans and heads of tribes, who had intimated that they were desirous of concluding a treaty. A treaty or an agreement was concluded—our troops were to be allowed to retire without molestation; the Afghans were to furnish them with provisions and the means of transport for the conveyance of our baggage, stores, &c. Instead of sending provisions, the savages murdered all our sick

and wounded men that they could lay their hands upon.

On the 14th of December was commenced the most disastrous and appalling retreat that has ever been recorded in authentic history. Making allowance for the difference of numbers, the retreat of the French from Moscow was less dreadful than this. In both cases, the ice and snow, and nakedness and famine, slew more than the sword. On the 20th of December, Sir William Macnaghten had an interview with the chiefs, who now demanded that a portion of our guns and ammunition should be given up, and that Brigadier Shelton should be put into their hands as an hostage. Lieutenant Sturt, in whom the English spirit had not become extinct, proposed to the general to break off the treaty and march forthwith to Jellalabad, where Sale was stoutly maintaining himself. But the general called a council of war—and a council of war never fights. On the 22d of December, as our troops were preparing to follow the van-division, Akbar Khan sent to propose a new and much more favourable treaty than the one which he had already broken, and to invite our envoy to another conference. On the following day Macnaghten went to the place appointed, presented Akbar with a beautiful Arab horse, and was barbarously murdered under the eyes of that khan and of other chiefs. It is even said that Akbar himself did the foul deed, shooting his victim through the body with a richly-mounted pistol which Macnaghten had sent him only a few hours before. The body was hacked to pieces by the armed fanatics, who carried the head into the city and triumphantly exhibited it to Captain Conolly, one of the prisoners who had been taken. Not an arm was raised to avenge Macnaghten's fate—nothing could re-animate our troops, or the wretched men who commanded them. All went on as if with one accord to complete their disgrace and seal their doom—all, except a few English hearts who murmured and remonstrated, but who had not moral courage sufficient to incur the heavy and awful responsibility of putting their commanding officers under arrest, appealing to the troops, and assuming the command themselves. There were more councils of war called, to end in more baseness and madness: it was agreed to leave behind all our guns, except six; to surrender all our treasure; to give up married men, with their wives and families, as hostages; to pay Osman Khan, and some other treacherous villains, five lacs of rupees in bills drawn upon India, but negotiated on the spot by a merchant of Cashmere and some Hindoo bankers, the said Osman Khan engaging to escort the whole army in safety to Peshawar. In vain did Major Pottinger raise his manly voice against this useless

¹ Lieutenant Vincent Eyre. The cantonment had a low rampart and a narrow ditch; its form was a parallelogram; it had round flanking bastions at each corner, but every one of these bastions was commanded by some fort or hill.

debasement (and never were English soldiers so debased before as to buy a way out of an enemy's country!)—the rest of the officers composing the council declared, one and all, that the bargain must be struck. And, accordingly, the bills were given, and English ladies were delivered over as hostages, if not at this moment, a little later.

On the 6th of January, 1842, our headquarters and the rest of our army cleared out of the cantonments at Cabool, to march, in the depth of

those who planned it, and who nearly all perished in it¹

The upholding of the Ottoman empire and the settlement of the Levant, effected during this year, and while the Melbourne administration was yet in power, seems to us worthy of all praise and commendation. The war which was waged for these great objects cost but little bloodshed, and it gave back to the sultan the strength of which his rebel vassal, the Pacha of Egypt, ought never to have been allowed to deprive him.

In the month of May, 1829, Sultan Mahmoud sent Hafiz Pacha across the Euphrates, with an army to recover Syria. In the month of June of that year, Hafiz Pacha was thoroughly defeated by Ibrahim Pacha, who drove the Osmanlis to the other side of the Euphrates. On the 27th of June, Sultan Mahmoud died, and was succeeded by his son, Abdul Medjid, who was only in his sixteenth year. The new sultan offered the too-powerful pacha a full pardon for the past, and the hereditary sovereignty of Egypt; Mehemet Ali replied, that he must have Syria as well. At

CABOOL.—From Atkinson's Sketches in Afghanistan

winter, through a country of perhaps unparalleled difficulty. The strength of our whole force was at this time estimated at about 4500 fighting men; the camp-followers at a moderate computation, amounted to about 12,000 men, besides women and children. At the moment the rear-guard cleared out of the cantonments, the Afghans began to plunder the baggage, and to follow and fire upon our soldiers; and these operations can scarcely be said to have ceased until there was nothing left to plunder—or to kill. We will not follow this demoralized and degraded army through the horrors of the passes of Khoord Cabool, Tezeen, and Gundamuck. General Elphinstone, almost at the point of death, gave himself up to one of the khans. The ladies and wounded were given up; Dr. Brydon, who escaped by a miracle, was the only officer that reached the garrison of Jellalabad, and a mere handful of sepoys and camp-followers entered the fortress, which Sale had held in spite of General Elphinstone's insane orders to him to evacuate. Counting camp-followers, women, and children, more than 26,000 human beings had perished in the retreat, through cold, famine, and the incessant attacks of the enemy. A few hundreds—mostly native Indians, had been carried away captives, to be turned into slaves, or to be kept for the sake of ransoms. Woe to this Afghan war! and mercy to the souls of

first, France would have put herself forward as sole mediatrix in the quarrel; but this was a position which the other powers of Europe could not allow her to occupy. After pretending, for a time, to go along with Lord Palmerston, the French minister suddenly alleged that he could not coincide with us and the other powers; that he could have no part in the settlement of the Levant, as we pretended to settle it; and Lord Palmerston then said, the Levant should be settled without France. Upon this announcement, there was much blustering among the journalists on the other side of the Channel, but what could France now do against the allied powers of Britain, Austria, Russia, and Prussia? All that she did was to give false hopes to the Pacha of Egypt and Ibrahim Pacha, and to encourage them into a resistance which was utterly unavailing, and which cost them great sacrifices.

A few weeks after the death of Sultan Mahmoud, the Turkish fleet, under the command of a traitorous capitan-pacha, or lord high-admiral, sailed through the Dardanelles, went down to Alexandria, and there placed itself at the disposal of Mehemet Ali. The young sultan had therefore no available naval force at the time when he most wanted it. It was resolved that the British navy should make up this deficiency. Nearly at the same time insurrections broke out among the

¹ *Our Indian Empire.*

mountaineers in Syria, against the oppressive government of the Pacha of Egypt. They complained of the conscription, which dragged them away in chains to fight for Mahemet Ali; they complained of *corvées*, and all manner of forced labour; they complained of the enormous taxes imposed upon property on the death of the owner, and the succession of his heir or heirs; and they could not brook the law which commanded every man among them who was not a soldier in the pacha's service to deliver up his arms.

The treaty between Britain, Austria, Russia, and Turkey, for the settlement of the eastern question, was signed at London, on the 15th of July, 1840, and was ratified on the 15th of September. By the beginning of October, our fleet, very effectually aided by a naval and land force of the Emperor of Austria, reduced the important city of Beyrout, on the Syrian coast, and drove off Ibrahim Pacha, with a loss of 7000 men, and nearly all his artillery and stores. Encouragement and substantial assistance were sent to the Syrian mountaineers; and the Egyptian army was compelled to retreat on Acre. Sidon was captured by the allies. The insurrection against Mehemet Ali spread over all Syria; and

Emir Beschir, chief of the Druses of Mount Lebanon, placed himself in the hands of the allies. On the 3d of November, the decisive blow was struck; Acre, or St. Jean d'Acre, was bombarded by the British fleet, and in less than four hours was knocked to pieces—the Egyptians losing more than 2000 men in killed and wounded, and 300 as prisoners; whilst the British counted only twelve killed, and forty-two wounded. The remnant of the army of Mehemet Ali then evacuated Syria. On the 27th of November, 1840, Mehemet Ali, yielding to hard necessity, accepted the terms offered by Commodore Sir Charles Napier, and agreed to restore the Turkish fleet to the sultan, to renounce for ever all claims upon Syria, and to rest satisfied with the possession of Egypt as an hereditary fief of the Sublime Porte. Thus speedily was settled one of the most important questions of modern times; and thus was given strength and solidity to the shattered Ottoman empire, together with another chance of occupying the position among the first-rate powers which, for the sake of the peace of all Europe, she ought to hold. And, since that period the internal improvements of this empire have gone on at an accelerated pace.

CHAPTER IX.—CIVIL AND MILITARY HISTORY.—A.D. 1842—1844.

VICTORIA.

Changes in the cabinet—Opening of parliament—Advances towards free trade—Motions for modifications in the corn laws—Presentation of the "People's Petition"—Its rejection—Parliament prorogued—Affairs of India—Resolution to continue the Afghan war—Sale's successful defence of Jellalabad—The siege raised—Disensions among the Afghan chiefs—Defeat of the Afghans at Kandahar—Advance of the British army into Afghanistan—Treatment of the English prisoners by Akbar Khan—They are hurried into the interior—Their deliverance and return—The Afghans quelled—Close of the war—War of the British in China—Its origin in the opium trade—Unsuccessful attempts to negotiate with the Chinese—Conflicts between the British and Chinese in the Canton river—Defeats of the Chinese—Canton invested—Captures made by the British in China—Treaty of peace with China—Terms of the treaty—Opening of parliament in 1843—Falling off in the revenue—Proposed remedy—The government scheme of education announced—Its unpopularity among all classes of Protestants—The scheme reduced into the factory bill—Colonization proposed for the relief of the industrial classes—Monster meetings in Ireland—O'Connell arrested—Disruption in the Church of Scotland—Rebekah riots in Wales—Their suppression—Trial of O'Connell—His conviction and sentence—He appeals against the sentence—His appeal sustained—His last appearances and death—Improvement in the revenue of 1844—Demand for the repeal of certain taxes—Discussion on the sugar duties bill—It is passed—Passing of the bill for the reduction of the three-and-a-half per cents—Sir Robert Peel's bill for the regulation of the Bank of England—His statement of its nature and specifications—The bill passed—Its mercantile importance—Passing of the regulation of railways bill—Regulation of joint stock-companies—Concessions made in the Irish charitable trusts bill—Abolition of old penal statutes against Roman Catholics.

WHEN the parliamentary business of 1842 commenced, there had been some slight changes in the cabinet. Lord Ellenborough, fortunately for the service, and for the tarnished honour of our arms, had been sent out to India

as governor-general, and he had been succeeded at the board of control by Lord Fitzgerald and Vesci. The Duke of Buckingham, who, as Marquis of Chandos, had so long headed what was called the farming interest, had resigned the privy seal, being alienated from Sir Robert Peel by the intimations now given, that the corn laws

must and would be changed. His office had been taken by the Duke of Buccleuch.

The session of parliament was opened on the 3d of February. The addresses were carried without a division, and when divisions became necessary, it was seen that the ministry was strong enough to carry any such measure of reform as it might propose. The machine of government was no longer at a dead-lock. Sir Robert boldly brought forward and carried his property and income tax, reducing at the same time various other taxes and duties. There was no other certain mode of raising revenue sufficient to make up for past deficiencies and defray our annual expenditure. Upon more than 750 articles there was an abatement of duty. Immense strides were made towards the system of free trade. For the total abolition of the corn laws, Sir Robert was not yet prepared: he still clung to the sliding scale; but his grasp was evidently less tenacious than formerly, and instead of a sudden alteration which took place on the existing scale from 10s. to 6s. 8d., 2s. 8d., and 1s., he proposed two stationary points, after which the duty would only fall by 1s. at each increase of 1s. in the average price. He believed that agricultural industry would stand on a firmer basis with prices between 54s. and 58s. the quarter, than when it was disturbed by violent fluctuations. He, however, disclaimed the idea that the legislature could guarantee any price for corn whatever. Another material part of the modification was the addition of 156 towns to the list of 150, in which the average prices of corn had been previously taken. Mr. Cobden denounced the plan of the government as an insult to a suffering people. This honourable member could consistently be violent, for he had been for years an enthusiast, a lecturer, and propagandist for a free trade in corn; and for some time he had devoted his entire life to this one object. But when the late ministers, who had only taken up the corn-law question when it was considerably past the eleventh hour, raised a clamour against Sir Robert Peel as loud as that of Mr. Cobden, it did seem inconsistent, unfair, and indelicate. And even now the Whig party were far from recognizing the principle of a free trade in corn. Lord John Russell moved a fixed duty of 8s. the quarter: Sir Robert Peel said that this was too high; and Lord John was outvoted by 349 against 226. Mr. Villiers, whose views on the corn laws had long differed from those entertained by the Melbourne cabinet, did indeed vote for the abolition of all duties payable on the importation of foreign corn. He was outvoted by 303 to ninety; and nearly all the Whigs were found in the majority. Sir Robert Peel's scale was carried by 306 against 104. On the 11th March, the premier developed

his financial plans in a long and most able speech which gave satisfaction to practical commercial men, and to all those whose habits and pursuits gave them the best means of judging of such matters.

On the 2d of May, Mr Thomas Duncombe presented to the commons what was facetiously called "The People's Petition;" which was said to have been signed by nearly three millions and a half of people. We had had monster meetings and monster balloons; here was a monster petition! When tacked together, it required sixteen men to carry it! It was escorted to Palace-yard by a long procession of working men, who marched in good order and with peaceable demeanour to the Houses of Parliament. It was so big that the door of the House of Commons was not wide enough to admit it. It was therefore divided into sections, and in that manner carried by the petitioners into the body of the house, where it was left to lie on the floor, for no table could have held it. There was much laughter, and those laughed most who best knew how the signatures had been obtained or manufactured. It demanded the enactment of the six points constituting "The People's Charter." Mr. Duncombe, though he laughed with those who laughed, moved that the petitioners by their agents or counsel, should be heard at the bar. He found 49 members to vote with him; but there were 287 against him. The best of the reformers, as Mr. Benjamin Hawes, said they could never think of conceding power to masses of men, blindly led, who had signed this trashy petition.

Sir Robert Peel announced that a supplementary grant of £10,000 would be proposed in addition to the usual education grant of £30,000. On the 9th of August, Sir Robert Peel moved an address for the erection of monuments to Sir Sidney Smith, Lord de Saumarez, and Lord Exmouth, three of our greatest naval heroes; and Mr. Hawes withdrew a motion for adding the names of Herschel, Watt, and Davy, hoping that Sir Robert himself would undertake that duty. The parliament was prorogued on the 12th of August, when her majesty deeply lamented the military reverses to the westward of the Indus, but turned with satisfaction to the gallant defence of Jellalabad, and a decisive victory in the field, which had evidently proved the courage and discipline of the European and native troops, and the skill and fortitude of their distinguished commander.

Lord Ellenborough arrived in India on the 28th of February, 1842. His earliest attention was claimed by the state of affairs on the Indus, where the Ameers of Scinde continued in a doubtful attitude, and by the state of affairs in Afghan-

istan, where our troops were remaining in a state of uncertainty as to their future operations, and where our captives were putting up earnest, but at times almost hopeless prayers for their liberation; a liberation which even the women of the party seem to have thought was not to be obtained by negotiation and ransom, but by hard fighting. At first his lordship adopted the notion of his predecessor; and it is said that positive orders were more than once drawn up for recalling all our troops, and commencing a treaty with men whom no treaty could bind. But the clear head and high heart of the Duke of Wellington revolted at this line of policy; and the English people, and assuredly the majority of the cabinet, felt with the duke. The indignation of the country would have broken up the new ministry if Lord Ellenborough had followed the plan which he had been induced to entertain, momentarily and reluctantly, by the advice of others, whose seat of sensibility was mostly in the purse. In a happy moment, his lordship in council pronounced the word "Forward," and from that moment our prestige began to brighten, our disgrace to be remedied. We speak not of vengeance for the past; this was not, and never ought to have been, a war of retaliation and revenge; it was a war of retrieval, a war of liberation. It was a war for retrieving all that was most valuable to us—our national character, the honour of our arms, and the spell of our prestige, wanting which we should have had not one, but

circumstances, had continued to hold out manfully behind the shattered walls of Jellalabad. His sorties had continued to be frequent and successful. Through these sorties many of Akbar Khan's people were killed and wounded, while many were so disheartened that they quitted the camp, and turned their faces towards their own homes. On the morning of the 7th of April, Sale defeated Akbar Khan in the open field, with only a part of the troops that chief boasted he had been blockading. The defeat was signal: two Afghan standards, four guns which had been lost by our Cabool army, and nearly all Akbar Khan's ordnance, stores, tents, &c., were taken. Next to Sale himself, the heroes of this day were Lieutenant-colonel Dennie, Colonel Monteith, Captains Broadfoot, Fenwick, Pattison, Oldfield, and Havelock, and Lieutenant Mayne. Unhappily the gallant Dennie was killed. But notwithstanding this victory, the situation of the brigade was still very precarious, for the provisions were almost all consumed. At last, on Friday the 15th of April, Sale received the joyful intelligence that Pollock's camp was at Ali Boghan, only eight miles from Jellalabad, and that he would certainly be at Jellalabad in the course of the next morning. And accordingly, on Saturday morning, at about eight o'clock, General Pollock and his force arrived, under a salute of seventeen guns. On Sunday, the day after this opportune arrival, there were three distinct shocks of earth-

quake; but they did no harm, and passed almost unnoticed by our rejoicing soldiers. Pollock had soundly beaten the Afghans in the Khyber Pass and above it; and before he reached Jellalabad, the beleaguered army had dissolved, or was in rapid flight, although only a few days before, the Afghans, to deceive and distress some of their English captives, had been waving their hands and shouting, "Shabash (Bravo)! All is over. The Feringee army has been cut up in the Khyber Pass, and all their guns taken, by Sultan Jan."

As soon as it was known that General Pollock intended

JELLALABAD.—From Masson's *Narrative of Journeys in Beloochistan, &c*

many wars to undertake in the East; it was a war for releasing in the only becoming manner the sons and daughters of Britain from a foul Afghan imprisonment.

In the meanwhile, General Sale, in spite of doubt and uncertainty as to the orders he might receive, and in spite of many other discouraging

to advance and not to retreat, the people of Cabool began to desert the city in great numbers, from dread of our army; and all efforts to induce the people to meet and oppose Pollock on his march were found to be fruitless. Many of the khans either struck away for their own mountains, or agreed that some one or two

of the English prisoners should be released, in order to open friendly negotiations with the victorious general. Just at this crisis Major-general Elphinstone breathed his last. By this time several of the Afghan chiefs were waging war upon one another in the neighbourhood of Cabool. It was difficult, even with the best management, to occupy the country, but happily there was no longer any intention of so doing; it was easy to regain possession of Cabool and to scatter the divided, distracted army of such an anarchic people. The sirdar now offered to release the English ladies and children unconditionally; but his despatch was intercepted and destroyed by one of the khans. One security for the lives at least of these interesting prisoners was in the circumstance that the women

and children of Akbar's own family and some other chiefs were in our hands; and the barbarians thought that if they murdered their captives, we should retaliate by murdering ours. The Shah Sujah was treacherously assassinated by one Sujah Dowlah, "a handsome, quiet-looking man," who now tried hard to persuade the English prisoners that the shah had played us false, and that he had committed a praiseworthy act in getting rid of him. The assassin's real motive was to avenge an attempt which had been made upon the life of Akbar by an agent of Shah Sujah; but many of these Afghan chiefs had become wonderfully anxious to prove that they had always been the friends of the English, and that it was the late shah who made the insurrection, and called upon all the mountain tribes to destroy our army on its retreat through the passes. Shah Sujah's youngest son, Futty Jung, was proclaimed king by one party, while the Barukzies formed another party and opposed him. From the close neighbourhood of Cabool, the civil or clan warfare was carried into the very heart of that city; and Futty Jung, who hoped to retain the treasure, if not the throne, of his father, the murdered shah, was closely besieged in the Balla Hissar. On the 6th of June, a mine was sprung under one of the towers of the Balla Hissar; but the storming party was driven back with loss. On the following day, however, Futty Jung, finding his people disinclined to support him any longer, made terms with Akbar and the other chiefs, giving up a tower in the Balla Hissar to each of them, and retaining for himself possession of the royal residence. By this strange bargain, the citadel was

now divided between four rival tribes, the Dooranees, the Barukzies, the Ghilzies, and the Kuzzilbashes, each being represented by its chief

FORT OF ALI MUSJID, in the Khyber Pass¹

On the 2d of June news was brought to Cabool that General Nott had gained a great victory under the walls of Kandahar, and had killed 2000 of the Afghans. Nott also succeeded in seizing the person of Sufter Jung, a rebel son of Shah Sujah, who had fought against his own father, and had now been fighting against the English. The sirdar, Akbar Khan, now told the English prisoners at Cabool that he intended shortly to march to Jellalabad, in order to pay his respects to General Pollock¹. But from other quarters the Englishmen heard that he meditated carrying them all off to the banks of the Oxus. This was the man who, after concluding the treaty with Macnaghten, girded on his weapons on the morning of the departure of our army from Cabool, and told the assembled chiefs he was going to slay all the Feringee dogs; and this was the man who, on the passage of our troops through the Khoord Cabool Pass, followed with some chiefs in the rear, and in the same breath called to the Afghans in Persian (a language which many of our officers and people understood) to desist from firing, and in *Pushtoo* (a dialect of the country which none of our people understood) to continue firing at the infidel dogs. On the 29th of June there was a shock of an earthquake at Cabool, and Futty Jung, the Dooranee chief, and youngest son of Shah Sujah, was proclaimed king by Akbar, who contented himself for the present with the title of vizier. But it would appear that our Indian government had begun once more to lose heart and confidence, and to doubt whether the

¹ From Lieutenant W. Barr's "Journal of a March from Delhi to Peshawer, and thence to Cabool."

united forces should retire at once to the country below the Khyber Pass, or take a forward position near Jellalabad, or advance upon Cabool. After his junction with Sale, Pollock halted more than four months at Jellalabad. During this long time the troops at Jellalabad were much afflicted with dysentery and other sicknesses, arising chiefly from bad food, improper or inadequate clothing, and the want of tents. A great many died, and all the surviving soldiers were impatient to quit the place, and march forward for the Afghan capital. If this long delay was partly owing to the difficulty of procuring cattle and forwarding supplies and reinforcements, it is pretty clear that it was also partly owing to the indecision of government, and to the want of proper energy and ability in the commissariat, and (*perhaps*) in some other branches of the service. At length, about the middle of July, General Pollock received instructions to advance on Cabool as quick as possible. Pollock, however, could not, or at least did not, move until the 20th of August. Akbar Khan declared, with an expression of savage determina-

equally successful; and both armies were satisfactorily proving that our soldiers, both native and European, only required proper commanders to be invincible. It was now expected that General Nott would reach Cabool early in September, and that Pollock would be only a few days after him.

On the 25th of August, Akbar kept his threat by hurrying off his prisoners towards Toorkistan. On the 3d of September, the unhappy party reached Bameean, every indignity having been heaped upon them by the way. There they were halted under a fort until fresh orders should be received from the terrible Akbar. On the 11th, the khan who had charge of them, and who was "a man that would do anything for money," signed an agreement with five English officers, who promised to give him 20,000 rupees and to insure him 1000 rupees per month. After this the khan hoisted the flag of defiance on the walls of the fort, telling the prisoners that they had no longer anything to fear—that they should not be carried into Toorkistan—that they should remain where they were until General Pollock should send a detachment to convey them back to Cabool in honour and safety. He had told the prisoners that he had received Akbar's orders to hurry them on their journey, and to butcher all the sick, and all those for whom there was no conveyance. Several neighbouring chiefs, knowing how matters were going at Cabool, and hoping to obtain some English money, came over to the fort and tendered their allegiance to Major Pottinger. Some two or three of them with much form and ceremony swore on the Koran to be faithful to Major Pottinger and his companions, who appointed a commissariat officer, and resolved, in case Akbar should send troops against them, to hold out till they should receive assistance, even though they should be reduced to eat the rats and mice, of which they had a grand stock in the old fort. On the 15th a letter was received at the fort, stating that all Cabool had risen against Akbar the new vizier; that Nott's and Pollock's forces were coming up rapidly; that Akbar had fled to the Zoba Mountains, and that other chiefs who dreaded alike the vengeance of the English soldiers and the vengeance of the people of Cabool had fled in various directions, and with only a few followers. It was also reported that a light English force had been sent to their aid, and was making forced marches towards the fort. Upon this Major Pottinger, no longer a prisoner, but acting as a viceroy and making grants of land and assigning revenues to the hill chiefs, to keep them in good humour, determined to quit the old fort, and return with the whole party along the road leading to Cabool.

GENERAL POLLOCK.—From a portrait by G. H. Ford.

tion in his countenance, that so surely as Pollock advanced, he would take all his English prisoners into Toorkistan, and make presents of them to the different chiefs of that wild country. On the 15th of August, General Nott, at the head of about 7000 men, had left Kandahar for Ghuznee and Cabool, a distance of about 300 miles. Sultan Jan started to meet Nott before he should reach Ghuznee; he fancied he was going to a certain victory, but he sustained a complete defeat; and, Ghuznee being retaken, Nott continued his advance. General Pollock was

The party, attended by a number of chiefs, set out from the fort on the 16th, hoping to meet their English friends on the road, and at the same time fearing that they might encounter some of Akbar's desperate and vindictive people.

1, KHAN SHEREEN KHAN, Chief of the Juwansheer Kuzzilbashies.
2 GHOLAM MAHOMED, a Barukzye.—From Hart's Character and Costume of Afghanistan.

As they encamped for the first evening they received a letter stating that Pollock's force, after fighting from midday to midnight, had eventually forced the Khoord Cabool Pass, and had charged the enemy as far as the hills on the north side of the city of Cabool; that Nott had attacked and pursued them in another direction; that the late Kuzzilbashies and adherents of the late Shah Sujah had made themselves complete masters of the city, and that Akbar Khan, Sultan Jan Achmed Khan, and other hostile khans, who had all been defeated, were nowhere to be heard of. This was pleasant news; but at the same time our returning prisoners were alarmed by the report that 2000 horse were following them up to recapture them and to carry them into the deserts beyond the Oxus. But their last fears were soon removed: at two o'clock in the morning of the 17th they were roused from their slumber by the arrival of a horseman with a letter from Sir Richmond Shakespear, who was coming with 600 mounted Kuzzilbashies to meet them. The party set off early, and at mid-day reached some deserted forts at the foot of a mountain-pass. They were sitting under the walls of one of three forts, sheltering themselves from the sun, when, at three o'clock, Sir Richmond arrived, and was received with heartfelt pleasure. "That we should have escaped unhurt, with so many delicate women, young chil-

dren, and tender infants, through such numerous perils, fatigues, and privations, and, above all, from the hands of such merciless enemies as Akbar Khan and his Ghilzie confederates, seemed at first too much for the senses to realize, nor could even the most thoughtless among us fail to recognize and acknowledge in all that had befallen us the distinguishing grace and protecting providence of a forbearing and merciful God. We now for the first time learned that General Pollock had reached Cabool on the 15th, where one of his first acts had been to hasten the departure of the Kuzzilbashies to our aid by a donation of 10,000 rupees." But the party had still a long march and a difficult country between them and Cabool, and were not without their apprehensions that Akbar might make some desperate effort to recover his lost prey. Sir R. Shakespear forwarded an earnest request to General Pollock that more troops might instantly be sent out to their support, as the pass of Suffed Khak, through which they must march, was reported to be occupied by a band of marauders. At the same time it was determined that the party should move forward by forced marches, for which every facility was afforded by the Kuzzilbash chiefs in supplying them with fresh horses. On the dawn of the 18th the march was resumed. On the 20th they met an English officer, who gave them the welcome intelligence that General Sale's brigade was only a few miles distant on the road to meet them. A little farther on they saw a body of her majesty's 3d dragoons with a squadron of Bengal cavalry quietly picketed in some fields.

"All doubt was now at an end; we were once more under the safeguard of the British troops. General Sale was there in person; and his happiness at regaining his long-lost wife and daughter may be imagined. The gallant veteran's countenance was an index of his feelings; and apathetic indeed must have been the heart that failed to sympathize with his holy joy. The camp was still a few miles further on; and we performed a procession of glad spirits, as we moved along towards the pass of Suffed Khak, whose heights we could discern crowned with British bayonets. This we found to be a part of the brave 13th light infantry (Sale's own regiment), who, as the ladies successively ascended the hill, raised three hearty cheers to each of them; sounds never to be forgotten, producing a thrill of ecstasy through the whole frame. The mountain guns, under Captain Backhouse, would cap the scene with a royal salute."¹ It was a glorious rescue—it was a scene worthy of an epic; but alas! that the number of the rescued should be so small. On

¹ Lady Sale's Journal.

the 21st, the happy party marched out with Sale's brigade to Killa Kazee, a village close to Cabool. At two P.M. on the same day they started for General Pollock's camp on the plain east of Cabool. Near the tomb of the Emperor Baber they passed

MAJOR-GENERAL SIR ROBERT SALE, G.C.B.

From a portrait by H. Moseley.

General Nott's camp. Thence their road lay through the city. The streets were almost empty, and unnatural silence prevailed—a striking contrast to the noise and bustle of former days! They passed the spot where Burnes's house had stood. That house was now a heap of rubbish, and its pretty garden a desolate waste. It was here that the unfortunate man used to look forward with enthusiasm to the rapid melioration of the country through the agency of British enterprise and skill—an unreal, fatal vision, and awfully dissipated! The party entered General Pollock's camp at sunset. Again the artillery uttered its boisterous notes of welcome, and old friends crowded around with their hearty congratulations. For the present their cup of joy was full. But when the first rapture was over, rest and reflection, and the scenes which surrounded them, must have brought to their recollection the thousands that had perished, and the many friends whose bones lay bleaching on the mountain-tops or in the dreadful passes.

Victory was now perched upon the British standard wherever it was raised. One of the most confident predictions of those who had pleaded for the continuance of the Company's commercial charter and monopoly of the China trade had been verified: from the moment that that trade had been thrown open, there had been nothing but dissension and confusion at Canton,

and the quarrel had led to war, and to the invasion of the Celestial empire by a British fleet and army. The victories obtained in the rivers and on the plains of China were rapidly rumoured throughout India, and produced a salutary impression among the mountains of Afghanistan, as well as in other neighbouring countries. They warned all our enemies that our enterprise, our strength, and resources were undiminished. On 21st of September Lord Ellenborough, being then at Simla, in the Himalaya Mountains, issued an encouraging proclamation, in which he stated that he had that very day received the reports of three victories: one obtained on the 30th of August, by Major-general Nott over 12,000 Afghans, thirty-eight miles to the southward of Ghuznee; one, on the 8th of September, by Major-general Pollock, over the troops of Mahomed Akbar Khan and the Ghilzie chiefs at Jugdulluk; and one on the 16th of June, by the expedition on the coast of China, within the mouth of the river Yang-tse-Kiang. Before the news of these victories reached them, our old foes in Nepal and some of the Rajpoot tribes in Central India were in a state of violent excitement, and even the Burmese looked anxiously towards China, and seemed more than half determined to try again the fortune of war by invading Arracan and the Tenasserim provinces. But as soon as it was known that the Chinese were fleeing before our troops, that the Afghans had been beaten in every encounter, and that Cabool had been recaptured, both Burmese and Nepaulese, together with every independent state in Hindoostan, gave up their warlike projects, and hastened to make the most amicable professions to our Indian government.

We had, however, had quite enough of Afghan connections and interferences; there was no longer a man that could be deluded by a vision like that of Burnes; we had released our captives, retrieved the honour of our arms, and by a series of well-ordered and gloriously-fought battles reduced the Afghan pride; and therefore it was felt that we had little else to do than to vacate a country which we ought never to have entered, and leave the khans to their own anarchy. On the 1st of October, Lord Ellenborough issued a proclamation from Simla, the spot where Lord Auckland had declared the war, stating that the disasters in Afghanistan having been avenged upon every scene of past misfortune, the British troops would be withdrawn to the Sutlej. And on the 12th of October, after destroying the fortifications, the grand bazaar, two mosques, and other buildings, the British troops evacuated Cabool, and marched off in three divisions for Jellalabad, where they arrived in the course of the 22d and the two following days. On Saturday

the 17th of December, they reached the right bank of the Sutlej opposite Ferozepoor, and crossed that river on a bridge of boats decorated with flags. Reviews, dinners, and balls ensued. In proposing the health of General Sale and the brave garrison of Jellalabad, Lord Ellenborough said that it was they who had saved the name and fame of the British empire in India. At a grand review on the 31st of December, 24,000 troops and 102 guns were mustered on this one spot.

Of the war in China we can say but little. The Chinese displayed on some occasions a wonderful

degree of fortitude and power of endurance, but of a brilliant or active courage they gave very few proofs; and their military science was altogether contemptible. A very small British army might have marched through and through the empire. Most of our troops that were actually engaged were ashamed of their easy conquest. There seemed hardly anything for them to do but to move forward and kill or scatter.

The quarrel had commenced almost immediately after the alteration of the East India Company's charter which threw open the trade of China as well as that of India. The Chinese

PORTS AND BATTERIES OF THE BOCCA TIGRIS or First Pass of the Canton River — From a view by Lieutenant Martin, 42d Madras Native Infantry

were enormous consumers of opium, and their supplies were almost wholly derived from Hindoostan. The moral government of the Celestial empire, shocked at the prevalence of this worst kind of drunkenness, had long been fulminating terrible prohibitory decrees; but the Chinamen could not do without their opium; the ministers of the law themselves had a very general love for the drug, and the mandarins and other officers employed to stop the importation went shares with those who carried on the contraband trade. The experienced sea-captains, factors, and servants of the East India Company had carried on this trade with great quietness and decorum, and with the order and regularity of an organized body. But the case was different when the free trade began, and when unpractised and impatient skippers and supercargoes repaired to Canton. The court of Peking was roused into a fury by the proceedings of these men; the opium on shore was seized, together with a large amount of British property; and the tea trade and all other trade with us was declared to be suspended. In 1834 Lord Grey's government sent out Lord Napier to Canton to act as chief superintendent, and to endeavour to make up the quarrel. The

viceroi of Canton refused to receive Lord Napier's letter, and peremptorily ordered his lordship to quit the factory, which is situated outside of Canton. His lordship refused either to communicate with the viceroi as a petitioner, or to leave the factory. On the 7th of September, 1834, as his majesty's ships the *Andromache* and *Imogene* were approaching the Bogue or Bocca Tigris passage, they were surrounded by a crowd of war-junks, and assailed by a fire from the Chinese forts. The English reserved their fire until they were in the narrowest part of the passage, and close to the paltry mud-forts, when a broadside or two did their business, silencing them and scattering the panic-stricken Chinese. Unfortunately Lord Napier was seized by a dangerous illness, which, with a difference of opinion that arose among the members of the British chambers of commerce, induced him to return to Macao, where he died on the 11th of October, 1834.

As soon as his lordship's decease was known, the chamber of commerce at Canton named Mr. John Francis Davis, formerly of the East India Company's factory at Canton, to succeed him as chief superintendent. But all the experience of

Mr. Davis was of no avail; and our relations remained in a most unsatisfactory state, the tea trade being at times allowed and at times suspended, and a rancorous feeling being displayed by the Chinese government on all occasions. Conflicts took place in the Canton river between some of our boats and the Chinese junks; and the authorities issued an order to interdict the supply of food of any kind to the British in China. On the 5th of January, 1840, an imperial edict directed all trade with England to cease for ever. On the 9th of June an attempt was made to burn all the English ships by means of fire-junks. A few days after this attempt Sir Gordon Bremer, who had arrived with fifteen men-of-war, four steamers, and 4000 soldiers, published a notice of the blockade of Canton. Something like a regular war now commenced. Part of our fleet proceeded northward on the east coast of China. On the 5th of July, 1840, the city of Shanghai, in Chusan, surrendered to our squadron. A blockade was now established from Ningpo to the mouth of the Keang River. In the month of November of that same year the court of Peking condescended to despatch plenipotentiaries to treat with us for a peace; but in the beginning of January, 1841, while we were in the midst of the negotiations, an edict was issued that all Englishmen and all English ships should be destroyed wherever they should be met with near China. In consequence of this violation of the existing truce, our soldiers and sailors attacked and carried several forts. As they were on the point of attacking the forts at the Bocca Tigris, Admiral Kwan solicited another armistice, which was granted by Captain Elliott. On the 23d of February, after other instances of bad faith, hostilities were resumed against China. Formal possession was now taken of Hong-Kong. The Bogue forts were reduced by Sir Gordon Bremer; Admiral Kwan was killed, 459 guns were captured, and the British squadron proceeded up the river to Canton. At the beginning of March, 1841, Sir Hugh Gough arrived with some slight reinforcements, and took the command of our land forces. On the 18th of March the Chinese having fired upon a flag of truce, our forces destroyed a flotilla of boats, captured 461 guns, threatened the city of Canton, and took possession of the foreign factories. After another hollow truce the Chinese attacked the British ships with great guns and fire-works. Our forces then began operations in earnest; and by the 25th of May all the heights behind Canton were occupied by British troops, and ninety more guns were taken. On the 27th of May the authorities of Canton agreed to pay six millions of dollars for the ransom of the city, in consequence of which another cessation of hostilities was granted. The

Chinese paid five millions and gave security for the remainder on the 31st of May. Our forces were then withdrawn from Canton, and the British trade was re-opened.

In the month of August of the same year (1841), Sir Henry Pottinger arrived in the Macao Roads, as sole plenipotentiary of her Britannic majesty. As the Chinese would not agree to terms, and as their government still urged the extermination of the English, war was renewed with vigour. On the 27th of August the town of Amoy was captured by the British, who there destroyed 296 guns. In October Shanghai was taken after some resistance, and Ningpo without any resistance at all. The total number of Chinese guns taken or destroyed during these operations was immense. In December Yu-Yaon, Tszেকে, and Foong-hua were carried by the British. On the 10th of March, 1842, from 10,000 to 12,000 Chinese troops, in attempting to recover Ningpo and Shanghai, were repulsed with great slaughter; and five days after this, 8000 of them were routed with great loss in an entrenched camp. After a few other operations the British squadron entered the great river Keang, capturing Wooshung and Shanghai, and taking more than 230 guns. On the 21st of July the city of Chin-Keang was stormed and taken. Here something like a bold stand was made; and when the victory of the British was decided, the Tartar general and many of the garrison committed suicide. By the 9th of August, our whole fleet being arrived at Nankin, a most populous city, and second in consequence only to Peking, the disembarkation of our troops was begun. Here the proud court of Peking fairly gave up the struggle. On the 20th of August, Chinese plenipotentiaries waited with a rare and becoming humility on Sir Henry Pottinger on board the *Cornwallis*; and in that ship, and in front of the walls of Nankin, a treaty of peace was signed on the 29th of August, 1842. The most important provisions of the treaty were the following:—

1. Lasting peace and friendship between the two empires.
2. China to pay 21,000,000 dollars in the course of the present and three succeeding years.
3. The ports of Canton, Amoy, Foo-choo-Foo, Ningpo, and Shanghai to be thrown open to British merchants; consular officers to be appointed to reside at them; and regular and just tariffs of import and export, as well as inland transit duties, to be established and published.
4. The island of Hong-Kong to be ceded in perpetuity to her Britannic majesty, her heirs and successors.
5. All subjects of her Britannic majesty, whether natives of Europe or India, who may be confined in any part of the Chinese empire, to be unconditionally released.
6. An act of full and entire amnesty to be published by the emperor,

under his imperial sign-manual and seal, to all Chinese subjects, on account of their having held service under the British government or its officers. 7. Correspondence to be conducted on terms of perfect equality between the officers of both governments.

A part of the money being paid on the 8th of August, her Britannic majesty's forces began to retire from Nankin and the Grand Canal.

At home the commencement of 1843 presented no trivial amount or complication of difficulties to parliament, which was opened by commission on the 2d of February. While the depression was going on under which our manufactures had for some time been suffering to a large extent, the reduced price of agricultural produce, and the alarm occasioned by the late tariff, were pressing heavily upon the agricultural population. All this had produced such a diminution in the revenue, that the decrease of the first quarter ending on the 5th of January (1843), amounted to £1,379,057, threatening a formidable falling off of £5,500,000 before the close of the year, unless this downward progress could be arrested. The remedy, too, must be immediate, as the resources to be derived from the income-tax were as yet a remote contingency. These considerations were fully announced in the royal speech with which parliament was opened, and the several cures that were proposed and deliberated in both houses continued to occupy the greater part of the session.

The first of these proposals was that of Lord Howick, on the 18th of February; and tracing the whole evil to the restrictions on importation that still remained unrepealed, he desired their complete abrogation, even though the fixed duty of eight shillings on the importation of corn should still be suffered to remain. As it was evident, however, that his proposal was meant to elicit from ministers their final resolution upon the corn laws, this premature inquiry was met by Sir Robert Peel with the declaration, that no proposition regarding the corn laws would be brought forward during this session.

The next remedy was that proposed by the philanthropic Lord Ashley, whose exertions had hitherto been directed to the sufferings of our manufacturing population. Tracing these sufferings to the want of proper instruction, by which the ignorance of our youth in the manufacturing districts was ripened into a manhood of crime, he moved on the 28th of February that "an humble address be presented to her majesty, praying that her majesty will be graciously pleased to take into her instant and serious consideration the best means of diffusing the benefits and blessings of a moral and religious education among the working classes of

her people." The statements of his lordship elicited from Sir James Graham an account of the government scheme of education which was to be engrafted on the factory bill. The experiment was intended to be commenced, in the first instance, only upon those who would be brought within the control of what some might call compulsory education—pauper and factory children. For these, district schools throughout the country were to be erected and endowed, under the superintendence of the clergy of the Established church, while provision was to be made for the children of dissenters and Roman Catholics under ministers of their own persuasion. But these educational clauses excited universal alarm: the Established church thought that too much was conceded to dissenters; while the dissenters, whose influence was strongest in the manufacturing towns, repudiated everything like a compulsory education, in favour of their own cherished voluntary principle. And all this was mingled with the common dread of these two great parties against Popery, which was thus to be introduced as an educational element, and whose seductions they feared, notwithstanding the precautions against attempts at proselytizing with which the bill was guarded. Petitions accordingly from every quarter were poured into the house, expressed in language so decided against this government system of education, and so numerous signed, that Sir James Graham was compelled to give up the educational clauses. Shorn of these the factory bill was introduced at the beginning of the next session, and passed with little opposition.

Another plan for the relief of the industrious classes was that proposed by Mr. Charles Buller, on the 8th of April. In a speech of great eloquence, he advocated colonization upon a more extensive scale than had hitherto been practised, as the best method of diverting our superfluous labouring population into more profitable fields than our own country could supply. This he suggested, not as the only remedy, but as a supplement to other remedies which had been, or still might be adopted. In this way, colonization might be an auxiliary to free trade; and for its purposes, we had the vast regions of Canada and Australia, which needed only capital and labour to cover them with abundant harvests, and which, wanting that capital and labour, were wasting their productive energies in nourishing weeds, or, at best, in giving shelter to beasts. He added, that when he asked the house to colonize, he only asked them to carry the superfluity of part of one country to repair the deficiency of the other—to cultivate the desert, by supplying to it the means that lay idle here; in one word, "to convey the plough to the field, the workman to

his work, the hungry to his food." To this it was answered, that emigration from Britain to Canada was already forestalled by the United States, so that our colonial market in that quarter was fully pre-occupied; and that as for Australia, its colonization was going on as prosperously as it could well bear, through the means which had been adopted by government. It was thought better in the meantime to leave the matter as it stood, and Mr. Buller was persuaded to withdraw the motion. The time was drawing nigh when even a stronger motive than a mere desire to escape the evils of poverty would attract our population by tens of thousands to the antipodes.

While parliament was thus employed in legislating for the sufferings of the lower classes, the

condition of Ireland was growing worse than ever. It had been announced by O'Connell that 1843 "is, and shall be the year of repeal;" and to effect this purpose, monster meetings were assembled throughout the country, and speeches of the most inflammable description addressed to the myriads, to make the cry of "repeal" the national watchword. Of these formidable open-air meetings, one held at Trim, on the 16th of March, mustered 30,000 attendants; another at Mullingar, on the 14th of May (Sunday), at which the Roman Catholic priests took a very prominent part, exhibited an array of at least 100,000 Irishmen. But even these were insignificant compared with the meeting held at Tara on the 15th of August, at which the numbers assembled were calculated at from 250,000 to

THE BANK OF IRELAND, College Green, formerly the Irish Parliament House, and TRINITY COLLEGE, Dublin

1,000,000. This increase of physical force was also matched by the increased violence of the harangues; and here O'Connell, forgetting his former caution and swept away by the whirlwind he had evoked, spoke boldly out. He told this immense auditory that before twelve months elapsed, the parliament would be in College Green, Dublin—that not twelve months could possibly elapse without hurrahs for the parliament there being heard over the land. This permission also for Ireland to govern itself was to be obtained, or rather *extorted* from the queen; and after showing how this was to be accomplished, he exclaimed, "The Irish parliament will then assemble, and I defy all the generals, old and young, and all the old women in pantaloons [thus he spoke of the ministry and the Duke of Wellington];—nay, I defy all the chivalry of the earth, to take away that parliament from us again." Such dangerous musters, appealed to in such language, and the plans that were organized at them against the proceedings of law and government, by electing magistrates

of their own, could no longer be tolerated, and accordingly, when a monster meeting was announced to be held at Clontarf on the 8th of October, to which the audience was invited to repair in military order and array, it was prohibited by a proclamation of the lord-lieutenant and council. This prohibition, backed by the horse, foot, and artillery that were moved to the spot on the morning of the day appointed, obliged the agitator to countermand his advertisement, and the few who assembled could only gaze in silence upon the imposing military force that held possession of every approach to the ground. A few days after, O'Connell himself and his chief coadjutors were arrested on charges of conspiracy, sedition, and unlawful assembling. He was soon liberated from prison on giving recognizances for his appearance on trial; but the promptitude with which his career had been stopped seems to have deprived him of his wonted audacity, and his loud tone was lowered. He abjured the use of the word "Saxon," with which he had been wont to brand his enemies, and agreed to curtail his demands

to a local parliament for local purposes; while his popular cry of "no surrender" was changed into exhortations of peace and endurance. Having raised the people of Ireland to that stormy point at which he was unable to control them, he perhaps felt grateful that government had so opportunely stepped in and relieved him from such a charge.

This year of Irish monster meetings that loomed so terribly in the view of England, was also distinguished by an event in Scotland immeasurably less noisy and obtrusive, but more important in its character and results. We allude to that event well known under the name of the Disruption, in which the popular agitations in Scotland had now terminated, and by which the national church, to the astonishment and dismay of our rulers, was most unexpectedly rent asunder. The causes and particulars of this important religious movement, however, more properly belong to another department of our history.

The small principality of Wales was not without its share of the commotions of this stormy period. Annoyed by the heavy tolls that had been established upon their highways, and the abuses of the turnpike system in general, the Welsh population, so early as 1839, had taken the law into their own hands, and the demolition of toll-gates, from a reckless frolic, was now organized into a formidable conspiracy. The mode also in which it was conducted, was in full accordance with the wild, ardent, poetic character that distinguishes every branch of the Celtic race, in contrast to the deliberate methodical Saxon. The chief leader, either real or fictitious, of this turnpike warfare—the Captain Rock of the Welsh—was generally personated by a man dressed in woman's clothes, by whom the scriptural blessing of Rebekah was adopted, "Let thy seed possess the gate of those who hate them." The attack was made at midnight; the rioters, under the name of Rebekah's daughters, were disguised like women, and being generally on horseback, they were the better able to make their onslaughts by surprise, as well as escape pursuit. Their arrivals were only announced by the sudden blowing of horns and firing of guns; a few minutes sufficed them for hewing down the gates and demolishing the toll-houses, and before rescue could arrive, they had vanished, no one could tell whither. To rebuild these barriers was only to provoke a fresh demolition, so that the trustees desisted in despair, and left the roads free of toll. These outrages, and the success that crowned them, owing to the want of a paid constabulary, expanded the ambition of the rioters, and Rebekah, from being a mere destroyer of toll-bars, was now regarded as a national champion, by whom every

Welsh grievance was to be redressed. High rents and vexatious taxes were in like manner to be swept away; and the daughters of Rebekah were joined by the discontented of every class, until, to the number of several thousands, they attacked the town of Caermarthen at mid-day, on

REBEKAH'S DAUGHTERS, OR REBECAITES.
From the Illustrated London News, 1844.

the 10th of June, carried it by storm, and proceeded to destroy the workhouse, toll-houses, and every other building that stood in the way of a thorough reform. In the midst of this uproar, a troop of the 4th Light Dragoons from Cardiff rode into Caermarthen, and by a vigorous use of the flat of their swords drove the rioters out of the town, besides taking above a hundred prisoners, and several horses which the riders had abandoned in their flight. Such a daring outbreak, and its political character, roused the attention of government, and a large military force, as well as a strong body of the London police, were sent into the disaffected districts. This formidable demonstration, with the promise which government held out of an examination and redress of grievances, gradually restored the tranquillity of Wales, and the principality subsided into one of the most orderly portions of the British empire.

The commencement of 1844 gave a better promise of national prosperity than the previous year. The revenue had increased, trade was reviving, while the applications of pauperism for public relief had considerably diminished. As a necessary consequence of this state of matters, the public confidence in the ministry was strengthened, and gave additional stability to their tenure of office. Still, however, there was the serious drawback of Irish insubordination; and above all, there was to be settled the pending

trial of the chief offender, Daniel O'Connell, who was reckoned too dangerous to be let loose, as well as too powerful to be punished.

This trial had commenced on the 2d of November (1843), but it was soon apparent that every resource in the shape of obstruction and delay would be adopted by his supporters to defeat the ends of justice. The first difficulty was to impanel a jury; and in preparing the jury lists, it was found that two slips of paper, containing sixty-three names, had somehow slipped aside, and could not be found. The trial had to be postponed till the 15th of January, 1844, and when the eventful day arrived, O'Connell repaired to the Four Courts, not like a culprit but a conqueror, conducted by the lord-mayor of Dublin in his state carriage, and escorted by a train of twenty-three other carriages. The difficulty of finding twelve honest and impartial jurymen to try a man so supported was quickly felt, and of those who were selected for the dangerous office, some pleaded ill-health, others that their Christian names had been erroneously set down, and all paid the forfeiture of £50 for non-appearance, except one, who gave in a *bonâ fide* affidavit of disqualification from sickness. The various modes of defeating the institution of trial by jury were neither new nor difficult to find in this unhappy country. After a proper jury had been found and impanelled, and after the case for the prosecution, which lasted eleven days, had been ended, another long interval was dragged out; but notwithstanding every expedient of procrastination, Mr. O'Connell, on the 12th of February, was pronounced guilty on the whole eleven counts of the indictment. The sentence, which was not given till the 30th of May, was a mild one. He was sentenced to a year's imprisonment, to pay a fine of £2000, and to enter into recognizances to keep the peace for seven years. On being allowed to choose his place of imprisonment, Mr. O'Connell selected the Richmond Penitentiary in Dublin, and in that quiet retreat he found a shelter from those numerous deputations that sought, but were not allowed to wait upon him, as well as from those desperate responsibilities which he could never hope to fulfil. So eager nevertheless had he been to keep up appearances, and retire with boast and bravado, that immediately after his trial, he issued a manifesto to the people of Ireland full of his old promises, and ending with, "Keep the peace for six months, or at the most, twelve months longer, and you shall have the parliament in College Green again."

As O'Connell had appealed against his sentence, declaring that he was guiltless of conspiracy, and that justice had not been done to him, his appeal was brought before the House of

Lords, who referred it to twelve judges. By them, six of the eleven counts were declared bad or informal, and in the end, the judgment was reversed on the 6th of September. The greater part of the English public were astonished that such an agitator should again be let loose upon them, and condemned the decision of the law-lords as an ill-judged piece of clemency. But apart from moral considerations, this verdict was a deed of true political wisdom. It saved the government from the degradation of waging a united war against an adversary already sixty-nine years old, and who would soon be where "the wicked cease from troubling." It would pluck from his head that crown of martyrdom which he knew how to make more formidable than a kingly diadem. It would bereave him of his strongest argument derived from the injustice and oppression of the government. His exit from prison was a triumph, but it was the last of his many triumphs; and though for two years longer he continued to haunt the political arena, it was with woefully diminished influence, and a continually abating popularity. At last, with brain and constitution equally worn out, and weary of the sight of those national miseries which his selfish ambition had so much tended to multiply, he retired to the Continent, and died at Rome, in May, 1847. Even already Ireland has almost ceased to remember this object of her recent idolatry.

The financial statement of 1844 exhibited a gratifying contrast to the previous year, the surplus amounting to £2,700,000. This was a sufficient cure for the public depression, and the reaction was manifested in various demands for a greater reduction of taxes than could be safely conceded. These demands were met by the statement that the income-tax was the only resource upon which we could fall back, while its continuance beyond the next year was as yet uncertain. In the meantime, no further abatement could be made than in a few duties to the amount of £387,000 per annum.

The chief conflict on the question of reduction was about the sugar duties, an annual subject of parliamentary controversy, and for which the present season was especially favourable. On one side was the West India interest, and on the other the free-traders. The first were opposed to an extension of the limits from which our sugar was derived; while the other party declared that as our consumption of the article was continually on the increase, and slave-grown sugar would find its own way, we might as well avail ourselves of the opportunity, as allow it to pass away to other countries. The proposal of Mr. Goulburn, chancellor of the exchequer, was brought forward in a way by which government hoped to steer clear of both parties. He offered

two resolutions. By the first of these, sugar certified to be of the growth of countries where no slave-labour was employed, should be admitted at a duty of 34s., the colonial duty remaining as formerly at 24s.: by the second the queen should be authorized, at the same date, to proceed upon any existing treaties by which she was bound to admit the sugars of any foreign country, on the same footing as that of the most favoured nation. This last proposal had a reference to the Brazilian treaty, which would expire in November. To this, an amendment was moved by Lord John Russell to the following effect:—"That towards raising the supply granted to her majesty, instead of the duties of customs now payable on sugar, there shall be charged on brown or muscovado sugar, the produce of any foreign country, the sum of 34s. the cwt. After a keen debate between the advocates of the free trade and the West India interest, Lord John Russell's amendment was rejected, the government motion being carried by 197 against 128.

A bill grounded upon these resolutions was brought forward after a few days, and read a second time without discussion. The battle of this question of years was reserved for the 14th of June, when the House of Commons resolved itself into a committee on the sugar-duties bill. On the morning of that day there had been a meeting of the West India body in the city, and there it had been agreed to propose a lowering of the duty on colonial and East India sugar to 20s. instead of the 24s. proposed by government, and a raising of the duty on white-clayed, or equivalent to white-clayed sugar, of foreign free-labour produce to 34s., the duty on brown or clayed being 30s. The motion to that effect before the committee of the house was made by Mr. Miles. The discussion that ensued produced a strange commingling of Whigs, young England champions, and free-trade advocates, who for the moment were at one, with Lord John Russell at their head; and such was the weight of their opposition, that there was a majority of twenty against ministers. It was thought that Sir Robert Peel must yield or resign office, but he did neither; on the contrary, he resolved to confront the storm which was expected to ensue on the 17th, to which day the committee was adjourned. He advocated the bill, not only as favourable to free-trade principles, but the cause of humanity also, by the discouragement of slave-labour. "The proposal of government," he stated, "having been negatived by the house, the government had reconsidered the subject, and now felt it necessary to adhere to their own measure. They considered that the consumer would not be benefited; that the West Indians would not be protected; and that the

revenue would be seriously injured." As for the rival motion, it was not one differing in principle but only in amounts, and therefore the house would incur no disgrace in reconsidering its late vote, and freeing the government from its embarrassment, if they still had confidence in its administration. It was also worthy of notice that next year would be an important one in regard to questions of commerce and finance, and that this bill was a fitting preparation. It was read a third time in a committee of 488, and passed by a majority of twenty-two.

Another important measure of this year was the reduction of the 3½ per cents., a public relief which the general prosperity and growing prospects of the country fully warranted. The plan for this purpose, which had for some time been in expectation, was clearly and satisfactorily brought forward by Mr. Goulburn on the 8th of March. He stated the importance of the measure, in which government was called to the unprecedented task of legislating upon such a sum as £250,000,000, and by which the power and resources of the country, and the stability of its commercial faith, would be so signally illustrated. He then announced his intention of proposing the conversion of the 3½ into a 3¼ per cent. stock, which should continue till October, 1854, after which period the interest should be reduced to 3 per cent.; with a guarantee, that for twenty years from 1854, there should be no further reduction. By this measure the public, from October, 1844 to 1854, would save £625,000 per annum, and from and after 1854, £1,250,000 per annum. He proposed also to make such arrangements, that from next October the payments of interest would be nearly equalized in each quarter. The intimation was received with repeated cheers from both sides of the house. The bill which was brought in to give effect to the resolution was read a third time, and passed on the 19th of March.

Besides this, an important monetary measure which employed the attention of the present session, was the bill introduced by Sir Robert Peel for the regulation of the Bank of England, and for the administration of banking concerns in general. By an act of parliament passed in 1833, conferring certain privileges upon the Bank of England, a promise was made not only that the charter of that institution should expire in 1855, but also, that the legislature should have the power of revising the charter ten years earlier, by giving six months' notice. On this occasion, nothing could exceed the lucid exposition of Sir Robert Peel, and the able manner in which he carried through the bill, except the importance of the movement itself, which constitutes a great era in our commercial history. After stating his

views respecting the principle for the regulation of a paper currency, he thus announced the outline of the practical measures which he was prepared to recommend: "I propose, with respect to the Bank of England, that there should be an actual separation of the two departments of issue and banking—that there should be different officers to each, and a different system of account. I likewise propose that to the issue department should be transferred the whole amount of bullion now in possession of the Bank, and that the issue of bank-notes should hereafter take place on two foundations, and two foundations only—first, on a definite amount of securities, and after that, exclusively upon bullion; so that the action of the public would, in this latter respect, govern the amount of the circulation. There will be no power in the Bank to issue notes on deposits and discount of bills, and the issue department will have to place to the credit of the banking department the amount of notes which the issue department by law will be entitled to issue. With respect to the banking business of the Bank," continued Sir Robert, "I propose that it should be governed on precisely the same principles as would regulate any other body dealing with Bank of England notes. The fixed amount of securities on which I propose that the Bank of England should issue notes is £14,000,000, and the whole of the remainder of the circulation is to be issued exclusively on the foundation of bullion. I propose that there should be a complete and periodical publication of the accounts of the Bank of England, both of the banking and issue department, as tending to increase the credit of the Bank, and to prevent panic and needless alarm. I would therefore enact by law, that there should be returned to the government a weekly account of the issue of notes by the Bank of England—of the amount of bullion, of the fluctuations of the bullion, of the amount of deposits—in short, an account of every transaction both in the issue department and the banking department of the Bank of England; and that the government should forthwith publish unreservedly and weekly a full account of the circulation of the Bank."

After explaining the regulations which he proposed for private banks, his purpose in these being to limit competition, and confine their issues to a specified amount, Sir Robert proceeded to show how his plan of issue allowed to the Bank of England to the extent of a fixed amount of securities—to £14,000,000, and his proposed rate of interest upon it would accomplish the saving to government which he had already announced. This whole plan was embodied in a series of eleven resolutions, that were put from the chair, while the members

were earnestly entreated by Sir Robert to refrain from pronouncing any immediate opinion upon them, but allow time for them to be printed, and deliberately discussed. This took place on the 20th of May. The resolutions were passed, and the bill founded upon them was ratified on the 19th of July, with the general concurrence of all parties. It established a most important commercial change, by separating the business of the Bank of England into two distinct departments, the one for the issue of notes, and the other for ordinary banking transactions, thus assimilating them into one body. Not the least praise bestowed upon the author of the plan was, that at a season of great political temptation he had avoided more showy and immediate remedies, and adopted one which, though certain to work well, required the slow and silent operation of years to realize its promised benefits.

Of the other parliamentary proceedings of this session, the most important was an "act for the regulation of railways." Only ten years before this period there had been nothing more than one railway in England, being that between Manchester and Liverpool; but during the short interval, railway speculation had grown into a downright national mania, threatening nothing short of national bankruptcy. Not even the South Sea bubble had held out more alluring promises, absorbed more capital, or produced so many terrible reverses; and the only consolation in the present case arose from the perspective benefits which the public would ultimately obtain from the present wild outlay. Already several of the great lines were opened for public travel or conveyance, and as the railway companies availed themselves of their exclusive possession by laying on exorbitant fares, the subject had excited the attention of parliament at an early part of the session, and a select committee was appointed to consider the best means of adapting this rapidly-growing system of communication to the wants of the country. In consequence of the committee's decision, a bill was introduced by Mr. Gladstone, containing enactments calculated to protect the public from the injurious effects of monopoly and combination, by vesting in the government a control over such companies as should thereafter come to solicit powers from parliament—and a right of intervention for the reduction of charges and tolls, whenever the profits of a railway should exceed the maximum of ten per cent. on the capital. As this bill so nearly touched the pockets of the principal companies, the opposition of their representatives in the house was both keen and formidable, but after certain concessions, the bill eventually passed and was established into law.

Another important act was introduced this

year for the regulation of joint-stock companies. It was at length found necessary to arrest the growth of those fraudulent and fictitious schemes which annually sprang up for the ruin of impatient money-holders, and in this bill the regulations for testing the character and establishing the responsibility of such companies were sufficiently stringent. A strict system of registration was established for the names and descriptions of the projectors, and the nature and objects of their undertaking were required to be enrolled at an office established for the purpose. Reports also were to be annually returned to parliament of such companies as should have come within the provisions of the act during the year.

In this year of monster meetings and O'Connell trials, certain concessions were granted to Ireland, by which it was hoped the religious asperity of its national insubordination would be materially softened. The first of these was the Irish charitable trusts bill, relative to the management and supervision of charitable bequests and donations in Ireland. Hitherto, while nearly three-fourths of such bequests were Roman Catholic endowments, the board under which their government and administration had been placed was almost exclusively Protestant. By the bill that was now passed after a third reading, the master of the rolls, the chief baron of the exchequer, and the judges of the prerogative court (of whom, two out of these three officers might be Roman Catholics) were to be *ex officio* members of the board, one or the other of them pre-

siding according to his rank. The board itself was to consist of ten commissioners appointed by the crown, of whom five should be Protestants, and five Roman Catholics. If a question also arose as to the status or condition of any person who had a right, or claimed to have a right, under any of the deeds of bequest brought before the commissioners, such question should be referred, if the claimant were a Roman Catholic, to the five commissioners of that persuasion, whose certificate of decision should be received as evidence. Even this, however, was not enough to satisfy the Irish members and their adherents, who complained that their clergy had not been consulted about this bill, nor their bishops recognized in it by their official titles. Another concession granted by parliament, was the abolition of certain penal acts still retained in the statute-book, although they had fallen into desuetude. These were the severe enactments of the periods of Elizabeth, James I. and William and Mary, which, however needful in their day, or in accordance with the spirit of the age, were thought disgraceful to the nineteenth century, as well as utterly unfit either for the protection of Protestantism or the subversion of Popery—being chiefly an array of pains and penalties inflicted upon Roman Catholic observances, or upon a refusal to comply with those of the Established church. Still, it was not without difficulty that the bill passed, for it was suspected by many zealous Protestants to be nothing more than a prelude to the entire emancipation of Popery.

CHAPTER X—CIVIL AND MILITARY HISTORY.—A.D. 1845—1847.

VICTORIA.

Prosperous state of affairs at the beginning of 1845—Sir Robert Peel's proposal to continue the income-tax—His statement of the expediency of the measure—Its connection with the reduction of other taxes—Continued discussions on Sir Robert's proposal—Proposed amendments—Peel's bill passed for the continuation of the income-tax three years longer—Modifications made in the sugar duties—Other financial measures—Bills passed for the regulation of banking in Scotland and Ireland—Bill passed for the amendment of the poor laws in Scotland—The college of Maynooth—Peel's Maynooth improvement bill—His proposal for the endowment of the college—Opposition to the bill, and arguments against it—It is passed—Sir James Graham's plan for the education of Ireland by the establishment of three colleges—Discussion of its merits—Passing of the bill—Opposition to it from the Papists of Ireland—Continuing demand for the total abolition of the corn laws—Growing strength of the demand—Proceedings of the anti-corn-law league—Its certainty of success—The trial hastened by the failure of the crops—It commences at the opening of parliament in 1846—Promise given by the partial opening of the ports—Peel's speech for the abolition of the corn laws—His preliminary proposals—His plan of gradual previous to total abolition—Keenness of the following debates—Attempts to postpone the discussion—Peel's bill for abolition of the corn laws carried in the commons—It is passed through the House of Lords—Famine and tumults in Ireland—Bill for the suppression of assassination and violence in Ireland—It passes through the lords, but is rejected by the commons—Sir Robert Peel resigns office—His eulogy of Cobden in connection with corn-law abolition—Lord John Russell becomes premier—Remedies adopted for the Irish famine—Measures for the moral improvement of the army—Indian affairs—

Ameers of Soinde—Their hostility and treachery to the British in the Afghan war—War commenced between the Ameers and the British—Victories of Sir Charles Napier at Meeanee and Dubba—The Ameers banished—Soinde annexed to our Indian empire—War with the Mahrattas—They are defeated and reduced to subjection—Complaints against the government of Lord Ellenborough in India—He is recalled—Invasion of the Company's territories by the Sikhs—They are defeated at Moodkee—Their defeat at Ferozeshah—Their further defeats at Aliwal and Sobraon—The Sikhs driven across the Sutlej—The Punjab occupied by the British—They take possession of Lahore.

HE reaction of prosperity which had commenced with 1844 still continued to go onward in the following year. The plentiful harvest of the previous autumn was accompanied with a brisk trade, and abundant labour for the working classes; while 200 new railway schemes that applied for legislation under the terms of the late act, was a gratifying proof of the abundance of capital. No political disquietude also was at hand to cloud the public tranquillity, with the exception of the anti-corn-law league, which still continued its active operations, and occasioned uneasy surmises to the agricultural interest. This state of public prosperity was an honourable attestation to the wise measures of Sir Robert Peel, and an encouragement to persevere in his plans of financial reform; and in bringing forward his full scheme before a committee of ways and means, which he did so early as the 14th of February, the house was not a little startled at its boldness. He was aware that retrenchment was the popular cry, and the income-tax the chief ground of complaint; and as this tax was the sheet-anchor of his financial system, his chief aim was to secure its continuation. This would accomplish the double purpose of carrying on the efficient performance of the public service, and affording means for the repeal of other taxes that pressed still more heavily upon industry and commercial enterprise. He showed that by the 5th of April there would be a surplus revenue in the exchequer of at least five millions, while in twelve months, should the income-tax be discontinued, there would be instead a deficiency. Would they then run the risk, he asked, of that deficiency, by making no provision to meet it? or would they postpone the consideration of that deficiency till the year 1846? He proceeded to show the intentions of ministers if the tax was continued. It would enable them to effect a reduction of the taxes on sugar: it would secure the abolition of export duties on all articles whatever, coal not excepted: it would effect the removal of the duties from 430 out of the 813 raw materials used in manufactures. To facilitate the transfer of property, he intended to repeal the auction duty altogether. He also purposed to relieve the article of glass from all excise duty. All this he would be enabled to do without utterly absorbing the sur-

plus, if the income-tax was continued. That continuance he now proposed for three years longer, and such was his confidence in the elasticity of the country, that he thought after that period the tax might be safely dispensed with. This comprehensive financial plan, which occupied three hours and a half in the detail, was so luminous, and withal so promising, that it was welcomed with cheers from every part of the house. In the debate upon it on the 17th of February, Mr. Roebuck pointed out at great length the unequal, vexatious, and inquisitorial nature of the income-tax, and thought it a worse evil than those imposts of which it would accomplish the removal. He therefore proposed a modification of Sir Robert Peel's motion, by omitting the words "professions, trades, and offices," not with a view of excluding them from taxation altogether, but of subjecting them hereafter to a discriminating scheme of taxation which he had already described. This amendment was rejected by a majority of 208, only 55 voting in its favour, while 263 were against it.

The discussion was renewed on the 5th of March, and several amendments were proposed and rejected. One was by Mr. Bernal Osborne, for the committal of the bill on that day three months; another by Mr. Curteis, to make the duration of the tax two years instead of three. The strongest argument in favour of such a system of direct taxation was made in the course of this discussion by Lord Sandon. "One great objection urged against the income-tax," he declared, "had been the danger of driving away capital from the country, by imposing so large a weight of taxation upon it: but when a tax of three per cent. raised £5,000,000 or £6,000,000, there was not much danger of capital being driven away; and a tax of this nature enabled the house to dispense with a large amount of indirect taxation. It was our duty to endeavour to provide occupation and employment for the labouring classes; and how was this to be effected? By promoting the industry of the country in every possible way. But what was the great obstruction to the progress of industry? The taxes imposed upon every description of manufacture through the customs and excise. Direct taxation, therefore, was becoming more and more advisable; and he should be extremely sorry if the house pledged itself to abandon the income-tax at any given period."

After the bill had passed through committee, the discussion was renewed on the 10th of March, by Mr. Charles Buller proposing the following amendment:—"That the circumstances under which the renewal of the income-tax is at present

JOHN A. ROEBUCK, M.P.—From a photograph by Mayall

proposed, are such as to render it exceedingly improbable that parliament will have the power of dispensing with its continuance at the end of three years; and that it is therefore the duty of this house to take care that the tax be imposed in a form in which its operation shall be less unequal and inquisitorial than it now is." He complained that of the 430 articles to be struck out of the tariff through the continuance of the tax, there was not one which entered materially into the common consumption of the poorer classes; and that if Sir Robert Peel had dealt frankly with the articles of tea, coffee, malt, soap, spirits, and wines, he might have so benefited the revenue, by diminishing their price, as to make up the amount of the loss at the end of three years by the increase of consumption. In answer, it was stated by the chancellor of exchequer, that the articles Mr. Buller had specified, produced a revenue of £16,000,000 or £17,000,000, and the amendment was outvoted by 240 against 128. After several other proposed amendments were rejected, the bill was read a third time, and passed through the commons. On the moving of the third reading in the lords, on the 4th of April, the arguments of the other house were recapitulated, and considerable discussion ensued, and there, as in the commons, the chief apprehension was, that the operation of the tax could not be limited to three years, but in all probability would become a fixture. Still, however, no better remedy could be discovered; and after some bitter remarks from the

VOL. IV.

Duke of Richmond, the Marquis of Lansdowne, and Lord Ashburton, the bill was read a third time and passed.

On the 24th of February, when the house had resolved itself into a committee of ways and means, Mr. M. Gibson, for the purpose of obtaining a permanent settlement of the sugar duties, moved a resolution as an amendment upon that of Sir Robert Peel, that no arrangement of those duties would be satisfactory and permanent which did not involve an equalization of duty on foreign and colonial sugar. In opposition to this proposal it was shown, that the cost of cultivating sugar in Jamaica was twice as much as in Cuba and Brazil; and that by equalizing the duties, we would ruin the West Indies, and defeat the abolition of the slave-trade. Accordingly, this amendment was rejected by a very large majority. Other discussions and debates upon the sugar duties followed in the committee, mixed with the subject of the corn laws and protective duties in general, upon which several amendments were proposed, but without effect. At last, a compromise was made by Sir Robert Peel: he consented to arrangements by which compensation should be made for the drawback of the duty upon the sugar now remaining in the queen's warehouses, so that no loss should be sustained by its owners; and this being granted, his new scale of duties upon the various sugars, foreign and colonial, was passed through the committee. The same demur occurred upon the other parts of the tariff, and chiefly the repeal of the auction-duties, but with a similar result. These financial measures having thus passed in committee, were equally successful in parliament, although not without keen discussions that extended over the whole course of the session. It was indeed a most important financial revolution, in which the interests of agriculture, free trade, manufactures, and the condition of the working classes were deeply at stake. The great annual question of the corn laws and free trade reappeared this year also in a variety of motions, which were successively defeated; but a terrible advocate had already entered into the contest, who, in the following year, was to plead against corn-law restrictions with arguments which no statesmanship could refute.

In the course of this year, Sir Robert Peel brought in two bills for the regulation of banking in Scotland and Ireland, conformable to those principles on which he had remodelled the banking system in England. His chief aim in these proposed changes was to add to the stability of the circulation in the United Kingdom, and to make Ireland and Scotland bear their proportionable share of guarantee against commercial panic. The bills passed through both houses

with little discussion, and were put into operation at the beginning of the next year.

Another important proceeding of 1845, in relation to Scotland, was a bill for the amendment of the poor's laws in that country. The introduction of the mercantile spirit had multiplied the poverty, as well as increased the wealth of the lower orders; but unfortunately, the manly spirit of pride and independence which so greatly distinguished the Scottish character, had considerably abated with the yearly multiplication of paupers, and private benevolence could no longer suffice for the evil. Legal provisions had therefore been devised, but these were only first experiments, that were soon found too insufficient for the growing amount of destitution. The chief contents of the new bill to remedy this defect, which was introduced by the Lord-advocate of Scotland, were thus enumerated by Sir James Graham at the second reading:—"Provisions had been made for local inspection; for a responsible supervision by a board sitting in the capital; for perfect publicity; for an appeal to the sheriff of the county (which was given for the first time) on the part of the poor man to whom relief was refused; for empowering the sheriff to order relief, and if the quantum were too small, for a power of appeal, without expense, to the central board, which had complete power, without limitation, to deal with the quantum of relief; on the other hand, if the quantum was too great, the parish might appeal to the court of session. Provisions had also been made for subscription to lunatic asylums; for the education of pauper children; for medical attendance; and for building poorhouses in large cities." This bill encountered considerable opposition in its various stages, chiefly from the Scottish members, but after undergoing a few slight alterations, it passed through the third reading without division.

One question, which if not the most important, was certainly the keenest subject of parliamentary debate during the session of 1845, demands particular notice. As usual in such cases, Ireland was the object of controversy. To provide a liberal education for the Roman Catholic clergy of Ireland at home, instead of compelling them to repair to foreign universities, where it was thought they would acquire political principles hostile to the British government, it had been usual for fifty years to vote an annual grant of £9000 to the college of Maynooth. This provision, however, had long been complained of as inadequate for the salaries of ten professors, and the sustenance of 250 free students which the college possessed, and the whole Roman Catholic prelatry had urgently petitioned for a greatly increased allowance. But even the original boon of £9000 had always been watched with an evil

eye by Protestants of every class throughout the three kingdoms, those of Ireland regarding it as a tampering with the Protestant ascendancy in that country, and those of England and Scotland as the commencement of a recognition of full equality between Popery and Protestantism. Hence the astonishment with which the proposal of Sir Robert Peel was received to raise this £9000 per annum to £30,000, and the loud outcry of popular remonstrance as well as thunder-shower of petitions that at any earlier period would have extinguished it at the outset.

In proposing his famous "Maynooth improvement bill," Sir Robert stated that there were three courses left open to her majesty's ministers. These were, to continue the present system and grant without alteration—to discontinue the vote altogether, and repudiate all connection with Maynooth—or liberally to adopt, improve, and extend the institution provided for the education of the Roman Catholic priesthood. The first of these he regarded as the worst of the three. It was, he alleged, a profession on the part of government of providing a religious education for the spiritual instructors of Ireland, and at the same time so limiting the allowance as to be unfit for such a purpose. Besides, if it was a violation of principle to provide instruction for the Roman Catholic clergy, that guilt was incurred already. He then came to the second alternative; and to show that we could not abandon all connection with Maynooth, he went into a history of the origin of that connection, which had taken place at a less liberal period, and when Irish Popery was more strictly coerced. "These disabilities," he added, "have been now entirely removed; the Irish Roman Catholics are placed upon the same footing with ourselves in respect to civil privileges: should we now, in opposition to the acts of our predecessors, say to them—'That favour which was granted to you under the administration of Mr. Pitt must now be withheld from you on account of a conscientious scruple?' Sir, I should deprecate the effect of such a step. It is not the amount of the pecuniary grant; what I deprecate is the animus it would indicate. We should never be able to convince those from whom the grant was withheld that those scruples which were not felt by George III., by Mr. Pitt, by the exclusively Protestant legislature of their own country, are now felt to such a degree by us that we must abandon the connection which was thus formed."

After having disposed of the first and second alternative, Sir Robert proceeded to the third, which was, to improve the institution of Maynooth, and elevate its tone of education; and he explained the proposal which he was commissioned to make on the part of government. The

salaries of the professors were to be raised, 500 free students were to be supported, and the buildings of the college were to be put into repair. For all this the sum of £40,920 would in the first instance be necessary, and afterwards a grant, of course not an annual one, of £30,000 a year. (There was no small amount of astonishment expressed at this intimation.) The laws regulating land purchase were also to be waived in favour of the institution, so that the trustees, who hitherto could purchase only to the amount of £1000 per annum, and that for the term of their own lives, were now to be incorporated, and enabled "to hold real property to the extent of £3000 per annum, should members of the Roman Catholic faith be desirous to contribute to the college so incorporated." Finally, the repairs of the college buildings were to be consigned to the board of works like other public structures, and to be included in its annual estimates. After unfolding the whole of his plan, which seemed to fall like an explosive shell among the Protestant members, Sir Robert craved permission to bring in his bill, and ended with the following words:—"We do not think that there is any violation of conscientious scruples involved in our proposition. We believe that it is perfectly compatible to hold steadfast the profession of our faith without wavering, and at the same time to improve the education and to elevate the character of those who—do what you will—pass this measure or refuse it—must be the spiritual guides and religious instructors of millions of your fellow-countrymen." Lord John Russell supported the motion, and permission to bring the bill into parliament was carried by a majority of 102, the votes in its favour being 216, and against it 114.

The more zealous portion of the Protestant party had been so taken by surprise that no system of opposition had been organized, and they now began to muster their whole strength for the conflict of the second reading. Churchmen and dissenters were at one against a common enemy; while such of the Tory party as cared little for the theological merits of the question, were opposed to the Maynooth bill on political grounds. It was recognized by all as a preliminary step to the endowment of the Roman Catholic clergy, and as such, hostile and dangerous alike to church and state. Public meetings were therefore called during the interval, petitions were sent from almost every part of the United Kingdom, and amongst the various elections which took place at the period the sentiments of the candidates upon the Maynooth endowment was the test of their fitness for a seat in parliament.

Under these auspices the second reading was moved on the 11th of April, and the discussion it occasioned occupied six evenings in the lower

house, and three in the upper. It would be as difficult therefore to give even a summary of these debates, as to convey a distinct idea of their warmth and asperity. Against the bill it was argued, that to endow the college of Maynooth was to provide a stronghold and training ground for Irish agitation—that it would be a nursery for Jesuits—that a state could not conscientiously support two different religions, as if both were equally true—that by this measure of endowment we established and rooted Popery in Ireland, even though a time should come when the Irish themselves might be inclined to quit it—and that in spite of all the promises they had given as the price of former concessions, the Irish bishops persisted in their invasions on the Protestant constitution, and would still continue their hostility. The arguments on the other side were derived in like manner from considerations of conscience and political expediency; but as these are so well understood from their continual iteration and reiteration on the public ear, it is unnecessary even to revert to them. It is enough to say that they were in many cases liable to a twofold application, and might as justly have been used by the opposite party as by the advocates for the endowment. Thus even as the means of stilling Irish agitation, upon which the plea of the ministers was founded, it was shown that on the other hand this boon to Popery would stir up a more formidable agitation still throughout the collected Protestantism of Great Britain. On a division there were for the second reading 323, and against it 176, giving a majority for the bill of 147. On the order of the day being read for going into committee, Mr. Ward moved the following resolution for amendment:—"That it is the opinion of this house, that any provision to be made for the purposes of the present bill ought to be taken from the funds already applicable to ecclesiastical purposes in Ireland." He proceeded to show that, while the Scottish church, with its 3,000,000 of Presbyterians, was endowed to the amount of not more than £200,000, the Irish Protestant church, of not more than 850,000 Protestants, received a revenue of £650,000. Out of this endowment the required amount might be subtracted for Maynooth, while such a proceeding, he alleged, would neutralize the dissenting opposition. After a long debate, Mr. Ward's motion was rejected by a large majority, and the endowment was authorized to be paid from the consolidated fund. The third reading of the bill was introduced, after several amendments had been rejected by large majorities; and the debate, which was continued during three nights, was chiefly occupied with arguments of a theological nature. When the votes were taken, there appeared for the bill 317, and against it 184.

The bill having thus passed through the commons, was introduced for a second reading into the lords by the Duke of Wellington, on the 2d of June. The lay advocates in its favour, besides the Great Captain, were the Duke of Cambridge, Lord Brougham, Lord Beaumont, the Marquis of Normanby, Earl Spencer, the Earl of St. Germain, Lord Monteagle, and Lord Stanley; its opponents were the Duke of Newcastle, the Duke of Manchester, Lord Roden, the Earl of Winchelsea, and the Earl of Charleville. Among the spiritual lords were the Bishops of Norwich and St. David's, and the Archbishop of Dublin, who spoke in favour of the bill; while against it were the Bishops of London, Exeter, and Cashel. The fact of these right reverend speakers arrayed on opposite sides, as well as the arguments they adduced, showed how singularly the questions, both of conscience and political expediency, could be applied equally for and against the measure. The chief indication of novelty which the discussion in the House of Lords presented, arose from the amendment proposed by Lord Roden for an inquiry by a select committee into the character of the education given at Maynooth. He declared he had ascertained from the textbooks and history of the institution, that the instruction given was of anti social and disloyal tendency; and he knew that the people of England, who had petitioned so largely against this bill, would not be satisfied if investigation were refused. He was seconded by the Bishop of London, who declared that the principles taught at Maynooth were calculated to make the priests democrats in politics, and bigots in religion; and he asked, "Could they be justified, then, in endowing a college to carry out such a system, without at least exacting from those to be intrusted with the working of it some distinct and definite pledge that the system itself should be improved, and its worst features removed?" Lord Roden's amendment was rejected by a large majority. At the third reading of the bill, it was passed by 181 votes against 50. Before it passed, an amendment was proposed by the Earl of Winchelsea, that its operation should be limited to a period of three years, but without effect. In this way, the endowment of the college of Maynooth seemed to be so permanently established, that nothing short of a great national revolution could dislodge it. From that period to the present, it has never ceased to be a bone of contention and ground of remonstrance, which every year becomes louder and stronger, giving its best advocates good cause to apprehend that they have gone too far, and legislated too rashly.

Even this measure, however, was felt at the time to be not enough. The college endowment

was but a step in advance to a more complete system of Irish education, and that education was to be so utterly unconnected with religious distinctions, as to be equally adapted to Protestant and Papist. The plan was developed by Sir James Graham, the secretary of state for the

SIR JAMES GRAHAM, Bart
From a portrait by S. W. Reynolds

home department, upon the 9th of May. After pointing out the manner in which the plan for the separate religious instruction of the children of the two parties of religionists had failed in the schools established in Ireland upon that principle, and how much better the national schools had succeeded where religious teaching was left to the care of parents and guardians, he proposed that these educational advantages, at present limited to the lower classes of the Irish, should be also imparted to the middle and upper ranks. How this could be accomplished he showed from the example of the colleges of London and Edinburgh, where there was an absence of all religious tests, and he proposed that three provincial institutions should be established in Ireland upon the same principle. Coming to details, he proposed that Cork should be the site of the college for the south, Galway or Limerick for the west, and Derry or Belfast for the north of Ireland—that government should grant £100,000 for their erection—and that an endowment of £8000 should be assigned annually to each. In these, all the sciences were to be taught except theology, although there should be no restriction to the voluntary endowment of a professorship of theology in any of these colleges, the attendance upon its lectures to be voluntary also.

Such is but an outline of the new government plan of education for Ireland, by which it was hoped all religious parties would be brought

together upon the neutral ground of a secular education. It was welcomed by the liberal Irish members, and not opposed by their conservative brethren. The chief opposition was from Sir Robert Inglis, who denounced the plan as one of the most gigantic schemes of godless education that had ever been proposed in any country. The bill was introduced; and at the second reading, on the 2d of June, the discussion, which was a very full one, extended over two nights. The main argument against it was that of Sir Robert Inglis—that it was a “gigantic scheme of godless education,” because it was dissociated from religious instruction. Sir James Graham stated in reply, that no measure for the theological instruction of the students in these colleges by a state endowment would be acceptable to the people of Ireland—that a Roman Catholic college in the south, a Presbyterian college in the north, and a Church of England college in Dublin, would only give a fresh stimulus to those religious disturbances which distracted Ireland too much already. Lord John Russell thought the plan not conciliatory enough towards the Roman Catholics, and proposed that the bill should be made more palatable to their clergy, by admitting them to a share in the legislation of these colleges. During this second reading, Mr. O’Connell, who had hitherto been absent in Ireland, appeared in his place in the house, and denounced the bill, because it did not make religion the basis of education. This, he thought, should be established not only as a part, but an essential part of the proposed system. He declared that if they did not attend to the advice of the Irish Roman Catholic prelates, their colleges could not succeed—that the advice of these prelates had been in several cases disregarded, and that they considered the bill a “penal and revolting measure.” “Penal!” said Sir James Graham. “Yes; they considered it penal,” replied the enfeebled agitator, “because they were deprived of doing the duty they owed to the principles of their religion.” He demanded a hall in which each particular religion should be taught, and in this he was seconded by Lord John Russell, who brought forward the proposal as an amendment, which was negatived by 117 to 42. Other proposals of amendment followed on several parts of the bill, but with a similar result. At the discussion on the third reading, a collateral subject was introduced upon the revenues and management of Trinity College, as to whether that college had not been originally founded with Roman Catholic property, and whether its income, funds, and offices might not be extended to Roman Catholics and Protestants alike. It was meant to bring the question of equality between the two religions in Ireland to the test, and to show, that in spite of all the pro-

fessions of the present ministry, they were still as far from this even-handed dealing as before. Thus a fresh element of controversy was introduced, with which the subject of the new colleges and the exclusion of religious endowments and theological chairs was curiously blended. The majority for the third reading was 177 to 26, and the bill was read and passed accordingly. In the lords it passed with less discussion and equal unanimity.

In this way the “godless colleges” were established in Ireland. The unlucky term, derived from the expression of Sir Robert Inglis, which was bandied to and fro during the debate, both among the commons and lords, was at last caught and secured by the fanatics of the Romish faith, by whom it was perpetuated as a nickname. This was not all; for so staunch was the opposition of the Irish priesthood, that they obtained from Pope Pius IX. a rescript prohibiting the attendance of the Roman Catholic youths of Ireland upon these secular, and therefore profane educational institutions. Thus the resistance came not from zealous Protestantism, as in the case of the endowment of Maynooth, but from the bigotry of Popery and the ambition of the Irish priesthood, that could tolerate no system of instruction in which they were not allowed to rule. The course of these colleges has therefore as yet been a struggle, while the chances seem equal of success or failure. As was originally proposed, £100,000 was granted for the erection of the buildings, and £18,000 per annum for salaries to office-bearers, and prizes for the encouragement of learning. As in colleges of more recent establishment, both in Britain and the Continent, neither the professors nor students reside within the walls. The appointment and removal of professors is vested in the crown.

While these were the principal movements of this year, a great national calamity was at work for the accomplishment of changes which political combinations could not effect. We allude to the agricultural blight of this year’s harvest, and the important concessions which it extorted from the powerful landed interest of Great Britain.

As yet, we have taken little notice of the long opposition carried on against the corn laws, and the insufficiency of Sir Robert Peel’s sliding scale to allay it. A total abolition of restrictions on the importation of corn was demanded, and nothing short of this would satisfy the claimants. To add also to the intensity of the contest, a strong feeling of political rivalry was largely mixed with it, so that it was considered a life-and-death question between the two great parties into which British society was divided—the agricultural and the manufacturing communities. While

the question was kept alive in parliament by the annual motion of Mr. Villiers for a committee of the whole house to consider the operation of the corn-importing duties, with a view to their immediate abolition, the subject was agitated powerfully throughout the kingdom, by the publications of the anti-corn-law league, and the orators whom they employed to explain and advocate their principles in out-of-door meetings and in-door assemblies. In 1841, this league found a voice in parliament through Mr. Richard Cobden, the pupil of Colonel Thompson in

RICHARD COBDEN, M.P. — From a lithographic portrait.

the anti-corn-law theory, who was now its active promulgator and eloquent champion; and the statements he made of the distresses of the working classes through the dearness of bread, had compelled the most unreflecting to listen. He was ably seconded by Mr. Bright, whose powers of political oratory had found a successful theme. Gradually, also, even farmers, magistrates, country squires and noblemen had their eyes opened to a new light which they had hitherto resisted, and they either joined the league, or ceased to oppose it. A still more formidable movement of this new power in the state was in the metropolis itself, where it effected such a lodgment as enabled it to influence every portion of the empire. The usual halls of London were at last found insufficient for the crowds that thronged to the meetings of the anti-corn-law league; and in 1843, Drury Lane was engaged for Wednesday evenings, where tales as tragic, and far more true, of sorrow and suffering were recorded to the thousands who weekly assembled there, than even Shakspeare or Otway had embodied, or Kean and Kemble acted. But a still

more important benefit to the cause than "overflowing houses" in the capital was found in the counties. To this department the league having turned its scrutiny, was soon enabled to discover that the landed interest was strongest there, through the multiplication of the franchise among the tenants-at-will, by which votes could be fraudulently increased to almost any amount. To counteract the predominance which the registration gave to the landed interest in the counties, it was necessary to make the forty-shilling clause available for the manufacturing community, according to the terms of the reform bill. And this could be honestly, as well as easily done. A house entitled to confer the franchise might be purchased for £30 or £40, while such articles of purchase were in plenty throughout the English market. Upon this idea Mr Cobden and the league acted. Offices were opened by the association for registering such land and houses, surveying the property, and preparing the conveyance deeds, so that the purchaser, freed from the business technicalities, had only to make his election of the place he wished to occupy, and pay down the money. In this way, not merely voters were secured, but industrious artisans and labourers were taught to invest their savings in a way best fitted to secure their independence.

Such was now the progress of the anti-corn-law league that the repeal of the restrictions was only a question of time. Years might yet elapse; but the result was so certain, that it was already contemplated as inevitable by the staunchest of the old protectionists. Unmistakeable symptoms of wavering and yielding had also been manifesting themselves in parliament. Sir James Graham had declared his conviction that the prosperity of the landed interest was dependent on that of the other classes, and that a gradual repeal of protection would be necessary for agriculture: all that he deprecated was suddenness. Lord John Russell had also declared, that he could no longer recommend the fixed duty of 8s., which he had proposed in 1841: and that should he advocate the cause again, it would be for a smaller duty of 4s., 5s., or 6s., but not less than 4s. While statesmen were thus toying with a question which they felt they must sooner or later give up, the elements themselves, or rather Him whom they obey, had pronounced its doom. A cold and late spring was succeeded by cold and long-continued showers, which threatened such a defective harvest, that a larger amount of imported grain would be necessary; and unless the American market should be overstocked, our hopes of assistance from any European market would be vain. But it was not the grain alone that suffered by the chilling rain: 'brown spots

began to appear upon the leaves of the potato; these were soon found to be indications of rotteness at the root; and at last it was discovered that the potato crop of Ireland and the greater part of Britain, the sole or chief subsistence of millions, was ruined by a mysterious blight such as had never before been witnessed. A national famine was not only inevitable but at hand, and the remedy must be immediate. Towards the close of the year the question of all parties was, "Are the ports to be opened?" Meetings of cabinet councils were frequent; but although Sir Robert Peel yielded to the stern necessity, and was desirous that the ports should be thrown open, so many of his colleagues were opposed to the measure, that in December he resigned. Upon this, Lord John Russell was summoned by her majesty for the purpose of forming a new government; but this offer he was obliged to decline, as his party were in a considerable minority in the commons. Lord Stanley and other dissentients to the corn-law abolition had previously received the same offer, but had declined it. The only hope after all seemed to lie in the retired minister, who at his departure had expressed his willingness to support, in his private capacity, whatever new minister might be appointed, in effecting a settlement of the question of the corn laws; and upon this declaration her majesty acted when the other applications had failed. On the 19th of December therefore, only a few days after he had left office, Sir Robert Peel was induced to resume it; and having reconstructed his cabinet, he was now prepared to encounter the noblest, but at the same time the most difficult task which a public character can perform—to tell the world that all his lifetime he had been the champion and advocate of a great political fallacy; and that now, he recanted under the force of circumstances which had convinced him of the error of his choice.

All was in readiness for that great political conflict, that had occupied so many years of preparation, and on which so many interests were at stake. Parliament was opened on the 19th of January, 1846, by the queen in person; and an allusion to the failure of the potato crop, the deficiency of food which it would occasion, and an earnest recommendation to co-operate in adopting such means as might alleviate the sufferings which the calamity would cause, formed an important part of the royal speech. The inferior business to which the attention of the houses was called was only prefatory to the great event, and consisted of a remission of several duties in the produce and manufacture of other countries, and a considerable reduction in others. Among these changes in the tariff, one connected with food was of especial significance. Animal food and vege-

tables were to be admitted duty free, and that on butter, cheese, hops, and cured fish was to be reduced one half. Live animals also, and several other minor articles, were exempted from duty. This "note of preparation" was given in Sir Robert's speech on the 27th of January, when every part of the house was crowded with expecting auditors, and when even the street was filled with hundreds who had tickets, but could not obtain admission. It is enough to add, that these proposals were afterwards passed with little demur; all their importance, which at any other season would have been a fruitful source of debate, was absorbed in the great controversy at issue.

In his opening speech to the house, which lasted four hours, Sir Robert Peel frankly acknowledged the awkwardness of his position. He would not deny, he said, that his opinions on the subject of protection had undergone great change, and that he did not feel himself humiliated by the confession. On the contrary, he claimed for himself the privilege of yielding to the force of reason and argument, and of acting upon his enlarged experience, and upon his more matured conviction. It was the experience of the last three years that had forced his new convictions upon him, by showing him that his former arguments were no longer tenable. During that period, prices had been high and wages unwontedly low, so that the effect had been an universal distress among the labouring population. He then showed that the removals hitherto made upon protecting duties had been accompanied with a material improvement upon the revenue, but without any detriment to the agricultural interest. Now that a new calamity had befallen the country, by a scarcity of that article which formed a considerable portion of the food of the people, government must perceive that it was impossible for them any longer to maintain the existing corn laws in their present integrity. After describing the reluctance of his cabinet to accord with these views, or to act upon them, which occasioned his resignation, and alluding to his recal to office, on the understanding that he was to follow out his own line of procedure, he added, in allusion to the new trials with which his office was encompassed, and the only terms on which he would submit to hold it: "It is a burden far above my physical, infinitely beyond my intellectual strength. The relief from it with honour would be a favour, and not a punishment. But while honour and a sense of public duty require it, I do not shrink from office. I am ready to incur its responsibilities, to bear its sacrifices, to confront its honourable perils; but I will not retain it with mutilated power and shackled authority. I will not stand

at the helm during the tempestuous night, if that helm is not allowed freely to traverse; I will not undertake to direct the course of the vessel by observations taken in the year 1842. I will reserve to myself the unfettered power of judging what will be for the public interest. I do not desire to be the minister of England, but while I am minister of England I will hold office by no servile tenure; I will hold office unshackled by any other obligation than that of consulting the public interests and providing for the public safety."

On the 27th of January Sir Robert brought before the House of Commons his great scheme of commercial and financial policy. It ranged over a large variety of objects; for, as he stated, the great principle of the relaxation of protective duties was not to be confined to any particular interest; on the contrary, he would ask all classes, manufacturing, commercial, and agricultural, to make the sacrifice, if such it might be considered, to the common good. He then proceeded to loosen the several props of the protective system. Of all the duties on raw material imported from foreign countries, only two remained—the duty on tallow, and that on timber: on the former, he proposed a reduction from 3s. 2d. to 1s. 6d. per cwt., and on the latter, a gradual reduction, until it reached a point where it should be permanently fixed at a future day. The manufacturers having thus free access to every raw material of manufacture, were to relinquish in return the protection they enjoyed in wool, linen, and cotton, upon the coarser articles of which the duties of importation were to be abandoned, while those upon the finer were to be reduced from twenty to ten per cent. In like manner, the duty upon silk was to be reduced from thirty to fifteen per cent. After enumerating other articles of less consequence upon which similar reductions were to be made, Sir Robert advanced to the main subject at issue. These were the articles connected with agriculture upon which import duties were levied. That upon all seeds was to be diminished to 5s. per cwt. Indian corn, so useful in the fattening of cattle, was to be imported duty free. Buckwheat and buckwheat-flour were to be admitted in the same manner. The duties upon the importation of foreign butter, cheese, and cured fish were to be reduced to half their amount. All articles of agricultural produce which constituted food as distinct from corn, every kind of vegetable and animal food, and all live animals from foreign countries were to be imported duty free.

Having thus approached the formidable question with a cautious step, Sir Robert unfolded his proposed change upon the corn laws themselves.

He did not intend to propose their immediate repeal; but on the other hand, that their continuation should be only temporary, for the sake of giving time for a final adjustment of the question in relation to the agricultural interest. His bill, therefore, would contain the proposal that after a certain date, grain of all kinds should come in duty free, and that in the meantime considerably reduced duty should continue upon it for three years and not longer. In the interval that should thus elapse until the 1st of February 1849, he proposed that the scale of duty on imported wheat should range from 10s. a quarter when its average price was under 48s., to 8s. a quarter when it was under 54s. According to this diminished rate, there would be a duty of only 4s. per quarter on wheat at its present price, instead of 16s., while every other grain taken out of bond for consumption in the home market would have to pay little more than nominal duty. This arrangement he intended to accompany with certain provisions for the interests of the agricultural party; such as the alleviation of the burdens on lands by highway rates, the law of settlement, and the expense for the maintenance of county jails, with additional facilities allowed by the state for the improvement of agricultural skill and industry. In conclusion, he suggested that, as his measure involved a great decrease in the revenue, as well as an annual charge of £600,000, the discussion upon it should be deferred till that day week. As a longer time was demanded by several of the members, the delay was protracted till the 9th of February. Upon that day, the subject was resumed with an earnestness commensurate with its importance. Nor was violence of speech or even downright personality spared, for each speaker felt his own pecuniary interests more or less involved in the contest. Perhaps this may account for the strong opposition which the bill unexpectedly encountered from several who hitherto had been the constant supporters of government. The debate commenced with an amendment of Mr. Philip Miles, member for East Somersetshire, that the house go into committee on that day six months. Fifty-five speakers advocated the cause of protection, and forty-eight that of free trade, while the discussion was carried on by repeated adjournments for twelve nights. On a division, the motion of Sir Robert Peel was carried, the amendment of Mr. Miles being rejected by a majority of 337 to 244.

On the 2d of March, when the house went into committee, and after the first resolution had been moved, Mr. Villiers proposed as an amendment "That all duties on imported corn do now cease." He expressed his conviction that immediate abolition was not only more generally desired

but a better measure than a postponement for three years; and he thought that Sir Robert must be of the same mind himself, as he had proposed the opening of the ports in November, which was tantamount to abolition. Sir Robert Peel stated in reply, that if an immediate instead of a deferred repeal was carried, he should accept the amendment, but that he preferred the latter measure to the former. His sentiment was followed by Lord John Russell, who thought that the success of the abolition question would be endangered if the amendment were carried. The amendment of Mr. Villiers was rejected by a majority of 265 against 78. On the 20th of March, the corn bill, with certain modifications upon the original proposal for the importation of maize duty free, stood for a second reading, and the debate was continued through four nights. The usual delay of a six months' adjournment was again proposed, and upon this amendment the protectionists rallied for a fresh encounter. On this occasion, Sir Robert Peel—who, since the opening of parliament, had been reproached in every form of language for tergiversation and apostasy, and threatened with every kind of political retribution—indignantly repelled the charge, as he had repeatedly done, and defied its consequences: “I am not surprised,” he said, “to hear honourable members predict to me that my tenure of power is short. Let these measures pass into a law. Suspend your indignation until then; and then it will be perfectly open to you to determine what measure you will adopt for the purpose of terminating my political life. I shall still pursue steadily that course which my conscience tells me I should take, let you and those opposite pursue what course you think right.” He afterwards added, what succeeding emergencies but too well justified: “You may think I have taken too great precautions against Irish famine: you are mistaken. Events will prove that these precautions are not unnecessary. But even if it were not so, the motive was to rescue a whole population from the calamity of possible famine and disease; and I shall, under these circumstances, be easy under such an accusation.” The second reading was carried by a majority of 88, 302 being for, and 214 against it.

On the 4th of May, when discussion was resumed previous to the third reading, all the expedients of delay were adopted for the final struggle. On this occasion, Lord George Bentinck, who moved a postponement till that day six months, declared that, as on former occasions, the distress of Ireland had been greatly exaggerated. After two divisions which were occasioned by the opponents of the bill, the order of the day was carried, and the house went into committee, when Lord George Bentinck proposed

that the word “oats” should be omitted in the specified articles upon which the duty was to be reduced. This he urged upon the plea that, as Ireland in the last and former years had an annual exportation of oats to the value of £2,500,000, even if a free importation of oats from abroad lowered the price of that grain to the extent of ten per cent., that country would be a sufferer by the change to the amount of £250,000 per annum. This new-born zeal for Ireland was answered by the chancellor of the exchequer, who showed that, if this amendment passed, oats, instead of paying one shilling per quarter of duty after the 1st of February, 1849, along with certain other grains, would be admitted without paying any duty at all, and thus Ireland itself would be the principal sufferer. The amendment was withdrawn, as was also that of Sir Charles Burrell, for a six months' delay, on the footing that the distress of Ireland was not so extreme as had been asserted. The bill did not arrive at the last stage till the 11th of May, and even then, when the third reading was proposed, a debate of three nights occurred, in which the same arguments that had been again and again refuted were brought forward, and urged with all their former violence. At length, on the 16th, when every mode of opposition had been exhausted, the third reading was carried by a majority of ninety-eight, those in its favour being 327, and those against it 229. Such was the result after a parliamentary conflict, the length and the virulence of which have seldom been surpassed, even in our assembly of national representatives.

In the lords, the chief debate on the corn bill took place upon the question of the second reading on the 25th of May. The speeches were scarcely less ardent than those which had rung for weeks in the House of Commons, while the repetition of the same arguments showed how sincerely each speaker felt upon the subject, whether as a political partizan or a landholder. The second reading passed by a majority of forty-seven. At the third reading, several amendments were successively outvoted, one of these being proposed by the Duke of Buckingham, the other by the Earl of Wicklow, a third by the Duke of Richmond, and a fourth by Lord Ashburton. This recusant spirit evinced by the members of the upper house had been temperately admonished in the following words by the Duke of Wellington: “If we reject this bill, my lords, we know that we reject the bill which has been passed and agreed to by the two other branches of the constitution, and that the House of Lords will stand alone in rejecting it. This is the consideration with which I beg your lordships to look at the question. This is a position, my lords, in which you ought not, in which

you cannot stand; it is a position in which you are powerless, and can do nothing. You have vast influence on public opinion; but separated from the crown and from the House of Commons, you can do nothing until the connection with them is revived." The third reading was passed, but not without a struggle. Several of the dissentient lords declared their deep distrust and disapproval of the measure, and of the mode in which it had been carried; while the Duke of Richmond expressed his regret to see such a measure become law without an amendment appearing on the journals of the house. He would advise the farmers to agitate against it, and for an adequate protection not only to agriculture, but to every species of national industry.

Although the new facilities for the importation of cheap food had an especial reference to Ireland, it was evident that something more than the corn bill would be necessary for the tranquillity of that continually agitated, and now famine-threatened country. The insecurity of life, and the prevalence of assassination and deeds of violence, had so greatly increased at the commencement of this year, that a bill was introduced upon the subject on the 24th of February. It was introduced also, in the first instance, not into the House of Commons, but of Lords, by the Earl of St. Germans, who, after a statistical account, which showed the offences against the person, property, and public peace, to have risen in a twelvemonth from 3102 into 5281 cases, proposed his measures for their suppression. These chiefly consisted of quartering an increased constabulary force upon any district in which a murder had been committed, and preventing people from being absent from their dwellings between sunset and sunrise, the time when murders were usually committed. To enforce these regulations, and also to compensate the sufferers or their representatives, it was further proposed that the vice-regal powers of the lord-lieutenant should be materially increased. The second and also the third reading of the bill, whose operation was limited to the 1st of October, 1849, after a few slight modifications, was passed through the lords without opposition. But very different was the fate of the bill when it entered the House of Commons, which it did on the 30th of March. It could scarcely obtain even a first reading, although this courtesy was almost invariably granted to bills sent down from the lords. This at length it obtained after a virulent debate and repeated adjournments. The whole force of the Irish constituency was brought against the bill during all its long protracted stages, and it was not till the 26th of June that the motion for its second reading was rejected by 292 votes against 219, giving a majority of seventy-three.

It was noticed as a curious coincidence, that this bill, which had for its object the security of life and repression of crime in Ireland, was defeated on the very same evening that the corn-law bill, which had for its chief object the relief of Irish destitution and misery, was successfully carried through its last stage in the House of Lords.

Having effected the great object for which he had resumed office, and effected it against an amount of obloquy and opposition that would have turned most statesmen from the attempt, Sir Robert Peel felt that his mission was accomplished. In addition to the final settlement of that great controversy of years, that of the Oregon territory, which threatened to involve us in an American war, was amicably adjusted, and the state of trade and finances was prosperous and full of promise. On the 29th of June, therefore, the resignation of Sir Robert Peel and his conservative ministry was announced in both houses by the Duke of Wellington. Seldom has a British premier been enabled to retire from office under such happy auspices, or in the midst of such general affection and confidence. His last act was one of disinterested justice: it was to attribute the honour of the recent victory to him by whose labours the way had been prepared. "There is a name," he said, "which ought to be associated with the success of these measures. It is not the name of the noble lord the member for London [Lord John Russell], neither is it my name. Sir, the name which ought to be, and which will be associated with the success of these measures, is the name of a man who, acting, I believe, from pure and disinterested motives, has advocated their cause with untiring energy, and by appeals to reason, enforced by an eloquence the more to be admired, because it was unaffected and unadorned—the name which ought to be, and which will be associated with the success of these measures, is the name of Richard Cobden. Without scruple, sir, I attribute the success of these measures to him."

The retirement of Sir Robert Peel was followed by the accession of Lord John Russell to the premiership. The results of the session, however, were of little importance, in consequence of the absorbing interest of the great question of the corn laws, which had been settled at last after so many years of agitation. The chief subject that occupied the attention of parliament was the famine in Ireland in consequence of the failure of the potato crop, which was now beginning to realize the worst fears of the corn-law abolitionists. The remedy proposed by Lord John Russell was the employment of the people by government upon public works, with money advanced from the treasury at only 3½ per cent. of interest, the principal itself to be repaid in

ten years; and from the very urgent character of the necessity, this remedy was adopted, notwithstanding the doubtful chance of repayment. The important subject of military reform in the matter of corporal punishment was also brought forward, in consequence of a motion for the total abolition of flogging in the army; but this premature, and therefore dangerous act of humanity, was prevented by the modification proposed by the Duke of Wellington as commander-in-chief. This was the limitation of flogging to the maximum of fifty lashes, and these only to be inflicted when the state of the weather, health of the culprit, and other circumstances showed that the punishment would be attended with no danger to life or limb. In the meantime, the moral character of the soldier, hitherto neglected, was to be so fully supplied with the means of improvement, that in course of time flogging might be dispensed with altogether. These means were, the establishment of libraries in the barracks, the institution of regimental schools, and of normal schools for regimental schoolmasters, and the formation of saving-banks in the army. By the adoption of such remedies, every year has witnessed a gradual improvement in the moral character of our soldiery.

During these four years of events at home, the state of our empire in India still continued to be a subject of much anxiety. Happily, however, these eastern commotions were quelled, and this by a series of achievements through which our military character was raised higher, and our Indian rule more firmly established than ever. A brief recapitulation of these transactions is all that can at present be attempted.

Lord Ellenborough had scarcely brought to an honourable close the hostilities in Afghanistan, ere he found himself of necessity involved in another war. The Ameers of Scinde had behaved in a treacherous manner while our troops were suffering their unspeakable disasters among the Afghan mountains. They had sustained some pecuniary loss, and they fancied they had suffered still more (besides a loss of honour) by a treaty into which they had been forced by Lord Auckland at the advice of Burnes. They had been obliged to renounce their transit duties on merchandise going up and down the Indus, and as yet they had seen nothing of that "hundredfold" benefit which had been promised them in the treaty. Moreover, only some of the chiefs had entered into this treaty; and all of them were excited by the apprehension that the English intended to dispossess them of their hunting-grounds which lie along the banks of the Indus, and which, besides being the source of their chief and almost only amusement, were far more profitable to them than any trade up and

down the river was likely to be for many a year. These chiefs were a brave and very vain set of men, almost as self-confident and presumptuous as the Burmese had been before the appearance of our army on the Irrawadi; and hence it was surmised that they would flee to arms rather than submit much longer even to the existing treaty. "Delusion as to the circumstances under which we retired from Afghanistan," says Lord Ellenborough, "and ignorance of our real strength, which they never experienced, would have induced a brave and barbarous people of plunderers to avail themselves of the first occasion in which we might be involved in difficulties, to endeavour to throw off engagements which they entered into with reluctance, and to compel our retirement from the Indus."

It is said, too, that the Ameers could not restrain their own people, and much less the armed retainers of their neighbours; and it is pretty obvious that our Indian government preferred attacking and breaking their strength now, to waiting for a future collision when they might choose their own time and possibly take us by surprise. They signed a new treaty on the 14th of February, 1843, and broke it one day afterwards by attacking the residence of the British commissioners with a large force; but then it is alleged that though the treaty had been signed and everything conceded that we asked for, Sir Charles Napier continued to advance, being apparently resolved to conquer Hyderabad, their capital, in spite of the treaty. On the other hand, it is said that the Ameers were tempted by the smallness of Napier's force and the magnitude of their own to attack him, and that they never intended to abide by the concessions they had made. We can well believe the last of these two assertions; but, in our view of the case, the concessions, so far from being worth fighting for, were not worth asking for.

On the 17th of February was fought the battle of Meeanee, a conflict which, in its heroic character and important results, has often been compared to the battle of Assaye. The advance of the gallant Napier had brought him to Muttaree, when he learned that the Ameers were awaiting his coming at Meeanee, ten miles distant, where they had taken up a position with 22,000 men. They were not only well provided with artillery but strongly posted, having woods on their flanks, which, it was thought, even by the British commander, could not be turned, and in their front the dry bed of the river Fulailee, which had a high bank and was difficult to be crossed. The army also that occupied such a formidable position was not composed of effeminate Hindoos, but gallant daring Beloochees, who, it was known, would fight to the last, and who to their native

valour added no small portion of military skill and experience. On the other hand, the British force did not exceed 2800 men of all arms, and twelve pieces of cannon. Undismayed by these difficulties and such fearful odds, Sir Charles Napier resolved to become the assailant, well

BELOOCHES ON THE LOOK OUT
From Burnes Atkinson, and Von Orlich

knowing that any delay or symptom of hesitation would increase the confidence of the enemy, and enlarge their army with reinforcements. After a quick survey of their position, Sir Charles gave the word to advance; and his troops moved on at a steady pace, as if they had been upon parade, crossed a plain that was swept by the enemy's artillery, and opened their fire at about a hundred yards from the bank. But this distant fight was soon exchanged for close combat; the order to charge was given by Sir Charles with a voice that was heard along the whole line; and his soldiers rushed through the dry bed of the Fulailee, and up the steep bank, with a rapidity that confounded the Beloochees, and made their fire straggling and useless, although they had laid their matchlocks in rest to be ready for the onset. A fearful hand-to-hand fight ensued, in which that little army of British was encountered with an alacrity that equalled, and a valour that almost matched their own. The Beloochees dashed across the bank to close with their assailants, and after firing their pistols and matchlocks, betook themselves to shield and sabre, their favourite weapons, and with which they had so often turned the tide of

battle against Indian antagonists. But these weapons were unavailing against the firm rampart-like ranks of the British, and their lines of bayonets, that pressed forward with a regularity and strength that seemed impelled by one powerful machine. And yet the Beloochees continued this terrible fight for three hours, and on more than one occasion the British ranks were disordered by the fierce charges of these intrepid swordsmen. They were rallied, however, in every case by the brave old Napier, who on these occasions displayed the ardour of a young soldier, combined with a skill and promptitude which few of our generals have equalled. At last, a charge of horse which he ordered at the critical moment decided the battle: the 9th Bengal cavalry and the Scinde horse fell upon the right of the enemy; and as soon as they had reached the rear of their right flank, the Beloochee resistance became more faint, and was at last exchanged for a slow indignant retreat, which only added to their heavy loss in killed and wounded. It amounted in all to 5000 men; and the whole of their artillery, their ammunition, standards, and camp, with considerable stores, and some treasure, fell into the hands of the British, whose loss was only 256 men in killed and wounded. That they should have suffered so little and yet achieved such a victory, attests the skill with which they were handled, and the courage with which they were led on. After the battle of Meeanee, the khans of Hyderabad came into the British camp, and surrendered their swords and their city to the victor.

Although Hyderabad was thus in full possession of the British, and its chiefs were prisoners of war, Scinde was not yet conquered. Another rebellious prince, Meer Shere Mahomed of Meerpoor, was in the vicinity of that city at the head of 20,000 Beloochees, and ready to renew the war. Against him, therefore, Sir Charles was obliged to march, instead of reposing upon his laurels at Hyderabad. He found Shere Mahomed strongly posted behind one of those nullahs that intersect the country in all directions, this nullah being formed by two deep parallel ditches, one twenty feet wide and eight feet deep, the other forty-two feet wide and seventeen deep. Here the Shere (that is, the Lion) had advantageously posted his numerous army, boasting loudly that he would "Cabool the British." But he had not taken the military skill and courage of Napier into account, or the warning conveyed by the victory of Meeanee. On the 24th of March, Sir Charles attacked him at Dubba, four miles from Hyderabad, and after a hard fight of three hours was again victorious. He outmanœuvred Shere Mahomed, the British stormed the nullah, and the enemy were beaten as effectually as they

had been upon the previous month, so that Shere Mahomed, after ineffectual attempts to rally a fresh army and renew the war, was fain to escape with a handful of his followers into the desert. Such is but a scanty specimen of those achievements of the campaign by which Sir Charles Napier accomplished the conquest of Scinde—a campaign of which his only superior in warfare (the Duke of Wellington) thus spoke in the House of Lords in the following year:—"His (Napier's) march upon Emaum Ghur was one of the most curious military feats which he had ever known to be performed, or had ever perused an account of in his life. He moved his troops through the desert against hostile forces; he had his guns transported under circumstances of extreme difficulty, and in a manner the most extraordinary; and he cut off a retreat of the enemy, which rendered it impossible for them ever to regain their positions. After retiring from this successful operation, he collected all his troops, and made those preparations for future defence which were necessary to the completion of his success. He made the most of this extraordinary attack, which was completely successful. He gained the camp of the enemy, got possession of his guns, and obtained the most complete victory, taking up a position in which he was not again likely to be attacked. Not only did he secure Hyderabad, and the portion of the Indus which lay in his rear, but he brought up a reinforcement, and placed himself at the head of a stronger army than that which he commanded before the battle. He manifested all the discretion and ability of an officer familiar with the most difficult operations; and it must be in the highest degree gratifying to their lordships to remember that these zealous and gallant efforts had been attended with perfect success." This was a noble testimony to the heroic conduct of Sir Charles Napier, and it had a double value coming from such a source. The result of these victories has been the annexation of the country to our possessions. In a few

short sentences Lord Ellenborough appointed Sir Charles Napier governor of "the province of Scinde," abolished slavery and all duties of transit in every part of Scinde which now was, or hereafter might be, occupied by our army, and declared the navigation of the Indus free to all nations. Nothing could exceed the satisfaction of the people of Scinde at their transference to

the British dominion. These Ameers, who were now sent into banishment, were not the native rulers of the country, but a combination of crowned heads who governed by the right of conquest; their subjects were of a different language and creed; and this diversity only served to increase the arrogance of the master, and embitter the bondage of the ruled. It was no wonder, therefore, if they groaned for deliverance from such uncongenial conquerors and oppressors; and when an unusual fall of rain had happened to irrigate the parched soil, and bring the promise of new abundance, the natives of Scinde regarded this as a token of the approbation of

LIEUT. GENERAL SIR CHARLES NAPIER
From a portrait by Smart

heaven upon the doom of the governor-general by which these Beloochee rulers were deposed from their sovereignty, and sent into exile.

Before the close of this same year, 1843, we were engaged with the Mahrattas, who had broken their treaties with the Indian government, and rebelled against the young and helpless maharajah, whom we were bound by treaty to support. They had also committed a series of most atrocious murders, and were guilty of other excesses which called for immediate repression. The governor-general advanced in person with an army to the strong fortress of Gwalior. Our troops, under the command of Sir Hugh Gough, were about 14,000 strong, with forty pieces of artillery: the Mahrattas brought to the field 18,000 men, including 3000 cavalry, with 100 guns. On the 29th of December, 1843, a terrible battle was fought at Maharajpoo, which ended in another victory to the British, who, however, lost 797 men in killed and wounded. On the same day another decisive victory was gained by

Major general Grey, who had moved with a division of the army to Punnar, about twelve miles from Gwalior. In consequence of these two victories the Mahratta durbar submitted to the demands of the Indian government—Colonel Stubbs remained governor of the fort of Gwalior, which commands the city; the plundering Mahratta troops were disbanded, and a British contingent was to be maintained in the country at the cost of the Gwalior government, which also agreed to pay forthwith the expenses of the campaign.

In all his operations Lord Ellenborough had been remarkably successful; but he had enemies in India, and more enemies at home. In the session of 1843 his policy was bitterly assailed by the Whig ex-ministers, who had involved us in the ruinous Afghan war, and who had meanly contemplated withdrawing our forces from that country, and trusting to negotiation with the barbarians for the recovery of our captives. His lordship was warmly defended by Sir R. Peel and the Duke of Wellington. "The difficulties in India," said the duke, "are now far greater than what they formerly were, because there has now been set up what is called a 'free press,' but what I shall call a *licentious* press! With a British population in India of not more than 50,000 persons, including 25,000 British troops, how is that country to be governed if the feelings of the natives are to be worked upon by a press like this?" Lord Brougham also defended the governor-general, as also did Lord Stanley and Mr. Hogg, the latter being one of the most competent authorities on India matters that could anywhere be found. Lord Ellenborough, however, had piqued the pride of the court of directors; and that court, having by their charter power so to do, recalled his lordship in April, 1844. Sir Henry Hardinge being appointed his successor, repaired immediately to India. Sir Henry on his arrival found that our troops in Scinde were suffering greatly from the unhealthiness of the climate, and that a mutinous spirit appeared in several Bengal native regiments which were under orders to march into that country. Like so many of his predecessors who had gone to India with most pacific intentions, Sir Henry soon found himself compelled to gird on the sword. Since the death of Runjeet Sing, the Lion of Lahore, the Sikh country had been convulsed by a continuity of revolutions, murders, and massacres; and the Sikh chiefs and soldiers had become as lawless as the Mahrattas in the time of the Marquis Wellesley. Shortly after the arrival of the new governor-general, daily reports were spread that these Sikhs intended to invade the British territories. The orders from the home authorities were so strin-

gent not to interfere with the Punjab, unless actual aggression were first perpetrated by the Sikhs, that the Indian government was crippled; and, acting on his instructions, the governor-general, who was then in the upper provinces, did not deem it advisable to take measures for raising an army capable of opposing the Sikhs, should they actually cross the Sutlej. Sir Henry Hardinge, if left to his own decision, would no doubt have taken, at an early stage, the steps which he afterwards adopted with such admirable energy and promptitude.¹ [We believe, however, that operations must have been somewhat retarded by the reductions recently made in our troops on this long frontier line.] It was different with Sir Hugh Gough, the commander-in-chief. He was at the head of his army. His acts were under the control of the governor-general, so far as organizing an army was concerned; but, trusting to his own foresight and military experience, he gave early warning to the troops on the frontier, as well as to those at the important military station of Meerut, to hold themselves in readiness.² Most fortunately Lord Ellenborough, in anticipation of this storm, had established a large force at Umballa, which could be available at a moment's notice.

So soon as it was known that a Sikh force had actually crossed the Sutlej and invaded our territory, our troops were put in motion with admirable celerity. The marches made were wonderful. On the 18th of December the first encounter took place at Moodkee. Our people were fatigued by a very long march through a sandy country.³ The Sikhs were quite fresh; they had a numerous artillery, and had become excellent artillerymen under the training of Avitabile, Venturi, and other European officers; we had merely a few six-pounders, not having had time sufficient to bring up any heavy guns. Nothing was to be done but to charge the enemy at the bayonet point. They were well posted among the jungle and stunted trees. The small compact body of British infantry (her majesty's 9th, 31st, 50th, and 80th regiments) charged amidst a murderous fire of cannon and of musketry, the Sikh infantry firing admirably. The columns of this fierce and formidable enemy were, however, broken and dispersed, but not before they had made a desperate stand and committed great slaughter among the European officers and men. Sir Robert Sale fell mortally wounded. Sir John Maccaskill was shot dead, and almost every officer on the staff of the governor-general was

¹ Dr. Macgregor, *History of the Sikhs*.

² *Ibid.*

³ "The troops were in a state of great exhaustion, principally from the want of water, which was not procurable on the road."—*Commander-in-chief's Despatch.*

either killed or wounded. The 3d light dragoons, being the only European cavalry present, pursued the fleeing Sikhs. The force thus defeated was only an experimental one. The *grande corps-d'armée*, with 500 guns of all calibre, were as yet on the other side of the Sutlej. Though thoroughly beaten at Moodkee, they were satisfied that, with an overwhelming number of guns strongly entrenched, they might withstand the attack of the British.

On the 19th of December some heavy guns, escorted by her majesty's 29th, the 1st European light infantry, and some native regiments, reached Moodkee. The Sikhs, in column after column, were crossing the Sutlej, boasting that they would march on to Delhi, Benares, Calcutta! On the 21st of December their pride was abated by the terrible battle of Ferozeshah. They had brought up a stupendous artillery, and were strongly entrenched. The battle is told by the gallant commander-in-chief in a few words.—"The Sikh guns could not be silenced by the British, and the infantry therefore advanced, amidst a murderous shower of shot and grape, and captured them."¹

On the setting in of night the European infantry remained in the portion of the camp which they had captured, while the Sikhs occupied the rest; their cavalry and infantry moving about the whole night, harassing and firing on the British who were bivouacked. Now and then they brought up a gun and fired grape among our wearied sleepy people. They had nothing for it but to remain quiet, and await the return of daylight. But their position was a fearful one! Before the entrenchments were entered, her majesty's 62d were "absolutely mowed down by the fire under which they were advancing."² Before the battle could be renewed on the 22d, Tej Sing brought up to the Sikhs fresh battalions and a large field of artillery, supported by 30,000 Ghorchurras, or irregular cavalry. Our own weak cavalry was unavailing, our artillery of little or no use: everything had to be done, and *was* done, by our indomitable British and Irish infantry! The Sikhs were driven out of the camp, and were beaten

and broken wherever they attempted a stand. We lost in killed and wounded more than 2000 men; thirty-seven officers were killed, and double that number wounded. Between the battle of Moodkee and this double battle of Ferozeshah, our total loss in killed and wounded exceeded 3000. The commander-in-chief, Sir Hugh Gough, commanded the right wing; while the left was under the command of Sir Henry Hardinge, who set aside his dignity doubly and trebly, and volunteered his services as second in command. Sir

GROUP OF SIKHS³

Harry Smith commanded the first infantry division, Major-general Gilbert the second, Brigadier Wallace the third, and Sir John Littler the fourth. All these officers were engaged in the thickest of the fight, and behaved with equal skill and gallantry. Wallace was killed by a cannon-shot. The commander-in-chief resolved to wait for the guns and mortars then moving upwards, with the 9th and 16th lancers, and her majesty's 10th and 53d foot. The Scinde troops, under Sir Charles Napier, had also been ordered up.

The Sikhs resolved to make another effort to maintain their position on the left bank of the Sutlej; and for this purpose they began to construct a new bridge of boats below Hurrakee. As soon as this bridge was finished, more Sikhs began to cross over. We have no space for any of the minor details. Sir Harry Smith gained a brilliant victory over a detached Sikh force, at

¹ Despatch.

² Speech of the Duke of Wellington in the House of Lords, on the 26th February, 1846.

³ 1, From a suit of armour in the Tower of London. 2, An Akalee, from the Honourable Miss Eden's *Portraits of the Princes and People of India*. 3, A chief on horseback, from Soltykoff's *Habitants de L'Inde*. 4 and 5, Soldiers, from the Hon C. S. Hardinge's *Recollections of India*.

Aliwal, on the 28th of January, capturing or destroying all their guns. Having finished their bridge of boats, the Sikhs busily employed themselves in making entrenchments, a *tête-de-pont*, &c., at Sobraon. Though at Moodkee, Ferozeshah, and Aliwal, they had lost upwards of 150 guns, they had united a formidable number on this point. The soldiers collected within these entrenchments at Sobraon were those who had been best trained by the French and Italian officers: these men felt assured that their position could not be taken by the best of troops; and they quietly waited the attack. Sir Hugh Gough did not keep them long waiting. He put his army in motion on the morning of Tuesday, the 10th of February, 1846, and in a very few hours the works of Sobraon were in his possession, and the Sikhs in headlong flight across the Sutlej. In their efforts to reach the right bank through the deepened water the enemy suffered a terrible carnage from our horse artillery. Hundreds fell under the cannonade; hundreds upon hundreds were drowned in attempting the perilous passage.¹ This was a glorious fight, and complete in its results. Nearly every gun of the Sikhs was captured, together with numerous standards. Such a victory, however, could not be achieved without an immense sacrifice; and there are few actions on record where so many officers were killed and wounded. The brave Sir Robert Dick fell in the attack on the camp; Brigadier M'Leod was hit while leading the 4th brigade of the centre division against the strongest part of the entrenchment at Sobraon, and was borne off the field mortally wounded; Brigadier Charles Cyril Taylor, who commanded the 29th foot, was killed; Major-general Gilbert, and the veteran Colonel Ryan, of the 50th, were wounded; and many other distinguished officers fell among the slain, or were carried maimed to the hospitals.

The Punjab was occupied by the British without any repetition of the hard struggle which

had occurred on the left bank of the Sutlej. On the 14th of February, 1846, the governor-general issued a proclamation:—"The Sikh army," said he, "has been expelled from the left bank of the Sutlej, having been defeated in every action, with the loss of more than 220 pieces of field artillery. The British army has crossed the Sutlej and entered the Punjab. The governor-general announces, by this proclamation, that this measure has been adopted in accordance with the intentions expressed in the proclamation of the 13th December last, as having been forced upon the governor-general for the purpose of effectually protecting the British provinces, for vindicating the authority of the British government, and for punishing the violators of treaties, and the disturbers of the public peace."

On the 17th of February our siege-guns crossed the bridge along with the 4th brigade, under the command of Brigadier Orchard. The army then steadily marched upon Lahore, the capital, which was entered on the 20th without any opposition. The remnant of the Sikh army quietly yielded, and delivered up more guns. The ranees saw that the only power on which she could rely for the stability of her young son's throne, and her own and his personal safety, was the British army. A treaty was concluded: the governor-general was to leave a force at Lahore, to prop up the young rajah's government; the rajah or maharajah Goolab Sing, was to be allowed to become master of the rich province of Cashmere; and indemnities were to be paid to the British.²

There could not have been a more honourable conclusion to our military history than Sir Charles Napier's war against the Ameers of Scinde, and these glorious combats on the Sutlej; they effaced the disgrace which had befallen us in Afghanistan; they more than renewed our former prestige; and they told the princes and potentates of India and the countries thereto adjacent, that the power of Britain was as great, and the spirit of her soldiers as high, as ever they had been.

CHAPTER XI.—CIVIL AND MILITARY HISTORY.—A.D. 1847—1849.

VICTORIA.

Continuing famine in Ireland—Attention called to it in the royal speech—Two bills to remedy the evil—Their nature—They are passed in parliament—Money lent to the Irish railways—Suspension of the corn and navigation laws proposed—The proposal adopted—Duties on rum and sugar modified—Proposal adopted for a loan of £8,000,000 for the relief of Ireland—Additional grant for public education proposed in the House of Lords—Controversy excited by it in the commons—A small sum granted with restrictions—Manchester erected into a bishopric—Political difficulties of the measure—New parliament—Disorders and assassinations in Ireland—Bill for their suppression—Mild nature of its remedies—Opposition of the Irish members to the bill—It is passed—Feargus O'Connor's unsuccessful attempt to re-introduce the question of Irish repeal—Jews' disqualification bill announced for future adjustment—Session of 1848—Consideration of West Indian interests proposed—A committee appointed for the purpose—Immediate measures adopted for our West India colonies—Unpalatable proposal upon the colonial sugar duties—It is passed—Diminution of the revenue from dread of foreign invasion—Select and secret committees of inquiry appointed—Temporary increase upon the income-tax granted—Proposal of alteration in the navigation laws—Arguments in favour of their alteration—The subject postponed for further consideration—Jewish disabilities bill re-introduced—Arguments used for and against the admission of Jews into parliament—The bill rejected by the lords—Continuation of the Irish insurrectionary spirit—Irish rebellion under Smith O'Brien—Its paltry character and speedy suppression—Measures adopted for tranquillizing Ireland—Bill to facilitate the sale of Irish encumbered estates—It passes through parliament—Bill passed to facilitate our negotiations with Rome—Abortive attempt of the chartists to effect a revolution—Their meeting on Kennington Common—Their huge petition to the House of Commons—Falsity of many of its signatures—This year signalized by European national revolutions—Revolution in France—Tumults and conflicts in Paris—Louis Philippe abdicates—He escapes to England—Temperate character of the revolution—A republican government established in France—It becomes unpopular—Louis Napoleon Bonaparte elected its president—Revolution in Italy—The pope driven out of Rome—Revolutions in the Germanic states.

RISH famine and Irish distress continued to be the great subject of popular anxiety, as well as parliamentary discussion. The mysterious blight of the potato, which had impoverished England and Scotland to the amount of several millions by destroying one of the principal articles of food, was immeasurably more terrible in Ireland, where the potato constituted the chief subsistence of its population. Harrowing accounts of whole parishes depopulated by famine, and of houses without number in which the wasted inmates were dying by inches, not only excited the horror of the British public, but stirred its sympathy to the lowest depths. The destruction of food to the amount, in value, of £16,000,000, in a country so improvident and so poor, implied an amount of suffering and mortality into which no statistic details could fully enter. Pesteilence, the usual attendant of national famine, had also entered that devoted island, so that in crowded rural districts, and especially in the cities, the inhabitants were dying in heaps. An earlier session of parliament than usual was therefore opened on the 19th of January, and the royal speech, which was delivered by her majesty in person, thus acknowledged at the outset, and in accents of sorrow, the paramount subject of attention:—

“It is with the deepest concern, that upon your
Vol. IV.

again assembling, I have to call your attention to the dearth of provisions which prevails in Ireland, and in parts of Scotland.

“In Ireland, especially, the loss of the usual food of the people has been the cause of severe sufferings, of disease, and of greatly increased mortality among the poorer classes. Outrages have become more frequent, chiefly directed against property; and the transit of provisions has been rendered unsafe in some parts of the country.”

After adverting to the means which had already been adopted for the alleviation of these sufferings, the speech, which was almost exclusively occupied with Irish affairs, thus continued:—

“The deficiency of the harvest in France and Germany, and other parts of Europe, has added to the difficulty of obtaining adequate supplies of provisions.

“It will be your duty to consider what further measures are required to alleviate the existing distress. I recommend to you to take into your serious consideration, whether, by increasing, for a limited period, the facilities for importing corn from foreign countries, and, by the admission of sugar more freely into breweries and distilleries, the supply of food may be beneficially augmented.”

For these distresses, “to which nothing ex-

ceeding was to be found in the page of Josephus, or on the canvas of Poussin, or in the dismal chant of Dante,"¹ the ministerial measures for relief were brought forward on the 25th of January. They were embodied in two bills, proposed in the House of Commons by Lord John Russell, and in that of Lords by the Marquis of Lansdowne. In the one bill, the remedies were for immediate, and in the other, for future and permanent relief. In the former class, besides the board of public works, which was already giving employment to 500,000 labourers, representing 2,000,000 souls, he proposed the addition of relief committees, established in certain districts, empowered to receive subscriptions, levy rates, and receive donations from government—and that out of such funds, food should be purchased, soup-kitchens established, rations dealt out to the destitute, and labourers employed upon tillage to aid in their own support. Of the debt thus contracted by the necessary advances from the treasury, which was to be repaid by annual instalments in the course of twenty-two years, one half of the amount was to be remitted and thrown upon the public, although this would necessarily burden the imperial finances, and prevent the reduction of taxation. The measures of a more permanent character had reference to advances of money for the improvement of estates, the reclamation of waste lands, and the purchase of waste lands by government for that purpose; the extension of the poor law, facilities for the sale of encumbered estates, and the improvement of Irish fisheries. In thus stating the particulars of which his two bills were to be composed, Lord John Russell ended by exhorting the Irish to adopt the maxim, "Help yourselves, and Heaven will help you."

Over so large a field and variety of particulars, the discussion that ensued was of such a correspondent character, that it is impossible, within our limits, to give even an abstract of its history. The urgency with which a remedy was needed was evident from the tangible fact, that food to the value of £16,000,000 had been annihilated by this terrible visitation of Providence, while the well-known improvidence of the Irish character made it evident that no temporary or half-measure of relief would avail. The bills of Lord John Russell, after several amendments, were passed through both houses. The chief difficulty seemed to consist in the selection of the most beneficial course of expenditure; but as the age of railways had now so far progressed, and as every possible benefit was anticipated from this new device of welding the whole British empire into one compact mass, the idea of employing the Irish in the construction of rail-

ways was the foremost proposal on the subject. The initiative, however, was sufficiently startling. It was nothing less than the proposal of a loan of £16,000,000 to the Irish railway companies, at the same interest at which the money was borrowed by government. This was brought forward by Lord George Bentinck, who anticipated no difficulty or doubt of repayment; for he had been assured by infallible authority—no less than that of Mr. Hudson himself, that the worst railway under his (the railway king's) direction, was capable of affording to government a cent. per cent. security. Independently also of the immediate employment which would thus be given to 110,000 men, it would so improve the land of Ireland as to increase the rental by £900,000—equivalent to a capital of not less than £23,000,000. Well might Sir Robert Peel exclaim derisively: "Twenty-three millions for the Irish landlords, to be derived from the improved value of their property in consequence of railroad enterprise!—then, why do not the Irish landlords promote these undertakings?" Still clinging, however, to this favourite national panacea, the experiment was to be tried, although upon a greatly reduced scale. This was in consequence of a motion by the chancellor of the exchequer, who proposed that a loan of £620,000 should be distributed in certain shares among the Irish railways, repayable with five per cent. interest. This was but a small fraction of the £8,000,000 borrowed during the course of the session to be applied in the relief of Ireland, and the bill was passed by 175 votes against 62. Besides these various remedies, which were adopted with more or less success, a motion was brought forward upon the subject of emigration, on the 1st of June, by the Earl of Lincoln. It would have been strange indeed, if this constantly recurring expedient had been forgotten at such a crisis. The object of the motion, which was agreed to, was "to obtain a commission to inquire, first, whether colonization could be applied, so as to relieve those who remained in Ireland; secondly, whether it could be applied, so as to relieve those who left Ireland; and, lastly, whether it could be so conducted as not to interfere with the interests of our colonies."

As the calamity of the failure of the potato crop had been felt to a great extent in England, and a still greater in Scotland, every facility for the importation of food required to be immediately adopted, without which every other expedient would have failed. The suspension of the corn and navigation laws, which had been recommended by the royal speech, was introduced almost immediately after the opening of the session by Lord John Russell, who moved for a committee of the whole house on the corn impor-

¹ Speech of Lord Brougham.

tation act, to be followed by another on the navigation laws. The necessity of remitting the duties on the importation of foreign grain, he stated, had not been felt by Britain alone: the famine itself was common throughout Europe, and therefore, in several of the principal states, that remission had been already effected, and in some of them, prohibitory statutes had also been passed against the exportation of their grain. On that account, there were only two quarters from which supplies could be obtained; these were Odessa and the United States. He proposed, therefore, that all duties on the importation of foreign corn should be suspended till the 1st of November next, after which, it should be left to the consideration of parliament whether this suspension should be continued or not. With regard to the navigation laws, by which the importation of foreign corn was impeded, their suspension was necessary to diminish the price of freight, and set free a number of vessels of foreign countries, which might then be employed in transporting grain to this country and to Ireland. This suspension, also, instead of being permanent, was only to be temporary, and in mixed cargoes was to apply only to the corn that was landed. The necessity as well as propriety of these two bills was so generally felt, that only two days after their first reading, they were passed by both houses, and on the 26th of January received the royal sanction.

On the evening of the 25th, the same day on which these bills had been passed through the House of Commons, a modification of the rum and sugar duties was proposed by the chancellor of the exchequer. By this measure of the new government, it was declared that not only relief would be granted to the country, but also to the sugar-growing colonies who needed a requital for the removing of protection. This was to be effected by admitting the use of sugar in brewing and distillation, by which a saving in the expense of grain would be insured. As for colonial rum, it was proposed that the differential duty upon it should be reduced from 1s. to 6d. These proposals were also passed without alteration.

In the financial statement for the year before the committee of ways and means, the necessary loans that had to be contracted for the relief of the Irish famine were fully stated by the chancellor of the exchequer on the 22d of February. He was happy to state, that the finances were well able to sustain the demand, as the balances this year in the exchequer were upwards of £9,000,000, while the next year would probably show a very considerable increase. Taking all this into account, and calculating that the expenditure necessary for Ireland would be scarcely less

than £1,000,000 per month, until the next harvest, he proposed that the sum of £8,000,000 should be borrowed out of the consolidated fund for the relief of Ireland. To this, the objections in the debate that followed were various: some thought it too large; others, that so much should not be granted, without a guarantee that remedial measures would be carried into effect; and others, that a property and income tax should be imposed upon Ireland to raise the required amount. After keen opposition the measure was passed, and carried into effect; and that kind of relief for Irish destitution was dealt out which can only be of temporary efficacy, until a provident independent spirit and industrial habits are ingrafted upon the Irish character.

Passing over several bills which were introduced in parliament this session, but not finally ratified, we proceed to the subject of public education, which was brought before the House of Lords by Lord Lansdowne, and which formed the subject of several keen debates, in consequence of the public antagonism it always excited between the Established church and the dissenters. Already, from 1833 to 1846, the amount of parliamentary grants for public education was £490,000, by which 500,000 pupils were provided with the means of instruction. In bringing forward his proposal for an additional grant, Lord Lansdowne stated the following *desiderata*, as the objects to be accomplished by his demand:—1. The system of inspection, which hitherto had been limited, although it had been attended with signal benefit, might be extended. 2. The standard and condition of schoolmasters would be raised. 3. Apprentices selected from the most hopeful of the pupils would be trained into efficient teachers. 4. Retiring pensions could be granted to those schoolmasters and schoolmistresses who for fifteen years had unexceptionably managed schools of a certain size, and gratuities provided for those who still preferred to remain in office. 5. The schools could thus be provided with industrial apparatus, in the country for agricultural, and in the town for mechanical application, by means of which instruction might be conveyed to the scholar on subjects not usually included in any system of education. This, his lordship said, was all that the government was at present prepared to propose. Lord Brougham regretted that the plan was not more comprehensive still; but sarcastically remarked that such was impossible, as society was divided into two great classes—churchmen and dissenters—who loved education much, but controversy more.

Of controversy there was enough when the subject was brought into the House of Commons, where dissenterism could obtain a free arena.

On the 29th of April, Lord John Russell detailed to the house the correspondence that had passed between government and the Wesleyan body upon these departments of public education, and expressed his hope that the Roman Catholic schools, at present to be excluded, would be comprised in the grants as well as others. He then gave a history of the progress of education in the country from 1784, when Mr. Raikes first established Sunday schools, down to 1846, when the annual grant had been increased to £100,000; and described the jealousy and opposition with which the attempts of government to extend and improve the educational system had been continually encountered. After justifying these ministerial measures, he proceeded to show the lamentable deficiency of the public education of this country, and the necessity for its still further improvement. We never, he declared, gave instruction to our labouring population until they were sent to our jails as prisoners, instead of indoctrinating them in religion, morality, and industry before their minds were vitiated. He finally disclosed the government plan, imperfect indeed as yet, but urgently needed for immediate use, and craved the means for its establishment.

The debate that followed was sufficiently varied, the ground of objection being shifted from point to point over an extensive field. In a majority of cases it was allowed that the state should possess the guardianship of public education, because it underlay the responsibility of providing it—but by what body is the state to be represented in this important guardianship? “By the church, of course,” was the general reply; and here the door of contention was opened, for the entrance of the contending claims of the Established church on one hand, and the dissenting interest on the other. By the government scheme, also, the Roman Catholics were for the present to be excluded; and this awoke the hostility of that middle party who might be called liberalists in religion—men who viewed the merits of the question solely upon the footing of abstract justice or political expediency, and who urged the propriety of admitting the Catholic population to a full share of these educational state endowments. Even the sum demanded, which to several of the dissentients appeared too much, was in the eyes of others by far too little; and of this last class was Mr. Hume himself, who was so conscious of the inestimable advantages of a good national education, that he was ready to give not the paltry sum of £100,000 for it, but five times as much. While the debate was pending in the House of Commons, the subject was under consideration in the House of Lords. There, too, its religious difficulties were fully appreciated; and the chief questions at issue

were, “Shall the Roman Catholics be admitted to these schools?” and if so, “How far shall concessions be made to them in the religious instructions which form a part of the school routine?” The sum of £100,000 was voted for the purposes of education, with the understanding that, “when the subject came before parliament year after year, and the government asked for a grant of money for the purposes of education, the principles on which the money was to be expended would be fully explained; so that parliament would be in a position every year to give or to withhold its sanction.”

During this session, in which so much theological discussion was involved, a measure, towards the close, in which the Established church was deeply interested, was accomplished by the creation of the new diocese of Manchester. The bill to that effect was introduced into the lords by Lord Lansdowne. After stating the immense increase of population in that quarter, which made the spiritual superintendence of a separate bishop necessary, and the wealth of the diocese, which insured him ample support without expense to the public, his lordship proposed, that Manchester should forthwith be erected into a bishopric. But here lay the chief importance of the proposal: “It was considered inexpedient to add to the number of prelates in that house, and no addition to the number of their lordships’ house would be made in consequence of the creation of the new bishopric. The first Bishop of Manchester would succeed to a seat in their lordships’ house when, by death or otherwise, a vacancy occurred in one of the other bishoprics. Thus, a bishop, when appointed, would not have a seat in their lordships’ house until a vacancy took place.” This was a startling innovation: a bishop was no longer to have a right to sit there *ex officio*, except the old-established prelates; and as it was stated that in all probability an increase to the number of twenty-four new bishoprics would soon be found necessary, each bishop would have little chance of a seat in parliament until he had reached a considerable age. A better expedient, it was alleged, would be, a return to the still unrepealed law of appointing suffragan bishops, who should possess episcopal supervision without a place upon the bench. The original motion, after being carried in the lords, was transferred to the commons, where it encountered a still greater amount of obstruction, and chiefly upon the same footing; but there also it passed a second reading by a majority of 124 to 15. In the committee, the bill was vehemently decried by those who saw no need of more bishops; by those who were opposed to the measure, on the score of the additional taxation it would occasion; and by those

who were unwilling to see the office curtailed of its accustomed privileges. The bill, however, passed to the third reading by a majority of 93 to 14, and Manchester was erected into a bishopric with the prescribed limitations.

During this session the lost bills, of which Lord Brougham declared, "some were never born, others departed without a moment's warning," were so numerous, that we cannot afford space even for their titles. Some of the more important of these, however, were not finally and irrecoverably lost: their announcement served to awaken the public attention, and prepare the way for their re-introduction under more favourable circumstances. Parliament was dissolved on the 23d of July by her majesty in person. The chief theme of the royal speech on this occasion was the Irish famine, and the promptitude and liberality with which it had been encountered.

The first session of the new parliament commenced on the 18th of November, at which Mr. Charles Shaw Lefevre was elected speaker. The address of her majesty, which was read by the Marquis of Lansdowne, again adverted to the predominant calamity of the period. The famine was still raging in Ireland, and the crimes and insubordination which distress had produced or encouraged, were such as to demand the attention of both houses. In the lords, it was declared by Lord Stanley, that "one by one the best members of society fell victims to a system of assassination; and it was now an admitted fact, that it was safer in that island to violate than to obey the law." The Romish priesthood, too, he alleged, "instead of denouncing this horrid system, aided and abetted it. The time was come for prompt and effectual measures; and he called on the government in the name of civilization to introduce them instantly." With equal urgency Lord Brougham declared, that "as for Ireland, she now stood in a hateful and shameful pre-eminence of crime, and he trusted that effectual measures would be taken to disarm the people, and to protect life and property."

Upon Sir George Grey, the secretary for the home department, the duty devolved of introducing a bill upon the subject, which he did on the 29th of November. After laying before the House of Commons the statistics of public crimes in Ireland, from which it appeared that, during six months of 1847, the cases of homicide, attempts at assassination, robberies of arms, and firing of dwellings had increased so fearfully, that they more than doubled the amount of the six months preceding, Sir George proposed his remedy. It simply consisted in investing the lord-lieutenant with extraordinary powers in those districts where the peace was most disturbed. In these he was

to increase the constabulary force as he should judge fit, and prevent persons from carrying firearms, except those who were privileged by office for exemption from this disarming act, under penalty of imprisonment for not more than three years; and those persons who had firearms in their houses throughout these proclaimed districts, were to be required to deliver them up at the nearest police-station by a certain day. In any district where a murder had been committed, the justices and constables were also to be empowered to call upon all males between the ages of sixteen and sixty to assist in pursuit of the murderers; and should any one refuse, he was liable to be imprisoned with or without hard labour for any term not exceeding two years.

Such were the chief characteristics of this bill, framed to arrest the most intolerable and mischievous of all tyrannies—the tyranny of an armed, unchecked, and infuriated people, confident in brute force, and determined to use it to the utmost. And yet the bill was decried as despotic and tyrannical! while various statements were brought forward for the purpose of proving, that not the people but the landlords, the Anglo-Irish aristocracy, were the real and punishable causes of these atrocities. After the bill was introduced, and had come to the second reading, a motion was made by Mr. John O'Connell, son of the agitator, that the house should pass to the order of the day. The discussion that followed was such as Irish affairs had awoken every year; and the arguments used were such as lay thick on the surface of the subject; and would have been worn out long ago but for the perennial necessity that renewed their freshness, and kept them always ready for act and use. The strain of Irish oratory which it also awoke was no new melody in the ears of the house, although of such recent introduction. The bill, although so gentle compared with the occasion that produced it, was characterized by Mr. J. O'Connell as a measure of "petty, minute, ingenious, torturing details." "It was," he said, "the most deceptive measure ever brought before the house. In other coercion bills, there had been frank, bold, avowed oppression; in this enactment it was covert: this was an insidious, deceptive, sneaking bill. It deserved no other terms. It did underhand that which its authors had not courage to do plainly and openly. It went beyond the powers of the worst clause of the worst previous act. It was calculated to meet the people at every turn: to annoy them in their persons, their pockets, and their liberties." Such was but a moderate specimen of Irish eloquence upon a question of Irish legislation. In spite of every attempt to defeat or delay the bill, it passed through the second and third read-

ings by large majorities, in the last case the votes being 173 to 14. The bill also passed unaltered through the committee in the House of Lords.

This was not the whole amount of vexation arising from the affairs of Ireland during the course of this session. The death of Daniel O'Connell, which had occurred at Genoa during this year (May 25th), seems to have produced a scramble among his disciples for the vacant leadership; and upon the present occasion, Mr. Feargus O'Connor endeavoured to seize the coveted distinction, by raising within parliament itself the favourite Irish mob-cry of repeal. To this effect, he moved for the appointment of a select committee "to inquire and report on the means by which the dissolution of the parliament of Ireland was effected; on the effects of that measure upon Ireland, and upon the labourers in husbandry and operatives in manufactures in England; and on the probable consequences of continuing the legislative union between both countries." To strengthen his claim, he entered into a lengthened history of Ireland from the period of its occupation by the English crown, till the period of the union with England in 1800; after which he attempted to show that every article of that union had been violated by the English legislature. So discursive a mode of handling his subject afforded him a wide field for complaint and abuse, which he was not slow to occupy; but it was quickly evident that he was no "Daniel come to judgment," however much he might attempt to imitate, or even to ape the great agitator. His motion was premature, and found only 23 of his compatriots to support it against a majority of 232.

The only subject of discussion in parliament after this, was the Jews' disqualification bill, in consequence of the return at the late general election of Baron Rothschild for the city of London. As the baron belonged to the Jewish persuasion, and as every new member on taking his seat was obliged to make a statutory declaration "on the faith of a true Christian," it was thought that this simple requirement precluded all Jews, as long as they persisted in their hereditary faith, from a place in parliament. The question that had so often been unsuccessfully raised, was now to be tried under the most hopeful auspices; and the claims of the great Hebrew financier were backed by a London election, and advocated by his colleague, who was no other than the first minister of the crown. Lord John Russell brought the subject before the house, in this case, in the shape of a resolution affirming the "eligibility of Jews to all functions and offices to which Roman Catholics were admissible by law." A majority of sixty-seven for the resolution prepared the way for his new bill,

which was to be introduced at the next session. Christmas being now at hand, the meetings of parliament were adjourned to the 3d of February.

The first subject of discussion with which the business of the next session in 1848 commenced, was the West India question, a question which, since the period of negro emancipation, had never ceased to be a source of doubt and perplexity. It was opened in the present case by Lord George Bentinck, the distinguished advocate of the West India interests, by the following motion: "That a select committee be appointed to inquire into the present condition and prospects of the interests connected with, and dependent on, sugar and coffee planting in her majesty's East and West Indian possessions and the Mauritius; and to consider whether any and what measures can be adopted by parliament for their relief." His motion was prefaced by three important petitions with which he had been intrusted: "One from the standing committee of the West India planters; another from the merchants of Greenock, against restraints on emigration, and on the employment of labour; and a third from merchants and others in Jamaica, praying for the removal of burdens, for a full supply of African labour, an alteration of the navigation laws, and an assimilation on the duties on colonial rum to those paid by the British distiller." The extreme necessity of an immediate inquiry he stated from the fact, that fifty great West India houses in Britain had failed under liabilities of more than six millions of money; and that this was the reward of our cheap sugar system, with which our free labour in the West India colonies could not compete. His lordship's motion for a committee was agreed to without a division.

Although the next proceeding of parliament was to advance a loan of £170,000 for promoting the immigration of free labourers into British Guiana and Trinidad, it became evident, from the desponding accounts received from the West Indies, that something more decisive must be done to save these colonies from absolute bankruptcy and ruin. The subject was therefore resumed in parliament on the 16th of June, by Lord John Russell, who brought before the House of Commons a measure of relief. This was, that the house, in addition to the money already voted, should guarantee a loan of £500,000 to these colonies on the security of their revenues, for meeting the expense of immigration. In addition to this temporary relief, he proposed a reduction on the duty of colonial sugar by 1s. each year, until the present rate, reduced on the 5th of July to 13s., should have diminished to 10s.; and that a new distinctive duty should be laid upon foreign brown sugar, such as would leave

a fair field of competition to our West India produce. Such, stripped of its technicalities and numerous details, was the government plan of relief brought forward by the premier. The debate that followed was no exception to the generality of those that were usually waged upon West India questions; and though sugar was the theme, it was discussed with as much bitterness as if it had been gall and wormwood. From wrath, the debate proceeded to such rude personalities, as would have better suited the ancient Roman forum than a British senate. At one stage of it, Lord G. Bentinck having accused the colonial office and its secretary of suppressing important information, in order to keep the house and the public in the dark as to the real predicament of the colonies, was thus answered in kind by Lord John Russell. "In general, with regard to those matters, it is quite evident that these mean frauds—these extremely disgraceful tricks—which the noble lord imputes to my noble friend—are not the faults and the characteristics of men high in office in this country. They are the characteristics of men who are engaged in pursuits which the noble lord long followed [*loud cries of oh, oh! and great uproar*]. Some time ago, the noble lord very greatly distinguished himself by detecting a fraud of this nature—[*loud cheers and counter-cheers*]—with respect to the name and age of a horse, a transaction in which he showed very great quickness of apprehension." [*Great confusion.*] Thus strangely was Newmarket mixed with the Indies, and race-horses with muscovado and clayed sugars!

A debate that could originate such unseemly eccentricities was protracted by frequent adjournments, and several amendments were successively moved, but only to be rejected. At one time the opposition to the bill arose from anti-slavery arguments, and at another from those of the protectionists. At last, all its resolutions were agreed to, and the bill thus passed into the House of Lords unaltered, where it underwent a second reading, and called forth no further debate until it became law.

It was not without reason that so much demur had been made upon the lessening of colonial taxes, and the grant of colonial loans. The balance-sheet of the last year, which was presented on the 3d of February, 1848, showed an excess of expenditure over income to the amount of £2,956,683, while a still more serious falling off was anticipated from the alarm of foreign invasion, and the necessity of increasing our armaments, and fortifying the more exposed parts of our coasts. This dread of a hostile interruption of peace arose from the unsettled state of France, and the warlike preparations that for some time

had been going on in that country. These causes, and their effects upon the revenue, were distinctly stated by Lord John Russell on the 18th; and for a remedy, he proposed to continue the income-tax for three years at the increased rate of five per cent. This proposal excited general dismay in the house, and while some declaimed against the madness of an increased taxation amidst the growing mercantile depression, others could discover no serious cause of alarm in the growth of the French army and navy, and their frequent threats of invading Britain. It was even alleged, that all our warlike preparations would only tempt the enemy to make a trial of our strength. The dread of our statesmen, however, upon the subject, in which the Duke of Wellington himself took a part, showed that it was anything but visionary; and subsequent events have shown, that nothing but those startling political changes that soon afterwards occurred in France could have diverted our old enemy from her long cherished purpose of revenge. The real causes of alarm, however, could not be openly stated; and therefore Sir Charles Wood moved that a select and secret committee should be appointed, to examine how far the estimates of the army, navy, and ordnance might be adopted; and to inquire generally into the affairs of those departments. Another subject of inquiry, was into the miscellaneous estimates; and to report whether any reductions could be effected, or any improvements made in the financial arrangements of these several departments. The necessity of such investigations was evident from the fact, that the expenditure for the navy, army, and ordnance, which in 1835 had been £11,730,000, had already risen to £17,340,000, and the motion was carried. It was soon apparent, however, that the attempt of the ministers to raise the income-tax from three to five per cent. was for the present impossible. The popular storm against it was so violent, and the petitions so numerous, that a national agitation was apprehended, before which both tax and ministry would have been swept away. On the 28th of February, therefore, the chancellor of the exchequer hastened to the house with an amended budget. The plan of permanently increasing the income-tax was abandoned. Still, a temporary increase was necessary, and for the following two years he declared it might be raised to five per cent., while at the end of five years the tax itself should altogether cease. On being asked whether he would pledge himself to take it off, as it was to be only temporary, at the end of two years, he replied with some warmth: "Can any man foresee what will be the state of the world two years, or even six months hence?" The same might have been predicated of his five years' limit. Who could have

anticipated after that duration, the permanency which it would acquire, or the causes that should compel its continuance?

Next in importance to the income-tax were the navigation laws, the alteration of which had been recommended by the royal speech, and promised by the present ministry on their entering into office. These laws, which were now found incompatible with the true interests of commerce, enacted, with regard to our foreign trade, that certain enumerated European articles could only be imported in British ships, or in ships from which the goods are exported, or of which they are the produce. With regard to our colonial trade, it was confined, with a few slight exceptions, entirely to British shipping. And to constitute a British ship, the vessel must be British-built, British-owned, and manned by a crew of seamen of whom three-fourths at least must be British. It was time that these restrictions, the fruits of an early age and narrow policy, in which the true interests of commerce were little understood, should be removed. It was not, however, till the 15th of May, that the measure to that effect was formally proposed by Mr. Labouchere. His speech on this occasion was of a length and complexity fully warranted by the importance of the subject, in which the security of the colonial trade, of the long voyage trade, and the carrying trade were equally involved. The proposed alterations were chiefly in connection with those mercantile advantages which our colonies had hitherto enjoyed, and those reciprocities in our traffic with foreign nations which the principle of free trade demanded. In the course of the debate, he endeavoured to remove the fears of the protectionists by showing that English shipping and seamen were quite equal to meet foreign shipping and seamen in equal markets; that, in fact, wherever they had done so, the increase of tonnage in our favour had been strikingly great. On the other hand, he showed by figures, that the most protected departments of the shipping were comparatively the least flourishing. Was it right, he asked, to maintain the principles of the navigation laws? The first principle was that of colonial monopoly; the second was the maintenance of those restrictions which were intended to secure the long voyage trade to this country; and the third was the maintenance of those restrictions which were intended to secure the European carrying trade. The question was, whether they were prepared to consider the propriety of departing from these principles, or leaving them untouched; whether they should meet the wants of commerce and the exigencies of the case before them; whether they were prepared thoroughly and completely to revise the

whole system of our navigation laws, with the view of adapting them to the spirit of the times, and meeting the just demands of other countries, the wishes of our own colonies, and the interests of our expanding trade. Following in the same track, Sir Robert Peel observed: "Every article of foreign manufacture, it was said, threw out of employment thousands of native workmen. But what a doctrine was that for a great manufacturing nation, which exported £58,000,000 in declared value of its own manufactures! Admit that doctrine, and foreign countries must regard us not as the benefactors, but as the enemies of human happiness." The subject itself was introduced so late in the session, was productive of such contrariety of sentiment, and protracted through so many adjournments, that on the 10th of August Mr. Labouchere announced its postponement to the following year. Enough, however, had been done to secure for it a favourable reception when it should be brought in the form of a regular motion before the attention of parliament.

In accordance with the promise given in the preceding session, the bill for the removal of the test by which members of the Jewish persuasion had hitherto been prevented from a seat in parliament was re-introduced at an early stage of the present session. The second reading was moved on the 7th of February, and notwithstanding the liberality with which Roman Catholics had been admitted into a share of the government, there was still much demur about granting the same privileges to Jews. From their peculiar nationality, it was alleged, they never could become Englishmen; and from their creed, they could never be the true and faithful representatives of a community whose legislation was upon Christian rule. On the other hand it was represented, that in England a Jew might be a magistrate, and why not also a legislator?—that all who shared in the burdens of the state were also entitled to its honours and privileges—and that our national constitution, in its religious restrictions, was yet of such an expansive character that it could accommodate itself to the growth and progress of society. The enemies of the bill were also taunted with the charge of narrowness and inflexibility, and exhorted to look to the example of France and Belgium, where all distinctions between Christian and Jew are abolished; and to that of Prussia, where the same principle had all but passed into law. To admit the Jews to parliament, was also stated to be nothing more than an act of reparation for centuries of injustice, persecution, and wrong. If the public feeling also was to be consulted in the measure, it would be found, that notwithstanding the long interval that had elapsed, the

petitions against the bill had not above 50,000 signatures, while those in its favour had more than 300,000. The second, and likewise the third reading were carried by considerable majorities. Very different, however, was the fate of the bill in the House of Lords, where the second reading was moved on the 25th of May by the Marquis of Lansdowne. There, the arguments urged against its admission were chiefly of a religious character, and seemed to have more weight than in the commons; and the fate of the bill, for this year at least, was sealed, in its rejection by a majority of 163 against 128.

The affairs of Ireland during the earlier part of the session occupied less of the attention of parliament than usual, and it was hoped by many that, with the death of O'Connell, the dangers of Irish agitation had been averted. But little did such hopes take into account either the national character of the people, or the vitality of a national hatred. Deprived of their leader, the Irish malcontents only showed themselves more desperate and daring; and while political clubs were multiplied over the whole country, their purposes were avowed more openly and loudly than ever. From these seminaries of political regeneration, the people were exhorted to prepare pikes and blunderbusses—to learn to destroy the soldiers not merely with such weapons, but with vitriol and burning turpentine—and to effect a thorough reform by the extermination of the 8000 Protestant landlords of Ireland. While such advices fell everywhere like firebrands upon the inflammable population, the new leaders of the movement were in close communication not only with America, but also with France, whose insurrectionary spirit inspired them with the highest confidence.

The campaign was opened by Mr. William Smith O'Brien, the most distinguished as well as most daring of this self-constituted Irish chieftainry. Since the death of O'Connell, under whose ascendancy his genius had stood rebuked, he had aimed at the vacant throne of agitation, and signalized himself by the recklessness and bustle of his proceedings, while his ancestry, fortune, and popular manners gave him considerable influence among his countrymen. So little difficulty did he anticipate in his proceedings, that at a public meeting in March, he had told his hearers they had only to "fraternize" both with the army and the police, to obtain their hearty co-operation. It was like the well-known receipt for catching swallows, and he found Irishmen in plenty to try the experiment. A war directory was constituted; a rising in arms was proclaimed for the 19th of July; and O'Brien, who was to head the movement, and who was already announced as one of the future

kings of Ireland, accompanied by his assistants, Meagher and Dillon, arrived at Enniscorthy, and took the command of the hungry and expecting multitudes who waited his arrival, and had been perfecting themselves in drill and other martial preliminaries. After much marching, counter-marching, and haranguing, the insurgents arrived at Mullinahone. On the following day (July 26th) O'Brien, armed with a pike, and pistols in his belt, and accompanied by a detachment of his followers, advanced to the police-barracks, and summoned the inmates to surrender, telling them that resistance would be in vain; but the soldiers, although only six in number, refused, upon which the future king of Munster, instead of storming the barracks, drew off, and resumed his marchings hither and thither, until he arrived on the 29th at Ballinacorney. By this time, a large reward had been offered for his arrest, and Mr. Trant, sub-inspector of the police, at the head of forty or fifty men, was sent to disperse the insurgents. Finding on his arrival that they mustered two or three thousand strong, armed with muskets, pikes, scythes, and pitchforks, he withdrew his small party to a slate-roofed house a few fields distant from the highway, and there resolved to make his post good, until the expected troops and constabulary arrived to his aid. The battle, if battle it might be called, was begun and ended in a few minutes. The assailants, after an ill-directed volley, advanced through the cabbage-garden in front of the house, to storm it; but a few shots from those within sent them scamping in all directions, while the hero of the fight, after retreating on all fours through the cabbages, mounted a horse belonging to a constable, and galloped off like the rest, complaining of the cowardice of his followers. He was soon after apprehended and tried, along with his coadjutors Meagher, M'Manus, and O'Donoghue, when all four were convicted and sentenced to die the death of traitors—a sentence, however, which was never meant to be executed, and which was changed into transportation for life.

In this way a rebellion, which in more able hands might have changed the fate of a kingdom, was scarcely more formidable, when brought to the touch, than a common holiday riot. Even those who would have been its sufferers could scarcely refrain from expressions of disappointment at such a ludicrous and contemptible termination. It was not, however, to be expected that such movements would always have such leaders; and both before and after the outbreak, government adopted such precautions as might neutralize the power of the Irish political clubs, from which the greatest mischief was to be apprehended. The chief of these precautions was the

very obvious one of vesting the lord-lieutenant with extraordinary powers. A bill accordingly was passed through both houses for the suspension of the habeas corpus act in Ireland. But a far more important measure, which had the future and permanent benefit of the country for its object, was the bill for facilitating the sale of encumbered estates, which had been moved at the commencement of the session, and was now resumed and passed. It was shown that the immense amount of landed property thus circumstanced in Ireland was not only detrimental to its owners, but injurious to the community at large. It was so laden with debts and mortgages, that landlords who nominally had estates worth £10,000 or £12,000 per annum, did not derive from them more than as many hundreds, while others derived from their estates no rental whatever. It was impossible, therefore, that they could improve the land, or find occupation for their tenantry. In such a case, the impoverished landlords would not only welcome the opportunity of converting their useless estates into money, but the peasantry would be benefited by the introduction of British capital and British industry. As able conveyancers were scarce in Ireland, one object of the bill was to cheapen and shorten the proceedings of transfer in the Court of Chancery. It encountered much opposition through its several stages, as it threatened to supersede the old national noblesse by a new aristocracy; but even this difficulty was obliged to yield to the necessity of the case, and thus new facilities were afforded for the better colonization and cultivation of this hitherto neglected country.

Closely connected with the disturbances of Ireland, and the difficulty of managing its Roman Catholic population, was a bill introduced and passed this session for enabling her majesty to carry on diplomatic relations with the court of Rome. It was one of the natural consequences of those concessions to Romanism which had now become the order of the day; and the chief argument used in its favour, was the political expediency of such a change. The principal objections against it were, that it recognized, for the first time, in Protestant England, the pope's title of "sovereign pontiff;" that it violated the obligations of the bill of rights, and gave admission at any time to a Papal nuncio into England. The bill was passed, although it was already known that the pope contemplated the project of dividing England into dioceses, and appointing an Archbishop of Westminster.

Although this year has been emphatically called the era of revolutions, in which almost every throne of Europe was shaken and nation convulsed, the state of Britain during the whole

period exhibited a most enviable contrast. It was impossible, indeed, that the ambitious, the discontented, and the ignorant, would fail to kindle at the example of France, and endeavour to imitate it; but the imitation was as futile and contemptible as that which had occurred in Ireland, under Smith O'Brien, for the restoration of the days of Malachi and Brian Boromhe. On the present occasion, the attempt was made by the chartists and physical-force men, who thought that the happy moment had occurred for overturning the British constitution, and establishing in its stead the five points of the charter; and accordingly, a "demonstration" was announced to be held on the 10th of April, when the reformers were invited to assemble on Kennington Common, to overwhelm the government with a display of their force and numbers. But vast though the assemblage was, it passed away as silently as a vapour; and without calling out any troops, the metropolitan police was found sufficient for the preservation of order. On the same day that this Kennington muster took place, two petitions were presented to the House of Commons by Feargus O'Connor, one of them signed, as he declared, by 5,706,000 and the other by 30,000, praying for the enactment of the five points, viz.: annual parliaments, universal suffrage, equal electoral districts, no property qualification, and payment of members. These petitions were brought into the house in five huge bales, and rolled along the floor to the table, where they were ruefully eyed by many members, not merely as mountains of offence, but magazines of national danger and destruction. But a careful examination diminished the terrors of these monster petitions. It was found that the signatures, when counted, instead of being nearly 6,000,000, were less than 2,000,000 of names. Of these also, a great multitude were forgeries, such as Victoria Rex, the Duke of Wellington, Sir Robert Peel; while others were merely derisive subscriptions, such as No Cheese, Pug-nose, Flat-nose, and appellatives of a much less harmless description. In this schoolboy fashion the scrolls at the corners of streets had been signed by thousands who cared neither for the five points nor their advocates. The effect was, that chartism shrunk abashed into its former obscurity, and a bill was introduced and passed for the more effectual suppression of seditious and treasonable proceedings. These proceedings were now classed under the head of felony, and punishable with transportation. In expressing his approval of this bill, Sir Robert Peel observed, that "he thought it right that men who had not the dignity of traitors, should be reduced to the position of felons. He would put a stop to those frogs that were croaking sedition in the marshes,

and would not allow them to puff themselves into the dimensions of the nobler animals that bellowed treason."

The long-protracted session of parliament for 1847-48, which had continued nearly ten months, was brought to a close on the 5th of September, when both houses were prorogued by her majesty in person till the 2d of November. It was a welcome intermission to the wearied members, as notwithstanding the apparently scanty results of legislation, the sittings, with a very few exceptions, had been continuous over the whole of that long period, and the labour severe and incessant.

We have already adverted to this year as the era of European revolution. This spirit was once more originated, and the signal of outbreak given by France, the mighty mother of modern anarchy and political change. In that country, the transition from the Thiers to the Guizot ministry had brought no amelioration in the radical evils of its government. The electoral constituency was still so small that its votes could easily be purchased by the government; and hence, the minister could at any time command a majority in the chamber of deputies, let the voice of the nation be what it might. It was universally complained of, therefore, as the engine of despotism, rather than the exponent of the national will and guardian of the national liberties. Louis Philippe too, adroitly availing himself of such an instrument, had freed himself from the jealous restrictions by which, as a mere citizen-king, his every movement had been circumscribed and fettered, and was moving onward to absolute rule with a continually accelerating step. True, he was an old man, and in the course of nature must soon die; but as if to perpetuate his power, and establish an absolute monarchy upon a basis that could not be shaken, he was devoting his old age to the aggrandizement of his family by royal alliances, so that in process of time it seemed as if it might vie in strength and permanency with that of Hapsburg itself. But his crowning iniquity in this respect, as well as great political blunder, was the Spanish marriage, in which the young queen of Spain was compelled by his intrigues to espouse an imbecile unpromising husband, that the succession might revert to his own family, and the Spanish kingdom be reunited to that of France. This event alienated from him not only the confidence of his own subjects, but of the European powers at large. In it the former dreaded the return of the absolutism of Louis XIV.; the latter his boundless ambition and lust of conquest, under which the world was still smarting after more than a century had elapsed.

From the state of public feeling in France, it

was evident that the reign of the "king of the barricades" was drawing to a close—that the paving stones of Paris would soon be in requisition once more. This was especially shown by the number and character of the reform banquets which were now multiplying over the country, and by the abortive attempts of the government to suppress them. They were regarded by the ruling powers as lineal successors of the old Jacobin clubs, and dreaded accordingly. It was by one of those meetings that matters were brought to a crisis. The twelfth arrondissement of Paris had announced a reform banquet on the 19th of January; but in consequence of a vote that had been just carried in the chambers against such assemblies, the meeting was put off from time to time, until it was definitely fixed to take place on the 22d of February. This, however, was not all; for the programme not only specified the mode in which the guests were to assemble and march through the streets, but it also invited the national guards to attend in uniform, and line the procession. This proceeding, in which private individuals usurped the powers of government, was too startling to be overlooked: the ministers had resolved to let the banquet take place, and afterwards try the legality of such meetings before the high court of cassation; but now, when the proceeding had assumed such a treasonable and dangerous character, a more summary process was necessary, and the banquet was accordingly proscribed by a public proclamation. The dinner was therefore abandoned, but a more terrible measure was digested in its stead; for on the very day appointed—the 22d of February—and at five o'clock in the afternoon, fifty-three members of the opposition, who at that hour would otherwise have been employed in eating and speech-making at the banquet, sent to the chamber of deputies an act of impeachment of ministers, by the hands of M. Odillon Barrot, who laid it upon their table. With the infatuation of doomed men the chamber adjourned without reading it, although the streets of Paris were already thronging with those tumultuary masses, which, like thunderclouds, had hitherto been wont to announce a revolutionary storm. On the following day, M. Guizot in the chamber announced the resignation of himself and his colleagues, and the commission which the king had intrusted to Count Molé to construct a new cabinet; but the mob was now predominant over the whole capital; barricades were speedily erected, and conflicts took place between the military and the people, which were continued till night, the populace being heartened in the insurrection by the reluctance of the national guards to act against them.

During the hours of darkness that succeeded, all was wakefulness and perplexity at the palace; Molé had been unable to form a new ministry, and M. Thiers was sent for, who agreed to assume the office of president of the council, with M. Odillon Barrot for minister of the interior. But although this change was loudly trumpeted on the following morning, it failed to quiet the people, who had assembled to complete their work: they had been maddened with the taste of blood, and instead of a change of the cabinet, nothing less than an eversion of the throne itself would satisfy them. When the popular names of the new ministry were therefore announced, they answered with cries of "*Vive la République!*" and tore down the proclamation. The fighting was resumed; but still the populace had easy work of it, as in most cases the soldiery either looked on as spectators, or joined the popular movement. The storm rolled onward toward the Tuileries, where the last resource of fallen royalty was adopted—Louis Philippe consented to abdicate in favour of his grandson, the Comte de Paris, the Duchess of Orleans his mother being in the meantime appointed regent; and this resolution was promptly followed up by the entrance of the duchess herself into the chamber of deputies, leading her two young sons, and attended by her brothers-in-law, the Ducs de Nemours and Montpensier. But even there, when her accession to the regency was announced, it was met with the cry, "It is too late!" and this declaration was followed with such a tumult, that for a short time it was feared the duchess and her children were in danger, more especially when an armed mob burst into the chamber, and menaced the president with their muskets. Amidst wild uproar and brandishing of weapons, a provisional government of five persons was decreed, and a republic proclaimed. During this in-door interlude, the work of fighting and demolition was going on without, in which the Hotel de Ville and the Palais Royal had a double share; while the Tuileries itself was carried by storm, where the royal carriages were piled into a heap, and converted into a bonfire. But in the meantime the king and royal family had escaped. Escorted by a body of horsemen, they had walked slowly from the Tuileries at one o'clock; and it was given out that the king was on his way to the chamber of deputies, to announce his abdication. But on passing the Pont Tournant, two small black carriages with one horse each were drawn up, which had been secretly prepared for their departure, and by these humble conveyances the king, queen, and family were conveyed to Versailles. They continued their flight disguised, and travelling chiefly by night arrived at Honfleur,

where Louis Philippe under the convenient European name of Smith, obtained a passport, and escaped to England, in which country he was certain of safety at least, if not of a cordial welcome.

In this way was the Orleans dynasty deposed and exiled in the course of a few hours. It is just, however, and honourable to the French character, to advert to the improvements which they had made in revolutionizing. The open manful struggle of the three days in 1830, and the concord that followed when the work was achieved, was a signal contrast to the atrocities of the first revolution. In like manner this of 1848 was an improvement even on that of 1830, on account of the small amount of havoc and bloodshed with which it was accompanied. The killed and wounded, during the numerous skirmishes that occurred in various parts of the capital during the course of two days, did not amount to a thousand; and when the Tuileries was crowded with the mob, though there was plenty of singing and drinking, and some demolition of furniture, there was little plundering. On the floor of one of the apartments was a frame of card-paper soldiers on wooden stands, with which the sons of the Duchess of Orleans had probably been playing before the sudden emergency drove them into flight and exile. A boy from the crowd laid hold of the toy, but was ordered by a grim armed artisan, hot from battle, to lay it down. "It is but a toy," replied the urchin. "That is true," said his monitor, "but if you take a toy, others would think they might take a treasure." Whether right or wrong, it was a great political principle that was at issue, and the meanest or worst of the actors seemed to scorn the thought of alloying it with theft and brigandage. While private property was thus respected, the emblems of religion were treated with veneration by the mob, even when their passions were at the wildest. When they had stormed the Tuileries, they found a magnificent image of our Saviour. "My friends," exclaimed a young pupil of the Polytechnic School, "this is the master of us all." The captors immediately uncovered their heads, and carried the image in solemn procession to the church of St. Roch.

A government was now extemporized in Paris with a rapidity which the case seemed fully to warrant. As might be expected, also, it was republican throughout. All titles of nobility and other aristocratic distinctions were abolished. The names of journals, streets, and public buildings that savoured of royalty were changed. The old republican watchwords, also, that had so long been unheard, were now recalled from their hiding places, and every street resounded with the cry

of liberty, equality, and fraternity. As the great defect in the right of electing representatives had formed the chief argument of dissatisfaction with the old state of things, its limitations were so completely swept away, that the suffrage was declared to be direct and universal, without any limitation as to property. All Frenchmen of the age of twenty-one were to be electors, and all who had reached the age of twenty-five were eligible for election. In addition to this, the vote was to be secret and by ballot; while the 900 representatives, to which the number was now raised, were each to be paid at the rate of twenty francs per day during the session. Among the difficulties of the new government, one of the most pressing was the support of the unemployed workmen in Paris—the thews and sinews of the revolution, who might unmake to-morrow what they had made to-day. As the remedy needed to be instant, a national guard *mobile* was immediately formed, ostensibly that they might be employed upon the frontier, where there was little need of their services, and for the thousands who could not be enrolled, national workshops called *ateliers* were opened by the government, to give occupation to the unemployed, at the wage of two francs a day, which afterwards, from the immense number of applicants, had to be reduced to one franc.

By these and similar expedients, provision was made for the safety and permanence of the new constitution. And yet, not many weeks or days had elapsed, when their utter insufficiency was felt. The whole nation had been taken at unawares by the sudden revolution in Paris, and had silently acquiesced in it; but in a short time it was shown that the republicans of Paris were not the representatives of France, nor even of its capital. During the long interval of peace, a numerous and influential middle class had grown up, to whom the insecurity of a republican government was the greatest of evils; and therefore, while in Paris itself they were sufficient to hold the wild democracy of the faubourgs in check, they were so predominant beyond its walls, as to turn the whole national feeling against the existing state of things. This anti-republican spirit continued to grow in strength, from the stagna-

tion of commerce and trade, the multiplication of bankruptcy and pauperism, and the insufficiency of the national funds to feed the idle and discontented; and it was finally confirmed by the wild proposals of the communists and red republicans, whose plans would have once more produced an universal equalization of property, and a war against every nation. After several desperate attempts at insurrection on the part of the latter, which were always defeated, their insurrectionary principles were brought to a final issue on the 23d of June. The government having found their establishments of *ateliers* or workshops

THE ATTACK ON THE PANTHEON, PARIS.—From the Illustrated News, 1848.

worse than useless, had closed them, by which their employees, who had increased from 13,000 to 120,000, were thrown upon the resources of common industry, instead of having light work and full subsistence prepared to their hand. They rebelled. the red republicans united their cause with that of the workmen, and a new war of barricades commenced, such as Paris had not yet witnessed. One of the most desperate of this series of street conflicts was at that splendid national building the Pantheon, in which a defeated party of the insurgents rallied, and where they gallantly maintained their position for nearly two hours, until they were driven out by the persevering attacks of the troops, and a heavy, incessant cannonade. It was not merely that the insurgents fought with their wonted courage and desperation, but they also united military science to their courage, and constructed such barriers of stone at every defensible point, as tasked the utmost occupation of artillery, and deepened ten-

fold the horrors of these civic conflicts. But those terrible efforts, which had formerly sufficed to unseat dynasties and revolutionize the nation, were met, encountered, and crushed in every direction during this four days' warfare of siege and storm; and General Cavaignac, who had been elected to the dictatorship at the commencement of the danger, and under whose energetic measures it had been suppressed, instead of being allowed to resign his power at the close, was almost unanimously invested by the national assembly with the office of president of the council. Even already the friends of order in France were willing to secure its blessings under the baton of an able military leader. Whether the baton should become a sceptre and the general an emperor was nothing more than a question of time and opportunity.

That question, however, was not to be settled in favour of the able and successful Cavaignac. Louis Napoleon Bonaparte was now in Paris. After his escape from the fortress of Ham, he had returned to his old privacy in England, and there it is probable his solitary musings were connected with the blunders of his ill-concerted attempt, and the means by which a second trial might be more successful. In the meantime he kept his own secret, and his chief appearance in public was such as might well disarm suspicion, for it was as a special constable during the chartist riots in London, when his only weapon was a policeman's truncheon. The dethronement of Louis Philippe and establishment of a republic were his signals for action: he hastened to Paris, but was advised by the provisional government to return to England. He complied, but subsequently, during his absence, he was elected a member of the national assembly by not less than four constituencies. Ought he to be permitted to sit? was now the question. His very name seemed to menace the restoration of the empire, and their ears were once more startled with the ominous popular cry of "*Vive Napoleon!*" It was decided by a great majority that he should be admitted, and he was admitted accordingly on the 27th of September. On taking his seat, he earnestly disclaimed those ambitious designs

which had been charged against him, and under the suspicion of which he had hitherto been condemned to exile. "My conduct, always inspired by duty," he said, "always animated by respect for the law—my conduct will prove the falsehood of those who have attempted to blacken me, for the purpose of still keeping me proscribed, and will demonstrate that no one is more firmly resolved than myself to establish and defend the republic."

Since the commencement of the provisional government, a committee had been employed in drawing up a form of constitution for France. The chief features of their plan were, a president to be elected by universal suffrage, and a vice-president, who was to be elected by the national assembly. There was also to be one assembly, and no other chamber. After long delay, the election of a president was commenced, and the great national ballot-box was opened for the purpose, near the close of the year. On this occasion it might have been thought that the upright, disinterested Cavaignac, the best soldier of France, and hero of the revolution, would have been elected, not only on account of his

LOUIS NAPOLEON, President of the French Republic

high character and wide popularity, but his recent valuable services. He was not indeed forgot, and nearly a million and a half of votes were enrolled for his election. But for Louis Napoleon, who had seen no military service whatever, who was scarcely even a Frenchman, and whose former life had neither been illustrious nor popular, 5,434,226 votes were tendered; and by this overwhelming majority, he was raised to that elevation, above which there was only a single step. Who after such an event could say, that his dethroned uncle had ceased to reign, as well as ceased to live?

A similar spirit was manifested over the greater part of Europe. In Italy, especially, the desire of throwing off the Austrian yoke was so strong, that the revolutionary element was kindled into full conflagration by lighting a cigar. In Milan, the people, for the purpose of injuring the revenue derived from them by their oppressors, had discontinued the practice of smoking; and when the Austrian soldiers smoked

cigars in the streets, the self-denying populace, irritated no doubt by abstinence as well as patriotism, fell upon the soldiers, who drew their swords upon the assailants, and in several scuffles, severe wounds and even deaths were the consequences. The same was the case in Pavia, where sanguinary encounters occurred in the streets between the students and the tobacco-loving soldiery. A revolt followed, which, commencing at Milan, speedily extended over the Austrian dominions in Italy. In Rome, the example was quickly followed; the way, strangely enough, having been prepared by the pontiff himself, who, assuming the character of a reforming sovereign as well as spiritual guide, introduced into the Papal constitution as many innovations as sufficed to whet the popular appetite for liberty without satisfying it; and the people, who now felt what was needed, rose in arms, to convert their half liberty into a whole. The consequence was, that in November the pope was obliged to escape from Rome in the disguise of a livery servant, mounted upon a coach-box. A revolt of Sicily against the Neapolitan government was at the same time raging at Palermo, where conflicts both on land and sea were maintained, and generally in favour of the revolutionists. Although these energetic attempts were in course of time suppressed, it was chiefly through foreign intervention and aid; and the whole course of conflict sufficed to show that the old Italian spirit had fully awoken, and would only wait for another opportunity. Every succeeding year has only deepened that conviction, and made politicians regard Italy as a slumbering volcano, that may at any moment burst forth to overwhelm and regenerate.

While Italy was thus moved throughout her kingdoms and provinces, the Teutonic spirit was equally pervaded by the epidemic influence of this most eventful year. The first of these great political movements was the quarrel of the provinces of Schleswig and Holstein against the Danish government, to which they had hitherto belonged, and which occasioned the armed interference of the German confederation. It does not fall to our lot to specify the conflicts that took place between Denmark and Prussia on this occasion, and by which, notwithstanding a seemingly amicable termination, the seeds of future quarrel were plentifully sown, that may

ripen into a melancholy harvest. In Hesse-Cassel the people rose against the elector, and compelled his assent to certain terms by which the more oppressive parts of their form of government were swept away. In Bavaria, the spirit of insurrection was still more distinctly manifested, being occasioned by the shameful dotage of their old sovereign, who had adopted a wandering stage-dancer for his mistress, raised her to the rank of nobility, and made her the principal channel of royal communication and favour. The time had happily gone by in Europe when a royal mistress could rule the movements of a court and the destinies of a nation; and on this occasion the armed remonstrance of the Bavarians was so effectual, that the actress was banished, and the king compelled to abdicate. But while the whole Germanic empire was more or less agitated throughout its many states with the principles of revolution and political reform, and while in several cases these were only decided by an appeal to arms, a war of liberty, which had broken out in Hungary against the Austrian rule, was the chief movement of note in the eyes of Europe, on account of the importance of the two antagonists, and the great events by which their warfare was signalized. The most important of these results was the spirit of disaffection against their own sovereigns, which recent events had so strongly fostered in the hearts of the Austrians; and after a desperate series of street battles in Vienna between the insurgent populace and the military, the emperor resigned his crown in favour of his nephew, Francis John, who succeeded to the imperial dignity without opposition. In this manner, during the whole of this year, Europe was convulsed to its furthest extremities with those great insurrectionary principles which the first French revolution had implanted, and which the recent events in France had encouraged into action. It was a startling spectacle the sight of so many throneless sovereigns, whom not the chances of war and the violence of enemies, but the doom of their own subjects, had deposed and driven into banishment. It was felt that a new principle of war was now to predominate, and that the conflict was henceforth to lie between the rulers and the ruled, instead of a trial for superiority and conquest by one nation against another.

CHAPTER XII.—CIVIL AND MILITARY HISTORY.—A.D. 1849—1850.

VICTORIA.

Opening of parliament—Bill to remove restrictions on the navigation laws—It is carried—Unsuccessful attempt of the protectionists to rally—Changes proposed in our rule of the colonies—Disorders in Canada—Repugnance of our penal settlements to continue as convict colonies—Hostility of the Cape of Good Hope to convict importation—The colonists prevent a convict shipment from landing—Measures for the relief of Irish destitution—The rate-in-aid bill passed—Bill passed to facilitate the transfer of encumbered estates in Ireland—Particulars of the bill—Amendment of the Irish poor law—Loans advanced by government to Irish landholders—Parliamentary inquiries into the part taken by British officials in the late European revolutions—Jewish disabilities bill again rejected—Bill to legalize marriage with a deceased wife's sister—Its second reading carried—Affairs of India—Symptoms of revolt—Insurrection of the Sikhs—Mooltan besieged by the British—Gallant resistance and final capture of Mooltan—Unsuccessful conflict of Lord Gough with the Sikhs at Ramnuggur—A second attack is successful—Severe loss of the British against the Sikhs at the battle of Chillianwallah—Alarm excited in Britain by the tidings—Sir Charles Napier sent as commander-in-chief to India—Complete defeat of the Sikhs by Lord Gough at Goojerat—Submission of the Sikhs—Annexation of the Punjab to the British Indian empire—Contrary effects of free trade on agriculture and commerce at the commencement of 1850—Demands of the agriculturists for exemption from local taxation—They are rejected—Motion for parliamentary reform negatived—The claims of the colonies to self-government considered—Inducements to grant these demands—The right conceded to the Australian colonies—Our foreign policy in relation to Greece made the subject of parliamentary inquiry—It is condemned in the House of Lords and justified in the Commons—Mr. Roebuck's arguments in its favour—Proposal to discontinue the blockade for the suppression of the slave-trade—The motion negatived—Death of Sir Robert Peel.

THE shock of foreign revolutions, the immense drain of capital occasioned by railway speculations, and the troubled state of Ireland, tended to retard that promised prosperity arising from free trade which was hoped to date its commencement from the beginning of 1849. Further legislation was found to be necessary before these blessings could be realized; and this disheartening fact was announced in the royal speech at the opening of parliament on the 2d of February. The chief impediment to be removed was the navigation laws, which her majesty's speech recommended to the attention of the legislature. This had been a subject of parliamentary discussion during the preceding year, but had been postponed to the present; and in accordance with the pledge then given, a motion was brought forward on the 14th of February by Mr. Labouchere, president of the board of trade, to the following effect: "That it is expedient to remove the restrictions which prevent the free carriage of goods by sea to and from the United Kingdom and the British dominions abroad; and to amend the laws regulating the coasting trade of the United Kingdom, subject, nevertheless, to such control by her majesty in council as may be necessary; and also to amend the laws for the registration of ships and seamen." Mr. Labouchere stated, that from former discussions the question was now well understood; that the pro-

posal of removing these obstructions on trade were generally acceptable throughout the country; and that while our colonies would hail the removal as a boon, the United States of America would meet the relaxation of our laws by a similar concession. On the other hand, the protectionist party, through their advocate, Mr. Henry Drummond, declared the measure to be "the last of a series inculcated by the Manchester school, the end and intention of which were to discharge all British labourers, and to employ foreign labourers in lieu of them—foreign sawyers instead of English sawyers, foreign shipwrights instead of English shipwrights, and so on through the whole catalogue of employments."

At the second reading of the bill on the 9th of March, after a long and keen discussion which lasted till the 23d, Mr. Labouchere announced a material alteration which government intended to adopt in the measure. At first, it had been intended to admit foreign countries, under certain modifications, to a share of the coasting trade, as it was believed that no loss would thereby accrue to the revenue. Subsequently, however, it had been found, that there would be the utmost risk of a falling-off if they allowed vessels, either British or foreign, to combine the coasting with the foreign voyage; and on this account, he did not feel justified in pressing that part of the bill which, in a modified degree, threw open the coasting trade of the country. The clauses to that effect were accordingly struck

out, and on the 23d of April the bill, thus modified, passed onward to a third reading. On this occasion its chief supporter was Sir James Graham. He advocated the bill on the ground that it was supported by the representatives of

HENRY LABOUCHERE, M.P.

the chief seats of commerce—among others, of Liverpool, Glasgow, Newcastle, and the West Riding. Without needing to rest either upon reciprocity or retaliation, it would tend to increase the commerce of the world; an increase from which this country would derive the greatest advantage, as the lion's share would fall to England. It would neither, he asserted, compromise our superiority on the seas, nor injure the mercantile marine, which was the mainstay of the royal navy. The simple and intelligible basis, moreover, upon which the measure would place our navigation system was now absolutely needed, on account of the complication of our reciprocity treaties—a complication which rendered it difficult for us, in many cases, to know where or how we stood. Sir James then startled the house by declaring, that if we persisted in retaining the navigation laws, without falling back upon the protective system in favour of Canadian corn, the loss of Canada would be inevitable. Such were his principal subjects of argument, which seemed to make a deep impression on the house. He was followed in a similar spirit by Lord John Russell, who, from the increase of our tonnage and number of seamen since the navigation laws had been relaxed, had no apprehension from the consequences of their removal, and who was urgent for a speedy decision to that effect, on account of the cry for a return to the protection duties, and the discontent which such a hopeless demand occasioned. The bill passed its third reading.

In the House of Lords, the second reading of

the bill was moved by the Marquis of Lansdowne, who satisfactorily showed that, though foreign shipping had marvellously increased since the great relaxation made in our navigation laws, at the close of the war, there was still no danger to be dreaded from a competition. To the astonishment of the whole house, he was opposed by Lord Brougham, the ex-chancellor on this occasion having made one of those sudden changes in political opinion with which he occasionally perplexed both friend and enemy; and his chief argument arose from the unsettled state of Europe, fermenting at present with revolution, which required us to keep our naval resources entire. "Was such a year," he asked, "the one for making great and portentous alterations in a navy by which victories had been nobly won and immortal triumphs gained? Was this the time for reducing our thousand ships to a hundred, or for striking off £10,000,000 sterling from our army, navy, and ordnance estimates?" Upon this important question the discussion was carried on in the lords, as it had been in the commons, and the second reading was passed by a majority of ten, among 366 voters. But for this majority, which could not be anticipated till the last moment, it was understood that the ministry would have resigned. The opposition was continued with equal keenness through the third reading, although without hope of success. During the debate, a severe caveat was administered to the bishops, through whom the second reading had been carried, by the Earl of Winchelsea. He warned them, that if the day ever arrived when measures of a secular character injurious to the best interests of the country should be carried by their votes, England would again wish to see the house of convocation restored, and the bishops represented in that house by a few chosen from themselves, to state their opinions on religious matters only. After a further course of animated debate, the opposition peers withdrew in a body, and the bill passed the third reading. Soon after, it received the royal assent, and the first day of the following year was fixed for the commencement of its operation.

In this manner, and after a long and keen contention of years, the most important measure of the session was settled. The decision was only a necessary consequence of the free-trade principle, which was now established beyond the chance of removal. Still, however, the protectionists were numerous and formidable, and, undismayed by their recent defeat, they returned to the charge upon a different quarter, viz.: that of the agricultural interest. The nature of their attack will be best understood from the following resolution, proposed by Mr. D'Israeli, who,

since the death of Lord George Bentinck, had become the recognized leader of the party:—

“That the whole of the local taxation of the country for national purposes falls mainly, if not exclusively, on real property; and bears with undue severity on the occupiers of land, in a manner injurious to the agricultural interests of the country, and otherwise highly impolitic and unjust. That the hardship of this apportionment is greatly aggravated by the fact that more than one-third of the whole revenue derived from the excise is levied upon agricultural produce, exposed, by the recent changes in the law, to direct competition with the untaxed produce of foreign countries; the home producer being thus subjected to a burden of taxation which, by greatly enhancing the price, limits the demand for British produce, and to restrictions which injuriously interfere with the conduct of his trade and industry. That this house will resolve itself into a committee to take into its serious consideration such measures as may remove the grievances of which the owners and occupiers of real property thus justly complain, and which may establish a more equitable apportionment of the public burdens.” Mr. D’Israeli then showed by statistical details that taxes to the amount of £12,000,000 were imposed upon the rental of landed property amounting to £67,000,000; and, as a remedy for this inequality, he announced his design to propose, that the system of local administration and the levy of rates remaining as at present, that the local districts should be responsible for one moiety, and the other be paid from the consolidated fund. The correctness of these statistics was denied; and it was argued that, even granting their correctness, the remedy itself would be abortive. The proposal of this talented orator and popular novel-writer was thrown out by a majority of 280 to 189.

The state of our colonies had of late attracted an unwonted degree of public attention, not only owing to their rapidly increasing greatness, but the expenditure they occasioned to the mother country; and a conviction had for some time been growing prevalent that they were now sufficiently ready for self-government, and might therefore safely be left to their own resources. At the same time the errors of the colonial office were complained of in parliament by Mr. Baillie, member for Inverness-shire, who embodied the charges of tyranny, oppression, and wasteful expenditure against it, as instanced by the cases of Ceylon and British Guiana. The discussion led to a proposal, on the part of Sir Robert Peel, that some such change should be introduced into our system of colonial government at large as would give general satisfaction. During the course of the session this proposal received additional weight and urg-

ency from the intelligence which arrived in May of the disordered state of Canada. In this, the most important of our colonies, an indemnity bill had been sanctioned, granting compensation to those parties whose property had been destroyed during the rebellion in 1837-8. This decree was obnoxious to the Tory party in the colony, who feared that the compensation would be extracted from the orderly part of the community, in favour of those who had occasioned or abetted the rebellion; and their rage was chiefly directed against Lord Elgin, the governor-general, who, contrary to their hopes, had given his assent to the bill. On his return, therefore, from the parliament house, his lordship was pelted by the mob, the house itself was attacked and burned down, and several of the obnoxious ministers were assailed in the streets of Montreal, and their dwellings destroyed. It was shown that this spirit of discontent pervaded the whole extent of the colony, while these riotous proceedings, instead of being confined to the lower orders, were countenanced and even shared in by people of rank, fortune, and intelligence.

When the home government was thus involved in the great trial of the colonial question, an additional difficulty was thrown into it from the plan adopted for the disposal of our convict population. While the other countries of Europe had disposed of their criminals in a summary fashion, by sending to the mines or the galleys such as were not disposed of at once by capital punishment, the growing spirit of English liberty had revolted at the sight of chains and bondage, even when inflicted on the guilty. Deportation therefore was adopted, by which the evil was removed out of sight; and our American colonies had at first been used as places of banishment for our convicts, until such a species of cheap labour was repudiated. The course of banishment was then directed to our Australasian colonies of New South Wales and Van Diemen’s Land, until these penal settlements refused to be any longer the mere sinks and drains of British iniquity, while the mother country, oppressed with her growing hosts of criminals, was at a loss for their disposal. In this dilemma, other outlets had to be sought for those whom we could not keep at home; and, in September, 1848, it was announced that our convicts were to be sent to the Cape of Good Hope, partly for the purpose of reforming them, and partly for supplying the colonists with good cheap labour. But the Cape colonists were indignant at the insult of being converted into jailors, as well as alarmed at the moral pestilence that would be introduced into their homes; and, at a public meeting held at Cape Town on the 4th of July, as soon as the decision of the home government had arrived, seven resolutions were

passed, in which the inhabitants complained of the degradation, and expressed their determination in every way to resist it. To such a height, indeed, had their indignation risen, that they were ready to take up arms, and risk the horrors of an unequal warfare, rather than afford the evil a footing on their shores.

This resolution was soon tested. On the 19th of September the first instalment came, in the form of a ship-load of felons conveyed from Bermuda, which anchored in Simon's Bay in the evening. As soon as the arrival was known at Cape Town, the preconcerted signal of alarm was

so that Sir Harry was soon compelled to have bread baked in his own house. Their perseverance was in the end successful. Rather than lose so valuable a colony to the British crown, which must have been the result, the home government yielded; and, without having been able to effect even a momentary landing, the *Neptune* sailed away with her obnoxious cargo in quest of more hospitable settlements.

During this session, the condition of Ireland, and plans for its coercion and relief, occupied the usual amount of parliamentary attention. This necessity, indeed, was so urgent that the discus-

sion of Irish affairs commenced with the opening of the session, and the suspension of the habeas corpus act in the more disturbed districts, which had been imposed the previous year, was continued for six months longer. Another step was a motion of Sir Charles Wood, that "the commissioners of the treasury be authorized to direct the issue out of the consolidated fund of the United Kingdom of any sum not exceeding £50,000, for affording relief to certain poor-law unions in Ireland." It was felt, indeed, that this loan, like other

CAPE TOWN AND TABLE MOUNT, from near Amsterdam Battery

given—the gong of the town-hall sent forth its thunders, the church bells were rung at half-minute time, and an address was despatched to the governor, "praying, as the people have determined that the convicts must not, cannot, and shall not be landed or kept in any parts of this colony," that the *Neptune* should be ordered, after victualling, to leave their shores, and rid the colonists of their anxiety. Sir Harry Smith, the governor, in a sore strait between the parent government on the one hand, and the fierce determination of the colonists on the other, attempted a middle course, and returned a soft answer. He expressed his intention not to receive the convicts pending the arrival of answers to his despatches on the subject addressed to the secretary of state, which might be expected in a month or six weeks; and that in the meantime the *Neptune* would ride at anchor in Simon's Bay, as in the case of any other ship. But this answer was anything than satisfactory to the remonstrants; they dreaded the smuggling of even a single convict on shore as the "letting out of water;" and they commenced action by stopping the supplies for the army, navy, and government,

grants to Ireland, must, from the desperate chances of repayment, be considered as a gift, and that it was merely part and parcel of a ruinous system that afforded no prospect of a close. Such was the view taken of it by Sir James Graham, when he gave his reluctant assent to the proposal. He did not scruple to declare, that "this must be the last vote, and he should agree to it distinctly on that ground; with the feeling that the time had clearly come when ministers must carefully review the whole subject of local taxation in Ireland, and come forward with a general proposition, embracing not only that, but many other subjects." A third proposal, moved and carried after the usual amount of Irish opposition, was to the following effect:—"That in each of the two next years there shall be paid by every union in Ireland a sum equal to the rate of sixpence in the pound on each electoral division in such union, towards a general fund for the relief of the poor in Ireland. That the said sum shall be paid to a separate account at the Bank of Ireland, in the name of the paymaster of civil services in Ireland, and shall be applied in such manner as parliament shall direct." To

this, also, the following amendment was added:—"That the income-tax received from property in Ireland, and a tax to be derived from other descriptions of Irish property, should be appropriated for the augmentation of the fund to be applied for the relief of distress."

While this rate-in-aid bill was passing through the House of Commons to that of the Lords, and involved in the uncertainties of an anxious and protracted discussion, the growing distress of Ireland brooked neither half measures nor delay. The £50,000 so lately granted for relief had disappeared, like a drop of water on a sand heap, and more and larger subsidies were in demand, let the fate of the bill be what it might. On the 19th of April, therefore, the chancellor of the exchequer proposed to authorize her majesty's treasury to advance a sum of £100,000 for affording relief to certain distressed unions in Ireland, the same to be charged on any rate to be levied in each union, under any measure to be passed during the present session.

In this way, the passing of the rate-in-aid bill was already anticipated; and failing this, no remedy remained but to convert the demanded loan into a grant. To this explanation Lord John Russell added, that should the rate-in-aid bill be thrown out, the government would propose no further grant from the consolidated fund. It was an awkward dilemma prepared for those who objected to a present loan for the relief of Irish distress. A proposal was made by Mr. Herbert to substitute an income and property tax on such land in Ireland as was exempted from its operation, in lieu of the rate-in-aid, but the latter alternative seemed the more tolerable evil of the two; and Mr. Herbert's amendment was rejected, while the original motion was carried by a majority of 201 against 106.

But the most important of all the government measures at this period in behalf of Ireland, was the bill for facilitating the transfer of encumbered estates. A bill to that effect indeed had been passed last year, but as yet it was little more than a dead letter, owing to the serious obstacles with which its working was impeded. These originated not only in the troubled state of the country, which made any transfer of old hereditary property unpopular and dangerous, but also in the constitution and forms of procedure of the Court of Chancery. Facilities must be granted for such a kind of transference, even though they should be of an arbitrary character, just as the habeas corpus law itself must be suspended when the safety of the whole community is at issue. The bill to further the facilities of transference was intrusted to Sir John Romilly, the solicitor-general, and introduced by him to parliament on the 26th of April. His plan was to the fol-

lowing effect: Instead of the buyers and sellers being fettered by the delays of chancery, and the expense of heavy fees, a commission was to be established, through which the whole business of transfer should be cheaply and expeditiously conducted. This commission, similar to one formerly established for the West Indies, and which had worked so well, was to consist of three paid commissioners and a secretary, invested with all the powers possessed by the Court of Chancery. It was to frame its own rules for its guidance, which were to be submitted to the privy council in Ireland; and afterwards, on being laid on the table of the British parliament, they were to have the same force and effect as if they had been enacted by the house. The commissioners would also have the power to alter their rules from time to time as circumstances might require, with this restriction, however, that they should not frame any rules imposing fees upon, or levying them from suitors. In the first instance, also, this commission, instead of being permanent, was to continue five years, until the experiment of its working had been fully tested. As for their official duties, they were only to act on application being made to them by owners or encumbrancers of estates; and this being done, they were to sell the property in such a manner, and in such quantities, as might seem to them for the best. The conveyance to the purchaser was to be made by a short and simple schedule, that would be an indefeasible title to the purchaser; while the commissioners should have the same right of putting him in possession as was vested in the execution of a sheriff's writ, by which actions of ejectment to obtain possession would be unnecessary. The purchase money was to be paid into the Bank of Ireland in the name of the commission, and then to be divided without delay amongst the various persons entitled to it, the commission determining as to the persons to whom it was to be paid.

Such were the most important particulars of the new and improved bill for the sale and transfer of encumbered Irish property: it was received with cheers from all sides of the house, and was passed through the commons with scarcely any opposition. It was introduced into the upper house by Lord John Campbell on the 11th of June, who confessed that the bill was indeed of an arbitrary character, and could only be justified by the most urgent necessity. The chief objections were brought against it by Lord Brougham, who suggested one or two modifications. By the first of these, the encumbered proprietor, instead of having the unlimited power of selling, could only dispose of his landed property when one-half or two-thirds of the rental were eaten up by the mortgages, while no.

sale was to be made at less than a certain number of years' purchase. The bill was referred to a select committee, and after several alterations, to which the House of Commons assented, it finally passed into law.

Another measure of relief for Ireland was an amendment of the Irish poor law. The system hitherto in use had proved unavailing, from the burdens already entailed on property, and the increasing growth of national pauperism, so that, but for the repeated aid of government, the poor-law system itself would have been utterly extinguished. On the 26th of April, Lord John Russell moved for leave to bring in a bill to amend the evil. It chiefly consisted of the introduction of a maximum in each separate electoral division, and the rates in all the electoral divisions in the unions. When in any case the rates of one of these divisions amounted to five shillings in the pound, it should be entitled to call upon the other electoral divisions of the union to contribute a share in whatever further relief might be required—this share not to exceed two shillings in the pound, in each division. In this way, the maximum rate of relief would be raised to seven shillings in the pound. As the necessity of some such measure was apparent, and as no better remedy for the present could be suggested, the bill was passed in the commons, with an amendment proposed by Sir George Grey, that rates in payment of former advances and loans, should be separated from the maximums fixed by the rate-in-aid bill. The whole brunt of opposition was brought against the measure in the House of Lords, where it was stigmatized as a miserable attempt at legislation, and a "trap to catch English capital." The bill was examined and contested clause by clause; that of the maximum rate, which formed the key-stone of the whole fabric, was removed; and in this dismantled condition the bill was sent back to the commons for reconsideration. There, however, its arrival was confronted with a question of privilege. Ought the house to waive its exclusive jurisdiction over matters affecting public money, by assenting to the amendments of the lords, although these amendments touched upon rates? Here, also, the extreme urgency of the case prevailed; the suggestions of the upper house were taken into consideration, and the greater part of the amendments were adopted.

Other measures in relation to Irish relief were considered during the course of the session. The first of these was the proposal of the chancellor of exchequer to advance a loan to the Irish landholders of £300,000, in addition to the former loans, for the drainage and improvement of their estates. To this, also, he proposed an additional £200,000 for the more costly, but more im-

proving system of arterial drainage, which had already been adopted with signal benefit to Ireland. This proposal was agreed to by vote. Another had reference to emigration. The superabundance of the Irish population required to be drawn off, and facilities were needed for the purpose by those who were desirous to emigrate. In this case, it was proposed that the boards of guardians should be empowered to borrow money for the purpose of advancing loans to Irish emigrants, to be repaid by instalments in the course of five or seven years. The landed proprietors, also, were to be allowed, for the same purposes, to borrow money upon their settled property for a similar period. In this way, it was stated, the sum needed, amounting to a million or a million and a half, would be entirely defrayed from Irish resources. This motion, which was proposed on the 15th of May by Mr. Mansell, one of the members for the county of Limerick, was also carried.

That volcanic shaking of the nations by which so many thrones had been overturned during the previous year, could not escape the anxious solicitude of the British parliament, isolated though the country had been from the visitation; and so early as the 6th of March the subject was commenced, by an inquiry as to whether a contractor who had been in the habit of supplying arms to the British government, had been allowed to furnish them from the government stores for the use of the insurgents in Sicily? The answer was, that this had been inadvertently done, and was afterwards the subject of deep regret. The question of British participation in the recent troubles in the north of Italy soon after followed; and Lord Palmerston was accused of withholding a despatch from the Austrian government, connected with the views of the latter towards Sardinia, by which an unfounded alarm had been created in the public mind of Britain against Austria. The motion for producing this suppressed document, however, was withdrawn. The French intervention in the affairs of Rome, by which the insurrection had been subdued and the pontiff replaced—and the revolt of Hungary, by which the overthrow of the Austrian dominion over that country had been all but accomplished—came in for their share of discussion, bearing as they did upon British interests, and attracting a full share of British sympathy. It was evident, indeed, that with 1848, an age of revolution had commenced which the rest of the present century would scarcely suffice to settle, let the immediate termination of the struggle be what it might. And still, in every case, the question was, Had Britain, amidst all these trying events, conducted her policy according to the good faith of treaties, and the claims of political justice? A satisfactory answer was given by Lord Palmerston. Our

government had not interfered, but it had not remained silent: it had expressed those sentiments which a great nation can never utter in vain. "It is not fitting," said his lordship, in his place in parliament—"it is not fitting that a country occupying such a proud position as England—that a country having such various and extensive interests—should lock herself up in a simple regard to her own internal affairs, and should be a passive and mute spectator of everything that is going on around. It is quite true that it may be said, 'Your opinions are but opinions; and you express them against our opinions, who have at our command large armies to back them: what are opinions against armies?' My answer is, opinions are stronger than armies. I say, then, that it is our duty not to remain passive spectators of events that in their immediate consequences affect other countries, but which, in their remote and certain consequences, are sure to come back with disastrous effect upon ourselves; that so far as the courtesies of international intercourse may permit us to do so, it is our duty, especially when our opinion is asked—as it has been on many occasions on which we have been blamed for giving it—to state our opinions founded on the experience of this country—an experience that might be, and ought to have been, an example to less fortunate countries. We are not entitled to interpose in any manner that will commit this country to embark in those hostilities. All we can justly do, is to take advantage of any opportunities that may present themselves, in which the counsels of friendship and peace may be offered to the contending parties. Her majesty's government have not, in the present state of the matter, thought that any opportunity has as yet presented itself that could enable them, with any prospect of advantage, to make an official communication of those opinions which they entertain on this subject—I say official, as contradistinguished from opinions expressed in a more private and confidential manner: but undoubtedly, if any occasion were to occur that should lead them to think the expression of such opinions would tend to a favourable result, it would be the duty of the government not to let such an opportunity pass by."

Among the lost bills of this session, which had reference chiefly to retrenchment and parliamentary reform, one of the most important was the admissibility of the Jews to parliament. On this occasion, the proposal was moved by Lord John Russell, who reviewed the three oaths taken by members on their admission to parliament, viz. those of allegiance, supremacy, and abjuration. The first of these was superfluous, as no lineal descendant of James II. remained, and therefore he proposed that it should

be abrogated. As for the oath of abjuration, his lordship alleged that it was only a modification of the first, and devised to exclude the temporal power of the pope, ending with these words, "on the faith of a Christian," which a Jew could not take, however he might abjure Popery and all its pretensions. His lordship therefore proposed that these words should be omitted in the case of Jewish subjects, to make them eligible to a seat in parliament. The bill in this form passed through the several readings in the commons, the third being carried by a majority of 272 to 206. It was not equally fortunate with the lords. There, the second reading was moved on the 26th of July, but had the episcopal bench for its chief antagonists, and the bill was rejected by a majority of twenty-five.

Another measure, which had for its object the removal of the legal restrictions against marriage with a deceased wife's sister, was brought before parliament this session for the second time. Although the Christian world at large had generally been agreed upon the religious illegality of such marriages, the practice in England had latterly become so frequent, and the succession of such an amount of property had become involved in the issue, that in 1835 all antecedent marriages between a widower and his wife's sister were legalized, but all contracted subsequently to that date were annulled. But since the passing of this act, it had been found by a commission of inquiry, that from 30,000 to 50,000 of such marriages had taken place, involving the legitimacy of at least 40,000 children. The bill proposing the final and complete removal of all such restrictions was introduced on the 22d of February, by Mr. James Stuart Wortley, and the discussions that followed on the subject embraced the whole range of theological, moral, and social obligations. The principal arguments both for and against such unions had to be derived from the Levitical law; and as each disputant had his own interpretation, or gloss, or comment upon the subject, such an amount of theological casuistry was brought forward as has seldom been displayed in a modern British parliament. The question was so frequently adjourned, that the bill did not reach its second reading till the 20th of June, when it was carried by a majority of 177 against 143. Here, however, its progress was for the time arrested, the lateness of the season, as well as the state of public feeling against it, giving no prospect of the bill being brought to a third reading during this year. On the 1st of August, the parliament was prorogued by commission.

After the victories which so lately crowned our arms in India, the tranquillity of our eastern empire, with few exceptions, continued uninter-

rupted during the course of 1847. This pacific character was no doubt materially promoted by the death of Akbar Khan, our chief antagonist in the Cabool war. In the Punjab, a serious disturbance was threatened from the intrigues of the Ranees to overthrow the council of regency; but by adopting the summary process of transporting her under a military escort to Shaikpoora, about twenty-five miles distant from Lahore, and keeping her there under strict surveillance, the danger was averted. In Scinde, also, our lately acquired conquest, a temporary disturbance which might have risen into dangerous importance, was speedily suppressed by the gallantry of a British officer and his handful of troops. A clan or tribe called the Boogtees, one of the most dangerous of all those marauding hordes that infest the frontiers of Scinde, to the number of 600 or 700 foot, and a small party of horse, had descended into the plains, and advanced towards the Timanee river. They were encountered near the Khoonee jungle by Lieutenant Merewether, who had set out to oppose them at the head of 133 men of all ranks, from the Scinde irregular cavalry. The battle that ensued was, notwithstanding the fewness of the combatants, of the most desperate character, the Boogtees rallying after each repulse, and renewing the conflict with the most obstinate perseverance, until nearly the whole were cut to pieces, including all their chieftains of note. In October, the hero of Meeanee and Hyderabad resigned his office as governor of the province of Scinde. Viscount Hardinge also resigned his office of governor-general, and was succeeded by the Earl of Dalhousie.

These eastern events were but the mutterings of the distant storm, which was again to gather around the Punjab. It was from the powerful and daring Sikhs, still untamed by their terrible defeat, that the danger was to proceed. In their occupation of the new province, the British had resolved to substitute Sirdar Khan Sing as new governor of Mooltan; and Mr. Vans Agnew, a Bengal civil officer, and Lieutenant Anderson, were sent to instal him in office. But by one of those sudden and treacherous revolutions so common in India, Agnew and Anderson were attacked and desperately wounded by the natives; and on being carried for shelter to a small fort outside the town, its gates were thrown open to the assailants by the Sikh garrison who held it, and the two officers were overpowered and murdered.

As soon as tidings of this assassination reached Lahore, bodies of our Indian allies were ordered to march upon Mooltan; and Lieutenant Edwardes, employed with a small force upon the Indus, broke up his encampment, and proceeded towards the scene of action. He effected a junction with

Colonel Cortland; and their united forces, chiefly composed of Sikh regiments in the British service, attacked and routed an army of their revolted countrymen. But although they continued to press onward for Mooltan, dispersing the enemy in their way, and were joined by native troops that brought their force up to 18,000, they were still not strong enough to undertake the siege of such a city, and were obliged to send to Lahore for reinforcements, in consequence of which their army before the walls of Mooltan soon mustered 28,000 men, of whom 6000 were British soldiers. With these, also, General Whish arrived, who assumed the chief command.

The British general now thought himself strong enough to attempt the capture of Mooltan, and for this purpose made an attack on the outworks on the 12th of September. All the defensible points on one side of the city were taken after a desperate resistance; but on the following day, when a still more decisive onset was to be attempted, Shere Sing, one of the auxiliary chieftains of the British invading force, suddenly deserted their cause, with 5000 Sikhs who were under his command. A similar spirit of defection was manifested by a large portion of the Sikh population, who were ready to forget their feuds for a joint attack on the British invaders; and soon a formidable army of 30,000, under the command of Shere Sing, and his father Chuttur Sing, were in the field, and ready to contend with their late masters for the possession of the Punjab. This formidable revolt required the presence of another British army near the centre of the Punjab, and thither accordingly a strong force was sent about the middle of November, under the command of Lord Gough. In the meantime, the siege of Mooltan was continued by General Whish, while the town was gallantly defended by Moolraj, lately its dewan or governor, who had been dispossessed of his charge by the British as a doubtful ally, in favour of Sirdar Khan Sing.

The besieging army being now raised by reinforcements from Bombay to 32,000 men, of whom 15,000 were British, made their final assault upon the town on the 28th of December. On the next morning, when the assailants had carried their bombardment close to the walls, an immense magazine within the town blew up with a tremendous explosion, shaking Mooltan to its foundations, and tumbling the houses about the ears of the inhabitants. This fearful earthquake occasioned only a momentary pause in the assault, and though their chief magazine of military stores was destroyed, the Sikhs continued their resistance for fifty hours longer. On the morning of the 2d of January, the British effected an entrance into the town, and laid siege to the

citadel into which the enemy had retired, and where they did not surrender till the 22d, when their stronghold was reduced to the last extremity by sap and mine, and about to be blown into the air. Of the garrison who marched out after this brave resistance, the following description is given:—"First appeared about 200 ill-clothed miserable wretches, who seemed broken and dispirited; then followed about 3500 hard, trained, stern, and stalwart-looking men; they had defended the fort to the last, and abandoned

it only when no longer tenable. They looked as if they would have fought to the death in the breaches, if such had been the will of their chief." It was evident from these specimens, that the British ascendancy in India was now to encounter more formidable enemies than the unwarlike effeminate Hindoos. Of Moolraj, who came out the last, it is added, "He neither wore the face of defiance or dejection, but moved along under the general gaze, as one conscious of having bravely done his duty, and aware of being the

STORMING OF THE KHOONLE BOORJ BREACH, MOOLTAN --From Dunlop's Sketches during the Siege of Mooltan

object of universal regard." He was tried as an accessory to the assassinations committed on Vans Agnew and Lieutenant Anderson; and being found guilty after a long trial of fifteen days, he received sentence of death, which, however, was commuted for imprisonment during life. After the fall of Mooltan, the victorious army marched northward to join the forces of Lord Gough.

While these operations were in progress, the grand army in the field which was opposed to Chere Sing and Chuttur Sing had not been so fortunate. These chiefs had skilfully posted their forces on the right bank of the river Chenab, near the town of Ramnuggur, having also fortified and occupied the town, a grove of trees on the left bank of the Chenab, and a small island in mid-channel comprising about two acres. Here they were attacked on the 22d of November at two o'clock in the morning, by Lord Gough; but the Sikhs were so skilfully posted, and defended themselves so bravely, while the British, ignorant of the nature of the ground, committed so many blunders that they were unsuccessful at every point, and suffered a heavy loss in men and officers. On the 30th, operations were resumed by an attack upon the Sikhs in front, while a strong British force was detached

to cross the river above Ramnuggur, and take the enemy in flank and rear. This last movement was effected on the 2d of December; and on receiving the intelligence our army commenced a heavy cannonade along the front of the enemy's encampment, compelled them to fall back two miles, and succeeded in sending another British detachment across the Chenab. Although the Sikhs resisted each lodgment, it was so unsuccessful, that they abandoned their position, leaving the passage of the river open to the British, who crossed in full expectation that the campaign had already terminated.

This flattering hope was speedily brought to a painful close. On the 10th of January, intelligence was received that the Sikhs had taken Attock, which had made a long and gallant defence, and that their army now amounted to 40,000 men and sixty-two guns, ready, if need should be, to become the assailants in turn. Eager to reach them, and end the war by one decisive action, Lord Gough rapidly advanced to the village of Chillianwallah, in the neighbourhood of which he found them skilfully drawn up, entrenched by sandhills, ravines, and jungles, of which they well knew the military use. Although the British troops were wearied with their long march, and the day was far

spent, and although the intervening ground between them and the enemy had not been carefully reconnoitred and ascertained, the signal of attack was given, and followed by a result unwonted in the history of our Indian warfare. The well-served artillery of the Sikhs tore our columns as they advanced; our troops that were sent to dislodge the enemy from the jungle, were outflanked and driven back; while a considerable portion of our cavalry, instead of charging, turned bridle, and rode through their own artillery, overturning and trampling down everything in their way. Over the whole front of the engagement a series of unfortunate movements had been made, and disgraceful checks or defeats experienced. The British indeed remained masters of the field, but it was with the loss of 2269 men in killed and wounded, five stand of colours and four guns taken, with the recapture also of those cannon we had taken in the engagement.

On the arrival in England of the despatches from India, it was felt that not only a national calamity, but even a national disgrace had been sustained, by this unfortunate battle of Chillianwallah. It was a positive defeat, and that too from an Indian army scarcely more numerous than our own. In this point of view, it would tend more to destroy our prestige in the East, than even the disastrous campaign of Afghanistan. While the public at home was incensed and mortified, the government was compelled to act with stern promptitude; and accordingly Sir Charles Napier, the conqueror of Scinde, whom the universal acclamation called for on this trying occasion, was immediately appointed to repair to India as commander-in-chief of the forces, and member extraordinary of the council of India. So high was the confidence reposed in his military talents, and the terror of his name among the Indian nations, that it was hoped his arrival there would at once recal victory to our standard, whatever mischances might happen during the interval. Fortunately, however, an event followed close upon that of Chillianwallah, by which the reputation lost in the latter instance was amply retrieved.

This was a second encounter with the Sikhs, in which they were completely defeated. To the number of 60,000, and with fifty-nine pieces of artillery, they had pitched their camp between the Chenab and the Jhelum, at a place called Goojerat, confident in their numbers and late success, and eager for another trial. And for this they had not long to wait, as Lord Gough on the 20th of February had come up with them, though his army did not muster more than 25,000. His late disaster had taught him caution; and the enemy was now to be overcome by the superiority of European strategy, instead

of a mere hand-to-hand encounter, in which the Sikhs would have the benefit of superior numbers. The engagement commenced early on the morning of the 21st by a cannonade so close, heavy, and destructive, that Lord Gough described it as exceeding all of the kind he had ever witnessed. The Sikhs indeed bore up

against it bravely, and answered it promptly with their artillery; but the iron shower that made huge gaps in their ranks obliged them reluctantly to fall back. The British advanced, and carried the key of the enemy's position; their artillery moved forward with great rapidity; and the unintermitting cannonade that continued to play upon the Sikhs, drove them from every position, and compelled them to a retreat, which was speedily changed into a headlong flight. Such was the victory of Goojerat, won by British cannon directed by science and skill, and which was cheaply won by the victors, who had only ninety-two killed and 682 wounded. So total indeed was the defeat of the Sikhs, that all thought of further resistance was abandoned; and accordingly, Shere Sing, Chuttur Sing, and the other insurgent chiefs, repaired to the British camp, and there surrendered themselves and their broken army to the conquerors, along with the guns and other trophies they had captured at Chillianwallah. Soon after, the fortress of Attock was recovered by the British, who crossed the Indus, and drove a body of Afghans, who had come to the aid of the Sikhs, through the Khyber Pass towards Cabool. By a proclamation of the Governor-general of India it was announced, that the kingdom of the Punjab was at an end; that all its territories were

now a portion of the British empire in India; and while every class were summoned to obedience, they were warned, that any fresh outbreak would be punished with prompt and most rigorous severity.

In proportion to the despondency that had been felt at home by the disheartening tidings of our disasters at Chillianwallah, was the exultation that welcomed the splendid victory of Goojerat. All fears for our Indian empire were silenced, and Lord Gough, so lately the object of public blame, was now the popular hero of the day. But an official testimony of the importance of the event was given by parliament on the 24th of April, when it was introduced before both houses. Its celebration was recommended by a day of general thanksgiving, and a vote of thanks was passed to Lord Gough and the officers and army engaged in the recent operations of the Punjab.

The free-trade principle, which was now in full operation, was attended with such results as satisfied its most sanguine advocates. A diminution of pauperism, a greater abundance among the lower classes of the means of subsistence, and an increase in the value of our exports to the amount of £10,000,000 sterling, were unmistakeable symptoms of the wisdom of this great political experiment. But, on the other hand, the depression of the agricultural interest, and the difficulties in which agriculturists were involved in consequence of the reduced prices of their produce, formed a serious counterpoise to the mercantile prosperity of the country. These circumstances were thus noticed in the royal speech read by the lord-chancellor, when parliament was opened by commission on the 31st of January, 1850:—"Her majesty has great satisfaction in congratulating you on the improved condition of commerce and manufactures. It is with regret that her majesty has observed the complaints which in many parts of the kingdom have proceeded from the owners and occupiers of land. Her majesty greatly laments that any portion of her subjects should be suffering distress; but it is a source of sincere gratification to her majesty to witness the increased enjoyment of the necessities and comforts of life which cheapness and plenty have bestowed upon the great body of her people."

The opportunity of remonstrance against the fruits of free trade, as exemplified in our agricultural depression, was not lost sight of by the protectionists; and accordingly, when the royal address was moved in the House of Lords, it was met with a formidable opposition. It had lightly touched the prevalent evil, and proposed no remedy; and in an amendment it was proposed to add, that these agricultural evils were mainly owing "to recent legislative enactments,

aggravated by the pressure of local taxation." The address without the amendment was passed in the lords by a majority of forty-nine. In the commons the subject was taken up with considerable keenness, where the principle of free trade was decried as the great source of our agricultural grievances, and a reconsideration of the whole matter was seriously proposed. It was answered, however, that these grievances were only temporary, not permanent; that our agriculture as yet was only in a transition state, in which the evils of the experiment had first to be encountered; and that with improved modes of cultivation, we should soon be able to keep our ground against the cheapness of foreign markets. The royal address was carried in the commons by 311 against 192.

On the re-assembling of parliament, the claims of the agricultural classes were brought before the house by Mr. D'Israeli, on the 19th of February. He stated that the prospects of the agriculturists were daily becoming darker; that the value of the fee-simple of the soil was deteriorating, and the factitious employment of the people in rural districts diminishing. The only sure remedy for this, he alleged, was the re-establishment of those protective laws which had lately been abrogated. But as the government now stood committed to free trade, so that such a change was hopeless, he would propose instead, the remission of that local taxation which weighed heaviest upon the agricultural classes. He would propose therefore the following resolutions:—
1. That the poor-law establishment charges in the United Kingdom (about £1,500,000) should be transferred to the general revenue.
2. That certain miscellaneous rates which, generally speaking, it was convenient to raise by the machinery of the poor law, but which had nothing to do with the maintenance of the poor, such as registration of births and deaths, preparation of jury-lists, &c., should also be defrayed by the consolidated fund.
3. That the charge for the casual poor throughout the United Kingdom should likewise be transferred to the general revenue.

Against these proposals, and the statements by which they were enforced, the arguments of the free-trade party were numerous and cogent. It was alleged, that it involved the question of whether £18,000,000 or £20,000,000 should be transferred from the land to the consolidated fund. It was but part of a great measure that would be certain to follow, affecting our whole fiscal system, and involving a revival of the policy of the last five or six years. And, after all, what relief would the present measure accomplish, even if it were conceded? It was also stated, that considerable agricultural distress had per-

vaded other countries of Europe, where prices had been depressed notwithstanding protection, and with the advantage of free importation into England. Besides, it appeared that during the last year we had imported 5,600,000 qrs. of foreign wheat, which had chiefly been consumed by those who lived by labour; and that from such an augmented demand, our own produce had the best chance of success. Even let the £2,000,000 also of taxation be transferred according to the proposal of Mr. D'Israeli, could it be justly assumed that there would always be an annual surplus to meet the demand? And even if there should be such a surplus, would it not be better to devote it to the remission or mitigation of taxes that oppressed the industry of the country, than to bestow it upon real property? How strong the protectionist party still was, and with what reluctance these arguments were received, was shown on the division of the house, when the motion was negatived by a majority of only 21, 252 votes being in its favour, and 273 against it.

The necessary but often vexatious subject of parliamentary reform was the next subject of deliberation, in consequence of a motion of Mr. Joseph Hume to the following effect:—"That leave be granted to bring in a bill to amend the national representation, by extending the elective franchise, so that every man of full age, and not subject to any mental or legal disability, who shall have been the resident occupier of a house, or part of a house as a lodger, for twelve months, and shall have been duly rated to the poor of that parish for that time, shall be registered as an elector, and be entitled to vote for a representative in parliament; also, by enacting that votes shall be taken by ballot; that the duration of parliaments shall not exceed three years; and that the proportion of representatives be made more consistent with the amount of population and property." In favour of his motion, Mr. Hume argued that it would raise the number of single voters from 800,000 to quadruple that amount; and that the concessions in the elective franchise lately granted to Ireland and the colonies gave a fair opportunity for his proposed change. At a subsequent stage of the discussion, Mr. Hume completely outstripped his motion; for he confessed that he would have no objection to extend the right of voting even to females, and to substitute for an hereditary House of Lords an elective second chamber. This was certainly driving the car of national reform too fast, and the best result in such a case could only be an absolute stoppage. The feeling of the house at such a startling attempt of progress was manifested in the division, when the motion was negatived by 242 against 96.

The welfare of our colonies was the subject that occupied the most important place in the proceedings of this session. Their claims to self-government had already been considered, and to some extent complied with; and as several of these colonies had ripened with unexampled rapidity, and grown almost into full strength, it was felt that the time had arrived when they might safely be intrusted to their own management. The subject had also been recommended in the royal speech; and at the commencement of the session, ministers had announced their intention of embodying their views in an act of parliament applicable to our Australian settlements. These views were now stated before the House of Commons by Lord John Russell on the 8th of February.

After a brief sketch of the history of our colonies, and a statement of their population, wealth, and resources, his lordship observed that, in consequence of our recent legislation, and especially that on the navigation laws, the question had arisen, whether it was worth while to retain our colonial empire. It was evidently, however, our bounden duty to maintain the colonies which had been placed under our charge, and govern them for their benefit. They were the sources of our wealth in peace, and our strength in war; but if they were abandoned, several of them would revert to those countries by which they had originally been founded. Thus, the Mauritius would return to France, and the Cape of Good Hope to Holland. Another scheme proposed had been, to free the colonial legislation in respect to local laws, and subject it to the imperial sanction for all others; but no such distinction could be drawn, as had been illustrated by the case of Canada. After adverting to the governments established in Canada, New Brunswick, and Nova Scotia, from which appeals that were to be decided by the colonial secretary were seldom transmitted, and to the form of government which had been resolved for the Cape of Good Hope, in which representative institutions were to be introduced, Lord John proceeded to that part of his bill which regarded Australia, being the same as he had proposed during the former year. "It goes not," he said, "on the principle of having a council and assembly [these were for the Cape of Good Hope], in imitation of the government of this country, which has been usually the form most palatable and popular in our colonies; but it is proposed that there should be but one council—a council of which two-thirds shall be formed of representatives elected by the people, and one-third named by the governor. The reason for adopting this proposal is, that after a great deal of deliberation, that plan was adopted some years ago, and, I think, was finally enacted by parliament

in 1842; and since that time has been found so acceptable to the people of New South Wales that, upon the whole, as far as we could ascertain their sentiments, they appear to prefer that form of popular government to that which is more in analogy with the government of this country." After dissenting cries of "No" and "Hear," the premier thus continued:—"But when we propose that this shall be the form of government for New South Wales, I should add, that we propose likewise to give the colonists the power of altering their own constitution in that respect; and that, if it should be their opinion that they had better resort to a government by legislative council and assembly, there would be no veto, no restriction on the part of the crown against the adoption of that course. Last year we proposed that the customs duties which now prevail in New South Wales should be enacted by parliament for the whole of the Australian colonies, and should be binding till they were altered by the proper authorities. We have thought that, although it is a most desirable object that the customs duties should not vary in the different Australian colonies, it is not advisable to enact that by authority of parliament, but that it is better to leave them to settle for themselves whether they will not adopt a similar tariff for all the various parts of Australia." He explained that, as these colonies would have their own councils, it would be sufficient for an assembly of these councils, on the application of two colonies, to establish a tariff for the whole; and that, by the same authority the price of waste lands should be settled, on condition of making their price uniform throughout the whole of Australia. The trying question of transportation to these colonies was hastily disposed of, with the declaration that convicts should only be sent, and in small numbers, to such colonists as were willing to receive them, but that none should be imposed against the will of the people. Such was the general colonial aversion to this kind of labour, that another punishment than transportation must be adopted for our criminals. As for emigration, it might still be left to spontaneous choice; late experience having shown that private benevolence and enterprise were sufficient for the increase of old colonies and the establishment of new. Anticipating the period when some of our colonies would so increase as to feel themselves strong enough to maintain their own independence in unity and alliance with England, Lord John Russell concluded with the following generous sentiment:—"I do not think that that time is yet approaching. But let us make them, as far as possible, fit to govern themselves; let us give them, as far as we can, the capacity of ruling their own affairs; let them increase in wealth and population; and

whatever may happen, we of this great empire shall have the consolation of saying that we have contributed to the happiness of the world."

This important bill for the government of the Australian colonies having passed, after a brief debate, the second reading was fixed for the 18th of February. The chief subject of disputation and demur on this occasion was that of government by a single chamber instead of a double one; though where the aristocratic element of an upper house could have been found in Australia would have puzzled every dissident of this stamp. Another objection was, that instead of planting liberal institutions in these colonies at once, we left them to the agony of working out a matured scheme of government for themselves. It was also repeatedly asserted and denied, that this kind of constitution was the one most in accordance with the present wishes of the Australians; who, having the permission, only wanted to have time and experience for developing it according to future wants and contingencies. The bill was read a second time; and, in its progress through committee, various alterations and amendments were proposed, chiefly in relation to the government of the Australian colonies by a single chamber, but these, in every case, were rejected by large majorities. The earnestness with which every point was considered, weighed, and contested, was an honourable attestation to the growing importance of Australia, as well as to the general desire felt at home of qualifying its colonies for independence and self-government.

The bill passed the third reading in the House of Commons on the 13th of May, and on the 31st its second reading was moved in the House of Lords by Earl Grey. And here, as in the commons, the single chamber system met with the chief share of opposition. It was stigmatized as "novel, unnecessary, mischievous"—as a sort of political go-cart, which the colonies were to have as a machine of practice for their limbs and members, by which, when they had learned to walk, they would knock away the whole present system of legislature. Another difficulty which had also been started in the other house, was not of a political but a religious character. What was to be the condition of the Church of England in these colonies? The Presbyterians, the Roman Catholics, and the dissenting bodies carried with them to these shores the principle of self-government, and the full power of synodical action. But such was not the case with the clergy of the Church of England, who, even at the antipodes, were recognized as subject to the see of Canterbury; and thus it endured all the restrictions, without enjoying the advantages of the mother church. The bill, with a few amendments, was returned to the House of Commons

for consideration on the 1st of August, which amendments were agreed to, and the Australian colonies were thus in a great measure consigned to their own guardianship.

At an early period of this session, our foreign policy in relation to Greece formed the subject of an important discussion in parliament. For a course of years our merchants had possessed certain claims upon the Greek government, the justice of which had been recognized, and satisfaction promised; but notwithstanding these promises, it was at last evident that the government of Otho had no intention to fulfil them; for they had been evaded from the beginning, and at last flatly refused. In consequence of this refusal, Admiral Sir William Parker, who was in the Greek waters, had been directed to proceed to Athens to enforce these demands, which he had done by blockading the Piræus. The public feeling in England was roused by the intelligence. Independently of the classical associations by which Greece must always be endeared to every European people, it was deemed ungenerous and unfair to take advantage of the weakness of a country still struggling into a new existence, and with which we were at peace. So loud was the popular indignation, that on the 4th of February, soon after the tidings had arrived, the subject was brought before the House of Lords by Lord Stanley. He detailed the circumstances as they were generally reported, and demanded an explanation. This was given by the Marquis of Lansdowne, who softened some of the reports and contradicted others, until the blockade itself was almost reduced to a friendly visit and polite hint on the part of the British admiral. The explanation, however, was not reckoned satisfactory; and it was alleged in answer, that although we had guaranteed with the other powers the integrity of Greece, we had by our late claim demanded the cession of the Greek islands of Elaphonisi and Sapienza, and had done this against the remonstrances of the French and Russian governments, who had offered their mediation and been refused. A misunderstanding with these formidable powers might lead to a fresh war, even though the islands in question were so worthless that, as Lord Brougham asserted, one of them supported three goats, and the other only a single hare.

On the subject being introduced into the commons, and full information demanded, the explanation given by the secretary of foreign affairs reduced the grievances complained of to the case of two British subjects, who had been forcibly deprived of their property at the instance of the Greek government, and from whom compensation had been withheld. As for Elaphonisi and Sapienza, these islands, it was asserted, were in-

cluded in the Ionian state in the year 1800 by the Porte. Each explanation seemed only to complicate the difficulties of the question, and deepen the popular resentment; and at last the public was startled to learn that on the 15th of May, the anniversary of our sovereign's birthday, the French ambassador had left London for Paris, while the Russian ambassador had withheld his presence from the official dinner. Was there then to be war at last? and upon such a paltry occasion? So strong was the general feeling against the ministry, that it seemed as if the hours of Lord John Russell's administration were numbered. At last, the whole subject of the ministerial policy in regard to Greece having been laid before the two houses, was commented upon with terrible eloquence and invective by Lord Stanley, and the whole condemned as a series of selfish blunders and short-sighted policy. We had been bullying a poor little kingdom of only fourteen years' standing. We had been playing a game in that country merely to strengthen ourselves against French ascendancy; and the claims which we had been enforcing against it for pretended injuries, had been unjust and extravagant, as well as in behalf of persons who were entitled to no such interference. The order to take forcible possession of the island of Sapienza, in which Britain had no right to act independently of France and Russia, had not been rescinded, and had only not been executed, because Admiral Parker and Mr. Wyse, our envoy, had more discretion than our foreign secretary who had issued it. In the meantime, the noble and dignified conduct of the Greek government, who were unable to resist, had won for them the sympathy of Europe. In conclusion, he thought that he had made out the points stated in his motion; and if the ministry had been guilty of injustice, if they had made extravagant demands, if they had oppressed the weak and disgusted the strong, it became that house to show that the government of England was not England, and he called on the house to vindicate the authority of a great nation prostituted by an attempt to enforce unjust demands upon a weak and defenceless state. Notwithstanding the palliations which were adduced in justification of ministers, the division of the lords on the question was an emphatic condemnation of the proceedings of government by a majority of 37 votes, or 169 against 132.

It was fortunate for Lord John Russell's administration that these views were not shared in by the commons, before whom the decision of the lords was introduced on the 20th of June, only two days after. As a proper commencement, Lord John was asked whether he would adopt any special course of conduct in consequence of the resolution passed by the House of Lords.

In a full explanatory speech, his lordship justified the proceedings that had occasioned such stir; and with regard to the question whether he would resign, he declared that there was no necessity for such a step, and in justification, he quoted instances, in which British premiers under similar circumstances had seen it right to retain, instead of abandoning, the reins of government. He also justified not only himself, but his colleague, Lord Palmerston, who had come in for a double share of the public vituperation. "I can only say," he added at the conclusion of his speech, "that we shall continue in that course which we have hitherto followed with respect to our foreign policy. So long as we continue the government of this country, I can answer for my noble friend, that he will act, not as minister of Austria, or of Russia, or of France, or of any other country, but as minister of England. The honour of England, and the interests of England—such are the matters which are within our keeping; and it is to those interests and to that honour that our conduct will in future be, as it has hitherto been, directed." These declarations were loudly cheered from every part of the house. On this occasion, the defence of Lord John and his colleagues came from a quarter the more available as it was least expected, even from Mr. Roebuck, who had hitherto shown no very amicable spirit toward the present ministry. In the present case, after justifying the right of a ministry to appeal from a condemnation of the House of Lords to a verdict of the House of Commons, he gave notice of the resolution which he meant to move on the following day, to this effect:—"That the principles which have hitherto regulated the foreign policy of her majesty's government are such as were required to preserve untarnished the honour and dignity of this country, and, in times of unexampled difficulty, the best calculated to maintain peace between England and the various nations of the world."

The debate which followed upon this motion was continued during four nights, and characterized by a crowd of speeches remarkable not only for their ardour, but their earnest and impassioned eloquence. The continuance of peace, the honour of England, the privileges of the House of Commons, and the stability of government were all felt to be at stake, so that the original Greek question was at length merely regarded as the starting-point of controversy. The statements of Mr. Roebuck went to show that Turkey had been bullied by Russia and Austria for the extradition of the Hungarian refugees; that France had repeatedly sent out her fleets to foreign ports for the hostile redress of grievances, notwithstanding the offered mediation of England; and that England in the case of Greece had,

even at the worst, done nothing more than these complaining countries had committed against other states. Coming closer upon the *origo mali*, he then showed that Athens had become the focus of intrigues against the interests of England; and that the individual injuries complained of were deeds of tyrannical oppression and injustice which had been inflicted upon British subjects, and in which we were therefore bound to interfere. They were not singular cases also, but merely part and parcel of a course of similar offences which had been pursued for several years. And our interference at last—it was a merciful mode of proceeding by a strong state against a weak; for it was by a blockade, instead of an express declaration of war. The injured had appealed to England, and we were told that compliance with such appeals was against international law; but we knew well what pernicious consequences might be deduced in despotic countries from such an interpretation. It was also said, that the cases of Mr. Finlay and M. Pacifico were isolated cases; but there were also other cases; and if we once relaxed, in the case of half-civilized nations, the rules by which the subjects of this country are guarded abroad, there would be no safety for English commerce.

These arguments of Mr. Roebuck will sufficiently explain the course of the debate on this occasion, without entering into details. The result was a complete reversal of the sentence of the House of Lords, there being for the motion 310 votes, while only 264 were against it, thus giving a majority of 46 in favour of government. Considering the wonderful changes that have since taken place, it is as well that this result was attained. The guaranteeing powers that were at issue on this question, were soon afterwards to be in deadly combat against the whole course of Russian intrigue in the East, with France and England united to oppose it. Even already there were gloomy symptoms of this terrible consummation, arising out of the late affairs of Hungary—the occupation of the Danubian principalities by a Russian army, under the pretext of suppressing insurrection—and the arrogant demands of the czar upon the Porte for the surrender or banishment of the Hungarian exiles. These matters were brought before parliament at an early period of the session by Lord Dudley Stuart, who moved for certain papers upon the subject, to form the ground of a parliamentary inquiry. His motion was afterwards withdrawn; but the statements which it occasioned deepened the public aversion to northern ambition and tyranny, and helped to prepare the way for those great events which were hastening to their crisis.

On the 19th of March an important discussion occurred on the slave-trade, which, notwith-

standing the pecuniary sacrifices of Britain for its suppression, followed as they were by those armaments that were maintained to watch every outlet and inlet of the evil, continued still to flourish among the slave-holding foreign colonies in alarming abundance. It was stated that in 1847, the exports of slaves from Africa had amounted to 84,000, and were annually on the increase, notwithstanding our blockade system, maintained at an expense of £700,000 per annum. Under all these circumstances, it was moved by Mr. Hutt, the member for Gateshead, that the crown should be addressed to direct that negotiations should be forthwith entered into, for the purpose of releasing this country from all treaty engagements with foreign states for maintaining armed vessels on the coast of Africa to suppress the traffic in slaves. To this it was answered, that the blockade, inefficient though in many cases it was, and must still continue to be, had been productive of great benefit to the cause of humanity. It had made the transportation of slaves more difficult than ever, as was manifested by the greatly increased price that had to be paid for them in the slave markets of Cuba and Brazil. It had also been the means of implanting the seeds of civilization and humanity in Africa; and even for the continuing of such a desirable improvement, a continuance of the blockade was necessary. But besides, these ships were necessary for the maintenance of our factories and legitimate traffic on the African coast, and for compelling Spain and Brazil to fulfil their engagements by which they had agreed to abandon this infamous trade in human flesh

The character and honour of our country was also at stake; and by withdrawing our ships, we would proclaim to the world, that henceforth the slave-trade might prevail over every sea without let or hinderance. These representations had their full effect, so that on a division of the house, Mr. Hutt's motion was negatived by a majority of 232 against 154.

It was while the political business of this year was at its height, that the voice of the most eloquent of our British political orators was no longer heard; the senate was no longer to be controlled or directed in its counsels by his commanding intellect and persuasive words. Sir Robert Peel had delivered his memorable speech, which was destined to be his last, on the affairs of Greece and in justification of the ministry, in the House of Commons, and was taking an airing on horseback, when the animal he rode suddenly shied near the wicket-gate leading into the Green Park, and threw him violently to the ground. The injuries he sustained on this occasion were beyond medical aid, and he expired in his house at Whitehall Gardens, on the 2d of July, four days after the accident. The remains of the great statesman were conveyed to his mansion of Drayton Manor, and interred on the 9th at the parish church of Drayton Bassett, while the whole nation bewailed his premature departure. In him not only the country lost a most able and upright statesman, but private worth and talent a liberal patron, the destitute a benefactor, and the oppressed a champion. Equally with his talents, Britain will continue to hallow the remembrance of the virtues of Sir Robert Peel.

DRAYTON MANOR, the Residence of Sir Robert Peel

CHAPTER XIII.—CIVIL AND MILITARY HISTORY.—A.D. 1850—1851.

VICTORIA.

Irish affairs—Loan of money granted to Ireland—Proposal to extend the elective franchise in Ireland—It is carried—Irish riot of Dolly's Brae—Its origin and causes—Its sanguinary and disgraceful character—The lieutenant of the county and several magistrates dismissed from office—The subject investigated in the House of Lords—Decision of the lords—Satisfactory nature of the financial statement for the year—Question about the disposal of the surplus—Demands for retrenchment in the government expenditure—Public salaries reduced—Prospect of the removal of the window-tax—Factory act of 1847—Its terms eluded by the mill-owners—Its rules for the amelioration of labour improved—Baron Rothschild's application for his seat in the House of Commons—He refuses to take the oath of abjuration—The controversy of Jewish disabilities opened afresh—The discussion postponed—Inefficiency of past concessions to Popery—Papal decree for the establishment of an episcopal hierarchy in England—Cardinal Wiseman, by the pope's authority, appointed Archbishop of Westminster—Pastoral address of the new Popish metropolitan—Indignation of all Protestant parties at these aggressions—Lord John Russell's letter to the Bishop of Durham on the subject—Dr. Wiseman's ineffectual apology—Notice of these Papal aggressions in the royal speech—Bill prepared to prevent the assumption of Popish episcopal titles from English dioceses or districts—Arguments adduced in parliament for and against the bill—It is introduced into parliament—Interruption to the discussion by the demands of the protectionists—Motion for the relief of the agricultural classes—Statement of their grievances—The motion negatived by a small majority—Motion carried for the extension of the franchise—Growing dissatisfaction with Lord John Russell's government—He resigns and is recalled—Consideration of the ecclesiastical titles bill, with modifications, resumed—It is still obnoxious to a large party in parliament—Chief arguments for and against it in the debate—Obstacles interposed to the progress of the bill—A large body of Roman Catholic representatives leave the house—The bill passed—Unsatisfactory nature of the victory—Particulars of the bill when established as act of parliament.

HE turmoil and perplexity of Irish affairs constituted, as they were wont, a large portion of the business of this session. The first of these referred to the ministerial proposition for advances to relieve the distressed Irish unions. It was stated by Lord John Russell that, in consequence of the change from subsistence on mere potato land by the labouring classes to that derived from wages, the pressure of this transition state had fallen upon the landed proprietors, who therefore needed temporary relief from the legislature. He hoped that this change would be greatly for the better; but in the meantime, it would be necessary to aid the impoverished unions by a loan of £300,000. This would only raise the loans advanced over ten years, that still remained to be paid, to the amount of £4,783,000—a debt the repayment of which was to be extended to a period of forty years, subject to the same conditions of interest or no interest as at present. Against this proposal it was alleged, that what was called a loan should be termed a *grant*, as the money would never be repaid. This objection, however, had now lost all its original force, and a bill founded upon the resolution was afterwards brought in and passed with little opposition.

The next Irish measure was one for the extension of the elective franchise for the counties and boroughs. This proposal, although considered necessary on account of the reduction of electors

in Ireland by the impoverished state of the tenantry and other causes, had been brought forward during several previous sessions, but always without effect. Sir William Somerville, secretary for Ireland, now moved to bring in the government bill, by which the franchise was to be extended to all occupiers of land to the amount of £8 per annum. This concession was objected to as being too much compared with the elective franchise of England—as too little compared with the privileges we had granted even to the Hottentots—as a strengthening of the democratic element—as a weakening of the leasehold suffrage. The bill was generally confessed to be both good and necessary; and although several attempts were made to alter or amend it, the third reading was successfully carried in the commons by a majority of 254 against 186. It experienced a keener opposition in the lords, where the £8 qualification was thought too little, and where it was proposed to raise it to £12 or even to £15. An amendment proposing the last-mentioned rate was carried against the ministers by a majority of seventy-two to fifty; and another, in which the drawing up of the election lists was subjected to the approval of the unions instead of the county clerks of the peace, as in the original proposal, was carried by fifty-three against thirty-nine. These were ominous symptoms of want of confidence on the part of the upper house towards the government that might well have made Lord John Russell and his coadjutors

quake; and upon the bill being sent back with these important alterations, the discussion was opened anew in the House of Commons, and with redoubled keenness. At last the commons yielded to three amendments proposed by the lords, and compromised the amount of franchise right by a twelve-pound qualification. With these concessions, the bill, on being sent back to the upper house, was passed, but with much demur and reluctance.

The measure that came next in connection with Irish affairs was the abolition of the office of lord-lieutenant; but although there appeared 295 votes for the second reading against 70, the bill was postponed at this favourable stage, owing to the great pressure of other business, and the lateness of the session.

So early as the 18th of February, the affairs of Ireland had been the subject of frequent consideration, as it was at that date that the unfortunate conflict at Dolly's Brae was discussed in the House of Lords. It was an event only too characteristic of the country, and the political and religious hatred by which it continued to be rent asunder. As the act making party processions illegal had just expired, a band of Orangemen resolved to improve the golden opportunity by holding their favourite anniversary of the battle of the Boyne, with an armed display that should bid defiance to their enemies, and perhaps produce the luxury of a faction fight. For this purpose, also, they resolved to pass in their route a steep ridge called Dolly's Brae, near Castlewellan, which at such a season had been usually occupied by the Ribandmen from an early period. The pretext of the Orangemen was, that they were desirous of congratulating the aged Earl of Roden, the lord-lieutenant of the county, on his birthday, and that the pass in question lay on their way to Tollymore Park, the residence of his lordship. There was indeed another road skirting the base of the hill, which had been constructed to avoid the steepness of the old one, but chiefly to prevent hostile meetings between the two parties; but this was only an additional temptation to take the old established path. On, therefore, by this Thermopylæ of Dolly's Brae marched the Orange party to the number of 1500 strong, with flags and music, and found, as they had expected, the pass well occupied by a formidable party of armed Ribandmen. An encounter would have been inevitable but for the presence of a strong body of soldiers and police, and the remonstrances of the priests; and a truce was struck, by which the Riband party agreed not to fire a shot, provided they were unassailed. Through the press, therefore, the procession marched without a blow; and on reaching Tollymore Park, and presenting their

congratulations to the earl, they were regaled with all the fervour of Irish hospitality. Unfortunately, however, on their return, and just when they had passed the hostile encampment, a random squib thrown by an unknown hand lighted among the ranks of the Ribandmen: and taking this as a signal of battle, the latter fired an indiscriminate volley not only at the procession, but the priests, soldiers, and policemen who were stationed near the spot. A pell-mell fight immediately followed, in which the Orangemen defeated their adversaries, and were said to have used their victory with great cruelty. As it was, four of the Riband party were killed, about thirty or forty wounded, and several houses sacked and destroyed. The county magistrates endeavoured to stifle inquiry into this disgraceful outrage, but government would not be so satisfied; and after a keen scrutiny, the Earl of Roden was dismissed from the lieutenancy, as well as several magistrates from the commission, while stringent measures were adopted for the prevention of all such deeds in time to come.

This unhappy affair, involving as it did the deposition of a worthy and popular nobleman from office, was now made the subject of investigation in the House of Lords. It was introduced by Lord Stanley, as an opportunity for examining into the ministerial policy manifested in the government of Ireland; and for this purpose he moved for copies of certain correspondence between the chief magistrate of Armagh and the executive government in June and July, 1846, and also for a variety of papers relating to the events which took place in this Castlewellan affray. The indirect approbation given by the ruling party to Orange meetings and processions, and the arbitrary dismissal of Lord Roden and the magistrates, formed the chief topics of his animadversions. On the other hand, the Earl of Clarendon, who had come over from Ireland and taken his place in the house to answer in person every charge, showed that the magistrates had deserved their dismissal by not preventing the procession from returning by the way of Dolly's Brae, when a collision was apprehended. About the procession itself, which was not essentially illegal, every precaution had been adopted by government to prevent any outbreak from taking place. As for the removal of Lord Roden from office, the Earl of Clarendon, after alluding to the valuable public services of the noble lord, and the warm friendship that had subsisted between them, thus proceeded to justify himself:—"I knew how much his dismissal would be resented by his numerous friends, and the unpopularity I should earn for myself, even among those who were not his friends, throughout the north of Ireland. I felt and I

foresaw all that: but still there was one feeling superior even to that—a feeling of duty; a feeling from which I did not venture to shrink, and by which I need not assure your lordships I was alone actuated in the course that I adopted. Ever since the government of Ireland was confided to my care, my great object has been to render the law a reality—to inspire all classes of the community with confidence in the impartial administration of justice—to convince them that before the law all men were equal; and that, whether high or low, rich or poor, the same justice should be meted out to all. And I should have felt ashamed of myself, and unworthy the confidence of my sovereign, if I had decided in a manner different with respect to the noble earl to that in which I should have decided in the case of any other man; or if I had allowed for one moment any personal consideration to interfere with what I believed the justice of the case required.”

The discussion of this difficult question terminated in a cordiality of agreement not often witnessed when Irish affairs were the subject. It was generally felt that the Dolly's Brae procession had only become illegal through its consequences—that the Earl of Roden had committed an error of judgment in so far countenancing it, and must quietly underlie the penalty—and that the Earl of Clarendon had discharged the duties of a wise ruler and upright judge, both in his plans to prevent an outbreak, and the punishment of those through whose imprudence it had occurred. In these circumstances, the motion of Lord Stanley for the production of the Irish documents was agreed to without a division.

The financial statement for the year, which was laid before the committee of ways and means in the House of Commons by Sir Charles Wood, the chancellor of exchequer, gave great satisfaction, as it showed that for 1850-51 there would be a surplus of £1,500,000 over the expenditure. To dispose of this surplus was now the question, and the chancellor proposed that its paramount application should be to the reduction of our debt. This was the more necessary, as during the last twenty years we had borrowed to the amount of £35,000,000, of which our increased revenue had as yet paid off only £8,000,000. Next to this, an abatement of taxes on landed property, chiefly in stamp duties, should be effected; a repeal of the duty on bricks; and advances furnished for drainage and land improvements. These proposals threatened to wake into fresh vigour the protectionist controversy, from the confession of agricultural weakness and distress which they were supposed to imply; and during the course of discussion the government sustained a defeat, by the reduction

of the duty on loans to 1s. in fifty pounds, instead of 2s. 6d. as the chancellor had proposed. Sir Charles Wood then attempted a compromise in the other reductions, in which he was successful, with no greater loss to the revenue than £500,000 per annum.

These abatements emboldened further demands, which had for their object the reduction of public burdens and retrenchment of expenditure—claims that had never ceased to be urged since the commencement of our mercantile depressions, as well as the withdrawal of agricultural protection. The movement to that effect by the opponents of government was anticipated by Lord John Russell himself, who brought in a bill for the reduction of the salary of the lord chief-justice of the common pleas, and for an inquiry into the salaries and emoluments of offices held during pleasure by members of parliament. To these were also added the salaries of judicial offices in the superior courts, the retiring pensions of the judges, and the expense of diplomatic establishments. It was a sweeping measure of economy, by which he hoped to clear away the opposition that had been gathering against his administration. Even this, however, was not enough for the friends of retrenchment, and Mr. Hume declared that the three points embraced by Lord John's motion would not touch one-tenth of the unnecessary expenditure; but it was carried notwithstanding by a majority of ninety-one. It was also moved by Mr. Horsman that the inquiry should be extended to the incomes of ecclesiastical dignitaries; but this dangerous proposal, which might have awoken the Sacheverell cry of “The church is in danger,” was speedily negatived by 208 to 95. Other financial motions followed, which had for their object the reduction of the public expenditure, and for their supporters both the free-trade and the landed interests, the former represented by Mr. Cobden, and the latter by Mr. Henry Drummond; but the motion of the former was negatived by a majority of 183, and of the latter by thirty-four. Mr. Drummond's, which was thus let down so gently, was, that “whereas the present system of taxation depresses all classes by diminishing the funds for the employment of productive labour, adequate means should be forthwith adopted to reduce the expenditure.” This he proposed to effect by diminishing the salaries of all servants of the crown, and by removing every impediment in the way of the cultivator of the soil. A still more hopeful prospect of the final repeal of the window-tax was afforded during the session, although it was introduced after the financial arrangements of the year had been determined. Since 1835, it was stated, five chancellors of the exchequer had promised to “consider” the sub-

ject, while not one of them had *considered* in accordance with the public wish. It was also declared that, by the removal of this unpopular impost, £1,800,000 of taxes would be got rid of. The motion was suppressed by a scanty minority of three, seventy-seven being in its favour, and only eighty against it. Among the other proposals for the repeal of taxes, one upon the malt-tax was introduced towards the end of the session, but negatived by the large majority of 247 against 123.

The working of the act passed in 1847, for the regulation of labour in factories, an act of which Lord Ashley was the honoured founder, and over which he had watched with paternal care, was brought under the attention of parliament by his lordship on the 14th of March. By the terms of the act, ten hours were to be the period of the labour of women and young persons in factories, to date from the time when they came to work. But several devices had been used by the employers to elude an act that bore so hard upon their interests, the chief of these being a system of relays, by which the perpetual motion of a factory might be kept up, to the subversion of that improvement in the health, morals, and education of the young for which the act had been designed. After stating the benefits it had produced, where it had been honestly observed, and denouncing the plan of shifts and relays by which it was counteracted, his lordship concluded with a solemn appeal, in the name of Almighty God, to the justice and honour of parliament in behalf of the temporal and eternal welfare of thousands which would be affected by their decision. From such a man, an appeal like this was something else than a mere oratorical invocation; the subject was taken up with the attention it merited, and the second reading of the bill was passed without discussion, the final decision being postponed till after Easter. On the 3d of May, Sir George Grey announced the intended course of government upon the subject. In common with Lord Ashley he felt the difficulty of adhering to the present range of fifteen hours a day, within which women and young persons might be employed for ten hours. He therefore would propose a new limitation, by which the entire time of employment should be defined. As the case at present stood, the factory might work between the hours of half-past five in the morning and half-past eight in the evening, the ten hours to be included within that time. He now proposed to limit this working to between six in the morning and six in the evening, deducting an hour and a half for meals, thus making the working time for all hands ten and a half hours daily. On Saturdays, however, he would take the eight hours from six till two,

omitting half an hour for breakfast. In this way, the fifty-eight hours per week would be extended to sixty. Although two hours were thus added, Lord Ashley assented to the amend-

LORD ASHLEY.—From a portrait by Sir W C Ross R.A.

ment, thinking it more likely to produce a beneficial result than the original bill. In this form it finally passed, notwithstanding various amendments proposed in both houses.

The closing scene of this session, previous to the prorogation of parliament, was the attempt of Baron Rothschild, the Jewish member-elect for the city of London, to assume his seat in the House of Commons. Weary of the long delay, his supporters had now resolved to take the question by storm; and for this purpose they accompanied him on the morning of the 26th of July to the house, where he presented himself at the table, and requested the oaths to be tendered. The clerk proceeded to do so accordingly, when the baron, in a clear distinct voice, exclaimed, "I desire to be sworn on the Old Testament." "I protest against that!" cried Sir Robert Inglis, in a voice that trembled with agitation; and amidst a storm of cheers and counter-cheers, he moved the resolution:—"That from the earliest times of a Christian legislature, no man has ever been permitted to take part in it, except under the sanction of a Christian oath; and Baron Lionel Nathan de Rothschild having requested to take the oath on the Old Testament, and having in consequence been desired to withdraw, this house refuses to alter the form of taking the oath." The debate of the admissibility of a Jew was awakened afresh, and with all the fervour which such a sudden apparition was fitted to excite. It was adjourned to the 29th, and on the question being then put by the speaker

to the baron, why he demanded to be sworn upon the Old Testament, the latter of course replied, "Because that is the form of swearing which I declare to be most binding upon my conscience," after which he retired. Mr. Hume then moved as an amendment to the motion of Sir R. H. Inglis, "That the Baron de Rothschild having presented himself at the table, and having requested to be sworn on the Old Testament, declaring that form to be most binding on his conscience, the clerk be directed to swear him on the Old Testament accordingly." This motion was carried by the large majority of 113 against 59, and on the next day, Mr. Rothschild was called to be sworn before the house. With the Old Testament in his hand he took the oaths of allegiance and supremacy, repeating after each the usual solemn attestation, "So help me God." But when the oath of abjuration followed, and the words, "upon the faith of a true Christian," should have closed it, he said, "I omit these words as not binding on my conscience, and hastily passed on to the final "So help me God." The discussion was opened afresh, and it was attempted to be proven that the abjuration oath itself was superfluous—that even if retained, the baron's form of taking it was sufficient—that in either case, he was entitled to take his seat without further opposition. At length the difficult knot was attempted to be cut by the attorney-general, who proposed the two following resolutions:—

1. "That the Baron Lionel de Rothschild is not entitled to vote in this house, or to sit in this house during any debate, until he shall take the oath of abjuration in the form appointed by law."

2. "That this house will, at the earliest opportunity in the next session of parliament, take into its serious consideration the form of the oath of abjuration, with a view to relieve her majesty's subjects professing the Jewish religion." Both of these resolutions were carried, the former by a majority of seventy-two, and the latter by one of thirty-six; and thus the difficulty, which was too much for the present hour, was postponed to a later period.

Passing over the minor events of this year, we must now hasten to the most important movement of the present day in Britain, whether viewed in its religious or political bearing. We refer to that daring aggression of Popery by which the Roman see revived its ancient claim to the homage and submission of our country, and the still more daring pertinacity with which a party in England endeavoured to establish the claim.

The concession of equal rights and privileges to the Roman Catholics by their admission to

seats in parliament—a concession from which so much had been hoped even by the most rigid Protestants—was soon found to be anything than a source of concord and contentment. The fact had been strangely lost sight of, that a church which claims all by right divine will never rest satisfied with a part, and that each concession will be only viewed as a step in advance to the possession of the whole. The recovery of her lost kingdoms was not merely the inspiration of ambition and self-interest on the part of the Romish see, but of conscientiousness also, believing, as she does and must, that there can be no salvation beyond her pale. Trusting, therefore, that Britain, by granting the Catholic claims, had voluntarily abandoned its old-established distinction as the head of Protestantism, and thrown open its gates for conciliation with Rome, the Vatican resolved to secure an immediate entrance, and not only so, but to assume immediate possession. A Papal brief to that effect was drawn up, with a loftiness of assumption which Hildebrand might have envied, constituting an episcopal hierarchy over England and Wales, instead of those vicars apostolic by whom the affairs of their church had hitherto been quietly managed in England. At the head of this hierarchy was placed Dr. Wiseman, lately an unnoticed priest, but now elevated into a cardinal, and constituted Archbishop of Westminster; and under his rule were placed twelve episcopal sees, into which the country was now parcelled out by pontifical bounty. Such was the nature of this strange brief, which, two months after the close of the session, and in the midst of profound peace and unsuspecting security, was published in England. The public rubbed their eyes, and could scarcely believe that they were awake. Was this in very truth the middle of the nineteenth century, or was the Reformation itself a dream? Or had the holy conclave itself committed so great a blunder as to confound Englishmen with Spaniards, and the meridian of London with that of Madrid?

A short time sufficed to convince them that this astounding brief was no pasquinade, but a veritable manifesto, for the cardinal-archbishop and new metropolitan of England was impatient to be up and doing. He accordingly addressed a pastoral to his flock in the fullest style of inflation, as "given out of the Flaminian gate of Rome, this 7th day of October, in the year of our Lord 1850," and signed, "Nicholas, Cardinal-archbishop of Westminster." In this arrogant manifesto, after gladdening them with the assurance that through the "generous and wise counsels of the supreme ruler of the Church of Christ," even that "loving father" the pope, the "greatest of blessings has just been bestowed upon our country, by the restoration of its true Catholic

hierarchical government, in communion with the see of St. Peter;" "the great work, then, is complete," he afterwards adds in a sort of poetical rapture; "what you have long desired and prayed for is granted. Your beloved country has received a place among the fair churches, which, normally constituted, form the splendid aggregate of Catholic communion; Catholic England has been restored to its orbit in the ecclesiastical firmament, from which its light had long vanished, and begins now anew its course of regularly adjusted action round the centre of unity, the source of jurisdiction, of light, and of vigour." His own appointment as superintendent of this glorious millennium for England he also describes with great unction, not forgetting his "cardinalitial hat;" and he arrogantly proclaims, in a style unheard by English ears for centuries, "so that at present, and till such time as the Holy See shall think fit otherwise to provide, we govern, and shall still continue to govern the counties of Middlesex, Hertford, and Essex, as ordinary thereof, and those of Surrey, Sussex, Kent, Berkshire, and Hampshire, with the islands annexed, as administrator with ordinary jurisdiction." It is worthy of observation, that throughout the whole of this bombastic pastoral, the very existence of a Protestant sovereign, parliament, church, and people are utterly ignored and set aside, as things non-existent or at least unworthy of mention; he sees no authority in England but that of the pope, no church but that of Rome, and no people but Papists, with Cardinal Wiseman for their head.

It was now full time not only for the church dignitaries who were thus dethroned, but the Protestantism which was unchurched, and the national independence which was insulted, to express their sentiments upon this act of monstrous usurpation; and, accordingly, all parties, whether of high or low church, or dissent, and all political classes, whether Whig, Tory, or Republican, laid aside their feuds for the time, to oppose this common enemy. As Lord John Russell's administration had of late been somewhat unpopular, the present opportunity of winning back the public esteem was not to be neglected, more especially as the sentiments of government upon the subject, announced through its premier, were anxiously expected. His letter addressed to the Bishop of Durham, which was published on the 4th of November, was all that an English and Protestant heart could have desired; and it regained for him the confidence of all classes. He characterized this proceeding of Rome as an insolent and insidious aggression; as an assumption of superiority even beyond that which it had dared to claim in Roman Catholic times. Still, however, his alarm was

not equal to his indignation; for he thought that the foreign enemy was too weak to be dangerous to Protestant England. But the chief peril was to be found among ourselves; and he thus adverted to that singular half-way resting-place towards Popery which, under the name of Puseyism, has become so fashionable in the present day: "There is a danger, however, which alarms me much more than any aggression of a foreign sovereign—clergymen of our own church who have subscribed the thirty-nine articles, and acknowledged in explicit terms the queen's supremacy, have been the most forward in leading their flocks, step by step, to the very verge of the precipice. The honour paid to saints, the claim of infallibility for the church, the superstitious use of the sign of the cross, the muttering of the liturgy so as to disguise the language in which it is written, the recommendation of auricular confession, and the administration of penance and absolution—all these things are pointed out by clergymen of the Church of England as worthy of adoption, and are now openly reprehended by the Bishop of London in his charge to the clergy of his diocese. What, then, is the danger to be apprehended from a foreign prince of no great power, compared to the danger within the gates from the unworthy sons of the Church of England herself?"

It was evident that here the matter could not rest. Alarmed, indeed, at the loud and universal indignation, and feeling when too late that the mine which had been preparing for years had been prematurely kindled, Dr. Wiseman endeavoured to repair the blunder which both himself and his church had committed, by a long and bland apology, addressed to the English nation at large. But he had too deeply committed himself to be extricated by any apology however ingeniously worded. Intoxicated with extravagant hope, Rome herself had blabbed, and revealed her dangerous purposes. The attention of parliament was called to the subject, by a paragraph in the royal address, delivered by her majesty in person to both houses, to the following effect:—"The recent assumption of certain ecclesiastical titles conferred by a foreign power has excited strong feelings in this country; and large bodies of my subjects have presented addresses to me, expressing attachment to the throne, and praying that such assumptions should be resisted. I have assured them of my resolution to maintain the rights of my crown, and the independence of the nation against all encroachment, from whatever quarter it may proceed. I have, at the same time, expressed my earnest desire and firm determination, under God's blessing, to maintain unimpaired the religious liberty which is so justly prized by the people of this country. It will

be for you to consider the measure which will be laid before you on this subject."

This promised measure was laid before parliament by Lord John Russell on the 7th of February, 1851. In moving for leave to bring in a bill to prevent the assumption of certain ecclesiastical titles, his lordship adverted to the excitement and alarm which the recent Papal aggression had produced in Britain, as well as the arrogant assumption of authority with which it had inspired the Romish priesthood of Ireland. He showed that this aggression, also, on the part of the pope upon England, was of a still more arbitrary character than that which had been attempted even with Roman Catholic countries—of France and Austria for instance, where the sanction or *placet* of the sovereign was indispensable to the validity of high spiritual appointments. Indeed, into no Roman Catholic country would a Papal bull be permitted to enter without the sanction of some civil authority, and even upon the weakest of these governments no such insult would have been attempted as that which the pontiff had offered to the Queen of England. Here was an assumption of territorial power, whether backed by authority to enforce it or not. His lordship stated, that the legal advisers of the crown had been consulted as to the existing law, but they were of opinion that neither by the common nor statute law could the mere assumption of titles be prosecuted as an offence; and that, although the introduction of bulls or writings from Rome was illegal, and subjected the party to penalty, yet the law had been so long in disuse, that a prosecution on that ground would probably fail. Amidst these and other difficulties, and with reference to the control which the new Roman Catholic prelates would obtain over large endowments in the hands of Roman Catholic trustees in this country, the government had proposed, in the first place, to prevent the assumption of any title, not only from any diocese now existing, but from any territory or place in any part of the United Kingdom; and to restrain parties from obtaining, by virtue of such titles, any control over trust property.

The debate that followed this announcement of the bill was conducted with all the earnestness which the subject demanded, and was protracted throughout four nights by successive adjournments. We can only afford a brief allusion to the principal arguments on each side of the question. Against the bill it was alleged, that the facts and principles by which it was supported had been derived from Roman Catholic states, and applied to one that was not Roman Catholic; and that, in the meantime, the chief case in point had been omitted—the example of the United States of America, which, though

governed by our institutions, and speaking our language, were not afraid of the pope. And why legislate against one class of ecclesiastics only?—a class which, in Ireland, had been recognized by their territorial titles even in acts of parliament. If Dr. Wiseman were to call himself Archbishop *in* Westminster instead of Archbishop of Westminster, the proposed act could not touch him. Extend this bill to Ireland, and there the religious agitation it would stir up would be of the most mischievous character. The question, it was alleged, was simply, Whether the Roman Catholic prelates should be nominated at all: if the pope must not nominate, and if the state stood aloof, the sovereign protesting against the religion of one-third of her subjects, was not this tyranny? And here Ireland, it was stated, formed the strongest argument of the opponents of the bill; and the only answer given to the measure in that country would be—"We defy you to carry it into effect." In such a discussion it was impossible that the great antagonist of Romanism, the Church of England, should escape not only a side-blow but a home-thrust. How, it was asked, had our legislation acted with regard to the Roman Catholic religion in England? According to the letter of Lord John Russell to the Bishop of Durham, the Church of England, which had been called the bulwark of Protestantism, was a kind of manufactory of home-papery. Notwithstanding the power and influence of the episcopacy in England, and its revenues, the depth of which the plummet of inquiry had never sounded, not only had the Church of England not saved the country from Popery, but it was said to be deeply infected with it; yet it was the ascendancy of this church that the bill of the noble lord was intended to bolster up, and which he believed would be impotent for the object in view.

Such were the chief arguments against the introduction of the bill. On the other hand it was declared, that the question now at issue was, Whether ecclesiastics of the Church of Rome should be allowed to occupy a position in this realm which they had never held in their most palmy days? The question did not affect the Church of England merely: it affected dissenters of all denominations, and touched the civil and religious liberties of Roman Catholics themselves. It might be said that the temporal power of the pope was weak; but his spiritual power was vast. It had been alleged that we were about to encroach upon the act of 1829, by which government had entered into a legislative compact with the Roman Catholics of the United Kingdom; but the present was not a question of taking anything from the Roman Catholics, but of allowing them to take something from us. The testi-

mony of Dr. Wiseman himself was quoted, who had declared that the object of the hierarchy was to obtain synodical action, which was repugnant to the rights of the crown and to the liberties of the people, and by which the Roman Catholic laity would be subject to the canon law for the first time in England—a law which declared that the laws of the state were subordinate to those of the church. It had been said that all this had been only a dispute about names; but there was an essential difference between a vicar apostolic and a bishop of a diocese, as regarded ecclesiastical distinguished from spiritual jurisdiction. The erection of sees, also, was an act of sovereign right. In England no attempt had ever been made to erect a see, except by royal authority; nor had the pope ever been allowed to erect a see in any continental state. It was also declared again and again, that the strong and general feeling which had called forth this discussion—a feeling in which the more reflective of the Roman Catholics of England participated, and which they had expressed in energetic protests against the Papal brief—was not to be stigmatized as a mere outburst of bigotry. On the contrary, it was a national demonstration against an attempt to force upon us a foreign yoke which our ancestors had successfully resisted.

With regard to the general character and expected results of the bill, these were sufficiently explained by the attorney-general. The offence to be remedied was the introduction of a bull into England, permitting certain persons to assume the titles of bishops with territorial jurisdictions; and to this the remedy was fully proportioned. As for the insult inflicted by Rome, that had been sufficiently requited by the general indignation of the country; and with the spiritual effects of the bull the house had nothing to do. All that was needful to be done, therefore, was to arrest the temporal power of these territorial bishops, so as to prevent them from interfering with the rights of British subjects. The bill, therefore, in the first place extended the provisions of the Roman Catholic relief act, which imposed a penalty of £100 upon the assumption of the title of any existing see to that of *any title whatever* from any place in the United Kingdom. But still more effectually to prevent the assumption of territorial titles, it would make every act done in virtue of such titles absolutely void; and moreover, to hinder parties from making gifts to persons assuming such titles, the bill would declare the endowment of such pretended sees illegal, and the gifts would be forfeited to the crown. By thus preventing persons from assuming territorial titles, and by preventing the existence of the dioceses or sees themselves, the bill would effectually remedy the mischief complained of.

By such statements it was attempted to reconcile the objections of the two parties now at issue; the one complaining that the bill was an infringement of the principles of religious liberty, and the other, that it was of too lenient a character, as compared with the trespass committed and the danger sought to be averted. On the 14th of February, the house was brought to a division, when 395 votes were given for the introduction of the bill, and only 63 against it.

Thus far had the initiatory step in this important measure proceeded, when events threatened a complete change in the ministry, notwithstanding their successful majority upon the ecclesiastical titles bill. This change, in the first instance was menaced from the protectionist party, and the motion of their leader, Mr. D'Israeli, at the beginning of the session to the following effect:—"That the severe distress which continues to exist among the owners and occupiers of land, lamented in her majesty's speech, renders it the duty of the government to introduce without delay measures for their effectual relief." The passage in the royal speech, after alluding to the prosperous state of our manufactures and commerce, was as follows:—"I have to lament, however, the difficulties which are still felt by that important body among my people who are owners and occupiers of land. But it is my confident hope that the prosperous condition of other classes of my subjects will have a favourable effect in diminishing those difficulties, and promoting the interests of agriculture."

The arguments in favour of the agricultural interests were filled with the usual statements of the sufferings of our farmers and landowners, from the disproportionate load of taxation imposed upon them, in consequence of which they could not compete with the foreign producer. The great mass of our general taxation, it was stated, was supplied from three sources—external imposts, inland revenue, and local contributions. Nearly one-half of the first was raised by not permitting the cultivators of the soil to produce a particular crop, or by loading it with a peculiar impost; two-thirds of the inland revenue were raised by a colossal tax upon one crop of the British agriculturists; while of the £12,000,000 of local contributions, £7,000,000 were paid by them, and the whole was levied upon a very limited class. This statement of the leader of the agriculturists, which was characterized as "hotch-potch" by the chancellor of the exchequer, was answered by the latter, who went over every item of taxation, and endeavoured to show the groundlessness of the complaint. On the division of the house, the motion was lost by 281 votes against 267; but this small majority of 14 in favour of government showed the insecure tenure

of Lord John Russell's administration, as well as the strength of the recoil with which the interests of free trade were threatened.

A still more direct and formidable opposition to ministers was made on the 20th of February, when Mr. Locke King, member for East Surrey, moved to bring in a bill to make the franchise in counties in England and Wales the same as in boroughs—that is, the occupation of a tenement of the value of £10 a year. This, it was sarcastically alleged, would pave the way for the great and comprehensive measure of reform with which the house was to be favoured by Lord John Russell when the “proper time” should have arrived. In favour of the motion it was also stated, that there had been, since 1843, an annual decrease in the number of county electors to the number of 22,666 in seven years, while during the same period there had been an increase in the boroughs of 50,000. Lord John Russell, whose co-operation was invoked on this occasion, as the advocate of free trade and liberal measures, was obliged to confess the justice of the proposed measure; but he thought the time unsuited for the experiment. On a former occasion he had acknowledged, he said, that he thought some extension of the franchise desirable; and he still considered it desirable that a measure should be introduced for a further extension of the suffrage. But there were reasons, general and particular, why it was not advisable to bring in such a measure this session, though there would be no reason why it should not be brought before the house at the commencement of the next. The motion was carried by 100 against 52.

The dissatisfaction of parliament against the government, manifested by so large a majority, had been brought up to full opposition heat by the financial statement of the chancellor of exchequer in the committee of ways and means, just three days previous. The probable surplus of this year, ending on the 5th of April, would be £2,521,000. But the question of what taxes might be safely modified or repealed in consequence of this increase became the subject of parliamentary contention, and the chancellor's proposal on this head was met with a murmur of dissatisfaction, all parties being more or less displeased. Some complained of the proposed continuation of the income-tax; and others were indignant that the window-tax, instead of being totally repealed, was only to be shifted from one part of the building to another. The hop-growers were to be left without redress, and the agriculturists to be mocked with a stinted relief. It was evident from the proceedings of the last three days, that the dissatisfaction against the Whig cabinet, which had been growing for some time past, had reached the height, and that the

confidence of parliament was now withdrawn from it. On the 22d, therefore, Lord John and the members of his administration waited upon her majesty, and tendered their resignation.

A new cabinet must now be formed: but by whom? and from what materials? Lord Stanley was immediately sent for by her majesty, and desired to construct a government; but the task of building up, especially at such a period, was more difficult than that of throwing down. His lordship was not prepared to form one. Others were then applied to, but were found in the same dilemma. As a last resource, Lord John Russell was recalled to the royal presence, and commissioned to reconstruct a cabinet, to which he assented, and asked the house to adjourn until the 28th for that purpose. As it was found that no single party was strong enough to carry on the government, and that no parties could be brought to coalesce for the purpose, the former administration, after their short retirement, were continued in office.

The great obstacle which our statesmen had lately encountered in the formation of a ministry, arose from the ecclesiastical titles bill, that still awaited a settlement. The opposition against it in parliament was so strong, while the public voice was so decisive in its favour, that, let the end be what it might, no one seemed willing either to encounter the difficulty or undergo the responsibility. Settled however it must be, and that without further delay; and accordingly, it was reintroduced on the 7th, but with sundry modifications, which had been devised during the interval. These, on the order for the second reading, were stated by Sir George Grey. Owing to the peculiar circumstances of Ireland, as distinguished from those of England and Scotland, the bill as it now stood would, without intending it, interfere with the purely spiritual practices of Irish Roman Catholic prelates in reference to ordination and collation of priests, and in regard to bequests and practices that had been long sanctioned; and on this account, the government had agreed to omit the second and third clauses altogether. It was indignantly objected by several members, that the bill thus curtailed would be no bill at all—a disgrace to the legislature, and a ground of discontent to the country. Sir George Grey's motion, however, was agreed to, and on the 14th of March the debate on the second reading commenced. But even in spite of the heavy abatements made on the bill, it was still so obnoxious, that its advocates could scarcely bear up against the storm, and seven nights of fierce debate were spent before the second reading was carried, which was done by 438 against 95.

In a matter of such paramount importance, the arguments upon either side were worthy of the

consideration they demanded. Should this measure become law, and be enforced, we were told that we should soon see a crowd of English exiled Roman Catholic prelates upon the shores of Belgium, Holland, and France. And would it suit the views of Englishmen to have complaints of their persecuting spirit thus dinned into foreign ears, and odious comparisons drawn between their illiberality and the toleration of the Continent? A long list of examples was rehearsed, to show that important ecclesiastical as well as lay functionaries, in official documents, had used the territorial titles of the Roman Catholic bishops in reference to the incumbents of those sees. The pride of Protestantism was also appealed to, with the assurance that no threat was held out by the Church of Rome against our civil and religious liberty, and that even at the worst the Church of England had nothing to fear.

For the bill it was alleged, that the Roman Catholics had no right to establish their hierarchy in England, merely because the state had granted them the free and unfettered exercise of their religion. But the means adopted for this purpose were a breach of our municipal and constitutional law; and were a violation of the public law of Europe, of the sovereignty of our state, and of our national independence. It was monstrous and intolerable, therefore, to declare, that the government and parliament of this country must submit to such measures, because some people thought that the Roman Catholic church would be better governed by archbishops and bishops than by vicars apostolical. This establishment of an hierarchy, also, had something more than a spiritual scope and effect. If any town or place were appointed to be an episcopal see, it became *ipso facto* a city; and was not this on the part of the pope an act of territorial sovereignty? If the Roman Catholics had wanted important changes, they should have come to parliament for them, and pursued their objects by legal and constitutional means, and not by what the nation regarded as an insult. In the mean time, it was not worth while for a great country like this to enter into hostilities with the Roman pontiff. The present bill would be enough for the emergency. By its preventive power, the Roman Catholics could not have episcopal jurisdiction; they could not introduce canon law; they could not assemble in synod to frustrate, perchance, the decrees of the imperial parliament, unless there were bishops with those territorial titles, which the bill would prohibit them from assuming.

In answer to those who were dissatisfied with the limitations of the bill, as well as those who thought it too stringent, especially for Ireland,

VOL. IV.

the attorney-general explained its legal bearings, and showed how far it was intended to operate, and would most probably operate. It would not affect liberty of conscience, or interfere with spiritual action on any Roman Catholic in the country. The canon law, as attempted to be established in our country by the Papal rescript, was not the law of England; but the English law would take cognizance of that part of it which concerns the matter in hand, as a fact to be proved by witnesses of competent character; and when the fact was once proved, the law would not inquire whether it was right or reasonable, but would adopt the fact, and act on it. There were rich ecclesiastical benefices in this country belonging to the Roman Catholics, to which their bishops had always claimed the right of appointment—a claim, however, which had always hitherto been successfully resisted by the laity. The prelates of the Roman Catholic church being simply bishops, and not having any territorial dioceses, could not enforce that claim; but by the canon law they would have the right, if their dioceses were made territorial, to appoint under certain circumstances and conditions the priests to these benefices. Such would be the consequences of the Papal brief, which this bill was calculated to prevent. These bishops, though thus debarred from the authority granted to them by the canon law, would still be able to exercise all their purely spiritual functions as before. The measure, as a whole, might check the first step towards giving the Romish church in England a predominance over that in Ireland; but it would not injure religious liberty, and ought not to injure the friendly relations with Ireland which all Englishmen desired to maintain.

In its progress through committee, the ecclesiastical titles bill was at every step the subject of a fresh controversy: at every point a stand was made against the measure; while the amendments proposed and negatived surpassed all former precedent. On the part of the apologists and adherents of Popery, it was a campaign in which they hoped to wear out the stronger party by obstacles and delays. This contest did not terminate till the 27th of June, when the result was brought before the house; and on that occasion an unexpected event occurred, which nonplussed the government and occasioned an important modification of the bill. On its preamble being voted as it originally stood, and the fact of this decision being announced, about seventy members, chiefly Roman Catholic representatives of Irish counties and boroughs, rose in a body, and marched out of the house, amidst peals of laughter. It was no laughing matter, however, to Lord John Russell and his administration, whom this secession threatened with heavy loss,

if not positive overthrow, although he referred to it with the coolness of a practised strategist. He called it a "significant and ostentatious retirement," and supposed it meant that these members would take no part in the proceedings. But they would be taking part, by the very act of retirement: they would be consenting parties to the decision of the house; and they would be responsible for the insertion of these amendments by their aid.

These amendments to which his lordship alluded, had been proposed by Sir Frederick Thesiger, and it was in consequence of these that the Roman Catholic members had made their famous exodus. The object of these proposals was an amendment of the first declaratory clause, so that it should apply to all Papal rescripts, and not merely to that which established the hierarchy—to give the prosecuting power to any individual, with the sanction of the crown officers—and to make penal the introduction of bulls. All three were carried. At the third reading of the bill, which occurred on the 4th of July, Lord John Russell endeavoured to persuade the house to reverse these decisions, but was unsuccessful. And still, the Irish Roman Catholic members kept aloof, and took no part in the proceedings. For this third reading, many a speech had been prepared on either side, and a long debate was expected; but on the speaker putting the question, "That this bill do now pass," not a member rose: on putting it again, there was the same dead silence; and on the division being taken, there were 263 for the motion, and only 46 against it. There had been no fight, because there was no opposition; and the assailing party appear to have been stunned by the mere *vis inertiae* so unexpectedly assumed by their adversaries.

In this way, a life-and-death contest that had continued nearly five long months, and wound up public expectation to the uttermost, was suddenly terminated. It had ended in a victory which was feared to be no victory at all, as not a blow had been struck, or token of resistance offered. After having passed the commons, the bill was brought into the lords; but there, a brief discussion sufficed, as the subject had already been so thoroughly sifted. The second reading was passed by a majority of 265 against 38; and on the 29th of July, the third reading in the lords was ended, and the bill committed to the royal approval. Thus sanctioned, on the 1st of August, 1851, under the designation of "An act to prevent the assumption of certain ecclesiastical titles in respect of places in the United Kingdom," this act of 14 and 15 Vict. c. 49, after stating

the offence which had occasioned its enactment, thus decrees:—

"I. All such briefs, rescripts, or letters apostolical, and all and every the jurisdiction, authority, pre-eminence, or title conferred, or pretended to be conferred thereby, are and shall be, and be deemed unlawful and void.

"II. And be it enacted, that if, after the passing of this act, any person shall obtain, or cause to be procured from the bishop or see of Rome, or shall publish or put in use within any part of the United Kingdom, any such bull, brief, rescript, or letters apostolical, or any other instrument or writing, for the purpose of constituting such archbishops or bishops of such pretended provinces, sees, or dioceses within the United Kingdom; or if any person, other than a person thereunto authorized by law in respect of an archbishopric, bishopric, or deanery of the united Church of England and Ireland, assume or use the name, style, or title of archbishop, bishop, or dean of any city, town, or place, or of any territory or district (under any designation or description whatsoever), in the United Kingdom, whether such city, town, or place, or such territory or district, be or be not the see or the province, or co-extensive with the province, of any archbishop, or the see or the diocese, or co-extensive with the diocese of any bishop, or the seat or place of the church of any dean, or co-extensive with any deanery of the said united church; the person so offending shall for every such offence forfeit and pay the sum of £100, to be recovered as penalties imposed by the recited act, may be recovered under the provisions thereof, or by action of debt at the suit of any person in one of her majesty's superior courts of law, with the consent of her majesty's attorney-general in England and Ireland, or her majesty's advocate in Scotland, as the case may be.

"III. This act shall not extend or apply to the assumption or use by any bishop of the Protestant Episcopal Church in Scotland, exercising episcopal functions within some district or place in Scotland of any name, style, or title in respect of such district or place; but nothing herein contained shall be taken to give any right to any such bishop to assume or use any name, style, or title which he is not now by law entitled to assume or use.

"IV. Be it enacted, that nothing herein contained shall be construed to annul, repeal, or in any manner affect any provision contained in an act passed in the eighth year of the reign of her present majesty, intituled, 'An act for the more effectual application of charitable donations and bequests in Ireland.'

CHAPTER XIV.—CIVIL AND MILITARY HISTORY.—A.D. 1851—1853.

VICTORIA.

Necessity of re-constructing the budget—The window-tax modified—Proposal to limit the continuation of the income-tax—Mr. Hume's proposal to continue it only one year—Financial difficulties—Mr. D'Israeli's motion for developing the protectionist instead of the government system of finance—Particulars of the proposal and its author's explanations—Answer of the chancellor of exchequer—The motion negatived—Proposals for other reductions in taxation—Re-assembling of parliament in 1852—Causes of Lord Palmerston's removal from office—The premier explains his pacific plan of policy—Necessity for the means of national defence—Parliamentary reform recommended in the royal speech—Lord John Russell's bill on the subject—The militia bill—Its essential points—It is introduced by the premier—Lord Palmerston's proposed amendment—He demands a regular instead of a local militia—Lord John Russell out-voted—The ministers resign—The Derby administration succeeds—The Earl of Derby announces his principles of government—His cautious enunciations—A petition on free trade to ascertain his views on the subject—Another for a similar purpose about the dissolution of parliament—The Earl of Derby refuses to commit himself—The militia bill re-introduced—Its essential points—Inadequate military force in Britain in the event of an invasion—Statement of the government plan of militia defence—Objections brought against it—The militia bill passed through the commons—It is brought into the lords—The Duke of Wellington's speech on the subject of our national defence—He recommends the bill—It is passed—Motions for parliamentary reform—Motion upon bribery and corruption in parliamentary elections—Our Australasian colonies—A representative government formed for New Zealand—Its details—Work effected during this session by the Derby administration—Parliament dissolved and a new one assembled—Death of the Duke of Wellington—Notice of the event in the royal speech—Motion for the further extension of free-trade immunities—Middle course proposed by Lord Palmerston—His proposal ratified—Prince Louis Napoleon becomes Emperor of France—His *coup d'état* of December, 1851—Secrecy with which it was conducted—Its rapid and complete success—He is appointed permanent and irresponsible president—He is afterwards elected emperor by the national suffrage—Apprehensions of Britain at these changes—Pacific professions of the new emperor—Precautions adopted against the chance of a French invasion—The Derby ministry overthrown upon the finance question—They resign.

HE disapprobation with which the financial statement of the chancellor of the exchequer had been received, and the subsequent resignation and recal of the Whig ministry, demanded a reconstruction of the budget, and accordingly it was submitted to the house on the 5th of April, with several important and popular amendments. The chief of these was the window-tax, an impost which not only weighed heavily upon the poorer classes, by confining them to ill-ventilated and darkened habitations, but even induced many of the better classes, especially in the country, to build up every window in their mansions except such as were found absolutely necessary. The chancellor, in his first financial statement of this session, had proposed a compromise, by which a tax upon houses should be substituted in its room, according to the principle of the value of the house; but this proposal, which merely shifted the demand to a different pocket of the tax-payer, without bringing the means of improvement in health and morals to the homes of the poor, was received with marked disapprobation. Sir Charles Wood now proposed a milder alternative. As the window duty was £1 856 000 while the surplus was

only £1,892,000, he proposed a uniform rate of ninepence in the pound upon dwelling-houses, and sixpence upon shops, irrespective of the number of windows or openings they might contain; while houses not exceeding £20 in annual value were to be exempted altogether. In this way the tax would be reduced from £1,856,000 to £720,000. The final result would be, that of the 3,500,000 houses in the kingdom, 3,100,000 would be exempt, and the tax levied only on 400,000 of the most valuable houses.

The income-tax came next into consideration. This Sir Charles acknowledged had at first been imposed to meet a deficiency; but it had been afterwards continued to furnish means for the removal of impolitic restrictions on industry and commerce. On the resolution to continue it being announced, a debate arose in consequence of the following motion of Mr. Herries:—"That the income and property tax, and the stamp duties in Ireland, were granted for limited periods, and to meet temporary exigencies; and that it is expedient to adhere to the declared intentions of parliament; and in order to secure their speedy cessation, to limit the renewal of any portion of those taxes to such an amount as may suffice to provide for the expenditure sanctioned by parlia-

mont, and for the maintenance of public credit." The usual objections that the tax, by its three-year continuations, threatened to become a financial fixture—that it was so dependent upon the true returns of annual income that rogues eluded it and honest men bore the burden—and that its inquisitorial character was still more odious than the pecuniary infliction, continued to be urged against it. On a division, the resolution of Mr. Herries was negatived by 278 against 230; and the second reading of the income-tax bill was moved for the 28th of April. On that occasion, a motion was made that the consideration of the bill should be postponed till that day six months; but Sir Charles Wood reminded the house, that if it should be thrown out there would be a deficiency of £1,000,000 this year, and £3,500,000 the next.

On the bill going into committee on the 2d of May, Mr. Hume moved an important amendment, to the effect that the grant should be limited to one year, with the object of having the whole question deliberately considered in a select committee. His principle was that direct is preferable to indirect taxation; and in support of this, he brought forward a dogged array of facts and arithmetical figures which no tropes and metaphors could overturn. By the present mode of taxation, he stated, sixty-seven per cent. is levied upon the necessities of life, eleven per cent. is paid for stamps, eight per cent. for assessed taxes, ten per cent. for the property-tax, one and a half per cent. for the post-office, and the rest for smaller matters. As indirect taxation thus pressed with unfair weight upon the working-classes, the whole question of taxation must be re-considered. By direct taxation between £2,000,000 and £3,000,000 might be saved, and several taxes might be relieved with a view to their removal. After a very close debate, in which Lord John Russell and his supporters endeavoured to quash the motion, it was carried by 244 against 230; and the income-tax was limited to a duration of one year.

A few days after, Lord John Russell announced his difficulties, and his views regarding the late decision. The trying question that now remained was, what course the government should take in order to sustain public credit, and provide for the expenditure of the country. The window-tax had been exchanged for an equitable house-tax, and the duties on timber and coffee were to be reduced; but during the present inquiry there ought to be no further alterations on the income-tax during the year, nor any diminution of the means of supporting public credit, and the responsibilities to which the house had pledged itself. To this, it was answered by Mr. D'Israeli, on the part of Mr. Hume, that the house having

now determined that the income-tax should last only one year, he did not consider members bound by anything that had passed previously with respect to the other financial propositions of the government, which had proceeded under the impression that the income-tax was to last for a much longer period. These he would have the right to consider as new propositions made under greatly altered circumstances. As for the income-tax, those who opposed it only wished, not that there should be an immediate or a very speedy termination, but a slow and gradual extinction. And since this very slow progress was an inevitable necessity, was it not a duty to make the tax itself more equitable?

Mr. Hume, after the victory he had gained over the government, proceeded to form his proposed select committee, but found such difficulties as had not previously entered even into his habits of careful calculation. When the season of action had arrived, his keenest supporters shrank from the responsibility, some with the complaint that his measure had gone too far, and others, that it had not gone far enough, while not a few had thought that it would never come to a committee at all. At length, however, and by dint of great exertion, a committee was formed, and for a twelvemonth at least the income-tax was left to an undisturbed existence.

On the 30th of June, Mr. D'Israeli brought forward a motion for the purpose of developing the protectionist system of finance, in distinction to that of the government, and of affording opportunity for a comprehensive discussion of their merits. His motion was embodied in the three following resolutions:—

"That, according to an estimate of the probable future produce of the existing taxes, submitted to this house by the chancellor of the exchequer, it appears that a surplus revenue may be expected in the present year of about £2,000,000.

"That in the revenue so estimated, is included a sum exceeding £5,000,000 derived from the tax upon income, respecting which an inquiry has been directed to be made by a committee of this house, on the result of whose labours may depend the future renewal or modification of that important impost.

"That in this provisional state of the financial arrangements of the country, it appears to this house to be most consistent with a due regard to the maintenance of public credit and the exigencies of the public service, not to make any material sacrifice of public income in effecting such changes as may be deemed advisable in other branches of taxation."

In the speech with which these proposals were followed, Mr. D'Israeli complained, that though

there was to be a surplus of about £2,000,000, it was only assumed in the expectation that the income-tax should be renewed not merely for three years, but an indefinite period beyond them. It was now evident that the present ministry intended to continue it as long as they held office; and from their tenacity in this respect, he thought that the prospect of relief was indeed a remote one. As for the abatements that had been made in taxation, they had been mere compromises of little value. As for the agricultural distress, it still remained unrelieved. Taking in review the other financial propositions of the session, Mr. D'Israeli observed, that a deficiency of £5,000,000 would be occasioned by the threatened extinction of the income-tax; and if this measure should be accomplished, how was the deficiency to be met?—it must be either by reducing expenditure or increasing taxation. The first could not be done, and the last had been rendered hopeless, by the recent abatement of £2,000,000 of taxes. He and his friends were willing to accede to a total repeal of the window-tax, but only on condition that the house-tax should be transformed into a complete commutation. As to the timber duty, he hoped they would not persist in their impolitic proposition, but would permit the British shipbuilder to build his ships in bond. Such was the gist of a speech that occupied two hours in its delivery. In reply, the chancellor of the exchequer declared that he could extract no practical suggestion from it, except the concluding one—that it should be allowed to build ships in bond. Mr. D'Israeli's motion had said, Repeal no taxes; but his speech said, Repeal the window-tax unconditionally; and then, after the surplus was thus disposed of, his (Mr. D'Israeli's) speech had concluded with reflections on the necessity of upholding public credit, couched in high-flown language about the empire of the Cæsars with its triple crown, the mines of Golconda, pillared palanquins, and other things having as little to do with the question. The surplus of this year did not depend upon the income-tax: it was independently of it that the repeal of the more urgent burdens had been proposed; while the repeal of others would depend upon the settlement of the question, whether the income-tax was to be continued or not. Mr. D'Israeli's resolutions were negatived by 242 against 129.

In the reductions of this year upon the customs duties were those on timber and coffee, which were brought down to half their previous amount. A proposal was made for the repeal of the malt-tax; but as this yielded a revenue of £5,400,000, the loss of which would be ruinous to the revenue after the late concessions, the motion was negatived by 258 against 122. After this defeat, the

advocates for wholesome drink for the working-classes, instead of gin and foreign spirits, moved for a repeal of half the amount of the tax upon beer, but were in this instance also defeated by

a large majority. The same fate attended a motion for the remission of the duty on hops. Another motion respecting the mode of levying duty on home-made spirits taken out of bond, although ultimately lost, produced a discouraging defeat to ministers, as on its first proposal the votes of the ministers and opposition were equal, so that the question was adjourned only by the casting vote of the speaker.

Such were the chief events of a session which, with the exception of the Papal aggression, and the ecclesiastical titles bill founded upon it, presented scarcely any event of historical importance. But the great event of public interest, the crowning achievement of 1851, was not only unconnected with parliamentary proceedings, but sufficient to make amends for their poverty. We allude to the opening of the Crystal Palace in Hyde Park for the exhibition of the industry of all nations on the 1st of May, of which an account will be given in that department of our history to which such an event more properly belongs. Parliament was prorogued by her majesty in person on the 8th of August.

At the re-assembling of the houses, which occurred on the 3d of February, 1852, there were several indications that the present ministry, notwithstanding that retentiveness with which they had been twitted by their opponents, held office by a precarious tenure. Not the least of these symptoms was the removal from office of Lord Palmerston, who was one of the chief sup-

porters of the government; and the causes of this removal became the earliest subject of inquiry. This explanation was given by Lord John Russell; and it appeared from it, that the offence of the secretary for foreign affairs (Lord Palmerston) had chiefly consisted in approving of Louis Napoleon's *coup d'état*, by which he had overthrown the republican party in France, and paved the way for the establishment of the empire. This, Lord John alleged, was not only putting himself in the place of the crown, but giving the moral approbation of England to the acts of the president, in direct opposition to our system of pacific policy towards France. Under these circumstances, he felt he had no alternative, while prime minister, than to advise Lord Palmerston to resign his seals of office.

Lord John then adverted to the present state of France, in its relation to the peace and safety of England, and thought it would be advisable, while maintaining our friendly relations with France, notwithstanding the late changes, to propose some augmentation of the estimates. This was no more than a necessary precaution which every prudent state ought to adopt. "It is impossible not to see," he said, "that, in the great changes which have taken place in the world within these few years, among other arts the art of war has been improved, and that it is necessary when there is, as there always is, a possibility of war, to be prepared for our defence. But, really, to see some of the letters which have been published, and to hear some of the language that has been used, it would seem that these two great nations, so wealthy, so civilized, so enlightened, were going to butcher one another, merely to see what would be the effect of percussion-shells and needle-guns. I trust these fears are only temporary; I am convinced the solid and deliberate opinion of this country and of this house is for peace—for the continuance of the most permanent and solid peace." His lordship then adverted to the terrible revolutionary year 1848, and the changes it wrought in Tuscany, Austria, Hesse, and other states, where democratic constitutions were proclaimed, and when many in that house expressed their joy at the tidings. But these democratic governments had one and all of them been strangled in their birth, and the rule of absolute power had been restored. "Now, sir," his lordship asked, "is there no moral to be drawn from this? Does it not show, in the first place, that we should not judge hastily or rashly of events occurring in foreign countries? Does it not show, likewise, that, with respect to ourselves, though it was thought we had not the same degree of liberty as some of those states, we have done wisely to adhere to our ancient institutions? . . . I trust, therefore, that we shall,

with regard to our own country, continue in the path of peaceable and safe reform, rather than, by the adoption of anything discordant with our institutions, run the risk of losing the very liberty for which we make the change. But as to foreign countries, there is this to be said, that while we do not interfere with their domestic concerns—while we abstain from any intemperate judgment on their internal affairs—yet, there is one result which comes home to us, and imposes upon us a duty from which we cannot flinch. All these various governments of foreign states, as each gets uppermost, send their enemies and opponents out of the country; and the consequence is, that we have many who are seeking refuge in England. In giving them hospitality we are but pursuing the ancient and known policy of this country; we are but doing that which was celebrated two centuries ago." In concluding this explanation of his pacific and conciliatory plan of policy, the wisdom of which a short time sufficed to demonstrate, the premier emphatically wound up the conclusion: "I must again repeat, that in any measures we have to take—that in any measures which we may have to submit to this house—it shall be our object not to increase that unreasonable panic, but to alleviate it. It is my persuasion that it is wise at all times to take precautions against contingent and possible danger; but, at the same time, I say, there is no reason to suppose that any danger threatens us—that there is, in fact, no dispute between us and any other power. I have the happiness to say, that the relations of peace exist between this country and foreign nations in the fullest degree. I trust they may continue to do so; and while I deplore events which have passed on the continent of Europe—events which, I fear, were but the too certain consequences of the revolution of 1848—I do trust that by peace and civilization, by the intelligence which is daily pouring in on us, by the inventions made to improve the condition of mankind, liberty shall be at length introduced and established, and that, with religion, it shall govern the hearts of men, and produce happier days to mankind."

After an explanatory speech from Lord Palmerston upon the subject of his retirement, the attention of the house was directed to the great periodical question of parliamentary reform. This had been called for in the following paragraphs of the royal speech at the opening of the session:—"It appears to me that this is a fitting time for calmly considering whether it may not be advisable to make such amendments in the act of the late reign, relating to the representation of the commons in parliament, as may be deemed calculated to carry into more complete effect the principles upon which that law is founded.

"I have the fullest confidence that in any such consideration you will firmly adhere to the acknowledged principles of the constitution, by which the prerogatives of the crown, the authority of both Houses of Parliament, and the rights and liberties of the people, are equally secured."

In accordance with this intimation of the purpose of the government, Lord John Russell announced, on the 9th of February, his intended bills for further parliamentary reform. He proposed to disfranchise the smaller nomination boroughs in cases of proved corruption, and to make a considerable change in the mode of inquiry into cases of corruption. He also proposed to extend the general franchise by lowering the established £10 to a £5 qualification for households, and to give the county franchise to persons living without the borough who paid 40s. annually of assessed taxes. Upon the qualification for members, he proposed that the oaths taken at the table of the house should be altered, the chief of these alterations being the omission of the words "on the faith of a true Christian." On a change of offices held under the crown, vacation of the seat and re-election were not to be required. And lastly, although he did not propose to alter the county franchise in Ireland, he wished to reduce that for cities and boroughs from £8 to £5.

After some discussion, in which it was manifest that the subject of parliamentary reform for the present had a very inferior degree of interest—that some other measure occupied the thoughts of the house—leave was given to bring in this reform bill at the specified period of three weeks afterwards. During the interval, the militia bill was brought in, by which the overthrow of the ministry was occasioned.

This bill was explained by Lord John Russell in a committee of the whole house, on the 16th of February. It was a matter of vital importance, as it concerned the national defence at a time when war, and even invasion, might have been apprehended, in consequence of the recent political changes in France. These were fully stated by his lordship as the causes of his present proposal, and he alluded to the facility with which Britain might now be invaded, from the changes produced by steam navigation. After stating the necessity of increasing our standing army, and concentrating our troops that were scattered over the colonies, his lordship announced the design of the ministry to establish a local in preference to a regular militia. The plan was as follows:—Two-thirds of the officers were to be appointed by the lord-lieutenants, one field-officer in each corps, and the others to be appointed by the crown. A qualification for officers of a certain amount of landed property was to be dispensed

with. Of the men, it was proposed that instead of limiting the standard to 18 and 30 years of age, as under the old local militia act, the limits of the ballot should, in the first year be from 20 to 23 years of age, and in the second, from 20 to 25; but any persons between 20 and 30 might volunteer, who should serve one year less than those drawn by ballot. Lord John then proceeded to detail the manner in which this militia army was to be combined. In the first year it was proposed that its number should not be less than 70,000 men, its expenses to be less than £200,000; in the second year the number should be raised to 100,000 men, and afterwards to 150,000, with proportionally increased expenses. In conclusion, he declared that, from the present aspect of affairs, it was evident some such force was needed; and he expressed his confidence that, whether his measure was accepted or not, he had laid the foundation of a force for the defence of the country.

The necessity of a national defence was felt by the dullest and advocated by the most economical, and therefore the house was at one upon this point. But was a militia the most effectual of defences? and was the present form of preparing it the best? Upon these points Lord Palmerston spoke fully. He first adverted to the suggestion of Mr. Cobden, that our navy was sufficient for the purpose, and he showed that upon any point of our coast, whose full extent it was impossible to cover, a hostile army might be landed. A land force, therefore, like the present, was the best—one dormant in peace, but ready to act with regular troops in time of war; but he thought it would be better to retain the plan of the old regular militia, and that the word "local" should be left out of the bill, which was also susceptible of other important improvements.

Leave being given to bring in the bill, Lord John Russell proposed it with several modifications. Substitutes were to be allowed, but only taken out of the same lists of the year and county, by which strict personal service would be avoided on the one hand, and the evasions attendant upon hiring substitutes on the other. Her majesty should be empowered to call out the force not only in the case of actual, but even of apprehended invasion; and it should be retained embodied not six weeks, but six months after the enemy had left our shores, with a further liability to be kept on foot for twelve months. Lord Palmerston then rose to propose his amendment, of which he had previously given notice. He thought there was an essential difference between the title of the bill and its purport; it confounded the essential distinction between a general and local militia. The danger of an invasion was most imminent at the breaking out of a war, and how

was this to be met? by having in time of peace a considerable force, organized, drilled, armed, and equipped, which could be raised at the shortest possible notice. But a local militia was not such a force. What the country wanted was a regular militia—a force that had existed nearly two centuries, instead of a local militia, which was only an occasional force for a particular emergency. He therefore proposed to insert the word “consolidate,” and omit the word “local” in the title and language of the bill. To this, Lord John Russell replied, that after some months of consultation, the government had come to the conclusion that the plan they had proposed was the best; but if the house decided to leave out the word “local,” all he could say was, that the chairman of the committee and Lord Palmerston must bring in the bill. Upon a division taking place, Lord John was outvoted by 135 against 126. He then declared, according to his pledge, that as the government had been defeated in bringing in the bill according to their own form, he must decline the responsibility of the measure. He had now been told by their decision that the house had no confidence in the government, and he moved, that the chairman and Lord Palmerston be ordered to bring in the militia bill. A scene of noisy confusion followed this display of pouting politics, and the necessary result followed: the ministers resigned office, and the Russell administration was ended. To the Earl of Derby was intrusted the task of forming a new administration, in which he succeeded. Much anxiety was felt to learn the course which the new premier meant to pursue in the present crisis both of foreign and domestic troubles; and this the earl announced in the House of Lords on the 27th of February. He was firmly bent on maintaining the blessings of universal peace, without either an ostentatious display of naval and military preparation, or a vain hope of disarming the world by casting down all our own defences. He would carefully avoid interference with other countries in the form of government they might be pleased to adopt, and would recognize it, even though it should be an absolute red republic. But while acting on these conciliatory principles, he would be anxious to put the country in a safe

THE EARL OF DERBY.—From a portrait by W. Derby

position against hostile aggression, and on this head he was glad to state, that our navy was never in a better condition than at present. As for home defence, he avowed his preference to the “old constitutional force.” With regard to his principles in commerce and finance, he spoke with necessary caution; and upon the terrible question of protection, which was certain to be brought forward as the test of the new administration, he expressed himself in such terms as sufficed to keep both parties in doubt; that, he said, referring to the question of a tax on food, “could only be solved by the intelligent portion of the community;” and it was not the intention of the government to make any proposition on the subject at present. The house then adjourned to the 12th of March.

On the re-assembling of parliament, the gage of battle was thrown down. This was in the form of a petition from certain inhabitants of the West Riding of Yorkshire, praying for a definite answer as to whether free trade was to be maintained or abandoned. But although conjured to announce the intentions of government on this sub-

ject, the Earl of Derby still maintained his cautious oracular obscurity. All he would divulge was, that this question could only be solved by a general election, an event which the formation of the present government would materially accelerate; and that such a step as the re-imposition of a duty on corn could only be taken after careful deliberation, and then, not by a bare majority, but after an expression of very general concurrence on the part of the country. Although these answers were deliberated in both houses, and were interpreted by each party according to its hopes or fears, no further satisfaction was vouchsafed for the present. Another trial was made to ascertain the purposes of the new ministry, by the question, at what period they intended to advise the crown to dissolve the parliament. But here also there was no definite answer. The Earl of Derby contented himself with stating, that he saw no good reason for an immediate dissolution; that the attempt to govern the country by a minority was sanctioned by example so late as that of Sir Robert Peel, but that he had no hesitation in declaring his opinion,

that the next autumn ought not to pass without calling a new parliament for the expression of the national feeling as to the principles on which the government of the country should be conducted.

After this difficult ordeal had been endured repeatedly by the new premier, without committing himself either upon his commercial or protectionist intentions, the serious business of the session commenced with the militia bill, which was introduced on the 29th of March, by Mr. Spencer Walpole, the home secretary. He stated that this country, in its means of defence at least, should be on an equality with other nations; but that such was not the case at present. There were 100,000 men for the army, 30,000 in India, 15,000 pensioners, 13,500 yeomanry, in all 160,000 men. But what number of men remained out of these for our own defences? Even this was not a quarter of the army of Russia, not a half of the army of Prussia, not one-third of the army of France, and very little more than the army of Belgium. But while the British empire comprehends one-sixth of the population, and one-eighth of the habitable surface of the globe, we could not bring 25,000 soldiers on any one point in England, and that then, the rest of the country, the metropolis itself, and the queen's palace, would be left to the defence of pensioners and police. Even our fleet, too, would be insufficient to prevent invasion, as the only ships at present in commission were nine vessels of war, five frigates, one sloop, nine steamers propelled by screw, and eight steamers propelled by paddle. Mr. Walpole then detailed the government plan of the militia defence, which consisted of the following particulars:—1. To raise, if possible, without abandoning the ballot, a force of 80,000 volunteers, 50,000 being raised for the first, and 30,000 for the second year, the period of service to be five years. 2. To raise these men by bounties of £3 or £4. 3. To dispense with the property qualifications hitherto required of all officers under the rank of major. 4. The number of days' training in the year to be twenty-one, the crown having the power to extend it to seven weeks, or reduce it to three days. Lastly, to make no alteration in the existing law about the embodying of the men. As to the expense of this national array, Mr. Walpole stated that £1,200,000 would be required for bounty and equipment; but if spread over five years, it would be about £240,000 per annum, except for the first year, when the cost of equipment and clothing would raise it to £400,000. These troops being a national defence, the expenses already mentioned should be borne by the public purse, except in those districts which could not provide their proper quota.

This simple and lucid statement, even though it had been tenfold more worthy of acceptance, could not have escaped from cavil; it was the measure of a new administration whose course of action had hitherto been provokingly concealed, and for whose halting, therefore, many were on the watch. The bill passed the first stage however, and on the second reading, which occurred on the 23d of April, the debate of two nights only served to strengthen the government, by exposing the rancorous temper and weak arguments of the opposition. It was alleged, that our military contingents in the colonies could be so pared down and lessened, as to furnish 15,000 good trained soldiers for home service, with a saving of from £200,000 to £300,000—that the militia force proposed to be raised would cost too much—that it would be impracticable to raise the men without ballot—that no plan of foreign invasion could be devised against us which our diplomatic agents would be unable to detect—and that this militia system, founded on the old plan, was unsuitable to the new emergencies of modern warfare, should the apprehended evil actually occur. The second reading was passed by 355 to 165, a result that showed in a wonderful degree the confidence that had already been won by the new cabinet. The third reading, notwithstanding the objections and amendments, which were continued to the close, was passed by 187 to 142.

In the House of Lords, where the subject was introduced on the 15th of June, the most prominent speaker in the debate was the Duke of Wellington; and upon a question on which he was so completely at home, and so well entitled to speak with authority, he made one of those last public addresses, which the nation would do well to lay to heart. It was like the testament of the heroic Bruce of Scotland, which he delivered upon his death-bed, and by which the land was often defended long after he had passed away. "I am certainly the last man," he said, "to have any hesitation of opinion as to the relative advantages of meeting an enemy with disciplined, or with undisciplined or half-disciplined troops. The things are not to be compared at all. With disciplined troops, you are acting with a certain degree of confidence that what they are ordered to perform they will perform. With undisciplined troops you can have no such confidence; on the contrary, the chances are that they will do the very reverse of what they are ordered to do. But we must look a little at the state in which we stand at the present moment. This country is at peace with the whole world, except in certain parts, or on the frontiers of its own distant dominions, with which operations of war are carried on by means of our peace

establishment. I say that peace establishment ought to have been effectually provided for long ago. If it had been, we should not have needed now to be told, as we have been by the noble marquis (Lansdowne) about the number of days and weeks it will take to train the militia recruits, or about the futility of expecting anything to the purpose from troops with their three weeks, or their six weeks, or what time it may be, of training. We have never, up to this moment, maintained a proper peace establishment—that is the real truth; and we are now in that position in which we find ourselves forced to form a peace establishment such as this country requires. I tell you, that for the last ten years you have never had in your army more men than enough to relieve the sentries on duty of your stations in the different parts of the world: such is the state of your peace establishment at the present time, such has been the state of your peace establishment for the last ten years. . . . We are still at peace with all the world; let us, then, have a peace establishment—our constitutional peace establishment; and, when you have got that, see what you will do next. The noble marquis says, he thinks he should prefer an army of reserve. An army of reserve! What is an army of reserve? Is it an army to cost less than £40 each man all round? If he thinks that possible, I tell him that we can have no such thing. But what I desire—and I believe it is a desire the most moderate that can be formed—is, that you shall give us, in the first instance, the old constitutional peace establishment. When we have got that, then you may do what you please. The noble marquis says, very truly, that these 50,000, or 80,000, or 150,000 militiamen won't be fit for service in six months, or twelve months, or eighteen months: but I say they will be fit, at all events, for some service; and certainly they will enable us to employ in the field others who are fit for service; and in time they will themselves become fit for service. In the last war we had in service several regiments of English militia, and they were in as high a state of discipline, and as fit for service, as any men I ever saw in my life. It was quite impossible to have a body of troops in higher order, or in higher discipline, or more fit for discipline, than those bodies of British militia were at the commencement of the present century up to 1810; they were as fine a corps as ever were seen; and I say, no doubt these bodies of 50,000 or 80,000 men, whatever the number may be, will be so too, in the course of time. Everything has its beginning, and this is a commencement. You must make a beginning here, and it will take some months before you can form reserve regiments. . . . If you begin with the forma-

tion of corps under this act of parliament, they will in time become what their predecessors in the militia were; and if ever they do become what the former militia were, you may rely on it they will perform all the services they may be required to perform. I recommend you to adopt this measure, as the commencement of a completion of the peace establishment. It will give you a constitutional force. It will not be at first or for some time everything we could desire, but by degrees it will become what you want—an efficient auxiliary force to the regular army." Such was the advice of the highest of all military experience, and the bill passed into law without further difficulty.

During this session, the subject of parliamentary reform was again brought up in a variety of forms, but with little or no immediate result. The first motion on the subject was made by that indefatigable reformer, Joseph Hume, who moved for leave to bring in a bill to extend the elective franchise in England and Wales, so that every ratepayer of age, a resident in his parish for twelve months, and free from mental or legal disability, should be entitled to vote for a representative in parliament—that votes should be taken by ballot; and that the duration of parliament should not exceed three years. His proposal fared as it had done before, being rejected by an immense majority. Another, re-introduced by Mr. Locke King, for the assimilation of the county to the borough franchise, was lost by a majority against it of fifty-three. A more fortunate measure was that proposed by Lord Brougham at an early part of the session in the House of Lords, to reduce the fifty days required to elapse between a dissolution and the meeting of a new parliament to thirty-five days. A bill to this effect was passed without opposition.

A more important subject than any of these—that of election bribery and corruption—was now brought before parliament; and it soon appeared that the application was by no means premature. An appeal of this nature near the close of the last session had been made against St. Albans; and the appointment of a commission of inquiry was followed by the discovery of such a system of bribery which had prevailed for generations in this effete moth-eaten borough, that it was forthwith disfranchised, and struck out of the election list. But the same inquiry showed that the purchasable men of Verulam were not the only trespassers in this respect: other boroughs were equally corrupt and rotten; and during the present session, an act was passed extending similar commissions to every other place in which the evil was reported to exist. The dismay which this law excited in several quarters fully evinced the

necessity for its enactment. By the disfranchisement of St. Albans and also of Sudbury, four seats in parliament were annihilated; and as it was judged necessary to keep up the full number of the national representation, the government wished to create four others in their room. To this effect Mr. D'Israeli moved, that two new members should be added to the West Riding of Yorkshire, and two to the southern division of Lancashire—and this to be done before the dissolution of the present parliament. In this proposal, however, the government was defeated by a majority of eighty-six.

The growing importance of our Australasian colonies, and the propriety of giving them a representative constitution in conformity with that of the mother country, had met with a ready acquiescence; and it was now the turn of New Zealand to have her claims on this head fully considered. This lately occupied settlement of British enterprise had received in 1846 a *pro tempore* constitution which would expire in 1853, and it was needful for so important a colony that a new and more ample constitution should be in readiness to replace the old. Some difficulty, however, was found in adapting it to the anomalous character of this settlement, where the natives not only greatly outnumbered the British settlers, but were rapidly advancing in civilization and political consequence. To this also was to be added the geographical character of the two islands of which New Zealand is composed, and the manner in which it had been colonized by the detached British communities from every part of the United Kingdom. The task was undertaken by Sir John Pakington, the new secretary for the colonial department, and was executed in such a manner as to give general satisfaction, so that the bill for the New Zealand constitution passed easily through both houses. A scheme of such difficult legislation is worthy of some detail. It was proposed that New Zealand should be considered as one colony, but be divided into seven provinces, each governed by a superintendent appointed by the governor-in-chief, with a salary of £500 per annum. Each superintendent was to have a legislative council of not fewer than nine members, to be entirely elective; while the qualification of the electors, whether settlers or natives, was to consist of either a freehold worth £50, or a house—if in the town, worth £10 a year, and if in the country, worth £5—or household property with an unexpired term of three years, worth £10 a year. Whether the members of these provincial councils should be salaried was a question left to the central legislature. Fourteen subjects were specified upon which these councils were to be prohibited from legislating. At the end of every four years, new councils

were to be elected. The central legislature was to consist of the governor-in-chief as head, and two chambers; the members of the upper chamber to be appointed by the crown during pleasure, and those of the lower to be elective, the privilege of election being held on the same terms as that for the provincial councils. The number of members for the upper chamber was to be not less than ten, nor more than fifteen, at the discretion of the governor-in-chief; for the lower chamber, not less than twenty-five, nor more than forty. This central parliament was to have a five years' duration, and its enactments were to overrule those of the provincial legislatures. A civil list was to be established, of which £12,000 a year was to be reserved for the salaries of the superintendents, and £7000 a year for native purposes. Finally, the local legislature should have full power, from time to time, to enact changes in the constitution, with consent of the crown.

Such were the chief proceedings of the session previous to the dissolution of parliament; and although it was alleged that the Derby administration had done little more than carrying through those measures that had already been prepared to their hand, it was still felt that much business had been transacted, and transacted ably as well as successfully. Besides those changes, several improvements were effected in the courts of law and equity, the common law courts, the county courts, and the court of chancery, by which their processes were simplified, and their vexatious delays abbreviated. Several sanitary regulations were also passed for supplying the metropolis with water, and abolishing the practice of intramural interments. On the 1st of July, parliament was prorogued by her majesty in person, previous to its dissolution, which was announced the day after.

The first meeting of the new parliament occurred on the 4th of November, when the Hon. Charles Shaw Lefevre was elected speaker of the House of Commons, and the royal speech was delivered on the 11th; but in the House of Lords one place was vacant which it may take centuries to fill. We allude to the death of the Duke of Wellington, at Walmer Castle, on the 14th of September. His grace was already in his eighty-fourth year—and with what important events both in war and politics had that long-extended life been crowded! This bereavement formed the first announcement, the commencing mournful note of her majesty's address; and the following words, in which it was intimated, were something far beyond the language of established usage or political compliment:—"I cannot meet you for the first time after the dissolution of parliament, without expressing my deep sorrow, in

which I am sure you will participate, that your deliberations can no longer be aided by the counsels of that illustrious man whose great achievements have exalted the name of England, and in whose loyalty and patriotism the interests

of my throne and of my people ever found an unflinching support. I rely with confidence on your desire to join with me in taking such steps as may mark your sense of the irreparable loss which the country has sustained by the death of

WALMER CASTLE, Coast of Kent.—From a view by S. Read

Arthur, Duke of Wellington." It was the touching spectacle of the sovereign of the realm bewailing the decease of the best support of her throne—of the hero whose firm unswerving loyalty had been so tenderly mixed with an almost paternal affection. The deep grief of all parties and classes throughout the nation—the eulogiums in parliament—the funeral of the illustrious deceased, in which the whole country bewailed their loss as one of the greatest of national calamities—and the monuments which have been erected to his memory, attest the cordiality with which the royal advice was received, and the unanimous enthusiasm with which it was fulfilled.

But there were stern political questions at hand to dry up the public tears, and introduce other feelings than those of funereal sorrow. The smothered indignation which the doubtful language of the cabinet had excited about their intentions upon free trade and finance broke out afresh, and the combat was opened anew. This conflict was commenced on the 23d of November, by Mr. C. Villiers, who proposed his resolutions in the House of Commons to the following effect:—"That it is the opinion of this house, that the improved condition of the country, and particularly of the industrious classes, is mainly the result of recent commercial legislation, and especially of the act of 1846, which established the free admission of foreign corns; and that that act was a wise, just, and beneficial measure. That it is the opinion of this house, that the maintenance and further extension of the policy of free trade, as opposed to that of protection, will best enable the property and industry of the nation to bear the burdens to which they are exposed,

and will most contribute to the general prosperity, welfare, and contentment of the people. That this house is ready to take into its consideration any measures consistent with the principles of these resolutions which may be laid before it by her majesty's ministers." If taunts not only bitter, but in many cases justly merited, could have extracted a distinct avowal from ministers of their future intentions about protection, the speech of Mr. Villiers might have shaken them from their ambiguity, and made them speak plainly out. On the other hand, it was objected by Lord Palmerston, that the present resolutions were too humbling, and that if eagerly pressed, they would probably be rejected. What he desired therefore was a middle course, embodied in the following amendment:—

"That it is the opinion of this house, that the improved condition of the country, and especially of the industrious classes, is mainly the result of recent legislation, which has established the principle of unrestricted competition, has abolished taxes imposed for purposes of protection, and has thereby diminished the cost and increased the abundance of the principal articles of the food of the people.

"That it is the opinion of this house, that this policy, firmly maintained and prudently extended, will best enable the industry of the country to bear its burdens, and will thereby most surely promote the welfare and contentment of the people.

"That this house will be ready to take into consideration any measure consistent with these principles, which, in pursuance of her majesty's gracious speech and recommendation, may be

laid before it." After a long debate, in which two adjournments occurred, these resolutions were agreed to by a majority of 468 to 53, the only alteration made in them being these words in the second, "without inflicting on any important interest," which were interposed after the words, "prudently extended." In this way, the policy of free trade received the full sanction of the House of Commons; and the Earl of Derby was encouraged to express his hope, that by this decision the question was finally set to rest. This hope was ratified by the decision of the lords, before whom the subject was brought on the 3d of December, and who agreed unanimously, that "this house adheres to the commercial system recently established, and would view with regret any attempt to disturb its operations, or impede its progress."

In the meantime, events had been occurring in France which were destined most materially to influence the political relations between that country and Great Britain. On the 6th of December, the astounding fact was announced in both Houses of Parliament, that Prince Louis Napoleon, late President of France, was now its emperor, and that he had been elected to this highest of places by the suffrages of 8,000,000 of voters, being almost the entire adult male population of the country. Accustomed as we had been to the strange and sudden mutations of the French government, so that we had ceased to wonder at them, this event so transcended all British calculation, that at first men could not believe the tale, notwithstanding the overwhelming huzzas of the election, and the substantial deeds of imperial power with which it was immediately followed.

We have already mentioned the singular manner in which this most incomprehensible of mankind succeeded, though with an inferior title, to almost all the kingly power of the deposed Louis Philippe. Invading France with nothing but his carpet-bag, he extinguished in a twinkling the strong rival claims of the two Bourbon families, and reduced to a mere question of days or hours his own final occupation of their throne. No one who had considered either the character of the nation, or the tendencies of the Celtic races, could believe that France would long remain a republic; with them, it must be at best a temporary expedient, either to recover from an universal anarchy or to avoid it. In a republic, every man must have a voice—and what would that be in France!! A republic indeed had succeeded the overthrow of monarchy, but all its subsequent proceedings only showed the restlessness of the people, their unfitness for representative government, their ignorance of what constitutes personal and individual liberty, and the in-

nate craving by which the Celt is distinguished for that patriarchal irresponsible rule and guidance which constitutes the chief element of his political being. The whole nation was soon weary of brawling senates, and divisive councils that ended in nothing, and this more especially when they had now a Napoleon at hand. And no one knew better than he the time when and the mode in which the opportunity should be seized. In his uncle's oracular language, the "pear was ripe," and he now proceeded to pluck it. Even his enemies too had prepared the way, by endeavouring to lessen his authority, and place the army under the control of the assembly. In this way, the assembly threw the army into the hands of the president, and sealed their own doom, which was to be effected by one of those dramatic movements so congenial to a French imagination—by a *coup d'état*. Accordingly, at day-break, on the 2d of December, 1851, those Parisians who were awake saw the city wall covered with papers, and on rubbing their eyes, they found that they were proclamations, dated from the palace of the Elysée, announcing to them that the assembly was dissolved, that the council of state was dissolved, that universal suffrage was re-established, and the state of siege decreed throughout the first military division. The new plan of government was then proposed; and that the people might know what it meant, as well as be enabled to guess its final purpose, it was recommended by the new Napoleon in the following language: "This system, created by the first consul in the beginning of the present century, has already given to France repose and prosperity. It guarantees them still. Such is my profound conviction. If you partake it, declare so by your suffrages. If, on the contrary, you prefer a government without force, monarchical or republican, borrowed from some chimerical future, reply in the negative. Thus, then, for the first time since 1804, you will vote with complete knowledge of the fact, and knowing for whom and for what you vote."

To this proclamation, which burst upon his friends and enemies like a thunderbolt, the president had made only three men privy; these were M. de St. Arnaud, minister of war; M. de Morny, representative of the people; and M. de Maupas, prefect of police, who were all ready to perform their assigned parts in this strange political drama. The bold proclamation was accompanied with still bolder action; for at a few minutes after six o'clock on the same morning, and even before the bill-stickers had commenced their office, the troops were placed at their posts, the agents of police were in motion; and at one and the same instant, over the whole city, every person whose resistance to the new state of things

was apprehended, was arrested, hurried from his bed into a carriage in waiting, and whirled away he knew not whither; so that in twenty minutes, Paris was utterly emptied of its choice republicans and agitators, some of them holding the highest distinction for their past services and influence. The assembly made a desperate rally to vindicate their authority, and met at an early hour in a different building, their own being occupied by soldiers; and there they declared Louis Napoleon Bonaparte a traitor, and deprived him of all authority as president of the republic; but in a few minutes after, they were marched as prisoners through the streets, and shut up in the barracks of the Quai d'Orsay. Thus the whole authority of France, which all Europe had recognized, was ignominiously cooped up in a barrack-yard. The members were offered their liberty, on condition of

offering no resistance to the president's measures; but although they refused these terms, they were all, with the exception of fourteen, set free a few days afterwards.

In this way, by a deed more deeply planned and more daringly and skilfully executed than anything which Napoleon the Great or Cromwell had attempted, France was revolutionized, and fitted for the rule of a master. During that day, Paris looked on stupefied and motionless, but on the morning of the 3d, the cry of "To arms!" was heard, the people began to muster for the fight, and street barricades were thrown up to the amount of several hundreds. Of these, the largest and strongest was at the Porte St. Denis, across the corner of the street of that name, skilfully constructed of huge paving-stones, beams of timber, and overturned waggons, and which was assailed by infantry, cuirassiers, and lancers, backed by a heavy cannonade, before it could be stormed. But skilled though the Parisians were in the war of civic insurrection, the troops had been so skilfully disposed, that every attempt at resistance was quelled almost as soon as it commenced. No scruples also withheld the soldiers from the full execution of their task, so that besides the deaths occasioned by actual conflict, citizens, whether singly or in groups, were fired at and struck down, wherever they presented a mark. After this, the last and most formidable source of resistance, the national guard, was dis-

banded; and that the sanctions of religion might be secured both for past and future proceedings, the Pantheon was restored to its original Christian destination as the church of St. Geneviève, by a decree of the already all-powerful president.

MONSTER BARRICADE AT THE PORTE ST. DENIS, PARIS.—Illustrated London News, 1851.

And now for the voting in of the new constitution, the terms of which were already understood both from past experience and recent proclamations! But what otherwise than a general assent could be expected, especially as the army had already proclaimed their choice, and were ready to maintain it? Even those, however, who were superior to such fears, were equally ready to vote for Louis Napoleon; and the reasons for this step, as announced by M. de Montalembert in his justification for taking it, might have been re-echoed by all the wise and reflective in France. "If Louis Napoleon were unknown," he thus wrote in his public declaration, "I would undoubtedly hesitate to confer on him such a force and such a responsibility. But without entering here into an appreciation of his policy for the last three years, I recall to mind the great religious acts which marked his government as long as the two powers agreed together—the liberty of instruction guaranteed; the pope restored by French arms; its councils, synods, and the plenitude of its dignity given back to the church; the number of its colleges, its communities, and works of charity gradually increased. I seek in vain elsewhere for a system or force able to guarantee to us the preservation and development of such benefits. I see only the gaping gulf of victorious socialism." The result of these mingled motives of fear and favour was shown in the great national poll, in which 7,439,219 votes were

in favour of the president, with increased power for ten years, while only 640,737 were against him.

On the establishment of the new government, unmistakeable symptoms appeared of the restoration of the old Napoleonic rule. The symbols of republicanism were to be removed, and condemned as treasonable and anarchical. The words *liberté, égalité, fraternité*, which figured on most of the public buildings, were therefore denounced by proclamation as incentives to public revolt, by reminding the people of successful insurrections, and ordered to be erased. In like manner, the trees of liberty, which were declared to be dried up and decayed sticks, were ordered to be cut down or rooted up. Certain living trees of liberty were in like manner disposed of, by several hundreds of obnoxious persons being banished to Cayenne or Algeria, or imprisoned in the fortress of Ham without the ceremony of a trial. But with all this severity, the general proceedings of the president were of such a popular character, that all lovers of order and settled government (and in France they now constituted an immense majority) thought that too much power could not be conferred on one who used it so benignantly and wisely. The effect of this feeling was shown with true French rapidity, and in a few months a general desire was felt to convert the president into an emperor. It seemed to them as if the mere name of Napoleon was insufficient, and of no meaning, unless coupled with the imperial title. At length all was in such readiness for the change, that a meeting of the senate was convoked in November, 1852, for the purpose of framing a *senatus consultum* for the empire; and there the president was proclaimed emperor, under the title of Napoleon III., and the imperial dignity made hereditary in his direct descendants, or failing issue, in the descendants of his uncle's brothers, whomsoever he might be pleased to adopt. The public voting for the empire, which commenced on the 21st of November, and was continued for several days, confirmed this decision of the senate by 7,824,189 votes, while only 253,145 were against it. Be it permanency what it may, no national choice could be more universally or distinctly intimated.

A new comet had thus risen in the political horizon of Europe "with fear of change perplexing monarchs;" and by no country was this apprehension more keenly felt than by Britain. It was remembered, that of all her military disasters, that

which rankled the most in French feeling was the defeat of Waterloo, and it was thought that the new emperor would be compelled to signalize his reign by an attempt to avenge it. One guarantee, indeed, the country had for a continued peace, in a speech of the emperor himself at his accession; he had declared that he was sovereign only by the voice of the people, and not by hereditary right to the throne; that he distinctly recognized all the governments that had existed in France since 1814; that he recognized the acts of these governments; and that he acknowledged the solidarity of his government as succeeding the others. These were guarantees, so far as they could go, of his purpose to continue those amicable relations which had subsisted so long between France and Britain; but who could tell what necessities might compel him to yield to those warlike impulses which were so congenial to the French character? Even the possibility of an invasion might now be more certain than before. It was not difficult therefore for the British parliament to agree to that proposal for strengthening our naval defences which had been made in the earlier part of the year. Accordingly, it was carried without a dissenting vote, that 6000 additional men should be employed in the sea service till the 31st of March, 1853; that a Channel fleet and a screw fleet should be established; and that £100,000 should be granted for the expenses of steam machinery. Additional estimates were also voted for the ordnance service.

The stability of the Derby administration was now to be tried upon the question of financial re-adjustment, upon which they could no longer maintain their cautious silence. Their plan was accordingly developed by Mr. D'Israeli, the chancellor of exchequer, on the 3d of December, in an eloquent speech of five hours' length. Into its long details, however, it is unnecessary to enter, as both plan and supporters were swamped in the attempt. The new chancellor had devoted himself heart and soul to the task, and had devised a financial scheme by which all former ones were to be surpassed as well as superseded; but it pleased no one and effected nothing. The debate was continued during four nights by successive adjournments, and the government was defeated by a majority of 305 against 286. Resignation after such a defeat was unavoidable, and accordingly, the Earl of Derby and his colleagues repaired to Osborne, and gave up their offices into her majesty's hands.

CHAPTER XV.—CIVIL AND MILITARY HISTORY.—A.D. 1853.

VICTORIA.

Formation of a new administration—Re-assembling of parliament—Attack on the new ministry—Motion for a remonstrance against the religious persecutions in Tuscany—Discussion of our relations with France—The Maynooth question—Inquiry demanded into the education of Maynooth college—Motion on the subject negatived in the commons by an amendment—A committee of inquiry on Maynooth education appointed by the House of Lords—Reasons adduced for and against the inquiry—Canadian clergy reserves bill—Parliamentary debate on the subject—The bill passed—The Jewish disabilities bill—It is revived by the election of Mr. Salomons to a seat in parliament—Bill for the removal of disabilities lost in the lords—Government plan of education proposed by Lord John Russell—His detail of the plan and its advantages—Comprehensive character of the plan—Permission given for an educational bill to be introduced—Nothing further effected—Finance—Resolutions proposed by the chancellor of exchequer in connection with the national debt—Their introduction into parliament approved of—Success of the chancellor's financial exposition—Popular character of his plan of retrenchment—A stand made against the continuation of the income-tax—The chancellor's bill passed through the commons—Opposition to it from the lords on account of the income-tax—Various obstacles to the bill—It finally passes—Motion for the repeal of taxes on knowledge—One out of three resolutions carried—Increase of nunneries in England and Wales—Suspensions of their coercive character—Motion to facilitate the recovery of personal liberty among their inmates in certain cases—Statements of the despotic character of these institutions—The bill negatived—Counter-motion against the Protestant Established Church of Ireland—Fallacious arguments by which the motion is supported—Answer to these arguments by Lord John Russell—The bill rejected—Bill to alter and amend the laws of church rates—A counter-motion brought forward—Both are negatived—Registration of assurances bill—Its previous frequent failures—It passes a third reading, but is withdrawn—Charitable trusts bill passed—Question of the transportation of our convicts—Impossibility of finding a new penal settlement—Secondary punishments substituted for transportation—Attention of parliament called to India affairs—Statement of the defects of our India government—Bill introduced for their removal—Lord Macaulay's statement on India affairs—The bill passed.

NEW administration was formed by a combination of the Whig party and the followers of Sir Robert Peel, having at their head the Earl of Aberdeen as first lord of the treasury; Mr. Gladstone, chancellor of the exchequer; with Lord Palmerston, Lord John Russell, and the Duke of Newcastle for the home, foreign, and colonial secretaries, &c. The Earl of Aberdeen announced the line of policy he meant to follow, the principal particulars of which were, that he would endeavour to maintain the general peace of Europe without relaxing those defensive measures so recently adopted and too long neglected; and that at home, he would maintain and extend free-trade principles, and pursue the commercial and financial system of the late Sir Robert Peel. The measures of the government would be conservative as well as liberal, for both were essentially necessary in the present state of things.

The Christmas recess being ended, parliament re-assembled on the 10th of February. In the House of Lords, the signal of onset against the new ministry was given by the Earl of Derby, in a question with which he had often himself been assailed, but had found difficult or inconvenient to answer; he asked Lord Aberdeen, what measures were intended for the session, and

urged the premier to lay a statement of them before the house. To this the latter replied, that he had already stated the general principles on which government would proceed, and as for the particular measures, they would be announced in the House of Commons. This was accordingly done on the same day by Lord John Russell.

The first business into which parliament entered, was to discuss the propriety of a proposal made by Mr. Kinnaird to address the queen on the subject of the persecution of the Protestants in Tuscany. There, it was declared, a systematic course of religious persecution had been established; and the last instance of this nature, the imprisonment of the family of the Medici, had roused the resentment of Protestant Britain, so that the public demand for our government to interpose was both loud and influential. The motion of Mr. Kinnaird proposed a remonstrance on the part of Great Britain, in concert with the Protestant governments of Prussia and Holland, for putting a stop to this religious tyranny. The house was recommended to leave this question in the hands of government, which had already remonstrated on the subject; and accordingly the motion was withdrawn. Another subject of discussion, brought forward by Mr. D'Israeli, was that of our relations with France. There was still a profound peace between the two countries, while our

armaments were continuing to be increased; and he wished to have a frank explanation from government as to how its foreign policy in this important case was to be conducted. To this it was answered, that we were on terms of intimate friendship with France, and would not interfere with its domestic concerns; that the virulent language used by our platform orators against the emperor was highly reprehensible; and that the increase of our armaments was only a wise precaution, when we recollected on what slight occasions, at such a period as this, unexpected hostilities might occur. Here the discussion terminated.

After the late Papal aggression, it could not be expected that the Maynooth question, so often the subject of keen debate in both houses, would be allowed to pass over undisturbed. At one time the propriety of endowing the college, at another the character of its education, was the subject of angry question both within doors and without. On the 22d of February it was awakened into full vigour, by a motion of Mr. Spooner, for a committee of the whole house to consider the act relating to Maynooth College. He had previously overtured upon the subject; but his facts, he complained, while uncontradicted, had been met with abuse, and the imputation of selfish motives. He now demanded inquiry into the character of the books from which its teaching was derived, and the effects of that teaching; and he proceeded to show from the text-books that were used, and from recent proceedings of the Roman Catholic clergy in Ireland, that the college had not corresponded to the expectations and intentions of the founders. The motion of Mr. Spooner was met by an amendment of Mr. Scholefield, in which he moved that the consideration of the committee should be extended to "all enactments now in force, whereby the revenue of the state is charged in aid of any ecclesiastical or religious purposes whatsoever, with a view to the repeal of such enactments." This counter-proposal, like a wedge, split the Protestantism of the house into its two antagonist divisions of state church and dissenterism, from whose contention Popery had ere now derived its strongest chance of safety. The debate was

continued by adjournment over the 24th of February, and the 2d of March; and the damaging effect of the amendment was conspicuous throughout, and resolved itself chiefly into the question whether churches should be endowed or not. The original motion was defeated by a division of 192 against 162, and the amendment upon which the debate was continued was negatived by 262 to 68.

The subject, thus set to rest in the House of Commons for a season, was taken up by the lords on the 18th of April, in consequence of the Earl of Winchelsea moving for a committee "to inquire into the system of education pursued at Maynooth." His lordship traced the late Papal insult to our sovereign, and indeed most of the evils of Popery, to the canon law, according to which the pope assumed temporal as well as spiritual authority over the subjects of other sovereigns; and he showed by extracts from books and documents on the Papacy, that the canon law, and the doctrines it inculcates, were taught at Maynooth. It was high

THE EARL OF ABERDEEN — From a portrait by Desmouins

time therefore, he thought, that such a system of education should be suppressed. Lord Aberdeen, who replied, observed that a commission had made in 1826 a full inquiry into the subject, followed by a most elaborate report; and that this had been thought sufficient to supersede the necessity of the present proposal: but as public opinion had demanded the inquiry, he would not check it, and he believed that it would redound to the advantage and credit of the college. But he objected to the proposed select committee, and desired a fair and impartial inquiry by able and independent men, on which account he would propose the following amendment, of which he had previously given notice:—"That an humble address be presented to her majesty, praying that her majesty will be graciously pleased to issue a commission to inquire into the management and government of the college of Maynooth, the discipline and the course of studies pursued therein; also into the effects produced by the increased grants conferred by parliament in 1845."

As dissenterism was not to be found in the British peerage, there was no word in the debate

about the disestablishment of churches, and the blessings of the voluntary principle. All was therefore left to the question, whether Popery should continue to enjoy its state endowments or be left to shift for itself. The chief arguments used in favour of the Maynooth grant were, that it went far to break the Protestant ascendancy in Ireland, which had been so fertile in political contention—that the system of education pursued at Maynooth was precisely that which was necessary to form a Roman Catholic priest—and that the proposed inquiry would produce nothing but misunderstanding, mischief, and discord. On the other hand, it was alleged, that the grant had produced no improvement in the character of the Irish priesthood; that it trained a greater number of priests than were needed in the present reduced state of Irish Popery; and that the persons educated there would never rest until they had effected the overthrow of Protestantism. The nature of the inquiry was also a subject of debate, some preferring a committee, according to the original motion, and others a commission, according to Lord Aberdeen's amendment. Against the latter mode of inquiry it was objected by the Earl of Derby, that the persons composing it must derive their views from parties who were connected with the institution, in which case, even if they were perfectly impartial men, still they would give the house only partial evidence. The inquiry ought to be on oath; but commissioners would have no power to examine on oath, or to compel witnesses to answer. The original motion was thrown out by 110 against 53, and Lord Aberdeen's amendment adopted. In this way the Maynooth question was set aside for future altercation.

The Canadian clergy reserves bill was another Protestant question that had already occasioned much contention. When the province of Canada had been divided in 1791 into two parts, an act was passed, that whenever the crown should dispose of waste lands, one-seventh of their value should be reserved for the support of the Protestant clergy. But during the fifty years that succeeded, complaints had been made that this seventh had been unfairly distributed, and that the clergy of the established churches of England and Scotland had received the larger share. In consequence of the quarrels between the legislative council and the house of assembly which this subject of complaint occasioned, and their appeal to the home legislature, an act had been passed in 1840, when the upper and lower provinces were united. By this act it was decreed, that the one-fourth of the church land already sold should be considered as belonging to the churches of England and Scotland, in the proportion of two to one; that of the remaining

three-fourths, one-half should be considered as belonging to the churches of England and Scotland in the proportion of two to one; and with regard to the other half of the three-fourths, it should be left to the disposal of the Governor-general of Canada and the executive council, for the purposes of religious worship and education. But since 1840, the population of Canada had more than doubled, and the condition of the colony was materially altered. The bill, therefore, which was now introduced into the commons by Mr. F. Peel, was for the purpose of giving the Canadian legislature the power, if it thought fit, of altering the existing arrangement, the matter being not of imperial, but wholly and exclusively of colonial concern.

Leave being given to bring in this bill, an animated discussion followed, especially on the 4th of March, upon its second reading. On this occasion it was argued by its opponents, that these reserves had from the beginning been set apart and dedicated to the service of religion—the Protestant religion in Canada; and could not now be diverted from the purpose even by parliament itself, without committing a mortal sin. And granting that Canada possessed the right of self-control, still the act of the imperial parliament was binding upon it. With regard to the policy of the measure, that too was condemned; for if the loyal Upper Canadians should renounce their allegiance, and annex their country to the United States, the original grant would nevertheless be rigidly enforced by the American law. And would it be wise or prudent to show to loyal subjects of the British crown, who were attached to their church, that the monarchy of England disregarded obligations which a republic was willing to respect? Lastly, those pioneers of civilization, the Protestant missionaries of Canada, were supported by the fund which this bill would alienate from them, while the Canadian Roman Catholics themselves would deprecate the alienation, as such a measure would endanger their own endowments. To this it was answered, that the act of 1840 had not been received by the Canadians as a final measure, and that the words "Protestant clergy," in that of 1791, were not limited to the clergy of the Church of England. All questions affecting religious endowments in a colony were essentially local, and, according to the rules of our colonial policy, should be dealt with by the local legislature. And when we had given self-government to Canada, were we not to respect that right?

The second reading passed by a large majority, and the third came on upon the 11th of April. On this occasion, when Mr. Walpole moved to defer the reading for six months, the Roman Catholic interest in the question was brought

into full discussion. The house had been told, he said, that the great object of the measure was to give the Canadian legislature the fullest power over all matters of purely local concern. But when the bill was examined in committee, it appeared not to be confined to these matters: it extended to investments made in this country, and enabled the Canadian legislature to deal with these investments, although they affected no local interests;—and further, that endowments to Roman Catholics could not be touched without the authority of the imperial parliament, while endowments to Protestants in Canada could be dealt with and destroyed by a majority of the Canadian legislature alone. The third reading was carried by 288 to 208.

In the House of Lords, the second reading of the bill was moved on the 22d of April. The Bishop of Exeter moved an amendment “that the bill be not read for six months,” upon the plea that the bill could only pass, if parliament would reserve a guarantee that the clergy reserves should not be secularized; and he adduced a long array of precedents to prove that the imperial parliament has power to control the colonial parliaments. This amendment, however, was withdrawn in consequence of a proposal of the Earl of Derby, by which the mode of contest was altered. His lordship, instead of giving the bill a distinct negative, would content himself with moving in committee certain propositions that would give the Canadian legislature more extensive power than had been done by the act of 1791, but, at the same time, maintaining inviolate and for ever all the appropriations for the Church of Scotland or the Church of England. On this understanding the bill being read a second time without a division, the House of Lords went into committee, and the earl produced his promised proposals; which having been adopted, the bill passed its third reading on the 28th of the same month.

The question of Jewish disabilities with respect to the admission of that proscribed race into parliament, had neither slept nor slumbered since the exclusion of Baron Rothschild. On the contrary, a still more determined Hebrew than the baron, who had been elected member for Greenwich in 1851, had presented himself at the bar of the House of Commons to take the oaths of membership, and had resolutely refused to swallow the unpalatable test “on the faith of a true Christian.” This was Alderman Salomons, lord-mayor of London. But on being ordered to withdraw, he at first only retired below the bar; and on a future day, when the discussion was renewed, he boldly took his seat on the ministerial side of the house, from which it required the sergeant-at-arms to dislodge him.

He even voted twice upon the question of his own admission, and delivered a short speech before he was compelled to withdraw. It seemed impossible but that at some period, and that too not very remote, such increasing boldness and perseverance would achieve a full and free admission. This question of Jewish eligibility for membership was moved by Lord John Russell for the consideration of a committee of the whole house, on the 24th of February. In addition to his old arguments on the subject, his lordship pleaded, that although it was alleged that the Jews were meant to be divided from all other nations, yet it was not for us to carry out the decrees of the Almighty. There was no ground of objection but prejudice, and the plea that we were a Christian nation, and that ours was a Christian legislature. Should we not remain so in spite of the admission of a few Jews into that house? He therefore requested the honourable members to do away with the remaining disqualifications which attached to a class of British subjects upon whose loyalty they relied, and of whose co-operation they would be glad; and to remove them on the grounds of truth and justice alone. His appeal prevailed: the house went into committee, and the resolution was passed, “That it is expedient to remove all the civil disabilities at present existing, affecting her majesty’s subjects of the Jewish persuasion, in like manner, and with the exceptions as are provided with reference to her majesty’s subjects professing the Roman Catholic religion;” and a bill to this effect was ordered to be brought in.

The house was weary of this oft-repeated subject, in which nothing new could be adduced, and the debate went on languidly, and was listened to with impatience. The second reading was carried; and the third, with a haste that was complained of, was hurried on for the 15th of April, when it was also carried. The second reading was moved in the lords on the 29th by Lord Aberdeen, who gave a brief review of the whole ground of argument both religious and political; and he was answered by the Earl of Shaftesbury, who stated the principal objections that operated against the bill, and moved that it be read that day six months. During the debate, the Jews found effectual advocates in the Archbishop of Dublin and the Bishop of St. David’s, the former asserting that the removal of their disabilities would be the triumph rather than the defeat of Christianity; while the latter adverted to the liberality of Jewish tolerance in the cause of Christian missions, and the building of churches. But the bill was lost in the second reading by 164 to 115, and the removal of these disabilities was reserved to a more convenient season which was certain to occur at last.

On the 4th of April, the government plan of education was brought forward by Lord John Russell. He commenced with a statement of the good that had been done by the establishment of public day-schools in opposition to those that were voluntary and secular. The total number of these day-schools, both public and private, now amounted to 44,898, at which 2,108,473 children of both sexes were educated. As for the voluntary and secular schools belonging to the different religious denominations, their number amounted to 19,856, with an attendance of 1,281,077 pupils. The weekly pence payment of these schools might be estimated at 500,000, or nearly one-half of the amount expended in their maintenance. Still the secular system of education was judged insufficient by government: it was felt desirable that Christianity, hitherto excluded from these schools, should be taught there; but the religious divisions of the country would prevent the imposition of a national rate for this purpose. It was thought, however, that corporate towns might obtain the means of supporting schools by rates, two-thirds of the town-council being agreed in imposing it. The rate thus raised should be applied, also, not to establish schools in substitution of the former ones, but in aid of the voluntary efforts of individuals, and of the school pence of the pupils. "We should propose," said his lordship, "some such scheme as this—that the rate might be applied to pay 2*d.* in the week for the scholars, provided 4*d.* or 5*d.* were contributed from other sources. We should propose, likewise, that the schools which should receive this assistance should be schools which, under the minutes of council, might receive assistance, and which consequently have for years received the sanction of parliament." This was a better plan than that which had lately failed at Manchester, of forming a plan for new schools, in which they had disagreed. To combine the *sine qua non* of religious instruction with the utmost liberty of conscience, "we intend," said his lordship, "that in these schools, the parent shall have the power of withdrawing his child from the religious instruction to which he might object; for it is obvious that the parent, on the one hand, would not send his child to a school where the religious instruction was repugnant to his feelings; and, on the other hand, the school which had a strict rule that every child must receive religious instruction, would refuse to receive the child of a parent objecting." As it would be necessary to make additional grants for building schools in poor localities, the following statement was made on this head:—"I should say that the country generally may be divided into places of three different conditions—1. Where the education is already sufficient in quantity and

quality; 2. Where it is not sufficient either in quantity or quality; and 3. Where the education is entirely deficient. The first class is already considerable, and is increasing; the third class is certainly not very large; but it is the second class which is the most important of the whole, and therefore requires the utmost aid and assistance."

These are but a few of the principal points which Lord John Russell detailed at length in the government plan of education. But the public charities in which education formed a part were also to be supervised, the schools of practical art assisted, and the system of the two universities improved. This last, however, was dangerous ground, and was not to be entered until the matter should have reached a more advanced stage of consideration. In the university of Oxford, it had been discovered by a commission of inquiry, that a material change was necessary in its government, and he stated that some such change had been determined. Having pointed out those time-honoured evils which needed reformation, Lord John thus concluded:—"I trust I have made it clear to the house that we shall not at the present time, or without giving full opportunity to the universities to consider what they themselves ought to do, propose to parliament any measure on the subject. At the same time we shall keep closely in view those objects in this matter which we deem essential. If the universities adopt these objects, and carry them into effect as far as they can, applying to parliament for the powers they may find requisite to the full development of those objects, the government will gladly concur in that result. If, on the other hand, the universities will not take this course—if prejudice shall prevent those having authority and influence there from making the alterations which are requisite—then it will be our duty as a government no longer to hesitate, but to bring in those measures which we deem called for by the necessities and expedencies of the case."

Having explained the government plan for the extension of education in England and Wales, Lord John Russell moved for leave to bring in a bill to that effect. His details, which were luminous as well as long and complex, had arrested the attention of the house; and, in the debate that followed, the sentiments of the members were delivered for or against it in the most express terms. Of course it was thought by some not to meet all the requirements of the case—not to go far enough—while Mr. Hume and his party alleged that the object could not be accomplished until the system of secular education was adopted. One member advocated the necessity of *compulsory* education for the "savages" of society, while others deprecated the imposition

of a general rate, until the wish of corporate towns had been received. And why meddle with the universities? While the members who were connected with these venerable seats of learning stepped forward in their defence, there were others who thought that the schools of Eton, Westminster, and Winchester, and the university of Durham, of which no mention had been made, were fully as needful of reform as the colleges of Cambridge and Oxford. The more minute portions of this educational scheme were also the subjects of question and altercation; but, upon the whole, the necessity of a national plan was felt, while none better than the present could be proposed in its stead. Leave accordingly was given to bring in the bill; but, having accomplished thus much, government ventured no further into the measure. The plan waited, as even yet it must wait, for the succession of a wiser generation and the coming of a better day. It was not by an act of summary legislation that so vital a change could be accomplished.

During this session, the important operations of finance were commenced by Mr. Gladstone, the chancellor of the exchequer, with a series of resolutions which he proposed on the subject of the national debt. These, which were fifteen in number, were designed to effect, not only a present relief, but a permanent advantage, by an absolute saving of a quarter per cent. for ever upon the interest of public debt. It is enough to state for the feasibility of the plan that it was approved of by Joseph Hume and ridiculed by Benjamin D'Israeli, and that the resolutions one by one were agreed to.

The chancellor's financial exposition followed on the 18th of April, in a speech of remarkable power, that occupied five hours in the delivery. From the difference between the estimate of last year and the real returns, there was a surplus of £2,460,000; but, from the increased expenses, arising chiefly from public education, the defences of the country, and the militia, this sum would be reduced to about £700,000. After this statement he proceeded to a consideration of the taxes; and first in the list was the income-tax, that "colossal engine of finance" which, during the late war, had been the salvation of the country. After showing that from 1806 to 1815 it had raised £7,000,000 more than the charges occasioned by the government and war, he added those words, that may be regarded as a prophecy in stereotype, and which have now more weight than, perhaps, at that period he was able to surmise: "It affords to me the proof that if you do not destroy the efficacy of this engine—I do not now raise the question whether it is to be temporary or permanent, which I hold to be quite a different question, and I will go into that by and by—it

affords you the means, should, unhappily, hostilities again break out, of at once raising your army to 300,000, and your fleet to 100,000, with all your establishments in proportion. And much as may be said of the importance—in which I

THE RIGHT HON W E GLADSTONE
From a photograph by Maull and Polyblank

concur—of an army reserve and navy reserve, and of having your dockyards and your arsenals well stored, I say this fiscal reserve is no less important; for, if it be used aright, it is an engine to which you may resort, and with which, judiciously employed, if unhappily necessity arise—which may God, in his mercy, avert—with it judiciously employed, you may again, if need be, defy the world." The intention of government, after having made certain mitigations in the inequalities with which it bore upon different persons and properties, was to renew the tax for two years from April, 1853, at the present rate of 7*d.* in the pound; for two years more, from April, 1855, at 6*d.*; and for three years more, from April, 1857, at 5*d.*; so that the tax would expire on the 5th of April, 1860. Incomes between £100 and £150 were also to pay 5*d.* in the pound for the whole time the tax continued. It was also resolved to extend the tax to Ireland, which would yield an increase of £460,000 a year. Still further to equalize the burdens that pressed too heavily on intelligence and skill as compared with property, certain changes were to be made in the legacy duty, by introducing a duty into all successions whatever, which, by the year 1856–57, he calculated, would add £2,000,000 annually to the permanent revenue of the country. The changes contemplated upon other taxes were then announced. An addition of 1*s.* per gallon on Scotch spirits, and 8*d.* on Irish, was to be imposed, with a drawback for waste upon

spirits in bond. An increase was to be made on the licenses of brewers, dealers in tea and coffee, tobacco and soap, amounting in all to £113,000. And while Ireland was to be charged with the income-tax and the duty on spirits, it was to be relieved from the consolidated annuities, amounting to £4,500,000, which would cease from the date of the 29th of last September.

Against these proposals of increase the chancellor of the exchequer proceeded to show an offset of contemplated reductions. There was to be an entire abolition of the duty on soap, that yielded to the revenue £1,111,000. The tax on life assurance was to be reduced from 2s. 6d. to 6d. per £100. Receipt-stamps were to be reduced to the uniform rate of a "penny-head stamp." The duty on apprentice indentures was to fall from 20s. to 2s. 6d. The charge upon annual certificates of metropolitan solicitors was to be reduced from £12 to £8, and of country solicitors from £9 to £6. The duty on advertisements in newspapers was to be reduced from 1s. 6d. to 6d., with a repeal of the 1d. and ½d. stamps on supplements used for advertisements. The duty on hackney carriages was to be reduced from 1s. 5d. to 1s. Similar reductions were to be made on taxed servants, private carriages, post-chaises for hire, horses, and dogs. Facilities were to be afforded for the redemption of the land-tax by a diminished percentage. Of the articles of food, including tea, 13 were to have their duties reduced immediately, 133 ultimately, and 123 to be freed from duty altogether. The effect of these changes in the customs duties, Mr. Gladstone calculated, would be a loss to the revenue for the current year of £1,338,000; but this, from the increased consumption, would soon diminish to £658,000. The total remissions in taxation for the present year would be £2,568,000, but there still would remain a surplus of £493,000. Seldom had the budget been louder cheered by the house, or more gladly welcomed by the whole country at large, which still continues to rejoice in the financial arrangements of this memorable year.

On the 25th of April the debate on the budget commenced; and, as the continuation of the income-tax to the year 1860 composed the foundation of the long list of concessions that were demanded, it was upon this important point that the discussion was waged. Could not those blessings be secured without the income-tax? was the question of one party. Could it not be further modified? was the demand of another. Could not its term be abbreviated? was queried by a third. The agriculturists complained that their interests had been sacrificed, and the Irish party that their country would be oppressed by the proposed measure. This last cry rose into an

absolute howl: Ireland would pay more than her share, if the income-tax should be imposed upon her at the last hour; it would drive her children into exile across the Atlantic; it was inconsistent with the act of union; it would injure her manufactures, which England had laboured to destroy from the time of "hook-nosed William" downwards. And what security had we, it was generally asked in the course of debate, that this income-tax would actually cease its existence in 1860? Such were the principal objections brought forward. The debate was continued during four nights; and the hottest opposition was from the Irish party, who made certain strange charges about bribery and corruption that for a time threw the house into an uproar. Still, the chief weight was on the ministerial side; and, after several amendments had been rejected, and five new clauses, proposed by Mr. Gladstone, been adopted, the third reading was carried on the 6th of June by 126 against 55.

On the 20th, the second reading of the bill was moved in the House of Lords by the Earl of Aberdeen. His lordship acknowledged the objectionable nature of the income-tax—of which, indeed, in the abstract, there could be no question—but it was impossible, he declared, to avoid its renewal without imposing other taxes still more objectionable. Even in its most obnoxious parts—the taxing of precarious incomes and realized property—it was impossible so to legislate as to give general satisfaction. The Earl of Derby declared the tax to be inevitable; but he objected to its principle, and he criticized the calculations of the budget as vague and fallacious. Lord Brougham not only condemned its principle, but saw no prospect of the extinction of this "execrable tax," either one year or seven years hence. The second reading, however, passed without a division, and the third was moved on the 27th of June, when Lord Brougham repeated his objections, with several additional arguments: he was constrained, however, to confess that, with all its evils, the tax was a matter of necessity, and could not be spared. The Irish claims to exemption were not lost sight of, and were brought forward by the Earl of Wicklow in favour of Irish landlords, who would have to pay tax on rents which they never received. In Ireland, he said, rent was not lost from insolvent, bankrupt, or absconding tenants, but from tenants who would neither pay nor abscond. These landlords, too, it was declared by the Marquis of Clanricarde, were not the disloyal agitators, but the very class who ought to be conciliated. The bill, however, was passed, and became law.

The income-tax being thus established, the other prominent departments of the chancellor's plan were successively taken up and dis-

cussed. And first of these was the succession duty, which was moved in the House of Commons, on the 10th of June, to be read for the second time. It extended not only to individuals, but to corporate bodies, who were to pay an annual tax for seven years, at the rate of 3*d*. in the pound upon their corporate property, with certain specified exceptions. The second reading passed, and on its going into committee, the chief resistance it experienced was from Sir John Pakington, who complained of the injury it would inflict not only on landholders, but small traders, owners of small estates, younger children, and unmarried daughters. An uncle or a cousin, he exclaimed, "aged thirty-nine, succeeding to an income of £100 a year, would have to pay £45; and a man succeeding to an income of £1000, would have to pay £450; and this latter with the income-tax besides! Such a proposal would not have been submitted to the house, if the burden had fallen upon existing owners of property." The third reading was introduced on the 18th of July; but a question involving so many personal interests had been obliged to fight its way, step by step, through every form of argument, remonstrance, and cavil, before it reached this stage. After numerous amendments had been rejected, it was finally carried in the commons by 176 to 102. In the lords, the second reading of the bill was moved on the 22d of July, by the Earl of Aberdeen; and the keenness of debate which it occasioned evinced the personal and vital importance which the aristocracy of Britain felt in it. It was called "absurd and cowardly," a "revival of the old Norman tax *in capite*," and "grossly unjust and unfair." There were many cases, it was alleged, in which persons had anticipated their successions to such an extent, as to have almost entirely squandered them; and in such cases, the government stepped in, because a man had been a spendthrift, and ruined him altogether. A person knowing that he was to succeed to property, might anticipate, and spend nine-tenths of its value; and when the remaining tenth would enable him to make a fair start in life, this new tax to be imposed would entirely swallow it up. As far as the right to spend in anticipation went, a perfect right to do so undoubtedly existed. The bishops were appealed to, and asked if they would be parties in these obnoxious regulations, while they were themselves exempt from their operation? It was replied, that this tax was neither a courting of popularity, nor the opposite: popularity for any tax was out of the question; all that could be done was to preserve it from dislike. As for the extreme cases of enormous hardship which had been quoted, the same might be said of any tax whatever. Opposite cases were also given

to show that the payment of the duty would not be onerous either on large or small successions, as it would be spread over eight half-yearly instalments, which on an estate worth £1000 a year, would amount to £150, or £37, 10*s*. per annum for four years. The tax, it was also alleged, was not aimed at a particular class, but at all classes; and the position of the owners of land would be strengthened by making them amenable to the same law as their fellow-subjects. The great families of the country did not owe their position to exemptions from burdens. Did the Duke of Norfolk owe his high position to having escaped the legacy duty? Why, the great families and landed proprietors would gain, in the prosperity of the country, infinitely more than they would be called on to pay. In spite of an immense amount of opposition, the bill passed its third reading through the House of Lords on the 28th of July.

The taxes upon knowledge were taken into consideration on the 14th of April, in consequence of three resolutions moved by Mr. Milner Gibson. The first was, that the advertisement duty be repealed; the second, that the imposition of stamp duties and other restrictions on the cheap periodical press is inexpedient, and that the law relative to taxes on newspapers is in an unsatisfactory state; the third resolution was, that the excise duty on paper materially obstructs good cheap literature, and that the maintenance of this tax as a permanent source of revenue would be impolitic, and would impede the progress of education. These three taxes he thus combined together, because they had been imposed at the same time, and because he judged them all equally subversive of the liberty of the press. It was acknowledged by the chancellor of the exchequer, that, irrespective of any profit they could yield to the revenue, these taxes had indeed been imposed at first to prevent free discussion, but as the necessity no longer existed, government in due time would provide for their removal. But in the meantime, he deprecated such a step, until substitutes were provided for the £1,400,000 which they added to the revenue. He thought the march of economy was already going too fast. During the eight weeks he had been in office, propositions had been made in that house for the repeal of duties to the amount of £7,000,000. The first of the proposed resolutions was carried against the government by a majority of 200 to 169, the other two were negatived. On the first resolution going into committee, the chancellor of the exchequer moved that the advertisement duty be reduced to 6*d*.; upon which Mr. Milner Gibson moved as an amendment, that "All duties now chargeable on advertisements be repealed, in accordance with

a resolution of this house on the 14th of April last." The amendment was negatived by 109 to 99, and the original resolution by 68 against 63. Mr. Crawford in the course of debate, moved that a cypher (O) should be substituted for 6d., and in this odd and novel fashion the resolution was carried. Mr. Hume, whose ideas of financial etiquette it grievously startled, asked if the committee was justified in thus substituting O for 6, but was assured by the speaker that it was perfectly correct.

Along with the late portentous growth and boldness of Popery in England, the establishment of convents, so alien to every principle of British liberty, had excited the popular alarm. There were already seventy-five Roman Catholic nunneries in England and Wales, which were regarded as strongholds of Antichrist, places of illegal imprisonment, or an *imperium in imperio*, according to the mood of the onlooker; and from a certain individual case—that of Miss Talbot—which had been brought before parliament, a strong suspicion had arisen in the public mind, that these conventual seclusions had taken the place of the former mad-houses, in which people were immured unjustly, and against their will. It was necessary that the question should be set to rest; and, accordingly, on the 10th of May, Mr. Thomas Chambers moved for leave in the House of Commons to bring in a bill to facilitate the recovery of personal liberty in certain cases. In a calm speech he went over those reasons which showed that the general suspicion was by no means groundless. The inmates of these establishments, he observed, being subjected to an irresponsible power exercised in secret, were less under the protection of the law than factory children, parish apprentices, or lunatics. These institutions, also, were so affiliated with others abroad, that any inmate of an English convent might be transported beyond sea, by which all means of tracing her could be eluded. He therefore proposed that where any case of undue coercion was reasonably surmised, the secretary of state should be empowered to appoint one or more persons to repair, with a justice of the peace, to the convent, see the party, ascertain the facts, and, if necessary, put the ordinary law in force by a writ of *habeas corpus*. These statements, of course, were denied and ridiculed by the other party as atrocious libels, and Exeter Hall alarms. No convent, it was declared, could exist under such inspection, and therefore the proposal was tantamount to the question, whether convents should exist at all in this country? It was also alleged that the nuns were not prevented from seeing their friends; that conventual establishments were useful as dispensers of good education; and that if this proposal were passed, the

Irish Roman Catholic females would throw themselves upon the protection of France. The motion, however, was carried by 138 to 115. The second reading was moved on the 22d of June by Sir Robert Inglis, but after much clamour and confusion was negatived by 207 to 178.

On the 31st of May, this attack upon the convents was retaliated by a counter-movement against the Protestant and Established Church of Ireland. This was commenced by a motion of Mr. George Henry Moore for a select committee to inquire into the ecclesiastical revenues of Ireland, in order to ascertain how far they are made applicable to the benefit of the Irish people. He complained that these revenues, although set apart for the education of the people and the maintenance of religion, had been diverted from that purpose to the benefit of the Protestants, who were but as one to five in the population of Ireland. But the policy of England was even more evil in principle, he asserted, than destructive in practice; for it contained the evils both of the voluntary and the endowment principles—endowing the religion of the rich, and handing over the religion of the poor to the voluntary principle. The motion was regarded as a proposal for the total destruction of the Church of Ireland, and was met accordingly by appeals to the act of union, the oaths of the members of parliament, and the national faith, which were all at stake in the preservation of Irish Protestantism. The opposite measure which had been dealt to Scotland, in the full establishment and endowment of her Presbyterianism, while there Episcopacy was left to its shifts, an argument of which the supporters of the motion had made a very adroit use, was answered by Lord John Russell. After adverting to the fact that the Roman Catholic clergy were under the direction of a foreign head, and aimed at a political power at variance with a due attachment to the crown of this country, the general cause of liberty, and the duties of a faithful subject, he said:—"I am convinced that if the Roman Catholic clergy had increased power given to them, and if they, as ecclesiastics, were to exercise greater control and greater political influence than they do now, that power would not be exercised in accordance with the general freedom that prevails in this country; and that neither in respect to political power nor upon other subjects would they favour that general freedom of discussion, and that activity and energy of the human mind, which belong to the spirit of the constitution of this country. I do not think that in that respect they are upon a par with the Presbyterians of Scotland. The Presbyterians of Scotland, the Wesleyans of this country, and the Established church of this country and of Scotland, all, no doubt, exercise a certain

influence over their congregations; but that influence which they thus exercise over their congregations must be compatible with a certain freedom of the mind—must be compatible with a certain spirit of inquiry, which the ministers of these churches do not dare to overstep, and if they did overstep it, that influence would be destroyed. I am obliged, then, to conclude—most unwillingly to conclude, but most decidedly—that the endowment of the Roman Catholic religion in Ireland, in the place of the endowment of the Protestant church in that country, in connection with the state, is not an object which the parliament of this country ought to adopt or to sanction.” This was speaking boldly out, and the sentiments thus decidedly expressed were loudly cheered by the ministerial party. In full proportion, however, was the resentment they kindled in the opponents of the Irish church establishment; so that Mr. Keogh, the solicitor-general of Ireland, and Messrs. Monsell and Sadleir resigned their offices, but were soon after induced to resume them. As for the motion itself, it was rejected by the large majority of 240 against 98, and the Irish Protestant church seemed more firmly established than ever.

In the meantime, the affairs of the church at home were not overlooked, so that on the 26th of May, Dr. R. Phillimore moved for leave in the House of Commons to bring in a bill to alter and amend the laws of church-rates. By the law, as it now stood, it was made the bounden duty of every parishioner to contribute to the repair of the fabric of the parish church, and it could be enforced even by a minority of the rate-payers. He proposed, on the other hand, that all dissenters should be exempted from the payment of church-rates, by the simple process of stating in writing that they are dissenters from the Church of England, and handing that statement to the churchwardens. He also proposed that all persons thus exempted should have no right to compel any clergyman to perform any religious service over him or in his behalf, and that he should have no place in church-vestries, or a right to church-votes. With regard to churchmen, he proposed that the law should remain as it was, except that in the consistorial court decisions should be given summarily *visâ voce*, and that they should be appealed from only on a point of law. In anticipation of this movement, an amendment, which was in readiness, was moved by Sir W. Clay, that “this house do resolve itself into a committee, to consider whether church-rates should not be abolished, and provisions made for the charges to which such rates are at present applicable, from pew-rents, and from the increased value which inquiries instituted by authority of the crown have shown may be derived under

better management from church lands and property.” Both of these propositions were considered objectionable. Without church-rates, it was alleged, the principle of a religious establishment could not be maintained, nor the nationality of the church prevented from dwindling into sectarianism; while with regard to the objections of conscientious dissenters to contribute to the church-rates, they had purchased their property subject to these imposts, and fully aware that it was thus encumbered. Both were therefore negatived—the amendment by 207 to 185, and the original motion by 220 to 172.

In the measures of law reform brought forward this session, was one which had been introduced into parliament nine times within twenty-three years, and as often had failed. In 1851 it had been carried unanimously in the House of Lords, but was dropped by the change of government. This unlucky measure, called the registration of assurances bill, was now brought before the lords on the 3d of March by the lord-chancellor for a second reading, and its object was the registration of titles and of incumbrances, the register being full proof of all the facts stated therein; and no claims to be recognized against the purchaser unless thus registered. A plan so hostile to the “glorious uncertainty” of the law had hitherto found its chief antagonists in the solicitors. It now had for its chief advocates Lords John Campbell, Beaumont, and Brougham, and it was passed through the second and third readings, but did not become law, being subsequently withdrawn in the House of Commons.

The second reading of the charitable trusts bill was next moved in the lords on the 3d of May by the lord-chancellor, after a pause since 1851, during which several changes had been made in it. It was proposed that a board of superintendence, composed of the lord-president of the council, some other cabinet minister who should also be a member of the House of Commons, and two legal gentlemen of high attainments, should, as a branch of the government, superintend all the charities of the kingdom—and the multifarious duties of their high office were also specified with full legal precision. It passed the upper house; and in coming before the commons, Lord John Russell stated before the bill went into committee, a few alterations which had occurred in the course of previous discussions. These he now proposed, and the most important of them related to Roman Catholic charities, the placing of which under the management of that body without special provisions might affect their very existence. He therefore proposed their exclusion from the bill, but a separate provision to be made for them; and the exemption itself to be limited to the space of two years. He made this

proposal at the last hour, because he feared that the bill itself might be injurious to Roman Catholics in respect to their trusts; and he had been informed by a Roman Catholic barrister that many of their charities were void in law. His lordship's proposal was carried in the committee by eighty-seven to seventy-six, and after several new clauses added to the bill, it passed the third reading on the 8th of August, and soon after became law.

As Australia now repudiated the indignity of being a convict colony, and was too strong and wealthy to be threatened into obedience, the question of transportation and the disposal of our criminals had become one of the difficult political problems of the day. It was urgent also for an immediate solution, and was accordingly brought before the House of Lords on the 10th of May. The first motion on this subject, which was made by Earl Grey, and which still contemplated the idea of transportation being available for the uses of government as a means of punishment and riddance, was negative, and a bill introduced for altering the punishment of transportation on the 11th of July by the lord-chancellor. In consequence of the growing repugnance to convict labour through all our colonies, Western Australia was the only one still willing to tolerate the infliction of penal servitude. In this case, consideration was called to the number of criminals that might still be transported, and the crimes that were to be so punished. It was proposed, therefore, that a fourteen years' sentence should be the standard for the expatriated, and this only in the case of flagrant offenders; while of the remainder, those who should have been sentenced to seven years, were to be kept in penal servitude for four, those for ten years, to undergo a home bondage for six, &c. These secondary punishments, in lieu of transportation, were deplored as a grievous necessity, and it was anxiously asked if there was not still some odd nook in the vast Australian continent into which our ship-loads of crime might be conveniently emptied. None, however, could be discovered, and from sheer necessity the bill was passed a second and third time through the House of Lords. It was brought into the House of Commons in committee on the 9th of August, by Lord Palmerston, who advocated the proposed secondary punishment system as the only alternative that remained for us. He explained that after the specified number of years of home servitude had expired, the convict should obtain a ticket-of-leave that would return him to society, but liable to be revoked. Here a grave question must arise: How were these enfranchised convicts to be employed? His lordship stated that means would be found of giving them employment upon the public works apart from the convicts, at suitable wages, from which

occupation, without a stigma, they might glide into the ordinary avocations of honest industry. The charge of providing this additional accommodation would indeed be borne by the public; but this expense would be more than compensated by the annual saving of the former expenditure of transportation. Such were the palliatives of that most unwelcome ticket-of-leave system, without which no other remedy could be devised. The bill, therefore, met with no further opposition, and was passed through committee. On the order for the third reading, a puzzling question was put by Mr. Keating. The ticket-of-leave man would be *quasi* a free man, and capable of contracting obligations; and yet, he would be in the anomalous position of one liable to have his liberty abridged at the will of the secretary of state. Here we should have a new class of persons introduced into society. To this, it was answered by Lord Palmerston, that the difficulty had already been foreseen, and easily surmounted. The element of hope was to be kept alive in the heart of the convict, while the liability of having his ticket-of-leave recalled, would teach him habits of self-control, and prevent him from lapsing into crime. The bill passed through all its readings, and became law.

The affairs of India every year becoming more important, as well as more complex and difficult, were introduced into the House of Commons by Sir Charles Wood on the 3d of June. In a speech that lasted five hours (for long speeches had now become too much the order of the day), he went over the history of India for the last twenty years, and showed the evils of its government that still brooded unredressed over the large mass of our eastern kingdoms and principalities. These evils he comprised under three heads—viz., the maladministration of justice, the want of public works, and the tenures of lands. Much had been already accomplished for India; but still it did not follow that it possessed the best government that could be devised. As for that which now existed, it might be regarded under two different aspects—the home government and that of India; and the question which he brought forward was, whether this rule should continue in its double character, or be reduced to a single rule administered by a secretary of state. The ministerial measure which he proposed was to continue it in the latter character, but to abridge the patronage of the court of directors. Their power of nomination to office was to be extinguished, so that civil and scientific appointments should depend upon merit alone. Having entered into ample detail of the contemplated changes by which the first head of his proposal—the administration of justice—was to be better adjusted, and which formed the chief subject of

his speech, he alluded to the others, but chiefly for the purpose of showing how much in these departments had been done already, and how reasonably we might be satisfied with its amount.

The debate, which was adjourned to the 6th of June, was resumed by Mr. J. Phillimore, who made a fierce attack on the apologetic speech of Sir Charles Wood, and declared that our government in India could only be paralleled in the descriptions of that of Sicily under Verres in the orations of Cicero; and he condemned the power still left with the court of directors as being by far too great. In the course of debate, heavy complaints were made of the loose statements that were brought forward respecting India by those who had gleaned their information from old newspapers, pamphlets, and magazines, when all they required was but a little industry and application to explore fifty-three large folio volumes in which Indian proceedings were registered. Another adjournment of the debate to the 9th of June followed; and in the course of discussion, where so many personal feelings were at stake, our Indian government was alternately praised and reviled, and a change as keenly deprecated as it was earnestly urged. In speaking upon the subject, which he could in some measure do from personal experience, in consequence of his early residence in India, Mr. Joseph Hume protested against the bill as premature and unstatesmanlike, and that ought to be opposed at every stage. "No wise man," he exclaimed, "would propose such a measure; and if it be, as I believe it is, a mad act, then it is the act of a madman." This logical *sequitur* was received with peals of laughter, and leave was given to bring in the bill.

To enter into the debates that followed would far exceed our limits. There were so many opposite statements, so many assertions and contradictions, so many amendments and counter-amendments, that the head becomes giddy in their whirl; nothing, indeed, but a residence in India, or a deep personal interest in its bank-stock or snug appointments, could induce general readers to wade through the whole subject, or furnish them with a key to understand it. The gist of the matter was thus given by Mr. Macaulay:—He said he should vote for the second reading of the bill. . . . What the country had a right to expect from the government was, not a bill that should make such a reform as would render all future reforms superfluous, but a bill that would introduce present improvements, and leave a scope for further improvements when required; and such a bill was that under discussion. All acknowledged that, in some shape or other, a double government was

most suitable for India; and he thought that the changes proposed in the machinery at home—which absorbed too much attention—would impart to it a greater amount of vigour and ability. But India must be governed in India; whatever might be the instructions from home, the local authorities must exercise a discretion. As to patronage, if the governor-general were allowed to nominate the civil servants, the most monstrous age of jobbing the world had ever seen would commence. And because the plan proposed by the bill (he continued) would fill the service with fit and superior men by the plan of competition, he was earnestly desirous it should pass without delay. Alluding to the opportunity it also gave of admitting such natives into office as could successfully compete with European candidates, he thus concluded with the exposure of a fallacy that had too long prevailed among our statesmen: "We shall not secure or prolong our dominion in India by attempting to exclude the natives of that country from a share in its government, or by attempting to discourage their study of western learning; and I will only say further, that however that may be, I will never consent to keep them ignorant in order to keep them manageable, or to govern them in ignorance in order to govern them long."

On the 28th of July, the bill, after having undergone several amendments, was brought before the house for the third reading. On this occasion an important debate originated in a motion of Sir J. Pakington, for a clause prohibiting the manufacture of salt by the East India Company from and after the 1st of May, 1856, and providing that the manufacture and sale of that article in India should be absolutely free, subject only to such excise or other duties as might then, or from time to time, be levied upon it. This article, it was stated, so important a necessary of life in other countries, was essentially so in India as the chief food of the natives consisted of rice; but as matters now stood, the Hindoo had scarcely half the quantity of salt used by an European; that it was an inferior article, mixed with sand, dirt, and ashes, and cost one-sixth of the consumer's time and labour to get money to purchase it. This important motion, after an earnest debate, was carried against the government by 117 to 107. Several other amendments were also agreed to, and the bill was finally passed amidst the loud cheering of the ministerial party. In the lords, the bill also passed through the usual stages without alteration, except in the case of Sir J. Pakington's salt clause, which was struck out. In this form the bill was agreed to by the House of Commons, and afterwards became law.

CHAPTER XVI.—CIVIL AND MILITARY HISTORY.—A.D. 1853—1854.

VICTORIA.

Apprehensions of war from the aggressions of Russia in the East—Affairs in India—A fresh war commenced with the Burmese—Capture of Martaban by the British—Difficulties of the campaign—Rangoon unsuccessfully assailed by the British—They capture Prome—Their successful expedition against Pegu—The province of Pegu annexed to the British empire—Defeat of Mea-Toon, the Dacoit chief—Discontent of the natives of South Africa with the British government—Sir Harry Smith sent as governor to the Cape of Good Hope—His proceedings on assuming the government—His address to the Caffre chiefs—Commencement of war—Defeat of the British by the Caffres at Keiskamma—Unfavourable and destructive character of the war—The Caffres solicit peace—Terms on which it is granted—Shipwreck of the *Birkenhead* steamer on its way to the Caffre war—Fresh European war originating from Russia—Early designs of Russia on Turkey—Ground of quarrel in the claim of Russia to the guardianship of the holy sepulchre—Counter-claim of France—Inability of the Turkish sultan to satisfy the claimants—Hostile movements on the part of Russia and France—Unreasonable demands of Russia on the Porte—War commenced by Russia against Turkey—Unsuccessful attempt of the great powers to reconcile them—Turkish declaration of war against Russia—Interests of Britain in the quarrel—Discussions on the subject in the House of Lords—Precautions of the ministry to avoid hostilities and preserve peace—Lord John Russell's statement of the whole history of the controversy—Military preparations—Naval coast volunteers bill brought into parliament—Its terms—It is passed—Opening of parliament in January, 1854—General impatience for war—Discussion in the lords upon our long forbearance and the backwardness of ministers—Hume's approval of our expenditure for warlike operations—Question in parliament on the propriety of aiding Mahometan Turkey against Christian Russia—The subject explained and justified in the House of Lords—The combined fleets of Britain and France move forward to protect Constantinople—Movements of the Russian and Turkish armies—Early successes of the Turks—Attempts of the conference at Vienna to mediate—Russia rejects the mediation—Attack of the Russian upon the Turkish fleet at Sinope—The Turks overpowered and massacred—Indignation excited by the affair at Sinope—Letter of the Emperor Napoleon on the subject—The Emperor of Russia's justification of his proceedings—Proclamation of war against Russia by France—Similar proclamation of the British government.

AMIDST those great measures affecting the internal welfare of the country with which the British parliament was employed during a session of unwonted stir and occupation, one subject of apprehension not only overclouded the members, but the public mind at large. It was, that the forty years of international peace which Europe had enjoyed—an unprecedented duration in the history of the world—was drawing to a close at last; and that, true to their nature, men would resume their spirit of rivalry and contention, and war be renewed with a vigour all the more intense in consequence of so long a repose. These apprehensions arose from the East, where the movements of Russia seemed but the prelude of a fresh northern inundation by which Europe would ultimately be desolated, and compelled to commence her career anew. The demand on the part of the czar for the protectorate of the Greek Christians in Turkey, and subsequently his hostile advance upon the Turkish provinces to substantiate his claim, were each and all made the subject of parliamentary inquiry and discussion. Many, indeed, persevered in hoping to the last that peace would be maintained, and therefore the walls of both houses echoed repeatedly to

the assurance that there was no danger; many declared that Russia would stop short in her aggressions upon the worn-out Porte at the first note of an European remonstrance. But the czar persisted in spite of remonstrance; and Britain, from a friendly mediator, soon found herself converted into a principal in a contest as trying as any she has ever yet waged for her own personal liberties. This change, however, comes more properly under the history of the following year, from which the conflict dates its actual commencement.

It was perhaps as well for Britain, when such a war broke out so unexpectedly, that recent military events in the colonies had trained and furnished her for a conflict nearer home; and that these colonial campaigns having served such a purpose, had now been happily terminated, so that she might avail herself of her full resources.

The chief of these disturbances was a second Burmese war. The humiliation which Burmah had sustained in her first trial of strength with the Anglo-Indian government had lasted its day; and the treaty of Yandaboo, by which she engaged to respect British rights and property, was becoming a dead letter. This was evident from the oppressions exercised by the native government upon our merchants at Rangoon, as well

as upon the British vessels that entered the port. On complaints of these injuries being transmitted to the governor-general, Commodore Lambert, with a war ship and two steamers, was sent to demand reparation; but although this was apparently given by displacing the offending governor of Rangoon and appointing a successor, the conduct of the new ruler to the British commodore was so unsatisfactory and insulting, that the latter proclaimed the mouths of the river in a state of blockade. This provoked shots from a Burmese battery, which, however, was quickly silenced; and on negotiations being renewed, the King of Ava refused the demands made upon him, which were, an apology for the insults offered to the British messengers, compensation

to the merchants for their losses, and an accredited agent of the British government to be permitted to reside at Rangoon, according to the terms of the treaty of Yandaboo. Harder terms were to be enforced by the cannon; and an armament of troops from the presidencies of Bengal and Madras under the command of Major-general Godwin, a veteran of the first Burmese war, were sent to Rangoon, who reached the mouth of the Irrawadi river, on which that city stands, on the 2d of April, 1852. As the Madras division had not yet arrived, General Godwin resolved to commence with the siege of Martaban; and on the 5th a tremendous cannonade was opened upon the town from the British ships, the troops were landed under its cover, and in a few minutes the walls, though defended by 5000 men, were scaled with but a trivial loss to the captors.

An eastern campaign had commenced once more in earnest, and one where the invaders had not merely to contend with want of roads and means for the transport of artillery, with thick jungles, a hot tropical sun, and long periods of incessant rain, but an intelligent, brave, high-spirited enemy, fully aware of British superiority, and yet ready to risk the encounter. On these accounts the progress of our troops, notwithstanding their bravery and the skill of their old commander, was so slow and precarious, that not a little discontent was expressed at headquarters. On the 11th, the attack on Rangoon was commenced from the shipping; but although the whole line of defences on the side of the river was destroyed, the fire of the Burmese in-

flicted a severe requital upon our sailors and marines. Matters were not greatly amended when the troops were landed; for they had not moved far when, to their astonishment, the enemy, in-

TEMPORARY STOCKADE, MARTABAN.—From a sketch by an Officer of the Indian Army

stead of ensconcing themselves behind their stockades as they had been wont, poured their skirmishers through the jungle upon the British flanks; and having become good shots, they rapidly picked off our men, whose dress exposed them to notice, while their own was obscured by the brushwood. The stockade from which these skirmishers issued was at length stormed, although with severe loss; but on advancing to Rangoon, our troops experienced a very different defence from that they had encountered at Martaban; and although, on the 27th of July, the governor-general himself, impatient at the length of the siege, arrived at Rangoon, hoping that his presence would accelerate the capture, the city still continued to hold out. The only counterpoise to this unsatisfactory progress was the capture of Prome, for which service a besieging force from the main army was embarked on the 25th of September. On the 10th of October the Burmese abandoned its defence, "leaving in our possession (writes General Godwin in his despatch) an entirely evacuated town overrun with thick and rank vegetation, and, I regret to add, abounding in swamps."

This was but a poor recompense for so much labour and loss; but in November, a successful expedition against Pegu was attended with more profitable results. The Burmese having taken forcible possession of the city against the will of the inhabitants, the British commander resolved to dislodge them; and for this purpose a flotilla under his command cast anchor, on the 20th, about two miles below Pegu. The landing was

made, the attack was commenced in gallant style, and 1000 British assailants succeeded in completely driving out the Burmese, who mustered from 4000 to 5000 men, strongly entrenched behind their ramparts. After the British force had been withdrawn, the Burmese endeavoured to recover the city, which necessitated the return of the captors; and on this occasion, after a single attack, the enemy, although very numerous and strongly posted, fled in all directions, and abandoned their purpose. The whole province of Pegu was thenceforth annexed, by a proclamation of the governor-general, to the British dominions in India.

After the capture of Prome and the annexation of Pegu, the war with Burmah may be said to have been closed. But the victors had still the task of suppressing those Dacoit chiefs who had appeared on the field during the disturbed state of the kingdom, and who plundered friend and enemy alike. The most conspicuous of these marauding chiefs, called Mea-Toon, was first assailed in his stronghold, about fifteen miles inland from Donnabew; but the small force of British who were sent on this expedition were repulsed with considerable loss. A still larger was then sent, consisting of sailors and marines and 350 sepoys; but they, too, fared as their predecessors had done, being utterly defeated, with the loss of their principal officers. As such an enemy could not be despised, that course was

King of Ava having agreed to those concessions which the governor-general demanded.

During this Burmese war, the British arms had been employed against an enemy in South Africa of a still more formidable description, as far as personal bulk, strength, and endurance were concerned, than the warriors of the East. These were the Caffres of the Cape of Good Hope, whose limits had been successively lessened by the increase of the British colonists, and by their own unsuccessful aggressions when the formidable growth of the settlement had provoked them into open warfare. Their boundary for many years had been the Great Fish River, but this had been afterwards carried backward to the river Kei, while the territory between it and the former limit, under the name of British Caffraria, but considered as a neutral ground, became a bone of contention between the Caffres and the colonists. These hostile demonstrations on the part of the former had become so formidable, that a governor of military talents was judged necessary for the Cape; and in 1850, Sir Harry Smith, the hero of Aliwal, was appointed to this office. One of his first proceedings was to repair to King William's Town, in the centre of British Caffraria, and summon a meeting of the Caffre chiefs, who repaired to him at the call. But Sandilli, the principal of these not only in power but in talent—a sort of Caffre Machiavelli, who, though young and lame, was re-

garded as an oracle by his countrymen—refused to comply with the summons. At this singular meeting, the proceedings of Sir Harry, if the colonial journals may be believed, were sufficiently *outré*. He carried a long stick surmounted by a brass knob, called the stick of peace, with which he illustrated his oratory, while his speech was a singular medley of Caffre and oriental eloquence. He railed at the chiefs for being such fools as to believe in a fool (Sandilli)—a boy-prophet, who “was all over grease, and as black as a coal.” Then flourishing his staff of peace, he exclaimed, “If you are not happy and want war, I will make war, and bring my troops from Cape Town in four days, as I came myself; and I will drive you all over the Kei, and get Krili to drive you to the Umzinvooho, and I will be there too—I was there once; you know it—and then get Faku to drive you farther; and then you will be scattered over the earth, as beasts of the field and vagabonds.

But the good I will protect and assist, and be their father. I will kill every one that will not fight on my side. There is a God above; he knows all things.” This speech, which might have produced marvellous effects upon a Hindoo audience, was utterly thrown away upon these stalwart

finally taken which should have been adopted at first; a large detachment, numbering about 1300, under the command of Sir John Cheape, was sent against the marauder, who was driven from his defences after a gallant resistance. On the defeat of Mea-Toon hostilities ceased, the

and cunning Caffres, who, while they listened with demure countenances, were no doubt laughing in the folds of their karosses at the governor's speech, so unlike the addresses of all former British rulers. They however shook hands with him in token of obedience, and then returned to their homes to mature the intended insurrection.

The train thus laid was kindled by the deposition of Sandilli; and Sir Harry had scarcely reached the seat of government when he was obliged once more to hurry to King William's Town. Finding that the Caffre chiefs would not undertake to capture Sandilli, the governor resolved to accomplish the feat by a surprisal; and for this purpose Colonel Mackinnon was sent from Fort Cox, on the 24th of December, 1850, at the head of 600 men. With this formidable force

the colonel proceeded up the valley of the Keiskamma, and through rugged defiles, until he entered a narrow rocky gorge, that seemed expressly made for the destruction of an invader; while his guides and advanced guard were ninety-two of the Caffre police armed and trained in British fashion, and whose fidelity under such tempting circumstances was implicitly trusted. It was not to be wondered at, therefore, when the British infantry had fully entered within the gorge, that an unexpected volley from an ambushed enemy came down thick upon them, and with deadly effect. To retreat in such a case was destruction, and the troops rushed forward under this dangerous fire until they cleared the gorge, and reached a missionary station three miles distant. Here, however, they were not safe, as the whole country round was in a state of insurrection; and Colonel Mackinnon was obliged to commence his retreat to Fort Cox by a circuitous route. But there also Sir Harry Smith himself was shut up without means of egress, the fort being closely blockaded by thousands of armed Caffres; and when Colonel Somerset advanced from Fort Hare to his relief, his troops were defeated and driven back by the Caffres, who now fought with muskets as well as assegais, and could wage a close hand-to-hand encounter with British soldiers as well as one of missiles. In this manner the war went on during the following year, with a succession of desperate skirmishes, by which our troops were thinned

and exhausted, whatever party prevailed; while the work of massacre, conflagration, and plunder, which the Caffre tribes carried on with equal cunning and daring, swept the whole range of

CAFFRES ATTACKING INFANTRY IN KEISKAMMA GORGE
From the Illustrated London News, 1851

frontier, and drove the British settlers across the boundary rivers, and into the settlements below, although these were scarcely places of safety any longer. To deepen the confusion, large bodies of Hottentots, under the leading of some deserters from the Cape corps, forsook their old allegiance to the British government, and made common cause with the now successful Caffres. In September, the following summary, published in a Cape journal, gives a melancholy account of the nature and effects of this war:—

"The ravages of the enemy continue to be most distressing. Having dispersed themselves over an intra-colonial zone, of a breadth varying from thirty to eighty miles, very little of farm stock or produce has escaped destruction. Beginning at Turka, where the Cradock district approaches British Caffraria, we may enumerate the various places as we proceed southward, by Somerset, Uitenhage, and eastward through Albany, till we arrive at Victoria, adjoining the posts maintained by his excellency in Caffraria; and everywhere the same melancholy tale of woe has to be repeated. Flocks carried off, homesteads burned to ashes, the most vigilant of the colonists barely escaping with their lives, the incautious everywhere shot down by parties in ambush—are, we regret to say, the general features of the narrative."

In this manner, a desultory but most harassing warfare of skirmishes and surprises was continued throughout the following year (1852), by

which not only the present prosperity of the Cape of Good Hope as a British colony was sorely diminished, but our future tenure made a matter of doubt and misgiving. We might slay the Caffres in hundreds, but when they requited the loss by tens or fives of British troops who perished in the struggle, the advantage was clearly on the side of the savages, whose numbers would have wasted us out in such a protracted campaigning. Besides, it was evident that the longer the contest was continued the enemy was daily becoming more skilful and daring, and therefore the better fitted for future resistance, even though the present insurrection should be put down. These considerations weighed with the reflective, and induced a desire for the pacification of South Africa, a measure which could now be accomplished with honour, in consequence of the able and successful administration of General Cathcart, who had succeeded Sir Harry Smith as governor and commander-in-chief. The overture came from Sandilli himself, the prime mover and chief support of the Caffre rebellion, who now humbly sued for peace and pardon, declaring that he had "no more strength to fight the English," that he had been driven from his country, and that he had complied with the governor's command by re-crossing the Kei. He now particularly wished to know what district would be assigned for the occupation of himself and his people. As the Amatolas and other districts formerly occupied by the principal insurgents were declared forfeited to the crown, it was necessary to drive Sandilli and his people farther back into the interior; and the country between the Kei and the great north road leading to the Windvogelberg, and bounded on the north by the Thomas river, and the south by the country of the chief Umhala, was assigned to him; this grace, however, was fettered by the conditions that he should surrender the muskets he had taken from the British, remain in allegiance to the Queen of England, and not trespass within the Amatolas, on pain of being dealt with by martial law. These hard terms were reluctantly accepted, and Sandilli and his numerous tribe retired to their new home, about 200 miles to the north of the old. How long this peace will continue, or under what plea or pretext it will be broken, no one can foresee; but that it will not long endure, seems an absolute certainty. A fearless, high-spirited, pastoral people like the Caffres, cannot be content with such narrow limits in the territory that was once their own, and even already they manifest rebellious symptoms, that only wait a fit opportunity for the outbreak. Should this occur, a fresh Caffre war will more than renew the difficulties and dangers of our South African colonists.

In a war that was otherwise so trivial and uneventful, one instance of heroism occurred which even the proud ages of chivalry could not parallel. It was exhibited in the shipwreck of the *Birkenhead*, a government iron steamer, on the 26th of February, 1852. This vessel was conveying detachments from several of our regiments to the seat of war, under Lieutenant-colonel Alexander Seton, of the 74th regiment of Highlanders (who had succeeded to the command on the death of Colonel Fordyce), and had proceeded on her voyage from Simon's Bay, when she suddenly struck upon a sunken rock near the shore, off Point Danger. The shock was so tremendous that the iron plates of the ship's bottom gave way, the cabin was quickly filled with water, and it was evident that in a few minutes more the vessel would be engulfed among the breakers. It was as yet only two o'clock in the morning, with no light but that of the stars; but in an instant the deck was crowded with the alarmed passengers, and, while death was imminent, only two of the ship's boats were available for service. To rush into the boats, at the risk of swamping them, would have been the impulse of the selfish; to fling themselves into the sea, in the hope of reaching the shore, but only to sink each other by their overcrowding, or perish among the breakers, and by the sharks that were on the alert, would have been the headlong attempt even of the bravest. But nothing of the kind in either way was done; and never was the power of military discipline, or the worth of fearless, unflinching courage, or the moral grandeur of self-sacrificing devotedness more conspicuously displayed than in this moment of terrible trial. At the word of Colonel Seton the soldiers drew up upon the reeling and loosening deck as if they had been upon parade; they obeyed his orders as calmly as if they had been executing the usual movements of the drill. The brave humane heart of the colonel was first directed to the safety of those who could least help themselves, and whose fate would otherwise have been certain—to the women, the children, and the sick on board—and they were carefully conveyed into the boats, which, in the first instance, were given up for their especial service; and, by this arrangement, all the helpless were saved without a single exception. And now only were the strong and vigorous to look to their own safety, after they had so nobly discharged their duty to others; and while several betook themselves to swimming, or committed themselves to pieces of floating timber, the vessel parted amid-ships, and went down with the greater part of the officers and soldiers, with whom self-preservation had been only the latest subject of anxiety. In this fatal catastrophe 357 officers and soldiers, and

60 seamen perished, while nearly 200 lives were saved—and this, too, in a crisis where, but for these arrangements, and the fidelity with which they were executed, nearly all might have been lost. These soldiers, also, be it observed, were not veterans, but for the most part young recruits, who had never been under fire; and yet they calmly stood in a breach more dismaying than that of Badajoz or St. Sebastian, and saw the boats, their last hope of safety, depart from them without a murmur. But what shall we say of the controlling might of that noble leader who directed their movements, and whom, even to the death, they were proud to obey? It was his last as well as his first field of action, if such it might be termed; but the event which bereaved the service of such an officer showed how much it had lost, and what a name he might have achieved for himself in the annals of modern warfare. We have been thus particular in the catastrophe of the *Birkenhead*, as it was a unique specimen of heroism, in which the coolest courage and intrepid daring were combined with the purest humanity and disinterestedness; and as such, it roused the emulation of our soldiers, and was the parent of similar achievements in the subsequent campaigns of the Crimea and India. As long as the British army nurses such a spirit as that which was shown upon the deck of the *Birkenhead*, and possesses such officers as Colonel Seton, our country, let the enemy be who they may, has nothing to fear.¹

We now turn our record to that momentous European war in which we were subsequently involved. In this case it came, not from France, whose revolutionary spirit in 1848 had filled us with apprehension, and against whose anticipated attacks we had been carefully arming, but from Russia, a country with which we had lived in friendship, and whose growing power we had fostered as a counterpoise to that of France. Little did our politicians foresee, even till the last hour, how diligently they would toil to undo their own work, and how cordially France and England would unite their banners in a common cause. But a new era in the history of human progress seems to have commenced, and to proceed by steps upon which the statesmanship de-

rived from the experience of the past is unable to calculate.

Since the days of Peter the Great, Russia had never ceased to turn a covetous eye towards Turkey: the possession of that country seemed to her nothing more than her birthright, as she was the great metropolitan head and representative of the Greek church; and, from the gradual decay of the Turkish power, it was thought only a question of time for the Russian dominion to be established upon the banks of the Hellespout, and the cross replaced upon the dome of Santa Sophia. When the opportunity had arrived, a cause of quarrel was not difficult to find; and Russia established her claim upon monks, relics, and shrines. Such pretensions are strange to the politicians of the nineteenth century; but the cause of quarrel was precisely fitted to the semi-barbarism of the Russian intellect, while it imparted to such an unjust aggression the sanctions of a holy war.

From the beginning of the sixteenth century to the nineteenth, the guardianship of the holy places in Palestine had been a ground of contention between the Greek and Latin churches, the former represented by the Czars of Russia, and the latter by the sovereigns of France. Independently of anything like religious feeling, a point of honour was at issue, in which neither party would yield to his rival; and, to complicate this singular debate, which was waged with a full amount of the *odium theologicum*, the umpire of the quarrel was necessarily a Mahometan—even the Sultan of Turkey, and august representative of the caliphs, in whose territories the places in question were situated, and without whose imperial *hatti-scheriff*, or imperial ordinance, the decrees of the contending sovereigns could have no effect. In 1850 this controversy had become so keen, especially about the possession of certain nooks and portions of the church of the Holy Sepulchre at Jerusalem, that the bewildered Turkish government knew not how to arbitrate, and endeavoured to preach peace to both parties, but in vain. When a joint commission from France and Russia had been unable to decide, the case was transferred to a Turkish special council of state, and the result was a *firman* of the sultan, in March, 1852, by which the different pieces of the church were apportioned among the rivals according to old treaty or tradition. Even this, however, was not enough; for, while a key to the church was granted to both parties, the Greek (or Russian) monks were offended, and claimed the sole possession of this precious key. And thus wrote the Russian ambassador, Count Neesselrode, upon this most momentous decision:—"The efforts of the French embassy have triumphed at Constan-

¹ A mural tablet was lately erected by government at Chelsea Hospital, bearing the following inscription:—"This monument is erected, by command of her Majesty Queen Victoria, to record the heroic constancy and unbroken discipline shown by Lieutenant-colonel Seton, 74th Highlanders, and the troops embarked under his command, on board the *Birkenhead*, when that vessel was wrecked off the Cape of Good Hope, on the 26th of February, 1852, and to preserve the memory of the officers, non-commissioned officers, and men, who perished on that occasion. Their names were as follows—(here the names of the officers, and the regiments to which the privates belonged, are given); in all, 357 officers and men. The names of the privates will be found on brass plates adjoining."

tinople. Not only has the firman, sanctioned by the sultan's hatti-scheriff, not been executed at Jerusalem, but it has been treated with derision by the sultan's ministers. To the indignation of the whole Greek population, the key of the church of Bethlehem has been made over to the Latins, so as publicly to demonstrate their religious supremacy in the East."

It is sufficiently evident that when the same privilege was conceded to both parties indifferently, no supremacy to either was conceded. But Nesselrode and his court thought differently; and with them less than all was nothing. To enforce the correctness of this conclusion, a Russian force was marched towards the frontier of Moldavia; while, on the other hand, the entrance of a French fleet into the Dardanelles was threatened, unless the Latin monks obtained the possession of the tomb of the Virgin one day exclusively for themselves. While the Turkish government was thus about to be crushed in the collision of two such powers, Prince Menschikoff arrived as Russian ambassador at Constantinople, and, from his arrogant tone, as well as secret proposals, it was evident that his mission aimed at something more than the possession of keys and holy sepulchres. It was nothing less than the full independence of the Greek church in Turkey—the establishment of an *imperium in imperio*, of which his imperial master would necessarily be the sovereign. Such a demand was inadmissible, and rejected accordingly, upon which Menschikoff left Constantinople in high dudgeon. To right itself in the estimation of Europe, which with Turkey was now a matter of some importance, an official note from its government to the different embassies announced the terms that had been proposed, and their decided refusal; and, in full apprehension of the consequences, notwithstanding the pacific assurances of the Emperor of Russia, the note thus concluded:—"Nevertheless, no direct assurance having been given to the Porte to the effect that there will be no war, and preparations going forward on a large scale, in the localities bordering on the Ottoman empire, the Porte, animated by no hostile intention, and as a simple measure of prudence, feels compelled to take measures of self-defence." To remove also every substantial ground of complaint from his Christian subjects, and their fellow-religionists of Europe, the sultan issued a firman at the end of May, 1853, by which the privileges of the Greek church in Turkey, so imperilled by late events as well as old abuses, were ratified and confirmed in the most express terms. Having performed this act of justice, the Turkish government prepared for war, which now seemed to be inevitable.

This event commenced in earnest on the 2d

and 3d of July, 1853, when two divisions of Russian troops crossed the Pruth, under the command of Prince Gortschakoff. In this way the provinces of Moldavia and Wallachia were occupied by the enemy, and Turkey in self-defence provoked to resistance. In consequence of this Russian movement, a combined English and French fleet were sent to Besika Bay, near the entrance to the Dardanelles, for the purpose of watching those further movements in which both powers had so deep an interest; while, to put a stop to the war at the commencement, the representatives of the four great powers held a conference at Vienna, and drew up terms of agreement, which were submitted to both parties; but, while Russia offered to accede to them, the Turkish government refused, unless some alterations were made in the language in which its provisions were expressed. Although the negotiating powers were offended at the refusal, yet they were soon compelled to acknowledge that the Ottoman Porte was in the right. These terms were therefore modified according to the wish of the latter; but it was now the turn of the czar to reject them, which he accordingly did. It was evident that matters had gone too far to be settled by diplomatic arbitration. Besides, the arbitrators had already committed a diplomatic blunder, by producing a note which required such amendment, and thus affording to both rival parties a loophole of escape.

During this period of mingled negotiation and aggression, a peace party in Turkey, headed by Redschid Pacha, conscious of the now decayed state of their empire, and devout believers in the old prophecy that they were to be finally driven out of Constantinople, and sent back to the interior of Asia, were chiefly anxious to procrastinate the coming of the evil hour, and with this view, they were ready to purchase a continuance of peace, even at the price of submission. But the war party, which was now the popular cause, clamoured for hostilities with a vehemence that threatened to garnish the walls of the seraglio with the heads of all who gainsaid them. "You are now listening," they menacingly exclaimed in the council chamber, where they sought and compelled an audience,—“you are now listening to foreign and infidel ambassadors, who are the enemies of the faith: we are the children of the Prophet; we have an army, and that army cries out with us for war, to avenge the insults which the Giaours have heaped upon us.” Thus it was that the fanaticism of Christian Russia was to be met with the equal fervour of Moslem pride and intolerance, and on both sides the conflict was to be distinguished by the revolting characteristics of a religious warfare. The popular outcry bore down all opposition, and on the 5th of October,

1853, the Ottoman Porte published a formal declaration of war against Russia. In this note the real and political motive of the Russian invasion was stripped of its religious pretensions, and exposed throughout with Turkish brevity and simplicity. "Even supposing," it said, "that Russia had a subject of complaint in relation to the holy places, she ought to have circumscribed her actions and solicitations within the limits of this question alone, and ought not to have raised pretensions which the object of her complaints could not sustain. She ought not, moreover, to have taken measures of intimidation, such as sending her troops to the frontiers, and making naval preparations at Sebastopol, on the subject of a question which might have been settled amicably between the two powers. But it is evident that what has taken place is totally contrary to an intention of amicable settlement."

In the meantime, how had Britain been employed in an event upon which she had so much at stake? On the 25th of April, when the movements of the Emperor of Russia had excited public alarm, and occasioned an anxious inquiry, the Earl of Clarendon assured the lords in the upper house that Turkey had nothing to fear; that the mission of Prince Menschikoff was for the purpose of placing the matter of the holy shrines on a permanent footing; that the naval and military preparations of Russia had been greatly exaggerated; and that our government had full reliance on the pacific declarations of the czar. Finally, he assured the house that in relation to Turkey there was no danger of the peace of Europe being disturbed. On the 27th of May, when the mission of Menschikoff was better understood, and the designs of Russia were more clearly manifested, the question was again brought before both Houses of Parliament. But in reply, Lord Clarendon in the lords alluded to the reserve he must maintain while negotiations were actually pending, stated that Menschikoff's mission was not ended as yet, and declared that the ambassadors of France and England now at the Porte were completely at one in maintaining the tranquillity of Europe, by upholding the independence of the Turkish empire. A similar reply was given in the commons by Lord John Russell. Only three days later, when Menschikoff's hostile departure from Constantinople was known, and when war was almost certain to follow, the question in parliament now was as to the probability of the British fleet reaching the Dardanelles before that of Russia could arrive; and the apprehension of the members was quieted with the assurance that our ships would be at their station two days earlier than the Russian armament.

Events now crowded thick and fast; the elec-

tric wires of the telegraph were kept in incessant action, and the public mind of England in a state of constant excitement. But the march of the Russian troops across the Pruth, and the occupation of the Danubian provinces of Moldavia and Wallachia, with the manifesto of the czar announcing and justifying the measure, seemed to make all further hopes of peace a delusion; and on the 27th of June and 11th of July, ministers were urgently asked if these reports were true, and if government had been officially informed of them. But to these the answers were so vague and unsatisfactory, although the subject was repeatedly brought before both houses, that the general impatience could be restrained no longer, and an attempt was made to break the spell in which the government had enveloped the subject, by a demand for the documents in their possession; but to this stern ultimatum it was answered on the part of the ministers, that the production of these would be detrimental to the public service. As long indeed as the last lingering shadow of a hope of peace remained, every care had been taken to avoid hostilities, either by the production of a diplomatic note or verbal expression of feeling, for it was felt that if hostilities commenced, they would be nothing less than the beginning of a great European war. But in Britain such silence has its limits, and there are emergencies in which the most taciturn reserve in high places is compelled to speak out. A full revelation was therefore made on the 16th of August, in the House of Commons, according to his previous promise, by Lord John Russell. On entering office his attention had been called to the controversy respecting the holy places; and from the starting-point of Menschikoff's embassy, his lordship proceeded to recapitulate the negotiations upon the subject, until both the French and English government had been startled by the czar's new and extravagant demands. This alarm had been increased by the Russian preparations, both naval and military, for the invasion of the Danubian provinces, and therefore the French and British fleets had simultaneously entered the Dardanelles, for the protection of Turkey. Even at this stage, however, every effort had been made to prevent a declaration of war; and for this purpose, the note of Vienna had been drawn up, and subscribed by the four powers. That note had already been accepted by the czar; but even if it should be agreed to by the sultan also, there would still remain the question of the evacuation of the provinces, and unless Russia consented to abandon them, no settlement could be satisfactory. As to the means by which this object is to be obtained, and the mode of operation, these, his lordship said, must be left to our executive government.

As for the French and English fleets in Besika Bay, there they might be allowed to remain, without being considered as an equivalent to the military occupation of the provinces, until peace should be secured, and the Russian troops withdrawn. "I will only say further," he added in conclusion, "that this question of the maintenance of Turkey is one that must always require the attention—and I may say the vigilant attention—of any person holding in his hands the foreign affairs of this country. This, however, can only be secured by a constant union between England and France—by a thorough concert and constant communication between those two great powers." At the close of the long discussion which followed, Lord Palmerston expressed his conviction that Turkey had still within itself the elements of life and prosperity; and he believed that the course adopted by her majesty's government was a sound policy, deserving the approbation of the country, and which it would be the duty of every British government to pursue.

As it was now full time to be intent on military preparation, a government plan connected with this was brought before the House of Commons previous to the close of the session, by Sir James Graham, entitled "the naval coast volunteers bill." It was based upon the voluntary enlistment principle, instead of the compulsion practised in the sea-service, and calculated for the fishermen, bargemen, lightermen, and persons employed in the coasting service, who lived upon our shores. These men, Sir James stated, would not be unwilling in a time of peace to be trained for a short period in each year to the use of great guns—a service for which their nautical habits had in some measure already fitted them. These volunteer marines were to be enlisted on the same terms as were held out to landmen for the militia service, by a bounty of £6, the payment to be extended over such a period as the admiralty might think fit; and their pay while on duty was to be equal to that of an able seaman in the royal navy. Their period of enlistment was not to exceed five years; that of their training was to be twenty-eight days, to be conducted either ashore or afloat; and when at sea, they were not to be taken more than fifty leagues from the coast of Great Britain or Ireland, or one hundred in the case of actual service. Such were the principal features of the bill, by which, in a season of war or invasion, Sir James hoped that 18,000 or 20,000 men could be mustered for the defence of our shores—men in the prime of life, inspired with the national character of British seamen, and trained to the use of arms, who would prove a powerful auxiliary to our advantages of steam navigation. The bill passed without opposition

through both Houses of Parliament. On the 20th of August, the prorogation of parliament was performed by commission, and with the usual ceremonies. After an amount and variety of labour that was altogether unusual, in which 104 bills had passed into law, and only two been rejected, the close was in gloomy anticipations, not only of a deficient harvest over the whole of Europe, but a general war, of which the advancing shadows were at hand.

Under these melancholy auspices, the parliament was opened by her majesty in person on the 30th of January, 1854. In the royal speech much importance was attached to the efforts which government had made for the preservation of peace; but the necessary secrecy with which these had been accompanied, as well as the shifting uncertainty that still continued to attend them, had been productive of no small amount of public impatience and resentment. Since war appeared inevitable, the nation was eager to plunge into it at once, and learn the best or the worst that might follow. And this impatience found ample utterance in the House of Lords, when her majesty's address was under consideration. The Marquis of Clanricarde declared that he was sorry he could not agree in the expressions used in the speech with regard to the efforts of the government to preserve peace. These efforts, it seemed to him, had been so characterized by vacillation and inconsistency, that, in point of fact, neither parliament nor the world knew what the determination of the government really was. Warfare was talked of, but no one knew with whom we were at war. Nay, no one could say whether we were at war or not. But if public rumours were true, we were at war, and if so, why was the government afraid to state the fact? Another point of complaint, his lordship added, was, that no information on the eastern question had been afforded to the public, so that the inhabitants of other and unconstitutional countries were in a better position to form an opinion of the state of affairs than the people of constitutional England. It was impossible to avoid coming to the conclusion that all this uncertainty was owing to the difference of opinion on the eastern question which prevailed in the cabinet; the result of which division was, that every step taken in the matter bore evidence of a compromise between the conflicting parties. The character of England had sank immeasurably among continental nations through the conduct of the government in this affair. The "sneer" went round that we were afraid. This expression by the noble marquiss of the popular feeling, called forth on the part of the Earl of Clarendon as full a justification of the ministers in the course of policy they had

hitherto seen fit to pursue. As they were responsible to parliament, they were not called upon to publish their acts before the legislature met, in imitation of those governments who had no parliament to which they owed responsibility. Revelations also might, on certain contingencies, have been inconvenient and damaging to the cause of peace. With regard to the taunt of cowardice which had been thrown out against the administration, this Lord Clarendon indignantly denied. What they had done was under a deep conviction of the value of peace, which they deemed worth any sacrifice except that of national honour. He illustrated this by a minute detail of the diplomatic tergiversations of Russia, through which our ministers, still hoping for a peaceful adjustment, had avoided committing this country to the perils and uncertainties of war, and by this pacific conduct they had placed the Emperor of Russia in an evil position, by making him the cause of aggression and sole author of the war. Moreover, this very delay had been serviceable to the Turks, who had thus obtained much valuable time for completing their warlike preparations; while it would justify the cause to the British public, should our going to war be inevitable. In the course of discussion in the lords, Earl Grey delivered a pertinent remark, which, had it been attended to at the time, and laid up for prompt accomplishment, might have averted much future disappointment and disaster. He was not quite satisfied that we should have interfered at all in the dispute between Russia and Turkey. If, however, as he feared, war was inevitable, it should be carried on with vigour and unanimity, and he trusted to find the defect in the naval and military services which long peace might have fostered, promptly removed, and young and intelligent officers appointed to the command.

The discussions both in the lords and the commons upon the approaching crisis, which every day appeared more inevitable, were both keen and frequent, but at each debate the asperity with which the delay of the ministers had been blamed, became more temperate, until it settled into a general conviction that they could scarcely have acted otherwise than they did; that, in fact, they had acted well and wisely, both for the honour and interests of the country. The strength of this conviction was remarkably manifested on the 22d of February, when the report from the committee of supply, communicating their votes of men and money, was brought before the House of Commons. On this occasion Mr. Joseph Hume, the keenest guardian of the public purse that ever kept watch upon the national treasury, opened the discussion, by observing that this was the first time since he had been in

parliament that he had not taken part in the question of voting the number of men for the public service. He deprecated the manner in which the government, and especially Lord Aberdeen, had been attacked, and expressed it as his opinion, that they had deserved the thanks of the country for having exhausted every effort for the preservation of peace. The official papers, he declared, as far as they went, showed that the past and the present administration had done everything in their power to keep aloof from the quarrel between the Latin and Greek churches, and to terminate the dispute between Russia and Turkey. They had been deceived by over-confidence. The shame, however, was not upon them, but upon the deceiver. Under the circumstances, he approved the increase of the navy, which he thought moderate, and considered that the measures taken by the government were fit and proper to protect the liberties of mankind against the encroachments of a barbarian power. Thus testified the venerable octogenarian whose cautious understanding so many years had only ripened into fuller maturity, and whose feelings had been mellowed when those of others are so often soured or dried up. After this, who could cry out against the expensiveness of warlike preparations, or preach peace upon the plea of economy?

Another important feature in the approaching contest, was a consideration of the question how far such countries as France and England could be justified in waging a war against Christian Russia, in support of Turkey and Mahometanism? The question thus stated had often been urged already, and it was necessary, both for the vindication of England and the satisfaction of the public mind, that it should be fairly met and dealt with. On this account, a motion was made in the House of Lords on the 10th of March, by the Earl of Shaftesbury, for papers respecting the condition of Christianity in Turkey. In common with the general desire of Christendom, he wished that both parties had been removed from their actual positions, yet still, being compelled to choose, he infinitely preferred the Turkish to the Russian civilization. He quoted authorities to show that while Protestantism was largely on the increase among the Turkish Christians, no difficulties were interposed by the Ottoman government to religious instruction; full permission was given to teach, and to print religious books, many of which were issued in the Turkish language. In Russia, on the contrary, his lordship showed that no religious movement was permitted; the Bible in the Russian tongue was prohibited, and even the importation of Hebrew Bibles; while as to Christian missions, these were also forbid by the Russian

government, even to the heathen who were under its dominion. With all this, the Greek priesthood were continually intriguing for the supremacy of their own church; the Russian consuls were employed in the same object, and while the result was tyranny and coercion, the British government was repeatedly compelled to interfere against the arrogant proceedings of these consular apostles. This, indeed, was the secret of the czar's proceedings; and the true meaning of Prince Menschikoff's note was, the exclusive aggrandizement of the Greek church in the Turkish dominions, by the extinction of every act in favour of Protestantism for the last twenty years; and during these twenty years Turkey had permitted more for the advancement of civilization than Russia during four hundred. These statements were cordially received by the house, and the motion was agreed to.

But even while these peaceful negotiations were pending, the war had already been commenced on the part of Russia, by her occupation of the Danubian provinces—an aggression which, in connection with the military events to which it led, will be detailed in the history of the Crimean campaign, of which it forms an important episode. And yet, even although hostilities had thus commenced in earnest, and such heavy blows been struck, the conference at Vienna had not ceased to mediate; and on the 5th of December, the following collective note was addressed to the Turkish government:—"The undersigned representatives of Austria, France, Great Britain, and Prussia, assembled at a conference at Vienna, have received instructions to declare that their respective governments behold with profound regret the commencement of hostilities between Russia and the Porte, and desire exceedingly, by interposing between the belligerent powers, to prevent any fresh effusion of blood, and to put an end to a state of things which menaces seriously the peace of Europe. Russia having given an assurance that she was disposed to treat, and the undersigned not doubting that the Porte is animated by the same spirit, they request, in the name of their respective governments, to be informed on what conditions the Ottoman empire would consent to negotiate a treaty of peace."

The application, though so late, did not seem in vain: Turkey, as the power in greatest jeopardy, and that had most to lose, was willing to negotiate anew upon the *status quo*, when an event occurred which gave all further hope of peace to the winds. Irritated at the successes of the Turks on the Danube, and eager to recover her military *prestige*, Russia resolved to abandon her professions of a defensive warfare, for a blow that should recover her lost reputation, even

though it might bring the whole allied powers to her gates. The Asiatic coast of the Black Sea, to which the Turks had been sending reinforcements, was selected for the feat; and the harbour of Sinope, a town half-way between Trebizond and Constantinople, and about a hundred leagues from either, was the place where the storm was to burst. There the Turkish fleet, to the number of seven frigates, three corvettes, and two smaller vessels, were anchored, but in very unskilful order, in the harbour, when on the 30th of November the Russian fleet, consisting of six sail of the line, two sailing frigates, and three steamers, unexpectedly bore down upon them. An action immediately commenced; but although the Turks fought with their wonted obstinacy, their inferiority, not only in ships, men, and cannon, but also in position and nautical skill, made resistance so hopeless, that in an action which lasted two hours and a half, they lost 4000 men, while all their ships were destroyed or rendered useless except a Turkish steamer, which escaped under a heavy fire of broadsides, and carried the tidings to Constantinople.

By this horrible deed, which resembled a massacre and a butchery, rather than a battle, the Czar of Russia belied his professions, upon the strength of which the allied powers had continued in treaty: he had also grossly insulted England and France, whose combined fleets at that time were lying at anchor in the Bosphorus. A day's sail would have brought them to the scene of outrage, either to prevent or avenge it; but in the present state of affairs such a movement was impossible. "The object (wrote Lord Clarendon to the British minister at St. Petersburg) with which the combined fleets were sent to Constantinople was not to attack Russia, but to defend Turkey; and the English and French ambassadors were informed that the fleets were not to assume an aggressive position, but that they were to protect the Turkish territory from attack." This was on the understanding that whatever naval operations were undertaken would be confined to the Russian coasts of Asia, and a defensive warfare on the part of Russia; "but the sultan's squadron (Lord Clarendon continued) was destroyed while at anchor in a Turkish harbour, and where, consequently, the English and French fleets, if they had been present, would have protected it, and would have repelled the attack." After the battle, indeed, the suddenness of which took all by surprise, the allied fleet sent two frigates to report the motions of the enemy; but not a Russian ship was to be seen: at the close of the engagement they had hastily withdrawn and taken shelter in Sebastopol.

The event at Sinope, which excited equal indignation in France and England, drew those countries more closely together against their common enemy, and inspired them with a more ardent spirit of resistance. The first result of this was the entrance of their combined fleet into the Black Sea, for the purpose of active interference in any attack that might be made upon the ports and coasts of Turkey—a movement against which Russia absurdly cried out as an iniquitous interposition. It was justified, however, and that too by no less a diplomatist than Louis Napoleon himself, in an autograph letter to the czar. “The affair at Sinope (he wrote) was for us as painful as it was unexpected; for it matters little to us whether or not the Turks wished to convey munitions of war to the Russian territory. In fact, Russian ships attacked Turkish vessels in the waters of Turkey, while those vessels were riding quietly at anchor in a Turkish port. The Turkish vessels were destroyed, in spite of the assurance that there was no wish to commence an aggressive war, and in spite of the vicinity of our squadrons. It was no longer our policy which received a check, it was our military honour. . . . Out of this feeling arose the order given to our squadrons to enter the Black Sea, and to prevent by force, if necessary, the recurrence of a similar event.” The answer which the Emperor of Russia returned on the 9th of February was still unctuous with peaceful professions, and held out hopes of an amicable nego-

tiation, while he was making arrangements for a war at *outrance*. This was manifested by the fact, that only a day after his letter had been written, he issued a ukase for a military levy throughout his dominions, of nine men in every thousand of the adult male population. This order was speedily followed by a proclamation, in which the blame of all that was to follow was transferred to those who were thenceforth to be regarded as the chief enemies of Russia. After declaiming upon the moderation and justice of his demands, and his hopes that Turkey, if left to herself, would have acquiesced in them, the czar’s manifesto thus continued:—“His imperial majesty’s expectations have been disappointed. The English and French governments have sided with Turkey, and the appearance of the combined fleets off Constantinople has served as a further incentive to its obstinacy; and now both the western powers, without previously declaring war, have sent their fleets into the Black Sea, proclaiming their intention to protect the Turks, and to impede the free navigation of our vessels of war employed for the defence of our own coasts. After a course of proceeding so unheard-of amongst civilized nations, we recalled our embassies from England and France, and have now broken off all political intercourse with these powers.” The proclamation then appealing to the superstition of the people, proceeded to invest the approaching contest to which they were summoned with the character of a war in behalf of

STATE OF THE PORT OF SINOPE AFTER THE BOMBARDMENT BY THE RUSSIANS.—From a sketch by M. A. Durand Berger, engraved in L. Illustration, 1854

Christianity itself, against those godless infidels by whom it was assailed. “England and France,” it said, “have sided with the enemies of Christianity against Russia, combating for the orthodox faith. But Russia will not betray her holy mission. . . . With this hope, combating for our persecuted brethren, followers of the faith of Christ, with one accord let all Russia exclaim:—‘O Lord,

our Redeemer, whom shall we fear? may God be glorified, and his enemies be scattered.’”

Matters had now arrived at that point where a proclamation of war is inevitable: the hostile parties were already in full array, and standing front to front, so that nothing was needed but the signal of onset. It was first given by France, as the stronger and more interested party, on the

27th of March. On that day, a message from the emperor was conveyed to the *corps législatif*, announcing that as Russia had refused an answer to the summons of France and England, she was thereby placed, with respect to France, in a state

of war, and that the whole responsibility of it rested on Russia alone. This message was welcomed with enthusiastic cheers and cries of approbation. A similar communication was made to the French senate, and it received an equally

ENTRANCE TO THE BOSPHORUS FROM THE BLACK SEA.—From a sketch by James Newlands, C E

cordial welcome. France was now as eager for a war with Russia as ever she had been for the invasion of England, while of all the coadjutors she could have found, none was so welcome as her ancient enemy, whose valour she had so often tried, and upon whose steady co-operation she could place unhesitating reliance. In Paris, and over the whole empire, the military spirit of the people, so long suspended, was awakened into full life; and while they recognized in this union of the power of France and England the full realization of their great Napoleon's fondest wish, an additional promise of success seemed to be imparted by the fact that it was under Napoleon's nephew that this combination had been formed, and by whom its efforts would be mainly directed.

It was only the day after, that a similar proclamation of war against Russia was issued on the part of Great Britain. It was felt and acknowledged among us that forbearance had been exercised to the last; that delay had reached its utmost limit, and that fruitless negotiation must now be exchanged for decisive action. So eager indeed, for some time, had been the national feeling, that the caution and reluctance of our ministers had been blamed as lukewarmness, and sometimes reproached as cowardice or even something worse. It was therefore with no ordinary stir and excitement that the royal message to parliament was delivered by the lord-chancellor

in the following words. It will be observed that the chief purport of such a proclamation, conveyed in the expressive word *war*, is not once mentioned throughout—and yet how thoroughly all its stern realities are implied!—

“VICTORIA R.

“Her majesty thinks it proper to acquaint the house that the negotiations in which her majesty, in concert with her allies, has for some time past been engaged with his majesty the Emperor of all the Russias, have terminated, and that her majesty feels bound to afford active assistance to her ally the sultan against unprovoked aggression.

“Her majesty has given directions for laying before the house copies of such papers, in addition to those already communicated to parliament, as will afford the fullest information with regard to the subject of these negotiations. It is a consolation to her majesty to reflect that no endeavours have been wanting on her part to preserve to her subjects the blessings of peace.

“Her majesty's just expectations have been disappointed, and her majesty relies with confidence on the zeal and devotion of the House of Lords, and on the exertions of her brave and loyal subjects, to support her in her determination to employ the power and resources of the nation for protecting the dominions of the sultan against the encroachments of Russia.”

CHAPTER XVII.—CIVIL AND MILITARY HISTORY.—A.D. 1854.

VICTORIA.

Origin and causes of the Crimean war—The czar's assumption of the protectorship of the Greek church in the Turkish empire—Dangerous character of this claim to Turkish independence—Insufficient grounds of the claim—Hostile manner in which it was adduced—The Russian army crosses the Pruth—It occupies Moldavia and Wallachia—The Vienna note refused by Turkey—The sultan proclaims war against Russia—First hostile movements of Omar Pacha in the principalities—He crosses the Danube—Reluctance of France and Britain to commence hostilities—Their decision confirmed by the massacre of Sinope—The French and English armies embarked for the contest—They are encamped at Gallipoli—Causes for the selection of this station—Opening of the campaign on the Danube—Victory of the Turks over the Russians at Citate—The Russians resolve to cross the Balkan—Their purpose frustrated—The allied army encamps at Varna—The allied fleet bombards Odessa—Destructive character of the bombardment—Attempt of the Russians to bombard Silistria—Gallant defence by the Turks—The British officers by whom they are headed—Unsuccessful attack of the Russians on Silistria—They are compelled to raise the siege—The Russians evacuate the principalities, and are replaced by an Austrian army—Sufferings of the allied army at Varna—Havoc produced among the troops by cholera—Destructive fire at Varna—Desolation of the surrounding country—The allied army passes over to the Crimea—Its landing—Its new encampment before Sebastopol—Symptoms of an approaching conflict between the allies and the Russians.

NOTWITHSTANDING the apparently frivolous character of the origin of this war, by which all Europe was kindled, there was a deeper significance in it than was implied by the mere possession of the keys of the holy sepulchre. This was evident to the statesmen of the different powers who either were engaged in the complex negotiations it occasioned, or who watched their character and bearings. The guardianship of the sepulchre, which the possession of these keys conferred, was something very different from a mere religious punctilio. It was supposed to invest with the rights of a protector over the Christians of his own church in the East the sovereign who held it; and this claim, if once allowed, would establish the Russian czar in the virtual sovereignty of European Turkey. This is apparent from a census that was taken in 1844. From this it appeared, that while the population of European Turkey amounted to 15,000,000, only 2,100,000 of these were of Turkish race, and not more than 4,550,000 in all were Mussulmans. Of the Christian part of the population, only 640,000 were Roman Catholics, while there were 10,000,000 belonging to the Greek church, who recognized the czar as their head, and regarded the sultan as little better than Antichrist. In Asiatic Turkey, indeed, the proportions were very different, there being 16,000,000 Mahometans to only 3,000,000 Christians of the Greek church, but the latter could be dangerous subjects, more especially when countenanced by the neighbourhood of a Russian army. It was therefore no trivial matter to Turkey whether these keys

were given to the custody of the Greek or the Latin church, whether they were held by the Emperor of France or of Russia. As yet, indeed, the *rayahs*, or Greek Christians of the Turkish empire, had shown no outward tokens of their sympathy with the designs of Russia; but in the midst of Mahometan intolerance and provocation, who could tell how long this forbearance might last? When the war broke out, the underhand proceedings of these rayahs against the allied armies, showed how completely their sympathies were enlisted on the side of the Russian sovereign.

As this claim of the czar to a protectorship in the empire of another power created an *imperium in imperio* which had a startling appearance to the rest of Europe, and was certain, on being put forth, to create much cavil and debate, some show of political right was necessary to fortify his assumption. For this purpose, therefore, he adduced the treaty of Kainardji, established between Russia and Turkey in 1774, by the 7th and 14th articles of which he laid claim to this unreasonable protectorship. But these articles, when examined, could bear no such interpretation. By the 7th article, nothing more is conceded than the following:—"The Sublime Porte promises to protect constantly the Christian religion and its churches; and also it allows the ministers of the imperial court of Russia to make, on all occasions, representations as well in favour of the new church at Constantinople, of which mention will be made in the 14th article, as in favour of those who officiate therein." And turning to this last-mentioned article, we find nothing more stated than this:—"It is per-

mitted to the high court of Russia, in addition to the chapel built in the house of the minister, to construct in the Galata quarter, in the street called Bey Oglu, a public church of the Greek rite, which shall be always under the protection of the ministers of that empire, and shielded from all obstruction and all damage." Here the Porte distinctly assumes for itself the protection of its Christian subjects, and allows to Russia nothing more than the right of having a chapel in the ambassador's house, and another in the city of Constantinople.

It was so early as the close of 1852, that the czar distinctly asserted his claim to the protectorate of the Turco-Christian eastern church; and to establish his assumption, he ordered at the same time a large body of troops to advance towards the frontier of Moldavia, which is separated from the Russian province of Bessarabia by the river Pruth. This movement of Russia to settle the question by force, occasioned a rival and counter-movement on the part of France by sea, and the Toulon squadron was ordered at an early period of the following year to set sail for the Greek waters. Hot and hotter waxed the negotiation of the representatives of Russia and France at the court of Constantinople, while Britain vainly attempted the office of umpire and pacificator, and the unfortunate sultan, swayed by either party alternately and feeling his danger, was unable to pronounce a conclusive verdict. This question of the contested sepulchre, from which the whole strife had originated, and under which it seemed as if Turkey must be finally crushed to death, was little fitted to recommend Christianity itself either to him or to his subjects! But the czar had advanced too far to recede, and it was not in his nature to yield; he also had calculated upon the impossibility of a union between France and England for a war in behalf of Turkish interests, and upon the sympathy with which his advance would be regarded as a crusade in behalf of Christianity at large. He therefore continued his forward movement. On the 31st of May, 1853, Count Nesselrode announced to Redschid Pacha, the Turkish minister, that in a few weeks the Russian troops would receive orders to cross the frontier and occupy the principalities, not, as he added, to wage war, but to obtain those material guarantees which had been demanded from the Porte; and on the 2d and 3d of July, two divisions of the Russian forces crossed the Pruth. If anything could add to the insult of this aggression, it was the professions of peace with which the act was followed, in the proclamation of Prince Gortschakoff, the commander-in-chief of the army of occupation, to the inhabitants of Moldavia and Wallachia. He assured its Christian and conquered, but now

acquiescent and contented vassals of the Porte, that his august master had commanded him to occupy their country, not however with projects of conquest, or to modify their institutions or political position, but to give an immediate and effectual protection to the principalities under certain grave and suspicious circumstances, originating in the Ottoman government. The czar, he added, had no design of an aggressive war upon Turkey, but only to obtain assent to his equitable proposals; and this being obtained, that the army of occupation would immediately return to the frontiers of Russia. But by what right, or semblance of right, had these forces crossed the Pruth at all? The provinces were under the sovereignty of the sultan, and ruled by hospodars of his election, and were not to be entered by the troops either of Russia or Turkey, which were to be stationed beyond their frontier, except for the repression of internal disturbance. Such had been the latest guarantee between the two powers upon the subject; but although there was no pretext of disturbances to be quelled either in Moldavia or Wallachia, the Emperor Nicholas filled these principalities with his troops, without proclamation of war, as if they were his by right of conquest, or had formed a part of his own dominions.

Notwithstanding these provocations, the allied powers were unwilling that Turkey should commit herself by immediately proclaiming war against Russia, for the maintenance of which she was unfit, and the burden of which, they knew, would ultimately fall upon themselves. Overruled accordingly by their advices, the Ottoman government confined itself to remonstrances, and a new series of negotiations was opened up with Russia for the withdrawing of her troops from the Danubian provinces. But matters had now advanced so far that every step of remonstrance or overture only complicated the question. Such was especially the case with the famous Vienna note, which, after a conference of the four great powers held at Vienna, was finally adopted, and presented for the acceptance of Russia and Turkey. This the czar was ready to subscribe, as it was unfortunately so expressed, that several parts of it might be interpreted in favour of his claims; but the Porte was fortunately awake to these equivocations, and refused to receive the note without certain explanations and restrictions. The allied powers were afterwards obliged to approve of this caution and scrupulosity, but in the meantime it formed a triumphant apology to the czar that he had accepted the conditions of the note, by which the blame of further proceedings was thrown on his antagonists. But the war party of Turkey was weary of these proceedings, and at Constantinople the popular in-

dignation could no longer be restrained. War was therefore declared against Russia on the 5th of October (1853), and in the declaration, a temperate statement was given of the concessions the Ottoman government had made, and the injuries by which it had been provoked. The question about the holy places had been settled to the satisfaction of all parties; but Russia was still arming and still advancing. "Is it not, then, seeking a pretext for quarrel," the manifesto added, "to insist, as Russia has done, upon the question of the privileges of the Greek church granted by the Ottoman government—privileges which the government believes its honour, its dignity, and its sovereign power are concerned in maintaining, and on the subject of which it can neither admit the interference nor the *surveillance* of any government? Is it not Russia which has occupied with considerable forces the principalities of Moldavia and Wallachia, declaring at the same time that these provinces should serve as a guarantee until she had obtained what she desired? Has not this act been considered justly by the Sublime Porte as a violation of treaties, and consequently as a cause of war? Have the other powers themselves been able to come to any other decision? Who then will doubt that Russia has been the aggressor?"

The commander-in-chief of the Turkish army for the Danubian provinces was Omar Pacha. This remarkable man, originally an Austrian subject, and born in Croatia in 1801, had entered the Turkish service in 1830, where his high talents and brilliant military career in Syria, Albania, Koordistan, and Bosnia, secured him the confidence of a government always jealous of foreigners. But as a soldier of fortune and a renegade from the Christian faith, he found it not so easy to obviate the religious scruples or aristocratic pride of those allied commanders with whom he was afterwards to act, and to most of whom he was superior in military skill and experience. On receiving the war manifesto of the Porte, he addressed Prince Gortschakoff, the Russian commander-in-chief, demanding the meaning of his entrance into the provinces, and granting him the space of fifteen days to quit them; but to this the prince answered, "that he had no orders to commence hostilities, nor to conclude peace, nor to evacuate the principalities." It was a ridiculous attempt to assume an aspect of neutrality after a hostile invasion had been committed. But this neutrality could not last, for on the 1st of November, the Russian emperor proclaimed war against Turkey in answer to the manifesto of the Porte. He was aware that, in so doing, he also proclaimed war against the allied powers who had become parties in the question; but he had gone too far to recede. On

the day that his troops had passed the Pruth, the Rubicon was crossed—the die was cast—retreat was impossible without dishonour and shame!

Even yet, however, the western powers would fain have delayed the deadly arbitration; and in the hope that it might yet be in time, they sent to Omar Pacha, desiring him not to cross the Danube, or give battle to the enemy. But the warning came too late. The pacha was already in motion, and between the 28th of October and the 4th of November, his army crossed the river at four places, and established themselves on the opposite side, in spite of the resistance of the Russians. The chief struggle was at Oltenitza, where the Turks, to the number of 9000, had established themselves on a triangle formed by the village of that name, the Argis, and the Danube. Here, after several skirmishes in which the Russians were unsuccessful, they made a final attempt on the 4th of November, but were met with such spirit that they were repulsed with a loss of 1200 in killed and wounded. Several sharp encounters also ensued at Kalafat and its neighbourhood, where the Turks made good their position; but although thus far successful, and in possession of the left bank of the Danube, Omar Pacha did not judge it prudent to keep his whole army there, exposed to attacks at various points during the winter. He therefore blew up the works he had constructed at Oltenitza, and recrossed the river, keeping, however, possession of Kalafat, by which he retained his hold of the left bank of the Danube until the return of spring. But even yet, though matters had proceeded thus far, the hope of peace was not utterly abandoned by the four great powers of Britain, France, Austria, and Prussia, and negotiations were still continued at Vienna for the purpose, when the fearful event at Sinope, like the sudden explosion of a mine, scattered protocols and remonstrances into the air, or shrivelled them into dust. France and Britain were defied, and they must answer the defiance with cannon-balls.

Even before war was declared in form by France and Britain against Russia, each had sent an army to the East in behalf of Turkey, to act as circumstances might require. This simple movement was confounding to Russian calculations, which had hitherto believed in the impossibility of military co-operation between two such rivals as France and England; and in this confidence, the Emperor Nicholas had persevered in his aggression upon Turkey until it was too late to arrest its progress. The British army consisted of four divisions, commanded by Lieutenant-general Sir George Brown, and Major-generals the Duke of Cambridge, Sir ~~John~~ Lacy

Evans, and Sir Richard England, and a division of cavalry under the command of the Earl of Lucan. It was a new and spirit-stirring spectacle for London, after so many years of peace, when the guards were marched through its streets for embarkation; and the huzzaing crowds who admired the stalwart forms and bold soldierly demeanour of this large body of troops, imagined that nothing could resist such a force, and already saw victories swarming in clusters around their standards. Even those whose fancies were more sober, imagined that the hostile demonstration of the two western powers would be enough, and that Russia would desist from her enterprise as soon as the allied armies had landed. The troops set sail from England on the 28th of February, 1854, and disembarking at Malta, where they remained till the 31st of March, they then proceeded to Gallipoli, in European Turkey, at which place they already found the French army arriving by successive detachments. The French force had for its commander-in-chief, the Marshal St. Arnaud, previously minister at war, and under him were Generals Canrobert and

Bosquet, commanders of the first and second divisions. The brigade of cavalry was under General d'Allonville, and the first corps of reserve under Prince Napoleon Bonaparte. A second corps of infantry, as a body of reserve, was commanded by General Forey, and a reserve brigade of cavalry by General Cassagnalles. On the 2d of May, Lord Raglan, the British commander-in-chief, distinguished in the war of the Peninsula under the Duke of Wellington as Lord Fitzroy Somerset, arrived at Gallipoli.

This locality, upon which the allied armies were for the present encamped, was not only uncomfortable as a place of military occupation, but apparently useless for the purposes of the campaign. It was too remote from the Turkish armies to give them aid, and from Constantinople itself to prevent a Russian march upon the capital. But the fortification of this remote peninsula had been the plan of the French emperor, and upon this post the two armies would be on the right flank of the Russians if they attempted, as they had formerly done, to cross the

Balkan. "The peninsula of Gallipoli," the emperor wrote in his instructions to General St. Arnaud, "is selected as the principal site of disembarkation, because it should be, as a strategical point, the basis of our operations—that is to say, the place of arms for our depôts, our ambulances, and our provisions—and from whence we may with facility march forward or re-embark. That will not hinder you on your arrival, should you consider it advisable, from lodging one or two divisions in the barracks, to be found either at the west of Constantinople or at Scutari. So long as you are not in front of

the enemy, the dispersion of your forces will cause no inconvenience, and the presence of your troops at Constantinople may produce a good moral effect; but if by chance, after having advanced towards the Balkans, you are constrained to make a movement in retreat, it will be of much more advantage to regain the coast of Gallipoli than that of Constantinople, for the Russians will never venture from Adrianople to Constantinople, with an army of 60,000 good troops on their right flank." To work then went the two armies to entrench themselves upon this specified

LORD RAGLAN — FROM A PORTRAIT BY ANDREW MORTON

territory, each in a spirit of generous emulation, and both labouring together in perfect cordiality and good humour. The lines were about seven miles long, running along the crest of a natural ridge from the Gulf of Saros to the Sea of Marmora. When these works were nearly finished, the allied forces were removed to the Bosphorus, the British landing at Scutari on the east side of that narrow strait, and the French occupying the European side of the Bosphorus, in the neighbourhood of Constantinople. Thus the Turkish capital was protected by the neighbourhood of 20,000 French and 10,000 British bayonets. Here, however, they had not long to wait, for the course of events demanded their presence elsewhere. To those causes by which they were summoned to the real seat of war, we shall now briefly advert.

The campaign between the Turks and Russians on the Danube had opened at the commencement of this year by a victory of the former at the village of Citate over the troops of the czar. The Russians were anxious to commence their

operations against Kalafat, upon the banks of the Danube, but for this purpose it was necessary to dislodge the Turks from several villages between Cioroine and Radovan. Skirmishes to this effect had been frequent between the Cossacks and the Turkish cavalry, until the 6th of January, when a considerable body of the Turkish cavalry boldly attacked the Russian lines at Citate, and the skirmish deepened into a general engagement, in which horse, foot, and artillery all came into full play. The battle lasted till night, and after desperate efforts of the Russians to maintain their slight fortifications, they were dislodged from them by the Turks, who remained masters of the field. The Russians, on being reinforced, made strenuous attempts during the four following days to recover their position, but were met, and in almost every instance foiled, by Omar Pacha and his gallant Osmanlis.

These indecisive operations on the Danube, which tended to raise the courage and confidence of the Turks, were to be exchanged for war upon a grander scale as soon as France and England were known to have combined for the defence of Turkey. Russia felt that she must now have recourse to more decisive measures—that she must once more force the passages of the Balkan, and strike a blow at the head of her enemy before this foreign aid could be available to ward it off. For this purpose, Kalafat, which was well protected by earthworks, and garrisoned by 30,000 Turks, must be watched by at least one-half of the Russian army; the small Turkish forts between the Dobrudscha and Silistria must be stormed and occupied, and a force left to keep the Turkish garrisons on the right bank of the Danube in check. These preliminaries to the important attempt upon the Balkan were commenced with such spirit as promised to be successful: the Russian right was placed so effectually as to keep Kalafat in check, while the left was skilfully conveyed across the Danube at three points, notwithstanding a keen opposition both from the Turks and the weather. The small forts in the Dobrudscha and other places fell into their hands, and nothing apparently remained for them to do but to advance upon Silistria, Varna, and Schumla, as they had done in 1828. But this march through the bleak barren Dobrudscha would, even if uninterrupted, have been a difficult one; every hour increased the chances of interruption from the armies of France and England, which were now entering upon the Turkish soil; and the designs of Austria and Prussia, at present in treaty respecting the part they should take in Turkish affairs, were a subject of doubt and anxiety to Czar Nicholas. These causes for hesitation continued until the French and English armies were encamped in

the neighbourhood of Constantinople, and in readiness to act wherever circumstances might require. And these allies of the Turks had not long to remain in uncertainty, in consequence of the arrival of Omar Pacha, and a war council which he held with the Turkish ministers and the commanders of both armies at Varna, on the 18th of May. His earnest advice was that an Anglo-French army should occupy the country between Varna and Schumla, so as to keep the Russians in check from Chernavoda to Kostendje, while he was prosecuting the war in Wallachia. The occupation of Varna was of especial importance, as a movement from this point could be made upon Schumla and the passes of the Balkan with equal facility, and the whole Russian plan of invasion frustrated. With similar ease, troops could be sent from Varna to the Crimea, to make an attack upon Sebastopol. His representations and arguments prevailed, seconded as they were by a visit which Lord Raglan and Marshal St. Arnaud made to Pravadi and Schumla, and an inspection of the Turkish army, and accordingly the armies of France and England, now considerably reinforced, were transported from Scutari by the Black Sea on the 28th of May.

OMAR PACHA —From a French lithograph.

From these land operations we must turn our attention to those which were going on at sea, of which the French and English navies now held possession, the Russian ships of war being shut up in Sebastopol. It was upon this element that active hostilities were commenced by the British, and the event was nothing less than the bombardment of Odessa. The moving cause of action was also as trivial and obscure as ever awoke the first echoes of a great war; for it consisted in a British ship carrying a flag of truce

having been fired at, as was alleged, while the governor of Odessa denied the fact of such a violation. But in spite of his denial, the British felt that the insult had been committed, and were resolved that it should not pass with impunity.

This great commercial city, of nearly 80,000 inhabitants, was defended by a garrison of 30,000 soldiers, while her harbour was filled with the merchant ships of several nations, so that the destruction of such a place was certain to aggravate

ODESSA, from the Commercial Quay —From L Illustration

the resentments of the impending war. On the 22d of April, a combined fleet of eleven French and English ships, and a detachment of rocket-boats, advanced upon the town, and opened their terrible cannonade upon its forts, batteries, and military store-houses, carefully avoiding the Quarantine Mole, in which were trading ships of all nations, with their flags hoisted at the mast-head for protection, and also the civic public buildings and churches. The numerous defences of Odessa returned the fire with equal spirit, and for ten hours land and water seemed to be enveloped in an atmosphere of living flame, that was continued until every battery was silenced or destroyed. On this occasion, the terrible effects of steam-ships in a bombardment were distinctly manifested. The chief attack was upon the Imperial Mole, containing strong fortifications and some large barracks, and sheltering numerous Russian ships of every description; and the steamers in assailing it, wheeled in a circle of half a mile within that shallow bay, each pouring in its heavy fire in succession—forming by their movements such a fantastic waltz of death as Holbein could never have imagined. In such a *mêlée* of destructive fire, it was impossible to avoid the buildings which the assailants were desirous of sparing; and the obstinacy or confusion of the Russian authorities, who, during the whole cannonade, exhibited no flag upon their public edifices and defences, so as to distinguish them from those of a pacific character, only served to involve all in one remorseless destruction. Thus, when the cannonade ended, church and palace had fallen as well as the fort or battery, and half of the inhabitants had their homes destroyed. But the greatest wonder of

all, and signally illustrating the advantages of an attack by steam ships and their heavy artillery, was exhibited in the trivial loss sustained by the victors, notwithstanding the resistance of the Russians. Of the English, not more than one man was killed, and eight or nine men wounded. The French had only two men killed, and two wounded, and that, also, not by the fire of the enemy, but a mischance from one of their own guns. Of the loss of the Russians in killed and wounded, no reckoning could be obtained; but from the havoc of shot and fire, and the explosion of powder magazines, it must have been of a fearful amount. When this affair was ended, the czar endeavoured to make the most of it by exciting the fanaticism of his subjects against the French and English; and accordingly, he published a proclamation, setting forth the impiety of the allies in having attacked Odessa upon a Sunday, when the inhabitants "were assembled in the orthodox temples to celebrate the death of the Son of God crucified for the redemption of humanity." He then represented in the same manifesto, that these profane invaders had been gloriously repulsed by his valorous troops; and finally, to signalize this defence, he allowed the public works that had been destroyed to be rebuilt at the expense of the inhabitants of Odessa, while he rewarded Baron Osten-Sacken, its governor, with the order of St. Andrew. As for the allied fleets, they repaired after this bombardment to Sebastopol, and challenged the Russian ships of war to come forth to a fair encounter, an invitation which the enemy, being of inferior force, judged fit to decline.

The scene of interest now shifted to Silistria,

the bombardment of which had been commenced by the Russians, to the number of 70,000, under the command of Prince Paskiewitsch. It was begun at the time that Lord Raglan and Marshal St. Arnaud had visited Pravadi and Schumla, previous to the embarkation of their troops for Varna. For this assault the Russians had made considerable preparations, by conveying the heavy materials for a siege across the Danube in the earlier part of May; and the gallant defence of this fortress by the Turks forms one of the most interesting episodes of the war. The chief fortifications of Silistria consisted of earthworks, in the raising of which the Turks were indefatigable; and as their construction and defence required little scientific or strategical skill, no bulwarks could have been better suited to the rude bold hearts that rallied behind them. Of these works, the principal was called Arab Tapia or Tepè, about 2000 yards in advance of the ramparts of Silistria; and behind, at the distance of 1000 yards, was Ylanli Tepè. These were relied upon as the chief defences of the fortress, although they were only earthen mounds of three sides, while the fourth was entirely open; and as they were in the direction of Rasova, from which the besiegers were to advance, they would naturally endure the first and chief brunt of the encounter. As it was necessary to become masters of these works before Silistria could be invested, the Russians assailed them with all the formidable and complicated resources of a siege—with parallels, zigzags, batteries, and mines—and twice they succeeded in penetrating within the Arab Tepè, while eight mines were exploded beneath its ramparts, and fifty yards of its front line were levelled with the ground. But as often as the enemy entered, they were driven back by the intrepid Turks; and as fast as the works were destroyed they were repaired, or new ones constructed. the unflinching courage of the besieged compensated for the feebleness of these protections, and made them as formidable as if they had been ramparts of the living rock. In this unwonted fashion, the Russian strategy was encountered by a pertinacity for which it was not prepared, and the resistance protracted long beyond the time at which, according to established calculations, the place should have surrendered, or been destroyed. Nor was Omar Pacha neglectful in reinforcing the almost overborne garrison with fresh means of resistance. Silistria, he well knew, was the Thermopylæ by which the invasion of Turkey was to find its entrance; and on the 4th of June, he sent forward 30,000 men to the rescue, who succeeded in entering the outworks by breaking through the Russian lines. Four days after, 1000 Turkish soldiers were equally successful, by stealing at

midnight into the place, over the corpses of the Russians who had fallen in heaps during the assault. In this wonderful defence, also, it was well for the undisciplined Turks that they were not without the direction of European skill, science, and genius, and that they had the wisdom to avail themselves of such advantages. Their brave commander, Mussà Pacha, was slain by a cannon-ball, and the remaining officers were little fitted to direct the enthusiasm of their followers, or turn it to the best account. But in Silistria, there were two English officers, Captain Butler and Lieutenant Nasmyth, both belonging to the East India Company's service, and to their exertions the length and success of the defence are chiefly to be attributed. They threw themselves into the place as volunteers; their superior abilities were at once recognized by the defenders; and while their gallant example animated the courage of the Turks, their skilful directions were implicitly adopted in the plans by which every attack of the assailants was baffled. Lieutenant Nasmyth happily survived the siege, to enjoy the rewards which his gallant devotedness had so justly won; but not so Captain Butler, who died exhausted by an endemic fever, brought on by

the incredible fatigues of his anxious and manifold exertions. It will ever be remembered with gratitude, that by their interposition not only Silistria was saved, but the French and English armies spared from the necessity of a campaign on the Danube, where the pestilent miasma of marsh and vapour would probably have been more destructive than the sword.

In the meantime, while the siege of this obstinate fortress was continued, the ardour of the Russians was not only damped by the resistance they encountered, but by the establishment of the allied armies at Varna. By this movement, which brought such a formidable enemy so nigh the seat of action, they were obliged not only to waste time in strengthening their fortifications for the purpose of guarding against an attack from without, but to provide in case of the worst for a retreat. The same cause prevented their complete investment of Silistria, by compelling them to keep their forces together, instead of extending them so widely as an investment would have required. On the 13th of June, the grand assault was to be made, and after the explosion of mines and a terrible cannonade, the Russian army was ordered to advance. But instead of starting to the summons as they were wont, they stood sullenly in their ranks, and refused to move: a dispiriting and wasting sickness was added to their other calamities, and alarmed at their unwillingness for action, their commander postponed the assault to the following day. But twice they were driven back from the frail earthen defences, and when the order was given for a third onset, they wavered and paused. On this, their commanders threw themselves into the front line, but only to share the usual fate of a forlorn hope. Prince Paskiewitsch was slightly, and Prince Gortschakoff severely wounded; Count Orloff, General Luders, and General Schilders, who had taken Silistria a quarter of a century earlier, were all struck down with dangerous hurts; and of the superior officers, few were withdrawn from the deadly fire without being incapacitated for duty, so that the chief command had to devolve upon new leaders. After this failure, the next great assault was made on the night of the 18th of June, and it was commenced with an explosion of mines, by which a gap was made in the Turkish parapet nearly twelve yards long. But the Russians on advancing to this breach, found a new wall that had been raised behind it manned with troops, and bristling with guns, at which unexpected apparition they fell back and retired. The Turks then rushed out of their new entrenchment to repair the old, which they did in spite of a heavy fire of musketry; and as fast as one man fell in the breach, another and still another came forward, and worked spade in hand, while their officers, coolly smoking their chibouques under cover of the parapet, indicated by a wave of their pipes the places at which the work was to be carried on.

During forty days this hopeless siege of Silistria was continued before it was reluctantly abandoned in despair, and the means brought against

it both of troops and *materiel* attested the heroism with which the defence was maintained. The Russians had eight batteries armed with artillery of very heavy calibre, extending in a concave curve from the right bank of the Danube to the outworks of the fortress; they had sixty guns in position at Silistria, that threw out more than fifty thousand projectiles of shot and shell; they constructed more than three miles of approaches, and sprang six mines; and by wounds and disease they lost 12,000 men in this memorable siege. And yet they gained not a foot of ground, and were obliged to leave the outer mud wall against which their force had been broken, still in the hands of its defenders, although it had been crushed into a shapeless mass of earth by mine and cannonade. If Turkey is doomed to extinction at no very distant day, in spite of European alliances for her preservation, the remembrance of this noble defence of Silistria will be a sunset upon her departure, and will serve to give dignity to her downfall.

The retreat of the Russians after raising the siege of Silistria, was a signal for the Turkish army to advance, which it did in the beginning of July, by recrossing the Danube; and on the 8th it inflicted a partial defeat upon the enemy at Giurgevo, on the left bank of the river, about forty-five miles from Bucharest, which still further confirmed the despondency of the Russians. The latter, abandoning their camp with an immense quantity of stores, fell back in full retreat upon Bucharest; but after a short stay in that city, they retired to the line of the Sireth, upon which the Turks took quiet possession of the old Wallachian capital. By this time, indeed, Wallachia was no longer to be a residence or a shelter to the Russian arms, whether in victory or defeat, as, after long hesitation, Austria had entered into a treaty with the Sublime Porte on the 14th of June, by which the existence of the Turkish empire in its present limits was recognized, and the use of every means pledged to obtain the evacuation of the principalities by the Russians. The Austrian army of occupation for these purposes was to be stationed in Wallachia and Moldavia, subject entirely to the authority of its own commander-in-chief, who was to inform the general of the Turkish army of his operations; and as soon as peace should be restored between the sultan and the czar, this Austrian army of occupation was to be withdrawn. This position of a neutral arbiter which Austria at last consented to assume, did not fulfil the expectations or the wishes of the friends of Turkey; but it was thought by some, that in the present state of matters, it was as much as the court of Vienna could offer, consistently with its late debt of gratitude to the czar

for his effectual aid in the suppression of the Hungarian revolt. On the 20th of August, the Austrian army for the occupation of the provinces commenced its march into Wallachia and Moldavia, and established its head-quarters at Bucharest, by which all further collision between the Turkish and Russian forces on these territories was prevented. By this movement, it might be said that both parties were equally benefited; for while Omar Pacha was thus rid of the defence of these provinces, and of the pre-

sence of a dangerous enemy that might still have proved too hard for him, Russia, by the withdrawing of its army, was enabled to strengthen the means of its resistance in the Crimea. It was upon the French and the English, for whom this portion of the war was reserved, that the whole brunt of the evil was to fall.

Of these armies of the allies, we have already mentioned the removal from the neighbourhood of Constantinople to Varna. It took place simultaneously with the commencement of the

THE TOWN AND BAY OF VARNA.—From Lieutenant colonel Andrews' Views in Turkey and the Crimea

siege of Silistria, and at Varna they continued inert, although exercising, by their nearness to the scene of active operations, a paralyzing influence upon the Russians. Even this inaction, however, was accompanied with such melancholy as well as important consequences, that it forms an episode which cannot be dismissed with a mere casual notice.

Varna, situated on the shores of the Black Sea, in the province of Bulgaria, is a fortified town and seaport, 160 miles to the north-west of Constantinople, and contains about 14,000 inhabitants. Its site is a gentle height on the north-west side of a semicircular bay formed by two rocky promontories; and, like many other towns which have been for a length of time in possession of the Turks, it exhibits the usual melancholy symptoms of neglect and decay; for it is but slightly fortified, its houses, which are chiefly of wood, are irregularly placed, and it has no public buildings but a few mosques. The British troops had their encampment at Aladyn, a few miles distant from the town; and seldom have war-tents been pitched in a more beautiful landscape, consisting of meadows so richly wooded and watered as to resemble the choicest rural scenes of England: it was this alluring home resemblance that determined the selection of the spot. During the whole time of their residence at Varna, the French

and English, both officers and common soldiers, vied with each other in deeds of kindness and mutual accommodation, so that it seemed as if the centuries of previous hostility had only inspired them with a deeper respect for each other, and a more ardent desire to be connected by the ties of an enduring fellowship. The greatest grievance, indeed, that first began to be experienced as a common calamity was the inactivity to which they were subjected, and this the more, as they could occasionally hear the faint, sullen boom of the distant cannonades, which proclaimed that there was stirring work going on at Silistria. But this feeling was raised to tenfold intensity when tidings arrived that the Turks had been successful—that the siege was raised—that the enemy had retreated none could tell whither; and “When shall we have a brush with the Russians?” was now the prevalent cry. They were also in full force for a great united enterprise, in consequence not only of the reinforcements that had arrived from England and France, but the addition of some Turkish and Egyptian battalions. Forty thousand men were encamped around the walls of Varna, while every street was crowded with soldiery who scarcely could find room to move. It was an assemblage well fitted for the visit of an Asiatic pestilence, and the Destroyer came at the summons.

On this occasion, the visitation was of that latest and deadliest phase which the plague—that terrible scourge of humanity from the earliest ages—has now assumed: it was the cholera. Previous to its arrival, fever and dysentery had been prevalent among the troops, owing in great part to their immoderate use of cucumbers and water-melons, and the pernicious raki or brandy of the country; and toward the latter part of July, it was found that these diseases had deepened into confirmed cholera. The first to be visited were the French, and among them the progress of the disease was so rapid, that they were obliged to clear out their hospital at Varna, which, though a very large building, was too confined for the number of patients, and treat their cases in the open field. It was melancholy to witness the effects of the first impressions of the malady upon these men, before it had taken confirmed possession: the laugh, the song, the jest, so essential a portion of the French soldier's existence, were no longer heard; they listlessly sat still, or moved with slow and heavy steps; and when the first touch of the disease was felt, however lightly, it was received as a death-sentence from which there was no appeal. The English army was soon to be allied with them in suffering and loss, for on the 23d of July, it broke out in their encampment with equal violence, wherein men and officers were equally the victims, and fifteen or sixteen deaths in the hospital was the usual return of each day's medical report. It was then found that the choice of Aladyn for the place of their encampment had been a fatal one; for notwithstanding the loveliness of the surrounding scenery, and the abundance of wood and water, it was noted at this season of the year by the inhabitants as a hot-bed of infectious maladies, and therefore to be carefully avoided. The same was the case with the neighbouring valley of Devno, in which part of the British tents were pitched; for there disease was wont to be so prevalent in summer that the Turks had termed it the "Valley of Death." It was time to abandon this fatal place, already crowded with the dying and the dead, and the decimated brigades were removed and spread over a wide encampment, extending over the country from Monastir to Varna, a distance of about twenty-six miles. Nor were the living exhibitions of this wasting plague less appalling than the sight of the graves with which their late place of sojourn was plentifully garnished. In our brigade of guards, numbering 3000 strong, 600 were already on the sick list; and when they were removed from Aladyn to Varna, which was scarcely ten miles distant, after a very short encampment, they occupied two days in the march, although their packs were carried for them. When such was

the fate of the choicest of Britain—the men of gigantic frame and iron endurance, whom perhaps no equal number of troops on earth could have matched—what must have been the condition of the other regiments composed of men of the common file? It has been noted, too, that the coming of a pestilence is often attended with a recklessness and improvidence among its victims amounting to downright insanity, and through which the cases of suffering and death are fearfully multiplied; and the present conduct of many of the soldiers, both French and English, was no exception to the melancholy rule. They clubbed together for the purpose of eating and drinking; they gorged themselves with pumpkins, water-melons, and fruit, or made themselves dead-drunk with the sour wine and poisonous raki of the country, under the idea of using precautions against the cholera; and then slept in the kennels or ditches, under a blazing sun, when their enfeebled frames were exhausted with the weight of their debauch. While the land was thus overspread with mortality, and its atmosphere laden with infection, the sea was no protection, and the English and French ships, anchored in Baltchik Bay and the harbour of Varna, exhibited an amount of infection and mortality equal to that on the shore, attended also in many cases with still more appalling circumstances. At last, on the second week of August, the mortality on board the French and English ships was so great, that the fleet had to make a run for it, and stand out to sea upon a cruise. How greatly this change was needed appeared from the fact, that on the 16th of the month, the British ship *Britannia*, since it left Baltchik, had lost seventy men, and had buried ten of her crew on that morning. To the horrors of pestilence were added the threats of famine, by a destructive fire which broke out in Varna on the 10th. It commenced in a spirit-shop near the French commissariat stores: the spirits, that ran in torrents, were converted into a torrent of flame, which the wooden houses quickly caught, and propagated from street to street; and for ten hours the sailors were employed in arresting the conflagration, which, in spite of every effort, destroyed a fourth part of the town, and an immense portion of the military rations and stores. Even as it was, Varna, but for these exertions, would have been wholly reduced to ashes, and the army left destitute. In what cause this suspicious catastrophe originated cannot well be ascertained: it was one to which every Turkish town, from Constantinople downwards, is hourly exposed, and which makes the police alarm of *yangen var* [there is a fire!] as common as a market-proclamation. But in this case, it was attributed to the Greeks

resident in Varna, whose sympathies with the cause of Russia were notorious, and whose quarter of the town was untouched; and a Greek, who was seen to set fire to the spirits with a torch as they flowed into the street, was cut down, and six or seven of his countrymen bayoneted by the French soldiers, while two Greeks, who were apprehended, were hanged after a very summary trial.

Such was the inauspicious commencement of a campaign upon which the hopes of England and France had been so sanguine, and for the first tidings of which London and Paris were so eager. Had the glorious pomp and circumstance of war, which had gone from their gates like a military triumph, been so quickly changed into a dead march! The havoc of a whole career of victory had been suffered, and yet not a single stroke been dealt. While such was the loud murmur of anger and disappointment at home, it may be imagined how much more keenly these emotions were felt by the armies at Varna. The soldiers complained that they were cooped up only to perish in heaps; they were drawn out only as a mark for the destroyer; they were struck by a silent, unseen power, and falling without fame or memorial. Why were they not led into the Crimea, where the stir of battle, or at least a soldier's grave could be found, instead of lingering in this life-in-death encampment? But for this purpose, more than one movement had been already made, and without success. While the siege of Silistria was going on, Lord Cardigan was sent with the light cavalry to ascertain the position of the Russian main army, for even its locality was as yet unknown at Varna; but although his exploration extended for nearly 300 miles over a waste, uninhabited country, and was advanced as far as Trajan's Wall on the borders of the Dobrudscha, he could only ascertain that the siege was raised, and that the force employed upon it was in full retreat towards Bessarabia. On the 19th of July, when a council of war had decided that it was time to proceed to active measures, General Sir George Brown, accompanied by General Canrobert, and attended by several French and English officers, embarked on board her majesty's ship *Fury*, to explore the Crimean coast in the neighbourhood of Sebastopol, and ascertain a fitting place for the debarkation of the army; but on the morning of the 20th the ship was discovered from the ramparts, and fired at with shot and shell, so that its object was frustrated. On the following day, Marshal St. Arnaud, weary of inaction, and alarmed at the continuing progress of the cholera, under which he was himself suffering, sent a division under General Canrobert on an expedition into the Dobrudscha, where he heard that

more than 10,000 of the Russian troops were assembled, by whose defeat he hoped the spirits of his army would be revived. But his soldiers carried the disease along with them, and without encountering an enemy, except in an insignificant skirmish of cavalry, the men died in heaps on the march, or in their tents, more numerously than if their progress had been enflamed by hostile batteries. Seven thousand men perished in this useless expedition alone, the miseries of which can scarcely be paralleled in the annals of modern warfare.

But the time of emancipation arrived at last. The siege of Silistria having been raised, and the Austrian army of occupation established in the provinces, the French and English armies could now carry out the original plan of the campaign by passing to the Crimea. It was through Sebastopol that the czar possessed the command of the Black Sea and the means of invading Constantinople; and it was therefore by the capture of this strong and dangerous fortress that the sultan could be best protected, and the objects of the expedition accomplished. There was joy among the troops, both French and English at Varna, when this purposed movement was made known; and under the welcome prospect of change of place and active occupation, the sick began to recover, and despair was exchanged for hope. The transportation commenced at the beginning of September, and was no quick or easy process, although 600 vessels were employed in it, protected by a war fleet carrying 3000 cannon; for the united armies mustered more than 50,000 bayonets, and the conveyance of so large a force by sea was an unwonted movement, while most of the commanders were unaccustomed to war upon such an extensive scale. There was therefore much hurrying and crowding, a vast amount of blunders and misunderstanding of orders, and loud complaints of impotence and deficiency in the means of transport, before this military chaos had settled into order upon the place of its final occupation. But with that settlement, good humour as well as military efficiency was restored, and the taking of Sebastopol in a very short period, if not at the first assault, was anticipated as a positive certainty. But these confident hopes were mingled with the ominous doubts and misgivings of the more reflective. That iron fortress of the Black Sea, upon the fortifications of which the utmost resources of military art had been expended, was as likely to waste an army that sat down before it, as to yield to the onset. It was also feared that the season was too far advanced for such active operations, and that the sufferings of a Crimean winter would have to be endured, along with those of a perilous and protracted siege.

The question of the fittest point for debarkation upon a coast hitherto so little known, had previously been the subject of much deliberation; and the place selected was Eupatoria Bay, to the north of Sebastopol, at a place called Staroe Ukroplenie, or the Old Fort. The landing was commenced on the 14th of September; and the first to reach the shore was a boat's crew of Frenchmen, who planted the tricolor flag in the ground, thus taking possession of the Crimea amidst shouts of "*Vive l'Empereur!*" As for the town of

Eupatoria, which presented a formidable appearance from the sea, it surrendered at the first summons. Although it must have been previously known to the Russians that the destination of the allied armies was the Crimea, such was either their apathy or their confidence, that no attempts had been made to interrupt the expedition. On sea, therefore, not a single hostile sail appeared in sight; and on the landing of the allies, there was neither a battery to oppose them, nor light troops to harass them with skirmishing: no-

EUPATORIA —From a sketch by M. Dulong, engraved in *L'Illustration*, 1854

thing in the form of an enemy appeared, except a Russian officer attended by four mounted Cossacks, who coolly stood within reach of the Menie rifles, and took notes of the particulars of the debarkation, which were probably to be transmitted to head-quarters. Instead of awaiting, they must seek the Russian army, which, as the allied commanders learned from the reconnaissance of their steamers, was entrenched in a strong camp on the heights to the south of the river Alma; and thither accordingly they commenced their march on the 19th of September. And that march was a splendid and a gay spectacle, contrasted as it was with the bleakness and solitude of the surrounding scenery; for the soldiers, by change of place and occupation, were fast recovering their health and spirits, and revelling in the hopes of victory. As Marshal St. Arnaud rode past the front of the 55th regiment, he exclaimed, "English, I hope you will fight well to-day." "Hope!" cried a voice from the ranks—"sure you *know* it!"

The tokens of the enemy's neighbourhood and promise of battle were not long in appearing; these were given in the form of villages and houses committed to the flames by the Russians

themselves, to delay our advance, and in troops of cavalry in the distance, that moved and disappeared as the hostile march approached nearer their encampment. After crossing the Bouljanak, a sluggish, muddy stream, the signs of hostility became more decisive: troops of Cossack lancers advanced for skirmishing, who were confronted by our light dragoons and hussars; and when the Cossacks fell back, our pursuing cavalry were met by strong bodies of Russian horse who checked their onward career. This called up other detachments both French and British to their aid, on which the Russians fell back upon the Alma. In itself the encounter was nothing more than an insignificant skirmish, a mere crossing of sword-blades; but this meeting of weapons had taught the combatants the strength of each other's arm, and warmed them for a conflict that should be at *outrance*. That night the allied armies bivouacked at Bouljanak, upon which they had fallen back, with the Russian position on the Alma full in sight, being illuminated by numerous watch-fires that gleamed over an extent of four miles. On the morrow, the campaign in the Crimea was to be opened in earnest with the conflict of the Alma.

CHAPTER XVIII.—CIVIL AND MILITARY HISTORY.—A.D. 1854.

VICTORIA.

Preparations for the battle of the Alma—Plan of the battle—Movements previous to the attack—The French cross the Alma—They gain the heights—Their successful attack on the Russian position—Entrance of the British troops into battle—Chief movements of the conflict—Defeat of the Russians—Losses of both parties at the battle of the Alma—Inability of the French and English to follow up their victory—They commence their march upon Sebastopol—Plan adopted for its siege—Risk of battle during the march—The allies take up their position against Sebastopol at Balaklava—Account of Sebastopol—Its strength and resources—Attempt of the allies to bombard Sebastopol by land and sea—Failure of the land bombardment—The bombardment by sea unsuccessful—Causes of the failure—The siege continued—Want of effective materials for the siege—Increase of the Russian army of observation—Its stealthy approach to raise the siege—Unexpected attack on the position of the British troops—Battle of Balaklava—Particulars of the attack on the British position—The Turkish troops driven from their redoubts—Gallant conduct of the 93d Highlanders—Chivalrous and successful onset of our dragoons—The great Balaklava charge—Mistakes that occasioned it—The British light horse led to the unequal encounter—Death of Captain Nolan—Terrible onset of the light horse—Their successful charge through a whole army—Their perilous return—Aid brought to them by the French chasseurs—Their heavy losses in this encounter—Failure of the Russian attempt at Balaklava—The British contract their line of encampment—A sally from Sebastopol—Its attack on the British second division—The Russian troops defeated and driven back to the town—The allied armies continue the siege—Obstacles to their success—The Russians again resolve to raise the siege—Their superior means for a fresh attempt—Prince Menshikoff invites the sons of the czar to Inkermann—They arrive to witness the expected victory—The Russians make a night march upon the British encampment—They secure an advantageous position for the morrow's attack—They advance to surprise the British second division—The alarm given by the resistance of our pickets—The second division drawn up—It is assailed at once from several quarters—The attempted surprise changes into open battle—Battle of Inkermann—Chief incidents of the engagement—Total defeat of the Russians—Greatness and importance of the victory of the allied armies at Inkermann.

URING the night of the 19th of September, while the soldiers of the allied army were sitting by their bivouac fires, or sleeping on the ground wrapped up in their cloaks and blankets, the principal commanders were arranging the plan for the next day's engagement. The plan was the following:—One French division under General Bosquet, accompanied by a part of the Turkish regiments, was to advance along the sea-shore, force the heights, and turn the enemy's left flank; and this being accomplished, the remainder of the French army was instantly to attack that part of the Russian centre which rested on high ground above a village called Alta-tamak. The English, retaining their inland direction, were to wait in the village of Barluik until the French should establish themselves on the heights, and were then to turn the Russian right, giving as wide a berth as possible to the heavy batteries in the enemy's centre. The inshore squadrons of the allied fleets, chiefly consisting of steamers, were to keep close to the coast, and cover the advance and attack of Bosquet's division.¹ It has been alleged that when this plan was made, the heights of Alma and the position of the Russian army had not been duly inspected.

Such were especially the complaints of our home strategists in London—of men who "sit by their firesides, and presume to know what is done in the capitol." But still more serious were the complaints and recriminations in the French and English armies upon each other on account of their misunderstandings and want of co-operation in the execution of the plan itself. Passing over these, which are still unsettled matters of controversy, it is sufficient for the present to note how ably and successfully the plan was executed.

The morning of the 20th of September opened with a thick haze that obscured the objects of the plain; and the heights of Alma were so enveloped in its folds, that at first it was thought the Russians had abandoned their position: but a light breeze rose, which removed the vapour like a curtain, and displayed the Russians to full view, with their formidable batteries, and strong natural ramparts of rock and ram. The first movement was that of the allied inshore squadron of vessels, headed by the *Agamemnon*, which took up a position off the mouth of the Alma; and this being effected, General Bosquet's division descended from the heights of Bouljanak, followed and supported more inland by the divisions of Prince Napoleon, and Generals Canrobert and Forey. At a later period, the British, whose encampment was more distant,

¹ *Annual Register*, 1854.

advanced in order for battle, and took up their position on the extreme left of the French. Both allied armies could now distinctly see the work that lay before them, which might well have daunted the bravest; for the slopes and precipices behind the Alma were serrated with glittering lines of bayonets, where the Russians were drawn up in almost inaccessible positions, and defended by better cannon than those which the assailants could bring against them. The stubborn, unflinching hardihood of the Russians,

passed the Alma without obstacle at the burned village of Alta-tamak, ascended the cliffs on the opposite side, and surmounted them in a few minutes. Thus the first difficult step in advance was won, and the enemy brought within reach, where the coming encounter could be better equalized; and in this daring and difficult advance, none were so distinguished as the regiment of Zouaves, which General Bosquet had thrown out to commence it. These hardy, sun-burnt soldiers from Algeria, conspicuous not

more by their bizarre Asiatic dress than their agility and courage, rushed through the river, bounded up the cliffs on the opposite side like antelopes, swinging themselves upward by the branches of trees and brushwood, alternately appearing for a moment and vanishing, until they were seen upon the high plateau, falling into regular line, and ready to advance against the fire that was opened upon them. And gallantly they maintained their ground, while the main body of the French under Prince Napoleon and General Canrobert were advancing to their assistance. The main body under these commanders, after crossing the river, gained a pathway leading to the plateau, but so steep and rugged, that it was only by extraordinary exertions that their artillery could be dragged up: but no

and the prestige they had acquired in passive and defensive warfare, was also taken into account; and it was known that thus posted, they could not be dislodged without a deadly struggle and fearful sacrifice. The delay of the British advance, the march of the French troops along the shore, and the necessity of reconnoitring the Russian position, prevented Bosquet from leading his division to the attack until it was nearly one o'clock P.M.; but when it was commenced, it was with a spirit and energy that made up for the loss of time. Marching to the mouth of the river, which had been cleared of the presence of the enemy by the guns of the steamers, the brigade of General Brouat crossed the Alma by a sand-bank, the only point at that part where the water was fordable, the men wading up to their waists, and afterwards climbing up the steep paths to the opposite height, where the Russians were ready to receive them. At the same time, the brigade of D'Autemarre

sooner had it arrived, than it was brought forward to the support of the Zouaves, who were still battling gallantly, although almost overpowered by numbers. In ranks, and in fragments of ranks, the rest of the division scrambled up as they best could; and once arrived, General Bosquet quickly formed them into line, and led them to the attack. It was marvellous that such progress had been made with so little opposition—that the well-planted batteries of the Russians had been so silent—that the French had met no interruption as their broken ranks winded upward with difficulty through these steep, rugged ravines, that had been hollowed out by the torrents of ages, and which could have been so easily defended. But the plan of resistance adopted by the Russian commander, Prince Menschikoff, which was confident to rashness, made him neglect these advantages, and leave them open to the assailants. His purpose was, to allow a sufficient number of their bat-

talions to gain the edge, and this done, to charge them before they could form, and hurl them down at the point of the bayonet. But he had not sufficiently reckoned upon the rapidity of French movements, and the extraordinary activity of the Zouaves, until he found them established with their guns in battery, and ready to dispute the ground with him upon equal terms.

It was now therefore that the conflict was commenced in earnest, where rapid movements and desperate efforts were enveloped in the smoke and flame of the artillery. Finding his plan frustrated, and his left about to be turned, Prince Menschikoff brought up whole masses of foot and artillery to support it; but the division Bosquet had already entered into action; the divisions Canrobert and Napoleon were advancing, and bearing down the obstacles that opposed them, according to the terse order of St. Arnaud, "Keep straight before you, and follow your own inspiration for your manœuvres. we must gain these heights: I have no other instructions to give to men on whom I rely." The three divisions were at last established on the plateau, after each had fought and won its way over local obstacles, and confronting troops and batteries, and all were now ready to bear down upon the enemy with a combined attack. This made Menschi-

koff anxious for his centre, which this junction menaced; and in consequence of his arrangements to strengthen it, M. St. Arnaud sent orders to his reserve to advance in two divisions, one to the support of Canrobert, and the other to proceed to the

extreme right of the battle. The reserve accordingly crossed the river, and took their appointed places in the conflict. A telegraph tower was used by the Russians as the key of the centre of

their position; and from the batteries on its flanks, and the sharpshooters within its walls, a deadly fire was kept up, under which the French dropped rapidly, or betook themselves to cover, when the entrance of the reserves to their aid introduced an important change; they assailed the tower, carried it after a short and desperate resistance; and this advantage being seconded by General Canrobert with his division, the enemy's left and left-centre were fully put to the rout, or driven to the rear. The victory, so far as the French were concerned, was secured, and St. Arnaud, after congratulating his generals, directed their attention to the English, who might now need their aid. But no such help was required; the English had already done their part, and after similar struggles were to be equally victorious.

According to the plan of battle concerted between the allied commanders, the British were not to commence their onset until the French should have gained the heights, and turned the Russian left. They waited accordingly until the French had established themselves on the plateau, being partly concealed from the enemy by the smoke of the burning village, and the trees on the river bank. It was an unwilling halt on their part, more especially as the sound of the cannonade deepened, and the tokens of the distant struggle came nigher, until a body of the French marines came in contact with their lines, while hastening forward in support of their countrymen. Their impatience for action was gratified sooner than was intended; for Marshal

St. Arnaud finding more resistance than he had expected—that batteries were multiplying on his front and flank, and fresh columns of infantry brought against him, sent in all haste to Lord Raglan, requesting him to advance without further delay. The message, although it disconcerted the original plan, was not unwelcome, and the British commander gave orders to advance. No sooner had his troops emerged into full view near the bank of the river, than the Russian batteries on the slope met them with a destructive fire, and their tirailleurs opened upon them a heavy discharge of rifles; but they pressed on like a torrent, sending volley after volley before them, that drove the tirailleurs across the river, and inflicted serious loss upon the batteries on the heights. Under cover of this fire, the Alma was crossed, the extreme left of the French reached, and every obstacle of the river banks, the vineyards, and the felled trees surmounted, although these difficulties seemed insurmountable, defended obstinately as they were by the enemy, and not relinquished without a series of obstinate struggles, under which the British more than once were obliged to lie down for shelter from the destructive fire of the Russian batteries. But forward and upward they still continued to press, although their comrades were falling at every step; and three regiments, the 7th, 23d, and 33d, reached the earthwork from which they had been cannonaded, but were there obliged to fall back before a heavy reversing fire of Russian infantry. Their difficulty was increased by mistaking a Russian column descending the hill against them for French troops, under which impression they ceased from firing, until an overwhelming volley from their opponents convinced them of their mistake. But the check was only momentary; the Duke of Cambridge had crossed the river, and arrived in time to support them, while a splendid charge of the foot-guards under Major-general Bentinck gained possession of the earthwork.

The heat of battle had now reached its height; the tug of war was equal on both sides, when the Highland brigade under Major-general Sir Colin Campbell advanced up the high ground to the left, in co-operation with the guards, and General Pennefather's brigade connected with the right of the light division. The conduct of these plaided warriors was worthy of their well-established fame. They drew up as if they had been ruled by machinery; at the signal to move, they marched at charging step into the hottest of the fire; their destructive volleys and onward progress were heard far in advance of their companions; and wherever the fire was heaviest during the whole of that eventful day, their deeds and bold bearing were marked and admired. Before their on-

set and that of the light division, the Russians were driven from their choice position which they had defended with so much obstinacy. But two solid squares still kept their ground, and would have tried the courage of our exhausted troops, had not two guns, by order of Lord Raglan, been placed on a commanding point, and brought to bear against them, by the fire of which the squares were torn asunder, and scattered over the hills. Flight indeed was soon becoming general among the Russians, notwithstanding the attempts of their officers to check them; and where they tried to rally, it was only to be driven back with fresh loss before the resistless progress of the British, who continued their advance, until the broken ranks of their opponents were mingled *pêle mêle* with their defeated left wing that was pursued by the victorious French, and their centre, which was fast withdrawing from the contest. The Russian cavalry, that had behaved indifferently during the action, now interposed, and the enemy, although so completely beaten over the whole field of battle, conducted their retreat in order, so that only two of their guns were left as trophies to the conquerors. Such was the battle of Alma, that lasted three hours, during two of which the British were engaged, although they had been eleven hours under arms. Of the numbers engaged on both sides, that of the Russians of every arm did not exceed 40,000, while that of the allies was above 50,000, but of these last, about 20,000 were not in action, and considering the strength of the Russian position, the odds were greatly against them. So signal a victory could not be won without a heavy price, and the allies had 619 killed, and 2860 wounded, of which the greater share fell to the British, who had more serious difficulties to surmount, and a sterner opposition to encounter. The loss of the Russians was estimated at more than 8000; but of prisoners, only 900 were taken, the allied cavalry being kept warily in hand, instead of being let loose in pursuit, on account of the superiority of the Russians in that arm of warfare. The disadvantages under which our troops so bravely conducted themselves, and wrested success into their own possession where it would otherwise have seemed impossible, were thus simply and truthfully set forth in the despatch of Lord Raglan:—"When it is considered that they have suffered severely from sickness during the last two months; that since they landed in the Crimea they have been exposed to the extremes of wet, cold, and heat; that the daily toil to provide themselves with water has been excessive, and that they have been pursued by cholera to the very battle-field, I do not go beyond the truth in declaring that they merit the highest commendation."

A great victory was thus won at Alma—a name that henceforth will be memorable in history. To improve this victory, it was thought that nothing more was needed than to pursue the flying enemy, and complete their destruction—to descend upon Sebastopol—to enter and take possession before the first panic had abated. But for such prompt conclusions, which seemed so natural to civilians, the allies were unfitted by the late sickness with which they had been wasted, by their want of cavalry and gunpowder, by their ignorance of the country in which they were still obliged to grope their way, and by the strength of the enemy, who, though defeated, had already given proof that they were not to be too closely followed with impunity. A more humane and necessary task was adopted of attending to the sick and wounded; and as the village had been burned down, they had to be removed to the ships. The same service was performed for the wounded Russians; and although two days were spent in this charitable duty, the whole could not be overtaken, so that 750 wounded soldiers of the enemy had to be left on shore, in an extemporized hospital, under the care of Dr. Thomson, who devoted himself to this noble self-denying office, and afterwards fell its victim. Thus the march from Alma did not commence till the 23d of September, and its course was to the north side of Sebastopol. On that evening the allied armies halted at Katcha, the alluring valley of which was plentifully studded with vineyards and gardens of rich fruits, which our soldiers, though still continuing to suffer from cholera and dysentery, did not leave untasted. Here, also, the armies were reinforced by the arrival of troops from home the French to the number of 7000 or 8000, and the British with the Scots Greys and 57th regiment, who were landed at the mouth of the Katcha on the 23d. On the following day (24th) they encamped on the right bank of the Belbek, at about six miles' distance from Katcha. But the plan of attacking Sebastopol upon the northern side had to be abandoned, as it was ascertained that strong batteries had been erected along the north-west of the harbour, and that these, in conjunction with the Star Fort and Fort Constantine would cause both danger and loss to such an attempt. The design was therefore changed for one suggested by Sir John Burgoyne: this was, a prompt flank movement on Balaklava, by which we should turn and neutralize the effect of these batteries, secure a new base of operations instead of that of the Katcha, and distract the enemy by an attack upon a part of the town where they were weakest, and where the danger had been least apprehended. From Belbek the march was accordingly directed towards the south-east on the Black River, al-

though it was a course both difficult and dangerous, and where the enemy, by a spirited attack, especially where our troops rounded the harbour, might have inflicted upon them a heavy loss. At times, too, glimpses of Sebastopol could be caught from the hill-tops in the bright sunshine. During this march, the French commander-in-chief died, worn out by the effects of cholera, by which he had been attacked at Varna, and was succeeded by General Canrobert, his second in command. It was the aim of the allied armies to reach Balaklava as soon as possible, and while hastily pressing onward for this purpose, they all but entered into a fresh battle with the enemy. After his defeat at Alma, Prince Menschikoff had retreated to the valley of the Tchernaya, from which he made a flank movement to Simpheropol; but on the way, his rear-guard fell in with the advancing columns of the allies. It was a most unexpected meeting and an awkward collision, which occurred at a place afterwards well known under the name of Mackenzie's Farm; but it ended in nothing more than the capture of a considerable quantity of baggage, which the Russians were glad to leave behind them in their retreat. On the 26th our armies reached Balaklava, which they forthwith established as their new base of operations, the French occupying the valley to the north of that town, with the sea on their flank, while the English took up their position inland, the post of danger and of honour. As the harbour of Balaklava was too small to hold the fleets of both armies, it was occupied by the British ships, those of France being stationed in Kamiesch Bay, an inlet in Cape Chersonese.

Sebastopol, around which the interest of the war was now to be concentrated, was originally nothing more than an insignificant Tartar village, under the name of Akhtiar, until 1780, when the Empress Catherine commenced, and her successors Alexander and Nicholas carried out, those improvements by which it became a great and beautiful city, and the chief naval arsenal of the Russian empire. It was more than a mile in length and three-quarters of a mile in breadth, and occupied for its site part of the peninsula on the south side of the roadstead of the same name, and rose from the shore in the form of an amphitheatre. Its basin, dry docks, and quays, in the construction of which engineering science had conquered the obstacles or supplied the deficiencies of nature, and its government warehouses and magazines of immense and solid structure, attested the great political importance of the place, and marked it out as a vital part of the empire at which a death-blow might be aimed by a bold enterprising enemy. And adequate to its importance were the numerous strong defences which had been erected for its protec-

tion both by land and sea. On the south, the port was defended by six principal batteries, each mounting from 50 to 190 guns; on the north were four batteries, mounting from 18 to 120 pieces; and besides these were several smaller batteries. Before the war commenced, 850 pieces of artillery guarded the port, of which

350 could be brought to bear upon a single ship entering the bay; but during the siege these were multiplied to an indefinite amount. By land, the original defences were by no means so formidable; but these were improved and multiplied with incredible rapidity as necessity and the changes of attack required, so that, almost daily,

new earthworks were constructed and fresh guns planted; and from these, at the very commencement of the siege, no fewer than 25,000 rounds were fired before our batteries opened upon them. Such was the place which people at home ignorantly imagined would be taken by a *coup de main*! "The position occupied by the enemy," wrote Lord Raglan in one of his despatches, "is not that of a fortress, but rather that of an army in an entrenched camp on very strong ground, where an apparently unlimited number of heavy guns, amply provided with gunners and ammunition, are mounted." It must also be kept in mind that while the allied armies had no covering force to protect them—that while their whole existence was staked upon the alternative of success or defeat—there was within the city an army nearly as numerous as the assailants, and on the outside, another more numerous still under the command of Prince Menschikoff.

On the 7th of October, the investment of Sebastopol was formally commenced by the erection of a line of earthworks on the side of Balaklava; and those of the English being completed by the

12th, were intrusted to the keeping of General Sir Colin Campbell, with the 93d Highlanders, reinforced by 3000 Turkish irregulars. The French works were of fully greater strength and extent, owing to the superior facilities of the ground, and their possession of the Woronzoff road. When the batteries were finished, those of the English overlooked Sebastopol, while those of the French were on a level with its defences. The encampment of the allies was a high bare plateau, sloping gradually on the north to Sebastopol, and on the west to Cape Chersonese; and as they had to retain possession of the harbour of Balaklava, where our shipping was stationed, and from which we were to derive our provisions and military stores, the lines had to be too far extended in that direction, leaving them in many places considerably weakened. On the 17th of October, at half-past six o'clock in the morning, the bombardment of Sebastopol was commenced by the French and British batteries, and by their ships in the harbour, for the attack was to be continued at the same time, and without pause, both by land and sea; but so ready were the Russians for the encounter, that they had anticipated

us by half an hour, and with such a cannonade as showed that they were superior to their assailants both in the calibre and number of their guns, which were also admirably served. The

mid-day a still worse explosion occurred in their lines, so that their fire had to be suspended during the rest of the day. On the side of the British the cannonade was maintained incessantly for seven or eight hours against the Redan battery, and the round tower with which it was connected. The latter being built of stone, was the first to be knocked to pieces; but the Redan being of earth, suffered little damage, except an explosion between two and three in the afternoon, by which it was supposed to be silenced for ever, so tremendous was the shock and din; but such of its artillerymen as survived returned to the charge, and kept up their fire with scarcely diminished vigour until night, when the destructive thunder on both sides was closed by mutual consent.

While thus it fared with the land attack, that from the sea was equally unsatisfactory. By agreement, the French squadron commenced by bombarding the Quarantine battery, the Artillery battery, and Fort Alexander on the south side; while the British reserved for their share Fort Constantine, the Telegraph battery, and the Wasp on the north. But as the ships neared their appointed stations, they found difficulties in their way, against which even naval warfare by steam was unable to contend upon equal terms. Although the water was deep enough at the mouth of the harbour, and in the passage leading to the mouth, there was on either side a long shoal, too narrow to allow even one half of the French and English ships to take up their position near the walls, so that many of the more distant were shut out from action. With a rare instance of self-sacrifice, the Russians had also blocked up the entrance to Sebastopol, by sinking five ships of the line and two frigates, so that a bar was interposed to the close co-operation of the fleet with the armies while both were engaged in action. These impediments, with the shallowness of the water inwards, not only prevented the close approach of the vessels, where

THE DOCKYARD CREEK AND TOWN OF SEBASTOPOL.—From Lieut.-Colonel Andrews' Views in Turkey and the Crimea

effects of this superiority against the land attack began to manifest themselves among the French works nearest the town; for after two hours one of their powder magazines blew up, and after

their broadsides would have been most available against the forts, but kept them at such a distance as made them more distinct marks for the enemy's fire. All and each of these obstacles now

¹ The buildings on the right are the barracks of the Karabelnaia, which are handsome, and of white stone. On the opposite side of the creek is Fort Nicholas, to the left you see the churches of St. Peter and St. Paul, on the extreme left the theatre, underneath, near the water's edge, are government sheds connected with the dockyard. The extreme distance is

the north side of the harbour, held by the Russians; Fort Catherine is close to the water. The bridge by which the Russians retreated to the north side ran from the near end of Fort Nicholas to Fort Catherine. The mouth of the harbour is a little to the left of the churches of St. Peter and St. Paul.—Lieut.-Colonel Andrews' Views in Turkey and the Crimea.

told with fearful effect. The roar of the broadsides from the shipping, and the heavy discharges of the forts that answered them, rose high above the deafening din of the cannonade on land, and was continued till evening; and when sunset arrived, at which the fleets retired, they had been so effectually mauled, that eight ships of the line, two English and six French, had to be sent home for repairs. The English had 44 killed and 266 wounded; the French, 30 and 164. Of the Russians, about 500 were killed and wounded; but the result had filled them with confidence, by showing the completeness of their defences, and how successfully they could defend themselves against attacks by sea: not a breach had been made in their batteries, nor a single wall dismantled, although they were marked and dented as thickly with cannon-balls, as buildings with the large rain-drops of a commencing thunder-shower.

After this unsatisfactory attempt, the partial investment of Sebastopol was continued in the form of an ordinary siege, and with various results. The French renewed their batteries, and pushed them somewhat forward in advance, and the English continued their fire on the southern front of Sebastopol; but both they and their allies were deficient, not only in weight of artillery but supplies of gunpowder. Our siege train consisted only of sixty guns, including mortars, all of them decidedly inferior in calibre to those of the Russians; while the French guns, which were of brass, and equally inferior, could make little impression on the strong ramparts and earthworks upon which their fire was brought to bear. So defective were we in these, that to arm our three batteries with their proper complement, we were obliged to strip our ships, and leave them half defenceless. It was unfortunate both for France and England, that to them the Crimean territory had hitherto been a *terra incognita*; and for the soldiers of both countries, that they had been sent forth, under the idea that they had only to summon the town to surrender, or advance upon its walls at the *pas de charge*. These walls were not of pipe-clay painted into an imitation of stone, or ramparts of lath and canvas for a mere melodramatic display, as we had been told that so many of the Russian defences were; and when the tidings reached our army from home, through the English newspapers, that they had already taken Sebastopol, it was like a bitter mockery, intended to aggravate their sufferings, which were already severe enough. Provisions were scarce, and could only be obtained at the dearest rate. Under these privations, combined with wounds, excessive toil, and sickness, disabilities were so prevalent that out of our 35,600 men, not more than 16,500 rank and file were fit for service. And yet—Why had we not taken Sebastopol?

Thus matters continued until the 25th of October, when the Russian army of observation resolved to make a decisive attempt for the relief of the city. It had commenced its movements for this purpose five days earlier, upon the right bank of the Tchernaya; and although rumours were prevalent that its battalions were crossing the river, and had been joined by the force under General Liprandi, newly arrived from the principalities on the Danube, these rumours had been disregarded. The Russian commanders, after a careful exploration for several days, had been confident that they could drive the allied army from their strong position at Balaklava, and place them between their own fire and that of Sebastopol; and they selected that part of our lines upon which the Turks were encamped, as being the weakest. It consisted of four conical hillocks in a right line across the valley beneath, upon which the Turks had thrown up as many earthen redoubts, each being defended by 250 men, and two or three heavy ship guns supplied by our fleet, with a gunner in each fort to work them. Upon this point, and these weakly manned redoubts, the Russians brought up during the night a battery of heavy guns, which were planted upon the opposite ridge; and at day-break, on the morning of the 25th, they opened a heavy fire, but with little effect. It was not here, however, that the chief danger lay, except in diverting the attention of the assailed; for at the eastern end of the valley Liprandi's *corps d'armée* was drawn up in order of battle, having its strong reserve on the Simpheropol road, and soon after, a large body of Russian cavalry advanced steadily down the valley, while a column of their infantry moved along the foot of the hill towards the Turkish redoubt No. 1. On finding themselves attacked in such force, after firing a few rounds the Turks fled in dismay, and were soon followed by those of the redoubts Nos. 2 and 3, who went off in such a hurry, that they did not wait to spike their guns, which were turned against them in their flight. Only the fourth redoubt, which was manned by British soldiers, but most of them invalids, was left unassailed.

Thus far the enemy had succeeded, and the chance of the British lines was perilous in the extreme. The next attack would be upon themselves, for which they were ill provided by the sudden defection of their Turkish allies; and could the Russians but reach the ground overhanging the harbour, our magazines and stores, and also our shipping, would soon be in a blaze. But fortunately a few minutes of time were left to prevent the surprise from being a successful one, for at half-past seven o'clock in the morning, an orderly came at full gallop to the head-quarters of

Sir Colin Campbell, with tidings of the attack on the redoubts. The news was quickly spread abroad, and the troops of both allied armies were speedily set in motion. Sir George Cathcart and the Duke of Cambridge were ordered by Lord Raglan to march their respective divisions, the fourth and first, to the scene of action, while General Canrobert, the French commander-in-chief, sent General Bosquet with his third division to assist the British in holding the valley. As for Balaklava, its defence was promptly looked after by Sir Colin Campbell, who stationed the 93d Highlanders drawn up in line in front of the road leading to the town. And even these preparations, quick and bold though they were, would be scarcely enough for the occasion. Six large masses of Russian infantry were seen marching up the valley in complete order, with a regular line of twenty pieces of artillery in their front; about a mile in advance of them were two batteries of light guns playing upon the redoubts; and behind them, in front of the infantry, were enormous bodies of cavalry. It was a fearful advance, in which war seemed to assume all its grandeur and solemnity as well as its terrors, and all its promise of devastation and victory.

The Turks, when they had been driven from the redoubts, had fled towards the Highlanders, upon the flanks of whom they rallied and formed themselves into companies. The Russian cavalry advancing in pursuit, perceived, when they had gained the hill across the valley, that the Highlanders were drawn up at the distance of half a mile ready to receive them, upon which they checked their advance until squadron after squadron had come up to join them. On being reinforced to the number of about 3500 men, they made a terrible and general charge towards Balaklava. It seemed as if nothing could resist that torrent: the Turks fired a second volley, and again fled; and down came the whole inundation of lancers, dragoons, hussars, and artillery upon the 93d, who instead of being thrown into squares, were only drawn up in a line of not more than two deep to receive them. It looked as if that coming charge of cavalry would snap the line asunder like a thread, and the onlookers held their breath in suspense; but before the enemy had

come within 250 yards, a close volley from the Highland rifles emptied the saddles of the assailants by scores, and brought the whole body to a sudden pause: they wavered, opened their files to right and left, and fled in fear of another such destructive welcome. "Bravo, Highlanders; well done!" rang from the excited spectators over the field. On perceiving that the intention of the Russians was to attack Balaklava, Lord

Raglan had ordered out the Scots Greys and Inniskillens dragoons, under Lord Lucan, and scarcely had they moved from their quarters, than they saw the advance of a large body of the enemy's cavalry. It was a bold resolution to attack them, for their opponents were evidently the *élite* of the Russian horse, and outnumbered them by more than four to one. At the prospect of that ominous meeting there was a pause of expectation and wonder among the allied armies, and both officers and soldiers gazed at this awful preparation as for a gladiatorial spectacle. The Russians came on in confidence down the hill, for they despised the fewness of their opponents; but it was only for a moment: the Scots Greys and Inniskillens charged their centre, which they broke right through; they plunged into the mass, where they disappeared; and "God help them, they are lost!" was the cry that burst from many a sympathizing spectator. But again they re-appeared, although with diminished numbers, and charged the second

line of the enemy as boldly as they had done the first. It was too much: the Russians were rallying, closing upon them, and might have overwhelmed them by the weight of numbers, when the 4th and 5th dragoon guards came down to their assistance, scattered with a single charge the Russian first line before it could form anew, and completed the defeat which the Inniskillens and Greys had commenced. At this triumphant close of the deadly drama, there was clapping of hands, shouting, and waving of caps among the spectators, who would gladly have shared in all the dangers of such a contest, to partake of its triumphs. It was most gratifying also to find that this chivalrous enterprise cost so little, for not more than four or five men were killed and thirty wounded among the victors of this unequal encounter.

And now came the most mournful, yet most brilliant episode of this eventful engagement. One of the four captured redoubts had been recovered from the enemy. On seeing a stir in the second of these, Lord Raglan imagined that the Russians were removing the captured guns from it, and with a view of preventing them, he sent a written order to Lord Lucan, the commander of our cavalry, to advance, and pursue the enemy in their retreat. The order was conveyed by Captain Nolan of the 15th hussars, one of the most gallant, noble-hearted, and accomplished officers in the British service. But during the short ride of Captain Nolan, such a change had occurred in the Russian movements as Lord Raglan could not have foreseen, and through which his order, that might have been at first of easy execution, was now changed into one of extreme rashness, if not utter impossibility. Nolan delivered his order—a written order—and the Earl of Lucan, notwithstanding the altered state of affairs, had no alternative but implicit military obedience. He might indeed have interpreted it according to the change of circumstances, and taken upon himself the responsibility of proving that compliance was impossible; and even this was gently hinted at in the despatch of Lord Raglan:—"From some misconception of the instruction to advance, the lieutenant-general considered that he was bound to attack at *all hazards*." As it was, Lord Lucan ordered Major-general the Earl of Cardigan to move forward with the light brigade of cavalry. And to overtake and charge what?—not an encumbered corps in hasty retreat, but an army drawn up to receive them. It was the main body of Liprandi's *corps d'armée* who were waiting them at the bottom of the valley, with the batteries of the two redoubts in their advance; with an additional battery which they had established on the Tchernaya ridge; and with the steep sides of the hills that flanked the valley

lined with riflemen supported by strong columns of infantry. And an army thus advantageously posted was to be attacked by 600 British light horse! Officers and men saw that such an onset was certain destruction, but how could it be avoided? The order of the commander-in-chief was imperative in the following words:—"Lord Raglan wishes the cavalry to advance rapidly to the front, follow the enemy, and try to prevent the enemy carrying away the guns; troops of horse artillery may accompany. French cavalry is on your left. Immediate." "Forward!" was the word, and the light brigade began to charge through that valley—the Valley of the Shadow of Death. At first, they were accompanied by the heavy brigade; but the latter, after they had rode a little way, were halted as a support beyond the reach of the enemy's fire, and the light brigade went on alone. On their left flank, and considerably in advance, as leader of the charge, was Captain Nolan, the bearer of the fatal order; but while he cheered his gallant followers, his arm suddenly fell, and his bold shout was exchanged into a death-shriek; for the fragment of a Russian shell had struck him to the heart, and he was dead in an instant. Still onward went the light brigade, increasing their speed and impetus as they neared the enemy; but at the distance of 1200 yards, the fire of thirty cannon was opened upon them; the balls made fearful gaps as they swept through their ranks; and it was with greatly diminished numbers, though unabated spirit, that they reached the steel rampart through the heavy rolling fire of the hostile infantry. Without a moment's halt they plunged into this fatal volcano, and were hid in a moment from the sight of their friends, who wondered at their heroism, and gave them up for lost; but still pressing on, they bore down and cut through the ranks of the enemy in their advance, until they had swept through the whole of that army from front to rear. The French and English who gazed from the ridge, had been astonished at such a charge of cavalry upon infantry, and still more, to see them emerge at the rear of their opponents, waving their red swords in triumph. But the fire of the batteries, the thick volleys of musketry, and the desperate hand-to-hand struggle with which every step of their progress had been accompanied, told fearfully upon their numbers: many a horse was masterless, and many who still survived, reeled wounded in their saddles. But there was no time for pause or reflection: they must return; and in returning, they must confront anew the fiery ordeal through which they had already passed. They wheeled, and re-entered that gap of death, which once more closed upon them, and from which they never would have escaped, had not an opportune res-

cue arrived. We have already mentioned that the heavy brigade, the heroes of the earlier part of the battle, had been drawn out as a support to the squadron employed in the charge; but they had been kept back, as it was soon perceived that their entrance into action would only deepen our loss. For such service, light cavalry was the most available, and this necessary aid was promptly afforded by our gallant allies, the French. Seeing the danger of our light brigade, General Bosquet sent his corps of chasseurs d'Afrique to silence the battery on the Tchernaya ridge, by the fire of which our troops would have to pass in their return. And most gallantly was this good office performed by a single squadron of the corps of chasseurs, which was all that could be spared to charge the Russian artillery. Animated by the spirit and example of those to whose rescue they so readily hurried, this handful dashed through and over every obstacle, and swept the battery of its defenders, maintaining their position against a heavy cannonade, until the relics of our light brigade had once more emerged from their deadly struggle. It was this generous

interposition which in all probability saved them from entire destruction. But of the 600 of our gallant heroes who had entered into this most unequal and perilous encounter, little more than 200 returned. Yet, although it was a rash mistake, or complication of mistakes, that sent these brave men to certain death, they did not die in vain. It supported to the very height the prestige of British valour, which, after so long a peace throughout Europe, was shown to have suffered no diminution or decay. It daunted the subsequent efforts of the Russians, by teaching them with what kind of enemy they had now to deal. And better than all, when a deed of brave devotedness will be required of British soldiers, their arms will be nerved and their hearts animated by the narratives that have been handed down to them of this terrible charge of Balaklava.

The battle was now ended so far as actual fighting was concerned. The Russians, having failed in the object of their attack, retired to their old position; while the allied armies, satisfied

with this advantage, gave them no further molestation. As for the four redoubts, two of which were still in possession of the enemy, but might easily have been recovered, it was resolved to leave the whole in their possession, as the Turks had shown themselves unable to defend them, and as their occupation demanded too great an extension of the British lines. It was judged more expedient to withdraw from that range of heights, and to concentrate our forces immediately in front of the narrow valley leading to the port and into Balaklava, and on the precipitous heights

THE HARBOUR OF BALAKLAVA from the Genoese Castle
1854 a drawing by James Newlands, C.B. (March 14, 1855)

on the right—having thus a narrower and easier line of defence, and keeping Balaklava and the communication with it open by the westerly and southerly heights behind our camp. Here our troops were to be reinforced by a strong body of seamen from the British fleet, and if need should occur, by some French regiments. As for the Turkish troops, who had no longer the redoubts to maintain, they were to be converted into labourers, and employed in constructing breast-works and defences, which, when completed, would inclose and secure our occupation of Balaklava.

In the meantime, there was glee and triumph in Sebastopol, when the guns captured from our redoubts were drawn into the city; it was reported that the army without had gained a great victory over the allies, of which these were the trophies; and there was ringing of bells and firing of cannon to celebrate the event. But this was not enough, and the garrison resolved to complete the chastisement of their foes by a sally from the town. Accordingly, on the following

morning (the 26th of October), several columns of infantry, accompanied by artillery and cavalry, composing a force of between 6000 and 7000 men, were seen to issue from Sebastopol. At first it was thought that they were going to join Liprandi's corps, by the road through the Inkermann valley; but instead of proceeding forward, they suddenly turned to the right, ascended the hills, and appeared on the ridge which overlooked the camp of the second division commanded by Sir de Lacy Evans. But he had been expecting some such attack, and was prepared to encounter it. The Russians came rapidly down from the hill, and suddenly fell upon the pickets of the 30th and 49th regiments; but this brave handful opposed such a resistance to their advance, that Sir de Lacy had time to draw up his lines in advance of the camp; and when the sound of the enemy's cannonade was heard, he was reinforced by the Duke of Cambridge with the brigade of guards, and by General Bosquet with five French battalions. At the same time, eighteen guns were placed in position, which opened a deadly fire upon the coming enemy; and after their artillery was silenced and driven off the field, the cannonade was directed against their infantry. This unexpected reception staggered them, and on the charge of our regiments with the bayonet, their rout was complete; they were chased over the ridges, and down towards the head of the bay, while our soldiers pursued them with such ardour that for some time it was difficult to recal them. After the Russians had lost 600 in killed and wounded by this inglorious attempt, they were fain to hurry back to the shelter of the town. This success was the more glorious to the victors, as it was by the second division alone, who scarcely mustered 1200, that the whole was achieved, the reinforcements of guards and French battalions who came to their assistance having taken no share in the encounter.

The siege of Sebastopol still continued to be pressed with vigour, and with alternate changes of failure and success; and as fast as a battery was dismantled or wall thrown down, fresh earthworks were constructed, and new guns mounted, while the obstinacy of the defence remained unabated. Far indeed from taking the city, it was much that the allies could maintain their ground, with such formidable fortresses opposed to them on one side, and so strong an army encamped against them on the other; and though our troops had won honour in every encounter in the field, these battles had been attended with no practical results. Thus matters continued until the close of October, when the confidence of the Russians was so increased, that they hoped nothing less than to raise the siege, and annihilate their antagonists. For this

important crisis, indeed, they had been for some time in preparation. Sebastopol although besieged had never been invested, and from Perekop, the base of Russian operations, which was perfectly open, the town was reinforced with troops, artillery, and provisions. At the same time, their forces which had been set free by the Austrian occupation of the Danubian provinces were conveyed to the Crimea, and 50,000 men were collected and impatient for action upon the heights of Inkermann. The time had arrived when the besieging armies were to be crushed between the resistless close of the city and its defenders from without. Such was the calculation of Prince Menschikoff, the Russian commander, and from the heights of Inkermann he wrote the following confident letter to the czar:—"A terrible calamity impends over the invaders of your dominions. In a few days, they will perish by the sword, or be driven into the sea. Let your majesty send your sons here, that I may render up to them untouched the priceless treasure which your majesty has intrusted to my keeping." These hopes obtained full sympathy in the palace of St. Petersburg, and the emperor's two sons, the Archdukes Nicholas and Michael, were forthwith sent to the Crimea, to witness the promised downfall, and be invested with the honours of the victory.

On the morning of the 5th of November, and at a very early hour, after a rainy night, and while the air was still darkened with vapour, the ringing of church bells and singing of psalms were heard in Sebastopol. This however excited little attention, as such sounds were not only the usual prelude of a military enterprise, but also the accompaniment of those numerous saints' days and festivals for which the Greek church is distinguished. But at a still earlier hour, other sounds might have been heard unconnected with religious worship. It was the low creak and rumble of heavy carriage-wheels along the valley, and it caught the vigilant ears of one of the sentries belonging to an outlying picket of the light division on the heights above. Had the man but given the alarm, the battle of Inkermann would have filled one of the brightest pages of French and English history; but thinking that it was nothing more than the usual passage of carts or waggons going to the town, he made no mention of it until after the battle. In this unsuspected manner, enormous masses of Russian troops and parks of artillery crept in darkness and silence up the rugged sides of the heights over the valley of Inkermann, and established themselves upon the undefended flank of the second division, whom they were soon to rouse with a deadly awakening.

This position, occupied by Sir de Lacy Evans, was the part of the allied encampment which

the Russians, from its importance and insecurity, had been always the most desirous to carry, and it was for this that the experiment had been made in the previous battle of Balaklava. That attempt, indeed, had been frustrated, but it had served their purpose so far as to make them fully acquainted with the defects of the position, and to suggest better modes of assailing it. "It must be observed (so writes our best historical authority of this war) that Sir de Lacy Evans had long been aware of the insecurity of this portion of our position, and had repeatedly pointed it out to those whose duty it was to guard against the dangers which threatened us. It was the only ground where we were exposed to surprise, for a number of ravines and unequal curves in the slope of the hill towards the valley lead up to the crest and summit, against the adverse side of which our right flank was resting without guns, entrenchments, abattis, or outlying defence of any kind. Every one admitted the truth of the representations addressed to the authorities on this subject; but indolence or a sense of false security led to indifference and procrastination. A battery was thrown up of sand-bags, gabions, and fascines, on the slope of the hill over Inkermann, on the east, but no guns were mounted there, for Sir de Lacy Evans, thinking that two guns in such a position, without any works to support them, would only invite attack and capture, caused them to be removed as soon as they had silenced the Light-house battery." This was but one of a series of improvident and unprofessional neglects which characterized our proceedings during the whole campaign, and for which we were now to pay a heavy penalty.

When the first faint dawn of light began to struggle through the gloom of that inclement morning of the 5th of November, some of our soldiers saw a body of Russians apparently unarmed on a hill above the western end of Sebastopol harbour, who pretended that they were deserters anxious to surrender themselves; but as soon as our picket advanced to receive them, an ambush darted upon them from behind the rocks, and made the whole party and their officer prisoners. Having thus prevented the alarm from being given, the Russians descended, but were recognized by the inner pickets, who threw themselves across their path, and the sound of firing that commenced gave warning to the regiments of the second division, who received the Russians with destructive volleys of their Menié rifles. But the Russian masses, unchecked by this resistance, came rolling onward like a tempest; their artillery opened upon the British from the ridge on which they had planted them, and at the same instant were seconded by the

cannons of Sebastopol, and of the ships lying within the harbour—while against these, the second division had neither adequate means for answer, nor places of cover. On front, flank, and rear they were plied with a heavy cannonade, seconded by clouds of skirmishers, who seemed to multiply at every point. To add to their

difficulties, their gallant and skilful commander, Sir de Lacy Evans, was stretched upon a bed of sickness; but happily, Brigadier-general Pennefather, upon whom the command had fallen, showed himself equal to the trial, while Sir de Lacy, sick though he was, hurried from his bed to the field, and although unable to resume the command, could animate his soldiers by his presence, and assist their leader with his counsels. The second division, that could not have long borne up against the overwhelming torrent, was quickly joined by the brigade of guards, who were nearest to the first point of attack; and foremost in the rescue were the grenadiers and Scots fusiliers, who hurried forward at the sound of the first shot. But it was around the Two-gun battery on the British right that the Russian attack was chiefly concentrated. In itself it was apparently worthless, for it was only made of sand-bags and fascines, and the guns had been removed; but the command which its occupation would give of the British position, made the enemy resolute to possess it at whatever cost—a resolution which was equally matched by that of our troops to re-

tain it. A picket of the 55th made it good, until they were driven out by an overwhelming attack; but the grenadiers and Scots fusiliers rushing forward, re-captured this Two-gun battery, as it was generally named, drove the Russians down the side of the steep hill, on a small spur of which the battery was planted, and being joined by the Coldstreams, made arrangements for holding it out to the last. Their resolution was to be tried; the Russians returned in greater numbers to the attack, and column after column ascended the steep, got upon the spur, and bore down with irresistible weight upon the right flank of the guards, whose numbers were greatly diminished and their gunpowder well-nigh exhausted; but they fought with their bayonets, and even with stones, which they hurled against the enemy, and being slightly reinforced with men and ammunition, they once more drove the enemy from the spur, losing two-thirds of their number in the effort. Never was any spot of a battle-field more fiercely contested or more gallantly maintained; it was known on both sides that the possession of this point would decide the issue of the battle, and during four hours and a half, the struggle was continued around it almost without intermission and with various fortunes, although the enemy in almost every case were as five or six to one of the British. They were also frantic with copious doses of brandy, which had been served out to them before the battle, and animated with fanaticism, having been taught by the emperor's proclamations, and the lessons of their priests, to regard this as a holy war in which Heaven was upon their side. But the guards, although repeatedly assailed and repulsed, as often returned and drove back the enemy, being resolved to perish to a man rather than abandon their post. And to this it would have come at last, had not fresh French troops arrived from General Bosquet's division to their aid. These allies took possession of the contested ground, and renewed with every promise of success the defence of the battery, upon which the relics of what had once been our gay and gallant guards resigned their charge, and drew up upon the rear of the right flank of our second division.

While the right of our position was so imperilled, a trial equally dangerous was going on upon the left, which was placed on the hill above the harbour, and separated by a deep ravine from the position occupied by our guards. Favoured by the ground that was broken and covered with brushwood, clouds of Russian skirmishers advanced, followed by heavy columns, and accompanied with the fire of their well-served artillery; and the troops of the second division, although joined by a brigade of the first, were borne back by the weight of the advance, until the enemy had

reached the very centre of the second's encampment. Here ensued a desperate hand-to-hand struggle, in which broken regiments were rallied, and guns captured and recaptured, but where numbers were likely to give victory to the Russians, animated as they were with a resolution to win or die—for had not a promise been sent to the emperor in their name, that they would preserve for him his fair city of Sebastopol? And were not his sons even now the onlookers and witnesses of their deeds? While the British positions were thus all but carried, by which the French and English armies would have been equally crushed or forced to surrender, it might be asked why our allies had been so slow in interposing, when their own safety was so deeply at stake. But no blame of remissness or want of cordiality can be attached to our gallant partners, who had their own difficulties to encounter. As might easily be supposed, it was part of the plan of the Russian generals to keep the French fully occupied, while the British position was assailed, even though the demonstration should be nothing more than a feigned attack. Accordingly, as soon as the first attack in the morning had been made upon our pickets, Liprandi's *corps d'armée* had crossed the valley of the Tchernaya, advanced to the foot of the heights, and commenced a fire upon the French, while they were opening a cannonade upon the rear of our lines. Judging that within this range the whole battle was to be comprised, General Bosquet had sent two battalions of his light infantry to aid in the defence of the British left, and after this was done, he thought that the danger in that quarter was over, more especially as the fire upon the rear of our lines had begun to slacken. But this change had only occurred to give time for the assault upon the British front, upon which the cannonade was commenced with a violence that taught him the real place and full amount of the danger. He boldly resolved to treat General Liprandi's advance as a mere feint; to leave his post for a time almost undefended, and hurry with the bulk of his troops to the spot where the call was most urgent. It was a fortunate resolution, and its magnanimity was well rewarded by the result, which was nothing less than the deliverance of both armies from ruin.

The first of the French who arrived to the rescue of the nearly overborne British were two troops of horse artillery and one field battery, which came up at full speed; these were followed by a regiment of Zouaves and one of Indigenes or Arabs, and finally Bosquet's troops of the line advanced with steady step. On the other hand, the Russians were equally on the alert, and one division after another came ra-

pidly through the ravines in the rear of our second division. The feints and manœuvres were thus terminated, the conflict had settled down into a single locality, and all that remained was a stand-up fight of regiment to regiment and man to man, where strength, courage, and endurance would decide the issue. It was well on such an occasion, fearfully outnumbered as they were, that the French and British were fighting side by side, each the witnesses of the other's prowess, and emulous to excel in this trial against a common foe. It was a strange and new war-spectacle, in which masses, distinguished by their several military costumes, glittered and shifted hither and thither like the gleaming flakes of the *aurora borealis*, and in which the steady advance and unbroken front of the British masses were contrasted with the apparently irregular but nimble and effective movements, the sudden approach and tiger-like spring of the Algerian Arabs and Zouaves. It was not to be wondered at if the Russians were bewildered by such various modes of resistance and onset—were borne down or compelled to recoil—and were at last fain to make a hasty retreat through the ravines from which they had issued. Over the whole field their columns were at last in full retreat, like waves that had spent their force, leaving behind them a wreck of the dead and dying at every receding step. They were beaten indeed, but still not subdued—slowly, reluctantly, and steadily they retired, while so careful were they of their military honour that they left not a single gun behind them; even the fragments of their gun-carriages they carefully gathered up under the heavy fire of our artillery and carried off with them, as if they would not leave a single trophy to the victors. It was well for them that the allies had no efficient cavalry to follow up their success, by which the retreat might have been changed into an utter rout; and more fortunate still that the Russian artillery upon the ridge still maintained its position to cover their retreating columns, and check the advance of the allies. The hand-to-hand fight was thus changed into a distant cannonade, in which fortune might have yet changed sides; for the Russian guns were greatly superior both in numbers and calibre to those of the allies, and served with admirable skill and perseverance. Their chief fire was upon the position of our second division, and with deadly effect, when Lord Raglan ordered two eighteen-pounders of our siege train to be brought up. It seemed all but impossible to drag such heavy pieces over the rough ground, and through the miry tracks that interposed, but the arduous feat was ably and quickly performed by the united strength of a multitude of men and horses; and the guns being placed in

position, their shot crashed through the Russian batteries, sweeping off their men and dismounting their guns at every discharge. They were obliged to retire their artillery to the top of

ZOUAVES—From the Illustrated London News

the hill, and finally to limber them up and withdraw them, leaving their retreating columns below to the fierce pursuit of the Indigenes and Zouaves.

Such were the chief movements of this victory of Inkermann; and they were thus briefly and distinctly described by General Canrobert on the same evening, in the account which he drew up:—"A great portion of the Russian army, favoured by the night and the fog, was enabled to establish itself, with powerful artillery, upon the heights which form the extreme right of our position. Two English divisions sustained an unequal fight with the invincible solidity which we know to be the characteristic of our allies, while a part of the Bosquet division, conducted by its worthy chief, came up to their support, and rushed upon the enemy with a boldness and intelligence to which I here render forcible homage. Eventually driven back into the valley of the Tchernaya, the enemy left upon the ground more than 4000 of his men killed or wounded, and carried away at least as many more during the battle." But while the main conflict was going on, other subsidiary attempts were made by the Russians against the allies, each of which had the relief of Sebastopol for its object. One of these, when the fight was at the hottest, was an attempt of General Soimonoff, with a large body of infantry and artillery, to turn the flank of the British, while our regiments were all but defeated in front. For this purpose, he ascended

the valley to the right of the five-gun battery, but was met mid-way by the first brigade of the light division and a small body of marines, under General Codrington, upon which Soimonoff, finding himself anticipated, and thinking his attempt not worth the risk, withdrew his troops from the encounter. Another and a more important movement was made about the same time from the town itself. A sortie of 5000 Russians, under cover of the mist, was made from Sebastopol, for the purpose of attacking the extreme left of the French lines, and had succeeded in capturing two French batteries by surprise before their object was discovered. But here they were attacked by General Forey, who commanded in that quarter, and after a short but sanguinary encounter were routed and driven back to the town. Their plan was well conceived, but for its success a greater force of men and artillery was needed, in which case they might have retained the two captured batteries, and seriously endangered the safety of the whole French left. But, indeed, it is difficult to give a special and scientific account of the whole of this battle of Inkermann: of manœuvring there was scarcely any, in consequence of the ruggedness of the ground, which did not permit such strategetic operations; and among the numerous ridges and ravines a multitude of encounters were going on simultaneously, which could only be heard by the fire of artillery and musketry, while the combatants themselves were hidden from the view of the commanders on both sides, and compelled to struggle upon their own account. Hence it is that this great affair of Inkermann has been called "the soldiers' battle." And well did it display the stuff of which the soldiers of the warring nations was made, and attest the supe-

riority of those of Britain and France above those of every other country. Even yet, however, they might have failed, and failed not ingloriously, considering the overwhelming numerical superiority of the Russians, but for several circumstances which enabled 8000 English and 6000 French to maintain a close fight against an enemy at least 50,000 strong, and in the end to prove victorious. These, according to the Russian statements, were the extensive use of the Menié rifle among the French and British regiments, the failure of Soimonoff's attempt upon the British flank, and the dilatory arrival of the Russian columns, that came up separately instead of simultaneously to battle, thus giving their opponents both leisure and warning for resistance. But more than these was the insufficient feint to occupy Bosquet, that ought to have been of a more formidable character, so as to prevent him from coming to the aid of the British, by which the fortune of the day was principally decided. But even allowing for every deduction, this victory of Inkermann was a glorious event for the united arms of France and Britain. It struck dismay into the heart of Russian ambition and presumption, and left the allies to turn their undivided efforts against the ramparts of Sebastopol. These results, important though they were at the time, may perhaps be as nothing compared with the prospective advantages that may accrue from it. If it permanently impresses the two lately reconciled nations with a conviction of their power when combined to aid the feeble, repress the strong and insolent, and advance the welfare of humanity at large, the world will have good cause to rejoice that such a battle was fought, and that such soldiers were the conquerors.

CHAPTER XIX.—CIVIL AND MILITARY HISTORY.—A.D. 1854—1855.

VICTORIA.

The encampment of the allied armies visited by a storm—Its wasteful effects by land and sea—Diseases and sufferings of our troops before Sebastopol—Their inadequate provisions and supplies—Exertions of benevolence at home in their behalf—Necessity of aid for the sick in the hospitals—Arrival of Miss Nightingale and the nurses—Their effectual services among the sick and wounded—Arrival of more nurses—Opening of the campaign of 1855—Strength of Sebastopol—Weakness of the army encamped against it—Great number of the sick and wounded—Death of the Czar Nicholas—Negotiation under his successor for peace—It is ineffectual—Unsuccessful attack of the Russians on Eupatoria—They take possession of a favourable ground in front of the Malakoff—Establishment of a fort and rifle-pits upon it—Contests between the Russians and allies for possession of the rifle pits—Fresh bombardment of Sebastopol by the allies—Its failure—Discontent at home from the delays in the siege—A new French commander-in-chief appointed—Expedition of the allies to Kertch—Destruction of Russian stores—Fresh attack upon Sebastopol—Its success upon the outworks—A decisive attack upon the town resolved—Plan of the attack—Fatal mistake at the commencement—Its disastrous failure—Particulars of the French attack—Failure of the British attack on the Redan—The British obtain possession of the Cemetery—Effects of this failure on the health of Lord Raglan—His death—He is succeeded by General Simpson—Attempt of the covering army under General Liprandi to raise the siege—Its attack upon the allied army at Tchernaya—Battle of Tchernaya—Defeat of the Russians—Decisive attempt of the allies upon Sebastopol—Capture of the Malakoff by the French—Failure of the British to take the Great Redan—Causes of the failure—The Russians resolve to evacuate Sebastopol—Heroism of their purpose—Their success in effecting it—They destroy their defences and military stores at their departure—Entrance of the allies into Sebastopol—Scenes of havoc and suffering in the town—Picture of the Russian sick and wounded in an hospital—The evacuating army entrenches itself in the neighbourhood—Successful expeditions of the allies by sea from the Crimea—Explosion of their gunpowder magazine—Symptoms of approaching peace.

AFTER the battle of Inkermann, the Russian army was so appalled by the unexpected and humbling result that it made no further hostile demonstration; while the allies, on their part, suspended active operations until they should be reinforced by troops that were expected from France and Britain. They were proud, and with justice, of the signal victory they had gained, and felt as if no resistance of the enemy could impede their further career. But foes were at hand which they had not taken into account, and obstacles to be encountered against which arms are unavailing. The rage of the elements and the wasteful attacks of disease were now to test their powers of endurance, neutralize the effects of their success, and keep them wistfully lingering before those walls and battlements which they had expected to enter as conquerors.

On the night of the 13th of November, a furious storm swept over Constantinople, unroofing the highest buildings of the city, and levelling three out of the six splendid minarets of the Grand Mosque of Sultan Achmet. On the following morning, the tempest commenced at Balaklava about seven o'clock, and in less than two hours it had wrecked eleven, and disabled six transports belonging to the allied army, among which was the magnificent steam-ship *Prince*, which was totally lost, with a cargo valued at £500,000, consisting of

clothing and provisions for our soldiers during the winter, and warlike stores for carrying on the siege. In the harbour of Balaklava, which was thronged with shipping, vessels were dragging their anchors, and running foul of each other, while thirty transports laden with ammunition and stores, that had been driven from the harbour, or had attempted to stand out to sea, were dashed against the neighbouring rocks. Nor were matters better with the French shipping at Eupatoria: eighteen vessels were wrecked or dismantled at the mouth of the Katcha; and to add to the horrors of the scene, bands of mounted Cossacks were busily plunging their horses through the surf and foam in quest of plunder, firing into the stranded vessels, and making prisoners of those whom the tempest had spared. In these calamitous wrecks, it was supposed that more than a thousand lives were lost, and about £2,000,000 worth of property in clothing, provision, and military stores, which the armies needed for the winter, that threatened to be a severe one. The calamities at sea were almost rivalled by the sufferings on shore. Not only the common soldiers, but even the general officers had as yet no better accommodation for the winter than their frail, scanty coverings of tents; and in these, 8500 British soldiers—hungry, half-starved, and overwrought, the relics of what had been a noble army—had been wistfully looking forward to the arrival of the promised supplies from home. But the

tent-poles were snapped asunder like reeds; the tents themselves were levelled like grass before the sweep of the scythe, or borne away on the hurricane; waggons were overturned; while men and horses were rolling over each other in heaps, or clinging to the earth, to escape being flung down the ravines or into the sea. To add to these grievances by destroying every chance of rest or covering, the raging tempest was mixed with rain and snow, and every portion of ground was soon converted into a mire where every one staggered

ankle-deep in mud. Nor was the town of Balaklava in better condition, or more fitted for comfort or shelter: its narrow streets were turned into canals of mud, among which men of all nations—English, French, Turks, Arabs, Egyptians, Italians, Maltese, Tartars, Greeks, Bulgarians, and Spaniards—were seen huddled together, or attempting to flounder along, all involved in a common misery, although expressing it in a most multifarious polyglot; while of the houses towards which they struggled, many

ENTRANCE TO BALAKLAVA HARBOUR.—Drawn by J S Prout from a sketch by James Newlands, C E

were roofless, several utterly destroyed, and the best of them so crowded as to be utterly undurable. When the strong and healthy were thus humbled, struck down, and reduced to helplessness, miserable was the condition of the sick and wounded; for the tents and wooden structures that had been set up for hospitals were swept away in the general desolation, and their inmates in many cases left to perish, because none could come to their relief. Seldom indeed has a victorious army been so visited and so chastised. It was a bitter caricature of military glory, to which human invention could scarcely have added a single touch.

This day of storm and terror was the commencement of a dismal season, in which rain, wind, and a black leaden sky predominated; provisions daily became more scanty and unpalatable, and the tents more incapable of giving shelter to their shivering and sickening inmates. To add to the discomforts of our diminished troops, the greater part of their principal officers were either laid up, or on their way home, the victims of those maladies by which the common soldiers were so mercilessly decimated. So scanty, indeed, were now the supplies of provisions, that the troops, although exhausted by night-work and watching, and by hard labour in the trenches, had to be put upon short allowance. Under such circumstances, it was natural that

the cholera should revisit them; and on the night of the 28th of November it made its appearance, carrying off scarcely less than sixty victims daily. How an army so circumstanced could continue to exist between two such dangers as the foe within the city and those without, both on the alert for its destruction, was marvellous; but the easy attempt to crush it was not made; and with but a few occasional flashes of cannon from the ramparts, or skirmishes and surprises in the trenches, in which few lives were lost, the eventful year 1854 was ended, and Sebastopol remained untaken. When December closed, there were 3500 sick in the British camp before Sebastopol, their illness chiefly occasioned by excessive labour, exposure to inclement weather, and want of the necessaries of life, while a still greater number were in the hospitals on the Bosphorus. And yet, there was no parsimoniousness in the supplies voted by the British parliament, or the contributions of private benevolence; and not only the necessaries and comforts, but even the luxuries of life had been sent, and still continued to be sent out to the Crimea, far more than enough to provide for such an army. But the science of victualling an army—the most important, but perhaps the most difficult and complex in modern warfare—had been forgot since the days of Waterloo, and had to be learned anew; and until its lessons had been fairly mas-

tered, there were blunders both at home and in the encampment—blunders in the transports at sea and the store-houses on shore—blunders in the commissariat and medical staffs, on account of which huts, clothing, food, medicines were finding their way to every shore but the right one, or lying packed up and useless in bond, waiting for official deliverance, while those for whom they had been destined were dying for lack of them. With all this ignorance also, there was an enormous amount of mercantile fraud somewhere among the army contractors and their agents, which has never yet been fully cleared, and through which enormous profits were realized from the sufferings of our heroes in the Crimea. They are among those buried iniquities that nothing but “crack of doom” will open and bring to light. During the last three months of the year, 9000 British reinforcements had been sent out, but they only added to the prevalent destitution instead of the real strength of the army. It might have fared as ill with the French, who had also abundance of disease in their encampment, but that their commissariat departments were better managed, and their stores more promptly distributed, while the Frenchman, a born soldier, can more readily adapt himself to difficulties, and is less scrupulous in removing them.

Such were the miseries that had been accumulating upon our army since its entrance into the Crimea, and such the condition it exhibited towards the close of the year. It was well, however, that it was not wholly consigned to the tender mercies of official mismanagement. British philanthropy was awakened in behalf of our suffering soldiers into more than its wonted liberality, and so early as the 12th of October a subscription was opened for the sick and wounded, which in less than a fortnight amounted to £15,000; and this sum, which was sent to the *Times* office, was so judiciously administered by Mr. Macdonald, the special commissioner appointed for the purpose, that the hospitals in not a few cases were supplied with necessaries, and the sick with the means of recovery. Only a day or two afterwards, “The Royal Commission of the Patriotic Fund” was commenced, and with such success, that its contributions for the same purposes at last amounted to £1,025,000. While the temporal wants of the sufferers were thus regarded, their spiritual necessities were not lost sight of, and a subscription having been moved by the “Society for the Propagation of the Gospel in Foreign Parts,” for sending additional chaplains to the seat of war, was so liberally answered, that twenty-four additional clergymen were sent to the camp and the hospitals, partly by subscriptions and partly at the expense of government.

All this was much, but it was not here that the spontaneous movement of British benevolence was to terminate. By whom were the sick to be tended and their comforts administered? While the worn-out and diseased, the mangled, the mutilated, and the dying were of themselves an army that was numbered by the thousand, what amount of mere professional or hireling skill was it possible to muster for the recovery of the hopeful, or the consolation of those whose recovery was impossible? The flying round of the over-taxed physician, or the monotonous consolation of the exhausted, half-asleep nurse, must have been an additional mockery to those cases that demanded nothing less than a mother's or a sister's tenderness and love. And here a new exhibition was to be made in modern warfare, by which even the fables of chivalry were to be outdone. Delicate ladies of rank and education were to hurry to the scene of action, but with far other motives than to witness the stirring spectacle of the tournament or the bull-fight. They were to go cheerfully forth, and brave the horrors and privations of war without its glory and excitement—to exchange their perfumed boudoirs for the fevered atmosphere of the hospital, and the music of the concert for the hourly groans and cries of the suffering—and all that they might undertake that humble, self-denying office, to which the lowest poverty will scarcely condescend, and to minister those tender offices to the poor, neglected soldier, which gold cannot buy even for the great and the noble. The one instance of Eleanor, who sucked the poison from the wound of Edward I., has been the standing tale of centuries: but he for whom she risked her life, was her husband, and the trial though perilous, was over in a few moments. But our soldiers, whose deeds had transcended those of the Crusaders, were now to be tended by a higher and more difficult devotedness than that of the much-vaunted English queen. It was found that more and yet more nurses were needed for our sick and wounded soldiers in the crowded hospital at Scutari, and cases had accumulated to an amount which had reduced the practitioners of the healing art to despair, when the Right Hon. Sidney Herbert applied to Miss Florence Nightingale, who gladly acceded to his appeal. In addition to that tenderness of heart, combined with firmness of nerve and enduring patience, in which women excel the other sex, and by which they heal or alleviate the sufferings inflicted by man on his fellow-man, her natural aptitude for the office of a ministering angel was perfected by an experience such as few of her sex have enjoyed in the hospital of Kaiserwerth in Bavaria, and other similar institutions on the Continent. Thus born and trained for the hour and the occasion,

she set forth on her mission at the head of thirty-seven nurses, and accompanied by the Rev. Mr and Mrs. Bracebridge. Their benevolent purpose was known, and their journey through France was a triumphal ovation: all classes paid them honour as they travelled along; even the tavern-keepers refused payment for accommodating them, and the tavern-servants for waiting upon them. On the 5th of November, Miss Nightingale and her

FLORENCE NIGHTINGALE — From an engraving by Holl

nurses arrived at Scutari, just before the wounded were brought in from the battle of Inkermann, and their arrival was like a spell under which pain was abated, murmurs lushed, and the glazed eye kindled with new comfort and hope. It was indeed felt that a change had come, in which war, divested of its worst inflictions, was to assume a new character and bearing. The crowds of wounded were poured in as was wont when a battle had closed; but for every sufferer the needful place had been prepared, and the remedies were in readiness; wherever there was pain, there was also a gentle hand to administer the cordial, and a voice to speak kindness and comfort; and while the soldier forgot his wounds amidst his grateful astonishment, the surgeons themselves, who had dreaded the arrival of such a new unprofessional medical staff, and who feared that these lady-nurses would be always in the way, or themselves converted into very troublesome patients instead of aids, were charmed by the order which they introduced into every department, by the silence with which they discharged their offices, and by the admirable tact and skill with which every prescription was applied. Death, indeed, was still busy, but only where the wound was mortal or the disease incurable; and the last hour itself was deprived of

many of its sufferings by the sedulous kindness of these devoted heroines. Soon, indeed, they must have fallen martyrs to the task from which they would not shrink, and which had outgrown their power, but for the arrival of Miss Stanley from England, with fifty new nurses, when the number of patients was 4000 in the hospitals of Scutari, and the newly established one at Kululee; and by this entrance to the rescue, the good work was resumed with more effectiveness than ever. Even when the great exploits by which this war was signalized have been forgot, these instances of woman's heroism will survive for imitation, and be cherished as a memorial beyond all military glory.

With the opening of 1855, the war seemed to be still further from a termination than ever. Sebastopol, instead of being crumbled beneath the cannonades of the allies, was daily acquiring new strength, until at last it promised to be impregnable, owing to the activity of its defenders, and the remarkable skill of General Todtleben, the military engineer, by whom their operations were directed. Every piece of ground available for defence was fortified; every point from which a shot could tell upon their enemies was mounted with cannon. Earthworks which can be speedily constructed had been thrown up, that were found to be more effectual than defences of stone, while the artillery which surmounted them was superior to that of the allies both in number and calibre. It was especially by these earthworks that the defence of Sebastopol was so long and unexpectedly protracted, in spite of the established calculations which fixed the period of its downfall after a few days of useless resistance. In the meantime, the plight of the English and French armies, notwithstanding the large reinforcements that had been sent out, was of the most hopeless character; and the causes of this were fully explained before the Commission of Inquiry afterwards instituted by the British government in the Crimea. From their report, presented to both Houses of Parliament in 1856, it is manifest, that with more than the usual amount of labour and difficulty, of sickness and suffering, which sieges had hitherto occasioned, there had been greater improvidence, waste, and misapplication of means, than had formerly characterized our military operations. Bravery, indeed, our soldiers had shown equal to any that adorns the page of history; but it was bravery unsheltered, unclothed, unfed—mortal bravery sinking and dying beneath those ills to which all flesh must succumb, but which a due amount of preparation might have eluded or warded off. The general effects of these upon our army can be estimated from the following brief statement given by an eye-witness, who was

present during the whole winter's campaign:—"On the 8th of January, of the 63d regiment only seven remained fit for duty. On the same day, the 46th, which had landed on the 8th of November, just two months before, mustered only sixty serviceable men. The 90th, a strong and healthy regiment, buried fifty men in eleven days; and one full company, during the same time, had only seventeen men out of hospital.

VIEW FROM MISERI'S HOTEL, CONSTANTINOPLE, Scutari Hospital in the distance
From a sketch by James Newlands, C E

The three battalions of guards were mere names. Out of 1562 men, sent out to the Scots fusiliers from first to last, only 210 remained. The three battalions, which in all represented some 4500 rank and file, at this time did not muster 700 men on parade, and of that number there was not one man who, in a time of peace, would have been considered fit to be out of hospital. During the month of January, the troops always in hospital at camp averaged upwards of 3000 men, and in the same month no less than 4073 invalids were actually sent away to Scutari."¹

The return of spring, which stilled the destructive war of the elements, was also accompanied by the tardy arrival of some of those supplies which had been mis-sent to foreign ports, or buried beneath piles of cannon and stacks of shot during the months of winter, when they were most needed; and our reviving encampment was again prepared for enterprise, and animated

with hope. Another enemy, almost as obdurate as the elements themselves, had passed away: this was the Czar Nicholas, the source and animating soul of the war, who died of influenza on the 9th of March. The union of the two great powers of France and Britain for the protection of Turkey had taken him by surprise, and falsified his calculations, while his pertinacity of purpose in pursuing his original plan had been accompa-

nied with such disasters as threatened its total overthrow. To such a lofty unbending spirit, death itself must have been welcome, as it saved him equally from the guilt of a useless persistence, and the shame of yielding; and he was succeeded by his eldest son, under the title of Alexander II. The new sovereign, who did not seem to inherit either the ambitious hopes or the resentments of his father, was desirous to establish the commencement of his reign by a general peace, and negotiations to this effect, which had been commenced at Vienna on the 28th of December, 1854, were carried on between the re-

presentatives of Russia, Turkey, Austria, France, and Great Britain. The basis of negotiation consisted of four articles, upon which the representatives of Austria, France, and Britain insisted, and were as follows:—1. That the exclusive protectorate exercised by Russia over Moldavia, Wallachia, and Servia should be abolished; that none of the stipulations of the ancient treaties of Russia relative to the said provinces should be revived at the peace; and that the arrangements to be concluded on the subject of them should be ultimately combined, so as to give full and entire effect to the rights of the suzerain power to those of the three principalities, and to the general interests of Europe. 2. The complete freedom of the navigation of the Danube, and that Russia, for this purpose, should withdraw her jurisdiction from that part of the Lower Danube which she had established by the treaty of Adrianople. 3. The more complete connection of the Ottoman empire with the European equilibrium, and the extinction of the Russian ascendancy in the Black Sea. 4. The renunciation¹ of Russia of her pretensions to a protec-

¹ "The Past Campaign a Sketch of the War in the East, from the Departure of Lord Raglan to the Capture of Sebastopol" By N A Woods, Special Correspondent of the *Morning Herald*. London, 1855

torate of the Christians of the Greek church who are the subjects of the sultan, and also the renunciation of all articles in former treaties interpreted in favour of such claim. The conference was opened at Vienna on the 15th of March, the representatives for Great Britain being Lord John Russell and the Earl of Westmoreland; and all went on smoothly until the discussion of the third article, upon which the conference was wrecked. Russia, indeed, could not well object to the connection of the Ottoman empire with the European balance of power, but she was wholly opposed to the limitation of her own ascendancy in the Black Sea. Every proposal to that effect was accordingly parried off or flatly refused by Prince Gortschakoff and M. de Titoff, the Russian representatives, and after much diplomatic discussion, the conference terminated on the 4th of June without any result.

While these negotiations were in progress, the war was not for a moment suspended: the blows already dealt had been too heavy, and the combatants were too warm for an effectual interference of peace-making diplomacy; and on the 17th of February a strong force of Russians, supported by a powerful body of artillery under the command of General Chruleff, made a vigorous attack upon Eupatoria. But the place was gallantly defended by Omar Pacha, at the head of a body of Turkish troops and a French detachment; and after a few hours of hard fighting, the Russians were driven from the walls, and compelled to retreat towards Simpheropol. Another attempt of theirs at Sebastopol was more successful. In front of the Malakoff, and a little to the right of the trenches of the allied army, was a knoll, which might be used with effect either against the town itself on the one hand, or against the French works on the other, according to the party that held possession of it, but which at present was a sort of neutral ground. The Russians, however, were sharp enough to discover the advantage that might be made of it, and on the 9th of March, during the night, a body of troops stole from the town and took quiet possession of the eminence, on which they erected a redoubt, and threw up works without interruption. When daylight dawned, the French were disagreeably astonished by the vision of this new lodgment, afterwards called the Mamelon Vert, which they assailed on the second night of its occupation by the Russians, but were beaten off with considerable loss. Improving their advantage, the Russians honey-combed the ground on the front and either side of the fort with rifle-pits, which powerfully strengthened its defences. These pits were merely excavations, each capable of holding about ten men; and being banked with the earth thrown up from them, and faced round

with sand-bags that were loop-holed for rifles, each formed a sort of troglodyte fortress which no assailants could approach with safety. To gain possession of these rifle-pits was now of serious importance to the French, and for that purpose several stirring encounters took place, one of the most important of which was on the 17th of March, which continued during the greater part of the day. At night, the French renewed the attempt, and a body of 700 advancing stealthily towards these dangerous earth-holes, discharged a volley of musketry at their defenders, and rushed forward with a bayonet charge. The pits were won, but it was only for a moment; the Russians rallied and the French were driven back; but the latter on being reinforced by 800 men returned to the charge, carried the first line of pits, and advanced upon the second, when they were met by such a heavy fire of musketry that they were routed and followed to their own entrenchments by the Russians, who at this point were compelled to retire in consequence of a cannonade being opened upon them. On the 22d the Russians attempted a surprise in turn. It was a dark and windy night, when a large body of their troops advanced from the Mamelon so silently, that they reached the advanced French parallel unobserved, and after a short fight drove the troops who opposed them back upon their reserves. Thus far successful, the Russians were eager for a similar attempt upon the British; and gliding along the French parallel, they crossed the ravine that interposed between the allied armies, and made a furious attack upon the British trenches, hoping to surprise and overpower the troops that guarded them. Here, however, they were disappointed, being resolutely met by a detachment of the 97th regiment, led on by the brave and good Captain Vicars, who fell while cheering on his men to the attack. These troops were soon joined by detachments of the 77th, and under their united charge with the bayonet the Russian column was borne back, defeated with heavy loss, and compelled to retire.

These, however, compared with the magnitude of the war and the important results at stake, were paltry skirmishes in which nothing more substantial than glory could be won; and although the losses of the Russians were heavy as compared with the allies, they could be more easily reinforced, while they had better means of procrastinating the war. More decisive measures were necessary, and it was resolved by the allied commanders that a second bombardment of Sebastopol should be attempted. Accordingly, on the morning of Easter Monday, the 9th of April, amidst rain, storm, and fog, while tents were blown down by the wind and the noise of the

cannon half drowned by the roar of the elements, the allied batteries opened their fire upon the devoted town; and these were answered by the

SEBASTOPOL. from the Trench of the Two mortar Battery — From a sketch by James Newlands, C.E.—1, Gordon's Battery, 2, Mamelon

Garden and Redan, the Mamelon, the Inkermann, and Careening Bay batteries, which successively and speedily came into play. But as fast as the Russian works were injured, they were repaired and made as fit for service as

ever, and although the enemy suffered a frightful loss in men, while many of the houses were demolished, they maintained the resistance with undiminished vigour. At the same time, conflicts were carried on for possession of the rifle-pits, which were taken and re-taken during the course of the general cannonade. But although this heavy bombardment was continued for several days, and the allies were reinforced by 15,000 Turks, Sebastopol gave no token of surrender, or even of slackness, but kept up her stubborn resistance to the close. It was not in this summary manner that the town was to be taken, and the unsuccessful attempt was once more followed by the skirmishes and surprises of a protracted siege.

The annoyance of so long a delay, and so many failures, could scarcely fail to produce discontent both in the camp and at home; and while the French and British generals were showing symptoms of divided counsels, the French commander-in-chief, General Canrobert, was superseded by General Pelissier, an officer who had acquired distinction in the French war in Algeria, by the stern energy and promptitude, as well as merciless character of his proceedings. Sardinia had also acceded at the commencement of the year to the war-like alliance of France and Britain against Russia, and furnished a body of 15,000 men, in five brigades, to co-operate with them in the Crimea. The effects of these changes were soon manifested in more decisive operations, by which the Russians were driven out of their ambuscades, and the town more closely invested. To cut short the resources of Sebastopol, and compel it to a more speedy surrender, it was also resolved to send an expedition to Kertch and the Straits of Yenikale, leading into the Sea of Azof, from which quarter the town received its principal supplies. For this expedition 3800 British, 7500 French, and 5000 Turks embarked on the 22d of May (1855), and were landed on the 24th, at a short distance south of Kertch. But scarcely had the troops disembarked when their landing was signalized by one of those terrible self-sacrifices which were now becoming a characteristic of the Russians, and by which they daunted their assailants more highly than by the valour of their resistance—they were destroying with their own hands their choicest magazines rather than that they should fall into our possession. Accordingly, the advance of the allied troops was greeted by tremendous explosions in the distance, that shook the ground beneath their feet, and made the vessels rock in the bay, as one magazine after another was set on fire; and on their arrival at Kertch, they found the whole works along the shore abandoned, the guns spiked, the forts blown up, and the immense stores of provisions destroyed.

What was left undone in this work of destruction in the Sea of Azof, was completed by Captain Lyons and a squadron of steamers; and at Berdiansk, at Arabat and Genitchi, above 100

GENERAL PFLISSIER — From a French lithograph

transport vessels were destroyed, and as much provision as would have victualled an army of 100,000 men for four months. It was a fearful stroke of the axe at the very root of the enemy's resistance, which had for some time been contemplated, but the execution of which had been delayed till now. After having wasted every source of supply to Sebastopol along the whole south-east corner of the Crimean peninsula, the troops were re-embarked on the 12th of June.

While this expedition was going on, the success of which was certain from the force that composed it, a fresh attack was resolved upon Sebastopol that promised to be decisive, as the assailants, notwithstanding their losses by war and sickness, were more numerous than ever, in consequence of the large reinforcements that had arrived, and four strong armies, consisting of French, British, Sardinians, and Turks, were now arrayed against its devoted bulwarks. The French were to make simultaneous attacks upon the Mamelon, and upon two other redoubts, the Volhynia and Selinghinsk, close to Careening Bay, while the English were to advance against the Quarries. At half-past six in the evening of the 7th of June, the French rushed forward to the assault; and though they suffered severely, from having a long way to traverse under a heavy fire of artillery and musketry, they reached the steep leading to the Mamelon, ascended it with unabated ardour, scrambling and bounding as they best might in broken array, but going direct to the mark, and were soon in the heart of the

Mamelon, the possession of which they contested with the bayonet. The Russians were driven out; they rallied and returned to the charge, and were again driven out; but being reinforced, they renewed the battle more fiercely than ever, while it was impossible, from the alternate swaying of the tide of fight for the spectators from beneath to ascertain with which party the advantage rested. An hour of terrible struggle elapsed, and the darkness was closing before this reeling earthquake terminated within the Mamelon, but it ended with the entire expulsion of the Russians. Enraged at the loss they had sustained, and the resistance that had been kept up by reinforcements from the Malakoff, the Zouaves impetuously rushed forward to assail and win it, as they had done the Mamelon, but were encountered by such a crushing fire from the Round Tower, that they were perforce brought to a pause, and at last compelled to fall back to the ground they had already won. Equally keen and equally successful was the attack of the British upon the Quarries, which had been used by the Russians as rifle-pits, and whose formidable defences were crowned by the Redan on the hill-top. Our troops advanced with their wonted gallantry against these dangerous entrenchments; stormed them in rapid succession, and held possession of them during the whole night against six desperate attacks of the Russians, who endeavoured to recover them, and were careless of the losses they sustained in the attempt. It was even thought that had our troops been permitted, they would have crowned their success by the capture of the Redan itself, which they were impatient to attack, and which at that time was almost without defence. The possession of these outworks and the glory of the success cost a heavy price to the victors, whose loss during this fierce evening and night conflict, in killed and wounded, amounted to more than 4000 men, the whole of which, with the exception of about 400, had fallen upon our French allies.

Having thus established themselves nearer to Sebastopol, an assault upon the town itself might have been expected to follow; but upon this the French and English commanders were divided, the latter declaring that Sebastopol was still too strong to be attempted by a *coup-de-main*. At last it was resolved, at a council of generals on the 16th of June, that an assault should take place on the 18th at daybreak. To the British was committed the attack upon the Redan, to which only 1200 men were allotted, while the French, in six columns, each numbering 6000 men, and supported by 25,000 reserves, assumed for themselves the principal part of the conflict. On their left they were to assail the Quarantine Bastion, the Central Bastion, and the Flagstaff

Bastion, each by one of their columns, under General de Salles; on their right the Gervais battery and the right flank of the Malakoff were to be assailed by another column led by General d'Autemarre; while General Brunet with a fifth was to issue from the Mamelon and attack the left flank of the Malakoff and the Little Redan. A sixth column of 6000 men under General Mayran, was to issue from the extreme right of the French

towards Inkermann, and from the White Works was to fall upon the Russian batteries near Careening Creek and the works connecting the first bastion with the Little Redan. In this manner every defence was to be assailed at once, and the whole of Sebastopol enveloped in a circle of flame and tempest, under which all must go down; and that nothing might be omitted, the French were to make a demonstration against the Mackenzie

Heights under the gallant General Bosquet, who had already shown his ability in attacks in an open field. The signal of onset upon so many points at once was to be given by the throwing up of star rockets, as soon as General Pelissier gave the word of command.

The plan was admirably laid, and with troops inured to such movements by a series of campaigns, it might have been successfully executed; but in the present case it was liable to such mistakes as would be enough to mar its uniformity, and occasion an utter failure. General Pelissier was to give the signal from the Lancaster battery; but while he was at some distance from the spot, and shortly before three o'clock on the morning of the 18th, he was startled by the sound of a heavy firing of cannon and musketry. A premature attack had commenced. Deceived by the light of a blazing fuze, which was sent up from the Brancion redoubt, and which he mistook for

the signal rockets, General Mayran advanced his column against the entrenchments, which extended from a battery at the point in front to the redoubt at Careening Bay. It was a fatal anticipation over the whole line of defences the enemy were roused and put upon their guard, and against Mayran's detachment was opened such a fire not only from the works to be assailed, but from the Russian steamers in the bay, that his troops were driven back, and himself mortally wounded. It was then only that the rocket signals went up from the Lancaster battery, and the other French troops rushed forward to support the unfortunate movement of Mayran's division, aided by whom, the latter established themselves in the hollow of Careening Bay. As for General Brunet he had not completed his arrangements when the signal was given; but he instantly advanced to the attack, and fell mortally wounded by a ball in the chest, while leading up his men to the left

of the Malakoff, and his troops were driven back with heavy loss to the trenches. To the right of the Malakoff the attack was more successful. As soon as the rockets were seen, General d'Autemarre's column dashed up the ravine that separated the Redan from the Malakoff, crossed the ditch, climbed over the parapet of the Gervais battery, driving the enemy before them, and a few even forced their way into the Malakoff itself. And now was the time for support from the British troops, who, it was calculated, were to be already in possession of the Redan; but the Redan was still in the hands of the Russians, and from it and the other works such a heavy fire was kept up against D'Autemarre's successful troops, that at half-past eight o'clock they were withdrawn, and with the other French columns recalled to the trenches.

It was from no lack of readiness or courage that the British were not in possession of the Redan, and prepared to second their allies; but the fatal blunder at the commencement of this complicated attack extended its influence to all the other operations of this unfortunate morning. The Russians also had cunningly withdrawn or masked the greater part of the guns of this fortress, to give it a tempting air of defencelessness; and hence the mistake which in the plan of action allowed so small a force as sufficient for its capture. It was also understood that the British assault upon it was not to be made until the French had carried the Malakoff; but when he saw them already in possession of the Gervais battery on the right flank of it, and pressing onward to the tower itself, Lord Raglan thought it full time to aid their efforts by commencing the attack. The storming party, consisting of 400 men of the 34th regiment, preceded by a party of the rifle brigade and a ladder party of the sailors' brigade carrying ladders and woolbags, rushed out of the trench; but the instant they appeared they were struck down in heaps by a sweeping fire of grape, case-shot, and musketry. Their commander, Major Gwilt, ordered them to lie down; but his soldiers on the extreme right of the trench, who did not hear the order, rushed on through the death-storm—the whole party followed in headlong haste and great disorder, but were soon brought to a pause on the left face of the Redan by the abattis, where they were struck down like deer in a battue by the deliberate well-aimed volleys that were poured upon them from the rampart. The officers were dropping fast; Major Gwilt was severely wounded, and Colonel Yea, who took the command, and saw the hopelessness of the attack, cried, "This will never do! where's the bugler to call them back?" As no bugler was to be found at this moment of need, he endeavoured by voice and

gesture to bring the troops into order for a desperate rush at the batteries, and fell mortally wounded by a grape-shot. Nor did matters fare better with the column on the left, appointed for the attack of the re-entering angle and flank of the right of the Redan; neither at the ditch nor at the abattis were scaling-ladders placed; the commanders at their head fell in succession while endeavouring to form the disordered ranks and lead them to the charge, and in a short time the whole of the assailing columns had disappeared. Thus miserably ended our mistaken confidence that the Redan would be taken at the first onset. With an inadequate force—with preparations so defective that not even a scaling ladder had been planted—our troops were thrown forward upon what had been mistaken for defenceless walls, but which were now found bristling with cannon, and manned with soldiers who had only to select their victims, and had been taught to take aim chiefly at the officers. So ridiculously insufficient indeed did this attack appear to the Russians, who were prepared for thrice the number of the assailants, that they laughed at and taunted our soldiers while they fired on them at the abattis, and cried, "Come nearer, Englishmen—come nearer!"

All the attempts of this unfortunate day however were not to be alike unsuccessful, and the exception was in favour of a body of troops of the third division to the number of 2000 men under Major-general Eyre, which was intended to make a demonstration rather than a real attack. This detachment moved down to the ravine at the head of Dockyard Creek early in the morning, to threaten the Dockyard and the Barrack batteries; and on approaching the cemetery, where the troops were halted under cover, General Eyre said to the 18th regiment: "I hope, my men, that this morning you will do something that will make every cabin in Ireland ring again!" The soldiers replied with an enthusiastic cheer, and although their shout roused the enemy and brought upon them a shower of grape, they rushed forward and took possession of the cemetery after a very slight resistance. A heavy fire was instantly opened upon them from the left of the Redan and from the Barrack battery, and volleys of musketry plied them from a suburb close to the Dockyard Creek, and from a number of houses below the Barrack battery; but the 18th dashed through the storm, and carried the houses on the left, while those on the right were won and occupied by detachments from the other regiments. Here they were ready to aid the French attack on their right if it should prove successful; and here therefore they maintained themselves till evening, under a heavy concentrated fire from the Russian guns, when, in

consequence of the failure of the attacks on the Malakoff and Redan, they were obliged to retire. The cemetery however remained in our possession, and the small Mamelon near it, and this was all we obtained from a disastrous failure that cost the allied armies a loss of nearly 5000 men in killed and wounded. The Russians were proud of their success; and in the armistice that followed for the removal of the dead and wounded on either side, they expressed their astonishment at the folly of the attack, and at our confidence that with such means we could take Sebastopol.

This melancholy defeat of the 18th of June was fatal to more than those who were struck down by shot and shell in the onset: it inflicted one of those heart-wounds upon our brave old commander-in-chief, more painful to bear than a mere fleshly injury, and for which no surgery can find a cure. Lord Raglan had long been silently writhing under the disappointments of this protracted war, at the impatience expressed at home, and the injurious comments of our journalists, who were reproaching him with incompetence because he could not effect what was afterwards found to be impossible. But the failure of that fatal day—of the 18th of June, the anniversary of Waterloo, of which he was one of the few surviving heroes, touched his military sensitiveness, and made him doubly feel the bitterness of such a disaster. He died on the 28th of that month, at the age of sixty-seven. During the whole of the Wellington campaigns he had been distinguished by his courage and promptitude, and by the confidence which his illustrious superior reposed in him; and on the breaking out of the Russian war, no general was judged from character and experience to be so well fitted for the command in so new and difficult a crisis. It has been concluded however, from the results, that still higher military attributes than his would have been necessary for such a trying position. It must be remembered also, that forty years of peace had elapsed, so that the military character of his army had to be formed anew; and that he was hampered with a divided command, in which nothing was entire but the responsibility and the blame of failure. When the news of his death reached England, General Simpson, chief of the staff in the Crimea, was promoted to the command of our army in that quarter, although he was himself the most earnest in deprecating the appointment.

Notwithstanding the success of the previous resistance, the condition of Sebastopol was more critical than ever. Her supplies upon which she had calculated in the Sea of Azof were destroyed, and the armies of the besiegers, increased with reinforcements, were more confident of success

than before. It was full time that the covering army under General Liprandi, which had remained dispirited and inert since its defeat at Inkermann, should make a fresh attempt to raise the siege, and they began to make preparations; but their intention was fortunately perceived by the allied forces, who on this occasion were not to be taken by surprise as they had been at Inkermann. The brunt of the onset also, instead of falling at this time upon the British, was to be directed against the French and Sardinians, whose lines were covered along their whole length by the river Tchernaya. At dawn, on the 16th of August, the Russians attacked the Sardinian outposts on the opposite bank of the river, for the purpose of securing three plateaux where their guns could command the ground occupied by the Sardinian and Turkish armies as well as the plain that opened towards the French position. The assailed outposts, though reinforced, were driven across the river, and the Russians, having liued the heights on the right bank of the Tchernaya, opened the fire of their heavy guns upon the French position which was opposite. They were answered in front by the French, and in flank by the Sardinians. Three compact masses of Russian infantry, reinforcements lately arrived from Poland, who came on with a courage and impetuosity that threatened to carry everything before them, now attempted an advance towards the plain in front of the French position; but the points they had selected for the purpose—the Tractir bridge and the last of a series of three hillocks—were so resolutely defended by the Zouaves, that the assailants were checked, and finally driven back both from the hillock and the bridge, and the French position was secured. They also attempted an aqueduct at the foot of the hillock which formed the French chief defence; but when they had crossed it on the right, and were beginning to scale the heights which formed the top of the embankment, they were taken so effectually in flank by the Sardinian batteries, that they were swept from their eminence in whole files into the aqueduct below. The Russian column fell back; but cheered by the advance of a fresh column to support them, they advanced to a second charge with greater weight and better success: they forded the river to the right and left of the bridge, crossed it by the bridge itself, and through a ford, braving every obstacle of fire and water that confronted them. But here the French were prepared to welcome them, and in such gallant style, that after a short struggle the assailants were forced from the ground they had won for a moment, and driven back across the river. All this as yet however was not half of the battle: the Russian columns returned to the attack both at bridge

and aqueduct, which they endeavoured to wrest from the French, who with equal determination maintained their defence, being ably seconded by the Sardinians; and the Russian columns after a desperate but hopeless series of struggles, retired from the fight with greater precipitation and show of faint-heartedness than they had done in any previous conflict. Here, also, their losses were occasioned not so much by bayonet thrusts and the wounds of a hand-to-hand fight, as by the French and Sardinian artillery, which was served with admirable precision and effect. It was a victory glorious to their arms, considering the disparity of numbers, for their forces engaged in it were not above 17,000, while their enemies amounted to between 50,000 and 60,000. The loss also on both sides was almost equally proportioned to such a disparity, for while the Russians had about 8000 in killed, wounded, and prisoners, those of the allies did not exceed 1000 men. Even in this last engagement also, as in several of the previous ones, the enemy evinced those traits of original barbarism which, notwithstanding their recent civilization, still constitutes an odious part of their national character. When the strife had ceased, the Russians opened their guns upon those French soldiers who were humanely attending to the wounded of their

the Turkish Delis or old northern Berserkars, revived and cherished among those who called themselves a Christian soldiery.

After this defeat of the Russians at Tchernaya, the allies made preparations for an attack upon Sebastopol that should be final and successful. The 8th of September was the time fixed upon, and the hour that of mid-day, when the Russians were accustomed to withdraw themselves under shelter, and take their repast. The plan of assault was, that the French should storm the Malakoff, and this being done that the British should assail and take possession of the Redan. To attack this last fort before the other was secured would have been the height of rashness, as the Redan was completely commanded by the guns of the Malakoff. Everything promised success to this closing enterprise, for while the covering army of Liprandi was reduced to inaction by its late defeat, so many of the Malakoff's parapets had been destroyed, and its other defences had been so damaged by previous cannonades, that it was in little condition to withstand a determined onset; and the only effectual resistance that could be offered was from the long-range shot which could be fired from the numerous batteries that the Russians had thrown up on the north side of the roadstead, in the rear of the first line of defences.

At the appointed hour of noon, the attack on the Malakoff commenced. The French troops nimbly crossed the ditches and scaled the parapets; they rushed forward with shouts of "*Vive l'Empereur!*" and came to close quarters with the Russian gunners, whom they assailed with the bayonet, the butts of their muskets, and stones, while the gunners in defence wielded their rammers, but in this hopeless re-

INTERIOR OF THE MALAKOFF, with Remains of the White Tower.
From Simpson's Sketches of the Seat of War in the East

enemies after the fight was over. Every Russian also who fell was found to have a large empty bottle beside him that had been filled with brandy; and it was evident through the conflict that their soldiers were animated with other inspiration than that of mere military ardour. It was the drunken artificial fury and madness of

assistance they were struck down, captured, or driven out, and in a quarter of an hour the tricolor flag hoisted upon the redoubt proclaimed that the Malakoff was taken. The Redan of the Careening Port was also carried after a severe struggle; every work selected by the French had fallen, and their centre column had arrived as far as the second

inclosure. And now was the time for the attack of the British upon the Great Redan, as had been concerted, and accordingly the signal was made by the French commander-in-chief. But here the difficulties were greater than had been surmised, while the spirit of blundering seemed to have wakened into more than its former perverseness. For the storming party only 1000 men had been selected, and these, instead of being our best and freshest soldiers, consisted of those who were worn out by service in the trenches, and raw recruits lately arrived from England. This most hopeless of "forlorn

hopes" had also 200 yards to traverse before they could reach the salient angle of the Redan, while the fort itself, well manned with Russians, who were now aware that a general attack was intended, could not be taken by surprise as those of the Malakoff had been. No sooner had the storming party sprung from the trenches, than they were encountered with a sweeping fire of artillery that miserably thinned their ranks before they could reach the salient of the redoubt; and on attaining this point, where they could not form a front, but only advance in two's and three's, they were enfiladed on either flank by the fire of an enemy whom they could not see. Gallantly, however, they kept possession of the post, until their ammunition failed, and they were assailed by superior numbers; but even then, they only shifted their ground from the salient point to the extreme side of the parapet, now a heap of loose earth, stones, and broken gabions, where they maintained themselves for an hour and a half under a heavy fire of vertical grape from within the works, and at last were only dislodged and driven back by an overwhelming rush of the enemy.

In spite, however, of this miserable failure upon the Great Redan, and also an attack of the French on the Central Bastion, in which they were repulsed, the fate of Sebastopol was sealed. After the capture of the Malakoff, the resistance of the town could be continued only a few days longer, and this too by the sacrifice of a part of its army, which, in consequence of the separation

of the great bridge of boats, would have lost its communication with the northern side of the town. But instead of this useless attempt,

INTERIOR OF THE GREAT REDAN, taken from its left face, looking south
From Simpson's Sketches of the Seat of War in the East.

the Russians had resolved to make one of those sublime sacrifices by which they endeavour to paralyze the progress of a successful enemy, and of which they had already given an instance by sinking their ships in the harbour—they resolved to destroy Sebastopol itself, and leave nothing but its ruins to the foe. "Valiant comrades!" said Prince Gortschakoff in his address to the soldiers, "it is painful, it is hard, to leave Sebastopol in the enemy's hands. But remember the sacrifice we made upon the altar of our country in 1812. Moscow was surely as valuable as Sebastopol—we abandoned it after the immortal battle of Borodino. The defence of Sebastopol during 349 days is superior to Borodino, and when the enemy entered Moscow in that great year of 1812, they only found heaps of stones and ashes. Likewise it is not Sebastopol which we have left to them, but the burning ruins of the town, which we ourselves set fire to, having maintained the honour of the defence in such a manner that our great grandchildren may recal the remembrance thereof with pride to all posterity."

Deliberately and carefully every preparation was made for this terrible holocaust of war. On the evening of the 8th, the Russian troops commenced their abandonment of Sebastopol on the south side of the town, and were transported to the north side, partly by boats, and partly by the bridge constructed in the bay. When all had been conveyed across in safety, and with a

deliberation that set their enemies at defiance, the work of destruction commenced by an explosion that shook the allied encampment, and roused for a moment some weary soldiers from their slumbers; but it was only a magazine-explosion—such noises were of frequent occurrence—and they turned themselves to rest again as if the matter was not worth a thought. But an hour after, these shocks were quickly repeated, and the houses that had been stored with combustibles for the purpose were kindled in each successive explosion, until streets and squares were enveloped in a sea of living fire. The enemy had blown up their defences, destroyed the artillery they could not carry off, removed the bridge—had finally scuttled and sunk their fleet with the exception of the steamers, and had left nothing behind them but the funeral pyre of Sebastopol! This the astonished allies found, when at break of morning on the 9th, they ventured as closely into the town as the showers of fire and ruin permitted, while far beyond these protecting obstacles the Russians were effecting their unmolested retreat. This safety they had dearly purchased but cheerfully paid, and nothing was abandoned to their enemies except a trophy that could only be regarded with shame or regret. The allies were astonished at the enormous strength of the works which the Russians had constructed with such labour, promptitude, and skill; and which they had made good against six bombardments, greater than any that modern war had yet produced, and they no longer wondered that the siege had been so destructive and so long protracted. But it was evident, also, that neither massiveness of rampart nor immensity of bomb-proof could have longer saved them from capture, especially when the Malakoff had been taken; and that with their firm resolution of “No surrender,” the Russians had no alternative but the destruction of the town, or that of their brave and numerous army.

The excitement of the siege—the glory of warfare had now passed away, but these were to be succeeded by its ghastly spectacles of the wounded or festering corruption of the dead—its bereavements and humiliations—its gore, and mud, and squalidness. The ditches of the Malakoff and Little Redan were piled with dead bodies as thick as they could lie; the suburb of ruined houses open to the sea, was a Golgotha of mangled Russians, who had crept into every hole and corner that they might die undisturbed. But let one of the hundred spectacles as described by an eye-witness suffice as a specimen of the rest. It was that of a building used as an hospital. “Entering one of these doors, I beheld such a sight as few men, thank God, ever witnessed. In a long, low room, supported by square

pillars arched at the top, and dimly lighted through shattered and unglazed window-frames, lay the wounded Russians, who had been abandoned to our mercies by their general. The wounded, did I say? No, but the dead—the rotten and festering corpses of the soldiers, who were left to die in their extreme agony, untended, uncared for, packed as close as they could be stowed, some on the floor, others on wretched tressels and bedsteads, or pallets of straw, sopped and saturated with blood, which oozed and trickled through upon the floor, mingling with the droppings of corruption. With the roar of exploding fortresses in their ears—with shells and shot pouring through the roof and sides of the rooms in which they lay—with the crackling and hissing of fire around them, these poor fellows, who had served their loving friend and master the czar but too well, were consigned to their terrible fate. Many might have been saved by ordinary care. Many lay, yet alive, with maggots crawling about in their wounds. Many, nearly mad by the scene around them, or seeking escape from it in their extremest agony, had rolled away under the beds, and glared out on the heart-stricken spectator—oh! with such looks. Many, with legs and arms broken and twisted, the jagged splinters sticking through the raw flesh, implored aid, water, food, or pity, or, deprived of speech by the approach of death, or by dreadful injuries in the head or trunk, pointed to the lethal spot. Many seemed bent alone on making their peace with Heaven. The attitudes of some were so hideously fantastic as to appal and root one to the ground by a sort of dreadful fascination. Could that bloody mass of clothing and white bones ever have been a human being, or that burned black mass of flesh have ever held a human soul? It was fearful to think what the answer must be. The bodies of numbers of men were swollen and bloated to an incredible degree; and the features, distended to a gigantic size, with eyes protruding from the sockets, and the blackened tongue lolling out of the mouth, compressed tightly by the teeth, which had set upon it in the death-rattle, made one shudder and reel around.”¹ And has war come to this at last? Is the field of glory and the bed of honour turned into such a loathsome sty, that the most adventurous would shudder at it, and the most ambitious turn sick at the spectacle! But thus it must be with the wholesale crushing and destroying arts of modern warfare, and it is only an inevitable consequence of the progress of science and the higher elevation of intellect. In this way, any humane military engineer acting upon an enemy whom he cannot see, and whom he does not hate, can inflict

¹ *Russell's British Expedition to the Crimea*, p. 474. London, 1858.

an amount of havoc and misery far beyond the worst of Attila or Tamerlane. Assuredly war has nearly reached that height at which it *must* pause! Even such excess might of itself compel a millennium of universal peace!

On entering Sebastopol, the allied troops were obliged to observe the greatest caution, as the Russians had dug numerous mines in the streets, to each of which a small wire was attached, and this, at the touch of an unwary foot, produced an immediate explosion. Every building that was standing was so riddled with shot and shells as to be useless; and as for the houses, they had been so well stripped by their occupants, that little remained in the shape of plunder. The Russians, moreover, far from taking to flight, and dispersing themselves among their boundless wastes, had made the safest and most orderly of retreats, had established themselves on the north side of Sebastopol, where they were separated from their enemies by a deep arm of the sea, a river, and the sides of a plateau as steep as a wall—and from their forts in that quarter, they opened a cannonade upon the town, wherever they saw our soldiers grouped together in the streets. On taking possession of Sebastopol, a division of it was made, the French occupying the eastern,

and the British the western suburb. With the fall of the town, the campaign for the season in this quarter was virtually at an end, and no active demonstration took place on the part of the allies with the exception of an expedition in the middle of September, which the French sent to Eupatoria, in which they defeated a body of Russian cavalry in a skirmish. On the 10th of November, General Simpson resigned office as commander-in-chief of the British army in the Crimea, and was succeeded by General Sir William Codrington.

While the allied armies were pulling the remains of Sebastopol in pieces, and using the fragments for the enlargement or decoration of the huts of their encampment, an expedition by sea was resolved against Kinburn, a Russian fortress situated on a narrow tongue of land at the mouth of the Dnieper, mounting sixty or seventy cannon, and garrisoned by 1500 men; and to conceal the object of the expedition, the allied fleet which left Kamiesch Bay on the 7th of October, anchored off Odessa on the following day, as if their object had been to bombard it. The enemy were thus thrown off their guard, and while they were hastily fortifying the large and rich town of Odessa, the fleet suddenly

GENERAL VIEW OF THE FORTRESS OF KINBURN.—From a sketch by M. de la Laurencie, engraved in L'Illustration.

weighed anchor on the 14th, and appeared before Kinburn. Troops were landed to prevent the garrison from being reinforced and to cut off its retreat, and on the 17th, three French floating batteries opened their fire upon the fortress, being seconded by the gun and mortar boats. Their heavy fire, and that of the British frigates and steamers by which Kinburn was commanded in front and flank, could not long be withstood, and terms of capitulation were accepted by which the garrison marched out as prisoners with the honours of war. After this surrender, two divisions of the armament were sent to scour the little islands in the mouth of the Dnieper, and after five days spent in this

expedition, they effected the capture of an enormous raft of timber intended for the naval arsenal of Nicholaieff, which, however, they could not bring into port, as in the attempt it was broken asunder, and drifted away into the open sea. At the same time, an expedition of the allied troops was conducted by land into the interior of the country, where they burned the village of Pakoffka, which was deserted by its inhabitants, a body of Russian cavalry which hovered upon their march not daring to attack them. A few days after, this expedition returned to the Crimea, leaving a garrison of French soldiers in the three forts of Kinburn. Another similar armament was sent on the 24th

of October, to destroy the Russian settlements at Taman and Fanagoria, on the eastern side of the Straits of Kertch, and was successful, both forts being captured without the loss of a man. A third expedition was sent at the same time to cut off the communication between Taman and Temruk, where a considerable body of Russian troops was stationed, and these were so effectually daunted by a fire of shot and shell from the ships at the long distance of 2500 yards, that instead of being able to advance to the relief of Taman, they were obliged to fall back upon Temruk. These in themselves were trivial undertakings, but they were all that were left to the allied armies in the Crimea after Sebastopol had been abandoned, and they tended to hasten the return of peace by cutting asunder the sinews of resistance. But in this kind of loss the Russians did not suffer alone; and the 14th of November was signalized by an accident in the

allied camp, that was long after remembered with terror: it was the explosion of a vast store of Russian and French gunpowder collected in three magazines to the amount of 250,000 lbs., with huge piles of shell, carcasses, rockets, and small-arm ammunition. But more important still than the loss of such warlike stores was that of life, which the explosion occasioned; for of the English, one officer, and twenty non-commissioned officers were killed, and four officers and 112 non-commissioned officers wounded, while the loss among the French was greater still. When the war was such a losing game to both parties, it was easy to read in these disasters the hope of peace, and promise of mutual agreement. The only question was, what party would be the first to confess its inferiority by withdrawing from the struggle, and with what concessions military honour and political expediency would be satisfied.

CHAPTER XX.—CIVIL AND MILITARY HISTORY.—A.D. 1855—1856.

VICTORIA.

Cessation of active hostilities at Sebastopol—The war in Asia Minor—Defeats of the Turks—General Williams sent to Kars—Attack of the Russians on Kars—Gallant defence by the Turks—Kars reduced by famine—Its surrender—Naval proceedings of the war—Operations of the allied fleets in the Baltic—Their first successes and failures—Expedition against the Aland Islands—Capture of Bomarsund—Naval operations in the White Sea—Attack of an English and French squadron on Petropaulowski—Death of Admiral Price—Attack of a land force on the town—Its total defeat—Dissatisfaction at home with our naval operations—Sir Charles Napier superseded—The massacre of Hango—Its stain upon the Russian character—Attack of the allied fleet on Sweaborg—The bombardment of Sweaborg—Its destructive character—Effectual plan of defence—Unsuccessful termination of the attack on Sweaborg—The new czar's disinclination to the war—Necessity of peace to Russia—Willingness of the allies to grant it—Preliminary negotiations for the purpose—Meeting of representatives of the belligerent powers at Paris—A treaty of peace concluded—Terms of the treaty—Peace proclaimed in the Crimea—Desolation of Sebastopol—Review of parliamentary proceedings at home during the period of war—Depression of the mercantile, and prosperity of the agricultural interests in 1854—Bill for parliamentary reform—Its introduction opposed as unseasonable—It is introduced by Lord John Russell—Reforms proposed by the bill—The ministers compelled to abandon it—Two other bills connected with parliamentary reform passed—Proposals of law reform—A bill passed for the amendment of the common law—Restrictions in the navigation laws wholly removed—The ministers lose public confidence through the mismanagement of the war—They resign—A new cabinet formed—Summary of the parliamentary proceedings of 1855—State of the nation at the commencement of 1856—General feeling towards the treaty of peace—It is discussed in both houses—Eulogy on Miss Nightingale and Lord Raglan—Address to the queen—The royal reply—Parliamentary summary of the services of the navy and army—Attestation to the valour of the Russians.

HE second winter had now set in upon the sojourn of the allied armies in the Crimea; and after the evacuation of Sebastopol there was a cessation of active hostilities, the Russians confining themselves to an occasional cannonade upon the town, to make its occupation as uncomfortable as possible to the victors; while the latter employed themselves in destroying its splendid docks and har-

bours, to prevent if possible any future restoration of Sebastopol. This monotony was only interrupted by tidings of the fall of Kars, one of the important episodes of the campaign.

Since the commencement of hostilities, the war had been waged by Russia against Turkey not only in Europe, but also in Asia Minor; and while the sultan had ordered the formation of an army 50,000 strong, to be collected at Kars and Erzeroum, for the defence of these places,

which were chiefly menaced by the enemy, the brave refugee Hungarian commander, Guyon, had been sent to benefit this army of Kars, as it was called, with his European experience, and as the principal adviser of its unskilled incompetent commanders. But these commanders, after raising only 40,000 men, put the money allowed for the surplus number into their own pockets: and as for the counsels of Guyon, they despised them as those of a foreigner and a Christian. It fared with such selfishness and bigotry as might have been expected. They were beaten at Bagazid, and still more heavily at Karuk Derè, from which utter rout the Bashi-Bazouks fled to Kars, proclaiming that all was lost. And so it would have been if the Russians had but advanced upon Kars and Erzeroum; but apprehensive of an attack from Schamyl and his Circassians both on flank and rear, Prince Bebutoff, the Russian commander, paused, and allowed the opportunity to escape. The Circassians and their daring prophet-soldier did indeed appear on the 20th of August (1854) in front of the capital of Georgia, only fifteen days after the defeat of the Turkish army near Kars, and by their neighbourhood Prince Bebutoff was so retarded, that the runaway pachas had time to rally for a fresh resistance. But it would only have been to be beaten more thoroughly than ever, had not the transference of the war of the allies to the Crimea found more urgent occupation for the Russian troops; and thus Anatolia for the present escaped.

This relief, however, was nothing more than temporary, and more decisive measures were necessary to secure the province from becoming a Russian possession. The capture of Kars being still an important object with General Mouravieff, the Russian commander, while its retention was of equal moment to the allies, in order to secure it for Turkey, the British government, at the end of July, 1854, had sent Lieutenant-colonel Williams, as our queen's commissioner, to the head-quarters of the Turkish army in Asia, to act there in communication with, and under the orders of Lord Raglan, obtaining in the meantime from the Turkish government every facility for the discharge of his important office. After the necessary negotiations for these purposes at Varna and at Constantinople, Colonel Williams (now raised to the rank of general) arrived in the province of Kars on the 14th of September, where he found the Turkish army 28,000 strong, but in a miserable state of destitution, as many of the soldiers had received no pay for nearly two years. His first duty in this case was to provide for the efficiency of the army by obtaining the necessary supplies for it, but his applications

to that effect appear to have been neglected by our ambassador at Constantinople. In this way time was wasted in a weary and fruitless correspondence, and the Russian army under Mouravieff was concentrating upon Kars, when

GENERAL WILLIAMS —From a daguerreotype by Mayall.

at last Omar Pacha, who had been urgent for its relief, obtained three Turkish battalions for that purpose from the Crimea, and with these, and other troops which composed a force of 15,000 men, he sailed to Redoute-Kaleh.

This aid was not obtained until towards the close of September (1855), but on the 16th of June, the commencement of the Mahometan festival of the Bairam, the attack upon Kars had commenced. The defence was gallantly maintained under the directions of General Williams, and the British officers who had accompanied him to Kars, and the first Russian attack was successfully repelled. But the town was closely invested; the forage of the besieged began to fail, and their horses were rapidly dying from sheer starvation. In this difficulty, General Williams permitted such of the cavalry as were still mounted, to the number of 1000, to make a night attempt on the 3d of September to cut their way through the enemy. For this purpose they stole silently from the town in the dark, and although the alarm when they reached the Russian outposts was raised, and volleys of musketry were poured upon them, they succeeded, although with some loss, in cutting their way through the enemy's lines, and securing their escape.

The Russians now decided to make a second general attack upon the town on the 29th of September; and to throw the besieged off their guard, they made pretended arrangements for a retreat, giving out that they were going to march

into Georgia. But the pretence was easily detected by General Williams, and the garrison incited to double watchfulness. The attack was made on the 29th, while the morning was still dark, by three Russian columns supported by twenty-four guns, who advanced on three different parts of the line of defence, hoping to surprise the garrison, and carry the town by a single onset; but when they came within range, they were unexpectedly met at every point by such a destructive fire as showed them that their purpose was anticipated. Although thus taken at unawares, the Russian left column of attack dashed forward with loud hurrahs, and rushed up the hill against the redoubts and breast-works, but here they were arrested by volleys of musketry, and at last driven down the slope in wild disorder. Nor did it fare better with the right column, although at first they were more successful; they turned the Tamash defences on the western extremity of the steep rocky range of hills on which Kars is situated, and penetrated to the rear of the Turkish position; but here they were brought to a pause by three bodies of reinforcements who unexpectedly confronted them, and were finally driven down the hill by a sortie from the garrison of the Tamash redoubts. The third point of Russian attack, which was upon that portion of the fortifications called the English tabiahs (or redoubts), was made with an

overwhelming force that at first carried all before it, until battalions of infantry that had been sent to reinforce them arrived, and drove back the enemy with a close bayonet charge. The Russians were thus defeated in every attempt, and across the whole line; they hastily withdrew to their encampment, and were followed in their retreat by a cannonade, that added heavily to their killed and wounded. It was a gallant defence, more especially when the Turkish combatants had been working and watching four months in the trenches. The garrison was also suffering from cholera, and seven hours were spent in close destructive fighting. Justly did General Williams say of them, "They have proved themselves worthy of the admiration of Europe, and established an undoubted claim to be placed amongst the most distinguished of its troops." But what shall we say of Williams himself, and his brave countrymen and assistants, Lieutenant-colonel Lake, Major Teesdale, and Captain Thompson? But for them, Kars would have fallen. Turkish valour needs nothing but able commanders, and these our country had supplied. The Russian loss in this one attack was immense. Five thousand bodies were left on the field, and 7000 dead and wounded were carried off, while the loss of the besieged scarcely exceeded 1000 men.

But hunger was now to effect what the enemy could not accomplish. The blockade was kept

GENERAL VIEW OF KARS.¹—From Lake's Account of the Siege of Kars.

up so closely that no supplies could be introduced into the town, and in a short time famine of the most gaunt and revolting character predominated over all classes. The brave defenders, lean, pale, and feeble, were by the 17th of October no longer like the heroes of the 29th of September, who had driven the enemy from their gates.

¹ The leading points of interest are indicated by flying birds. One bird—Ruined castle of Terrin Pasha and Armenian suburb. Two birds—Castle and town of Kars. Three birds—Thompson's Tabiah, marked by group of tents at top of the distant hill. Four birds—Teesdale Tabiah on the hill, and the suburb of Beiram Pasha at the foot.

The dogs scratched the bodies of the soldiers from their graves and fed upon them; the very grass was carefully gathered in the open spaces, and its roots used as food; and crowds of women and children were moaning in the streets, and sinking and dying of starvation. The miseries of Kars were like those of ancient Jerusalem when the Roman armies encompassed it; and by the 24th of November, resistance, which was impossible, would also have been unavailing. No help moreover could be afforded by Omar Pacha, who had landed at Redoute-Kaleh for the pur-

pose of raising the siege, although by the 1st of November he had reached the river Ingour with 20,000 soldiers, chiefly Turkish, and a few French and British reinforcements. He was confronted on the opposite side of the river by a Russian army strongly entrenched; and in endeavouring to cross the river by two different fords on the 6th of November, each attempt was baffled, and the Russians remained in possession of the Ingour. He then tried it at a third place, and was more successful; but although he thus wrested the whole of the left bank of the river from the enemy, the latter fell back only to entrench themselves anew on the river Tsiva, on the road to Kutais. The fate of Kars was sealed, for its last morsel was eaten; and on the 24th of November, General Williams made overtures for surrender. The proposal was received with courtesy and humanity, and the terms were honourable alike to the besiegers of Kars and its brave defenders. The garrison was to march out with the honours of war; in depositing their arms at a place appointed, the officers of all ranks were to retain their swords; and while the subjects of the belligerent powers were to be prisoners of war, the inhabitants of the town were to be placed under the protection of the Russian government, and the Turkish militia allowed to return to their homes. "Thus, with the surrender of Kars," adds General Mouravieff in his report, "the last remnant of the army of Anatolia, which in last June numbered 30,000 men, has vanished. The Mushir, Vassif Pacha, commander-in-chief of that army, is himself a prisoner of war in our hands, without counting eight pachas, and a great number of superior and subaltern officers, including the English general Williams and his whole staff. In the fortress we took 130 cannon and a great stock of arms." It was a dispiriting blow to the cause of Turkey, and as such it was felt not only at Constantinople, but in the allied army of the Crimea, and in Paris and London. General Williams and his officers, on being carried prisoners into Russia, were treated with all the courtesy that is due to a gallant enemy.

Our operations by sea during this war now demand our notice. It was for these that our preparations had been the greatest, and correspondent exploits were expected to be performed upon our favourite element, let the events upon land be what they might. Of the achievements of our fleet in the Black Sea, while it accompanied the land expedition, incidental notices have already been given. But independently of this squadron, another and still more powerful fleet was despatched from the Downs to the Baltic on the 13th of March, 1854, under the command of the hero of Acre, Vice-admiral Sir Charles

Napier, consisting of eight screw line-of-battle ships, four screw frigates, and four paddle-wheel steamers, which was subsequently reinforced in Kioge Bay by the *Neptune* (120), the *James Watt* (91), the *Boscawen* (72), and several other ships of

ADMIRAL SIR CHARLES NAPIER.
From a print by Porter, after a picture by John Simpson.

war. Against such a force and with such a commander what available resistance could Russia be expected to offer? To the same quarter, the French despatched in April a squadron of twenty-three ships, carrying 1250 guns, under the command of Vice-admiral Parseval-Deschônes. The first operations of our fleet were of the most promising character. A rigorous blockade was established in the Gulf of Finland, and the different ports along the coast were so closely shut up that not a Russian vessel could show itself in the Baltic. The enemy had therefore to be sought, and early in May, Admiral Plumridge was sent with a portion of the fleet to cruise in the Gulf of Bothnia. This he did so effectually, that between the 5th of that month and the 10th of June, when he rejoined Sir Charles Napier, he had destroyed forty-six merchant vessels, about 50,000 barrels of tar, and an immense quantity of naval stores, without the loss of a man. But an attempt of two of his ships, the *Odin* and *Vulture*, at Gamla Karleby, was not so successful. The water was so shallow that the ships were obliged to anchor five miles off the port, while four boats were manned and sent in to take possession of whatever vessels and stores might be found there. But the Russians on shore opened up from an ambuscade such a fire upon the boats for upwards of an hour, that fifty-four of our officers and men were killed, wounded and captured, and the *Vulture's* paddle-box boat taken. A more daring and more fortunate expedition

later in May was accomplished by the *Hecla* and *Arrogant*, that sailed from Hango Bay, seven miles up a narrow river, to Eckness, through a most intricate and dangerous navigation, destroyed a powerful battery that opened fire upon them, routed with volleys of grape and canister a troop of horse artillery and a large body of infantry, and having cut out a large and richly-laden merchantman, returned with it in tow through an enemy's country to Hango.

The next naval movement was against the Aland Islands in the Gulf of Bothnia. This large cluster, consisting of 80 inhabited and 200 uninhabited islands, occupying a space of about 352 square miles, and situated between the gulf and the Baltic Sea, and near the mouth of the Gulf of Finland, had formerly belonged to Sweden, but been ceded by that country to Russia in 1809. The great fortress of these islands was Bomarsund, situated at their most easterly point, upon a tongue of land, and was guarded in its approaches by two marshy swamps, while its chief works consisted of a fort and a long line of batteries, all of them of granite, besides an earth-work battery that had been recently constructed. Altogether it was a place of great strength, and furnished with powerful means of resistance. Three steamships of the allied fleet, the *Odin*, *Hecla*, and *Valorous*, which in the first instance had been sent to reconnoitre these islands, had opened up a discharge of shells upon Bomarsund,

miral Chads with eight ships British and French, was joined in Lumpar Bay, on the south side of Bomarsund, by a French expeditionary force of 10,000 men under the command of General Baraguay d'Hilliers, and on the following day the landing was effected, and the siege commenced. The resistance, however, was neither proportioned to the strength of the place, nor the importance that had been attached to it, for on the 15th a breach was made in the walls, its guns were silenced, and a white flag was hoisted in token of surrender. Thus easily was the capture effected with scarcely a score of men killed and wounded among the allies, while the capture consisted of nearly 200 guns and 2235 prisoners. After demolishing and blowing up the works, by which the labour of years was destroyed in a few hours, the armament withdrew from the Aland Islands. With the fall of Bomarsund, the naval operations of the year were at an end.

During the summer of this year, a small squadron had been employed in the White Sea; but except the destruction of certain stores of the Russian government in Shayley Island, the bombardment of Novitska, and the destruction of Kola, the capital of Russian Lapland, nothing of particular notice was effected by this squadron, which soon after returned to England. But there was a fatal offset to these trivial successes, in the disaster that befel an allied squadron at Petropaulowski. This town, the principal seaport of

the Russian province of Kamtschatka, received an hostile visit from three French and three British vessels, that anchored before it on the 28th of August, and the fire with which they were immediately greeted from the batteries showed the readiness of the town for a stout resistance. This resistance also was likely to be formidable, on account of the natural as well as artificial defences of Petropaulowski; for its horse-shoe shaped harbour was guarded in front by a natural breakwater of sand, and a masked battery of twelve thirty-six pounds; while behind, the town, which lies in a hollow,

TOWER OF THE FORTRESS OF BOMARSUND.—From L'Illustration, 1854.

which they had continued for seven hours so effectually, that had it lasted but a little longer it was thought the fortress must have surrendered, as its roof had been blown up, and some of its works been set on fire. It was now to be besieged in form, and its fall attended with greater dignity. On the 7th of August (1854) Rear-ad-

was backed by a high ridge of rugged volcanic mountains. It was resolved to attack the town next morning, and a preliminary cannonade had commenced, when a pistol-shot was heard in the cabin of the *President*, the flag-ship of Admiral Price, the British commander. At that critical moment the admiral had committed suicide, but

from what cause, unless it was some sudden access of frenzy, it was impossible to discover. On the following day, the attack was resumed; but although two batteries were successively silenced, the masked battery which we have mentioned kept up such a successful fire, as obliged the ships that assailed it to fall back out of range. On the day after, a landing was made, not only to bury the body of the admiral, but to make an attempt upon the town, which, the allies were assured by two Americans who offered to be the guides of the landing party, was open to an attack in the rear. Seven hundred soldiers were sent upon this service, and after silencing two batteries on shore northward of the town, the party was landed. But instead of keeping upon the main road, they scrambled in disorderly fashion up the hills at the back part of the town, and were picked off as they advanced by Russian sharpshooters, concealed among the thick brushwood. A march into the town was hopeless, and a retreat was sounded: but the soldiers withdrew so hurriedly, that they lost themselves among the hills; they were plied with volleys by an unseen foe, were driven like sheep to the brink of a precipice between them and the shore, and were only extricated with difficulty, and after heavy loss, by the guns of the ships, and a rearguard that was sent to their relief. Although upon a small scale, this expedition was conspicuous from first to last by its blunders and disasters; and the self-congratulations of British and French of their deeds during this war will occasionally be crossed and qualified by the admonitory name of Petropaulowski. In a day or two after, the damaged vessels had to quit the coast and retire to San Francisco.

By the approach of winter our naval operations for 1854 were suspended, and nothing could be undertaken till the ensuing spring. But what the while had been effected by those magnificent fleets which Britain and France had equipped at so great an expense, and upon which they had placed such unbounded confidence? Why was not Cronstadt bombarded? How had St. Petersburg itself escaped untouched? It seemed as if our naval spirit had expired with Nelson, and its glories been extinguished at Trafalgar. So fierce was the popular indignation, so loud the national outcry, that the British admiral was obliged to find a scape-goat and a victim, and one, too, of no inferior mark, so that on the return of Sir Charles Napier from the Baltic, he was directed to haul down his flag. It was alleged that he had not done all that his means permitted, and the command of the Baltic was transferred from him to Rear-admiral Dundas. This could not be done without an indignant remonstrance on the part of the gallant veteran:

VOL. IV.

he complained that the blame lay with the admiralty itself, who had so crippled him by restrictions, that he could not attack Sweaborg until it was too late to succeed. A keen controversy upon the subject between Sir Charles and their lordships was the consequence, which has not yet terminated, and into which we have no desire to enter, being so mixed, as it soon became, with political heats and party arguments. With a new admiral and redoubled efforts it was hoped that our operations for 1855 in the Baltic would be more successful, and on the 19th of April there were eighty-five English and sixteen French ships of war in that sea, carrying 2506 guns.

The renewed hostilities at sea, in the absence of any naval action, were signalized in 1855 by a serious charge of treachery against the Russians, a charge which weighed more heavily against them than any defeat could have done. Admiral Dundas having permitted Captain Fanshawe of the *Cossack*, to liberate three Russian prisoners, that officer, on arriving off Hango Island in the Gulf of Finland, on the 5th of June, landed the three prisoners with four others, in a cutter bearing a flag of truce. Scarcely, however, had this been done, than the boat's crew was fired upon, notwithstanding their flag of truce, and the whole killed except one man, who escaped wounded with the boat. At the same time, a small party, with the British lieutenant in command, who had advanced from the shore to communicate with the people and the officer of the telegraph, were suddenly attacked by a party of soldiers, seized, placed in carriages that had apparently been kept in readiness for the purpose, and hurried off to Eckness as prisoners. This foul breach of the law of nations led to indignant remonstrance on the part of Admiral Dundas, both with General de Berg, the Russian commandant at Helsingfors, and with Prince Dolgorouky, the Russian minister at war; but their answers were only shuffling attempts to prove the whole matter a mistake, and to throw the entire blame of it upon the party who had landed. To establish this view of the case also, recourse was had to misrepresentation and falsehood. They declared that the boat's crew had exhibited no white flag, or at least, such an one as was visible; that on finding no soldiers on shore, they had commenced hostilities at their landing, by setting fire to some huts and boats; and that the cutter itself in which they had arrived, was armed and provided for such deeds of aggression. Such were the statements unblushingly made by the Russian authorities, but which were successfully refuted by Lieutenant Geneste, the officer in command of the cutter's party, after he had returned from his Russian prison to England.

By this hostile deed, as paltry as it was perfidious, and from which no advantage could be gained, the enemy sullied the glory of their arms, and the esteem to which they were entitled by their efforts and their sacrifices. It was an instance of Slavonic treachery which, with others of a similar kind that occurred during this war, will be remembered to the disadvantage of Russia, until she has effaced this blot upon her national character by a course of manly openness, kindness, and integrity.

The great aim of the allied fleet was the capture or destruction of Cronstadt. This strong seaport, situated on the long flat island of Kotlin, near the eastern extremity of the Gulf of Finland, opposite the mouth of the Neva, lay provokingly across the way to the entrance of St. Petersburg, from which it was only twenty miles distant; but the narrowness of its channel on the south side of Kotlin, by which only one vessel could pass at a time, from the gulf to the capital, the effectual manner in which its guns commanded this passage, and the strength of its vast fortifications, which made every approach an experiment of the utmost hazard, had compelled Sir Charles Napier, as they now did his successor, to respect its strength, and keep at a wary distance. For more than three weeks, the allied fleet, consisting of forty ships, lay off the north side of Cronstadt without risking an attack; and they finally weighed anchor on the 14th of July, to make a more hopeful attempt upon Sweaborg. This fortress, on the north side of the Gulf of Finland, and about three miles south-east of Helsingfors, occupies seven little islands, all of them strongly fortified, and communicating with each other by bridges of boats. Of these islands, the chief is Vargoe, on which the principal fort is erected, consisting of a strong castle, and extensive magazines and barracks cut out of the rock, and bomb-proof. The numerous walls and ramparts by which the narrow channels between the islands and also the bay at every point were commanded, were bristled with 2000 pieces of cannon; and since the war commenced, the Russians had erected new earthworks upon commanding sites. On the 6th of August, the allied fleet arrived off Sweaborg, and the two following days were employed in preparations for an attack. On the morning of the 9th, the work commenced by a discharge from the mortar-vessels upon the fortress; and these were followed almost immediately by the gun-boats, that moved in a circle to avoid giving a fair mark to the enemy, and delivered their fire in the course of their revolution, first from the gun at the bow, and afterwards from that astern. The effect of these mortars and gun-boats was tremendous: their shot, that fell within the line of the batteries, produced a

succession of explosions that resembled volcanoes, in which military stores were kindled and sent blazing aloft, and huge masses of rock, beams of timber, and fragments of houses were scattered in the air. At eight o'clock in the evening the gun-boats were recalled, and their places supplied by rocket-boats, which during the night kept the atmosphere in a destructive blaze, and extended the conflagration to those parts that had escaped during the day. So terrible, indeed, and close was the fire, that a large three-decker which the Russians had moored between the islands of Gustavswerd and Bak Holmen, with her broadside towards the sea, so as to block up the channel, had to be removed during the night to save her from destruction. Soon after three o'clock on the morning of the 10th, the bombardment of the previous day was renewed, and was continued till evening, while within Sweaborg, the arsenals and stores behind the line of batteries continued to blaze with increasing violence. It was no wonder that the destruction had been so wide and wasteful, as a thousand tons of iron in shot and shell had been thrown into the place by the English alone. But except this destruction of arsenals, stores, and dwelling-houses, little had been effected; the forts were too well defended to be assailed, as well as too strong to be shaken by the hurricane; and the ships, instead of being sent against them for a contest of broadsides, were cautiously kept aloof, and mortar-vessels sent in their stead. "Seeing the impossibility of obtaining any decisive success," writes the Russian general De Berg, in his account of the bombardment, "against our fortifications and batteries, the assailants evidently resolved to take advantage of the long range of their projectiles, and exposing themselves as little as possible to our fire, to demolish and set fire to the buildings inside the fortress, a task rendered easy by the existence of wooden houses, and large houses three stories high, not arched. Suspecting their plan," the general adds, "I ordered from the commencement of the combat, our batteries not to fire unless the enemy's vessels, which offered but a small target, came within a range which would allow our artillery to do them a serious mischief. This order was obeyed with that praiseworthy coolness which distinguishes a really good artillery, and with such success, that whenever an enemy's vessel advanced from its line of battle, the well-directed fire of our batteries immediately compelled it to retire." In this skilful manner, any plan of the allied fleet for a decisive attack upon Sweaborg was rendered hopeless, and mischief, not victory, could be the only result of continuing the bombardment. It therefore ceased on the morning of the 11th—and thus terminated the naval operations of 1855.

On the return of the French and English ships, which the rapid approach of winter in the Baltic Sea rendered necessary at an early period, they found but a cold welcome at home on account of the little that had still been accomplished; and it was complained, that all the damage inflicted upon Sweaborg, was scarcely worth the cost of the powder and shot that had been thrown away in the enterprise.

The commencement of 1856 found the allied armies still occupied in the destruction of the harbours and public works of Sebastopol, while the Russians, from their neighbouring encampment, were sternly watching these proceedings, and treasuring them up in their memory for future vengeance. But even already peace was at hand. At his accession, the new czar found himself entangled in a war which he had not originated, and the plan of which he must have found himself unable to carry out; and as he was not pledged to continue it for evil or for good, he might gracefully retire from it when a fitting opportunity had arrived. And even now it had come, when the surrender of Kars could be shown as an offset to the evacuation of Sebastopol. While his pride was thus saved from the humiliation of defeat, peace was necessary for the interests of his empire. The war had been a losing one, in which the arms of Russia had suffered four signal defeats; a powerful enemy was established on its frontier, whose advance might be accompanied with still worse disasters than a conquest of the Crimea; and at sea its ports were blocked up, its ships destroyed, and its commerce suspended. For the present, Russia was obliged to contend against four great powers, but it was certain that the addition of a fifth would suffice to turn the scale; and there was now the prospect of Austria joining the warlike coalition of France, Britain, Sardinia, and Turkey, and sending her armed myriads to co-operate in the common cause. To these might be added the moral and political reforms already contemplated for the Russians to bring them up to the scale of other nations, but which war would retard, or might possibly even defeat and set aside. Nor were the allied powers unwilling to listen to peaceful overtures. To them the war had been both costly and ruinous, of which the glory was scarcely equal to the price. It was also thought dangerous still further to provoke Russia, that young Titan of the nations, which had already shown such strength and resources, and been taught by each recent struggle the lesson of its own power. If by any treaty also Turkey could be saved from dismemberment—for the present at least—the object for which the allies had taken arms would be effected, and the evil day which is reckoned inevitable be postponed.

The public manifestations of this peaceful spirit were given on the part of Russia at the close of the preceding year. This was done by a despatch of the government to its diplomatic agents on the 22d of December, announcing through them to the courts at which they resided its desire for peace, and the sacrifices it was willing to make for it. After this overture, a neutral negotiator was needed to interpose with friendly offices, and bring the contending parties to a mutual understanding; and this was undertaken by Austria, which had a vital interest in the question, but had as yet kept aloof from the contest. A negotiation was accordingly opened between the courts of Vienna and St. Petersburg, to ascertain the conditions upon which the latter was willing to treat; and as these appeared sufficiently moderate, a meeting of plenipotentiaries was assembled at Paris, on the 26th February, for the settlement of an armistice, and the terms of a lasting peace. The representatives for Great Britain were the Earl of Clarendon and Lord Cowley; for Austria, Count de Buol Schauenstein and Baron de Hübner; for France, Count Colonna Walewski and Baron de Bourqueney; for Russia, Count Orloff and Baron de Brunow; for Sardinia, Count de Cavour and the Marquis di Villamarina; and for Turkey, Ali Pacha and Mehemmed Djemil Bey. According to the etiquette established on such occasions, Count Walewski, as the representative of the sovereign in whose capital the plenipotentiaries were to hold their meetings, was appointed president during the sittings of the conference.

The armistice, which was of easy settlement, was the first subject of discussion, and it was agreed that it should continue till the 31st of March, unless renewed till after that period by common consent; and that during this interval both armies and fleets should retain their present respective situations, but without any hostile movement on either side. After this, the sittings of the conference lasted till the 30th of March, on which day the treaty of peace was definitively signed, but the ratifications of which were not exchanged until the 27th of April. They were in substance as follows:—

The territories conquered or occupied during the war were to be reciprocally evacuated.

The town and citadel of Kars, as well as other parts of the Ottoman territory of which the Russian troops were in possession, were to be restored to Turkey.

The four allied powers were to restore to Russia the towns and ports of Sebastopol, Balaklava, Kamiesch, Eupatoria, Kertch, Jenikale, and Kinburn, as well as all other territories occupied by the allied troops.

The allied powers, and also the Czar of Russia

and the Emperor of Austria, declare the Sublime Porte admitted to partake in the advantages of the public law and system of Europe. The six Christian sovereigns also engage, each on his part, to respect the independence and territorial integrity of the Ottoman empire; to guarantee in common the strict observance of that engagement; and to consider any act tending to its violation as a question of general interest.

Should any misunderstanding arise between the Sublime Porte and one or other of the signing powers, that might endanger the maintenance of their relations, the Porte, and each of such powers, before having recourse to arms, shall afford the other contracting parties an opportunity of mediating between them.

The sultan having already issued a firman for the welfare of his subjects, without distinction of religion or race, and which records his generous intentions towards the Christian population of his empire, now communicates to the contracting parties the said firman, emanating spontaneously from his sovereign will. The contracting parties, while recognizing the value of this communication, clearly understand that it does not give them the right, either collectively or separately, to interfere between the sultan and his subjects, or in the internal administration of his empire.

In regard to the ancient rule of the Ottoman empire, relative to the closing of the Straits of the Bosphorus and of the Dardanelles, it was agreed, that the rule should continue in force; that no ships of war belonging to foreign powers should enter the Straits of the Dardanelles and the Bosphorus; and that so long as the Porte is at peace, the sultan shall admit no foreign ships of war to enter the said straits: and on the other hand, the contracting powers engage to respect this determination of the sultan, and to conform themselves to the principle above declared. By a second article, the sultan reserves to himself, as in times past, to deliver firmans of passage for light vessels under flag of war, which shall be employed, as is usual, in the service of the missions of foreign powers. By a third article, it is declared, that the same exception applies to the light vessels under flag of war, which each of the contracting powers is authorized to station at the mouths of the Danube in order to secure the execution of the regulations relative to the liberty of that river, and the number of which is not to exceed two for each power.

In regard, also, to the amount of naval forces which Russia and Turkey might respectively keep in the Black Sea, it was agreed in a separate convention between these two powers, that each should maintain in that sea six steam vessels of fifty metres in length, and not beyond 800 tons burden each vessel, and four light steam

or sailing vessels of not more than 200 tons each. It was agreed, moreover, that the Aland Islands should not be fortified, and that no military or naval establishment should be maintained or created there.

The Black Sea to be neutralized, and its waters and ports thrown open to the mercantile marine of every nation; and either of the powers possessing its coasts, or any other power, are interdicted from the use of the flag of war upon it, with such exceptions as Russia and Turkey shall fix by a separate convention. The commerce in the ports and waters of the Black Sea being freed from any impediment, was to be subject only to regulations of health, customs, and police; and to insure the security of this commerce, consuls were to be admitted into the ports upon the coast, according to the principles of international law.

No toll was to be levied upon the navigation of the Danube, nor duty upon the goods which may be on board of vessels. With exception of the regulations of the police and quarantine, to be afterwards framed to facilitate the passage of vessels, no obstacle whatever was to be opposed to the navigation of the river.

In return for the towns and ports restored to Russia by this treaty, and to secure the freedom of the navigation of the Danube, the czar consents to the rectification of his frontier in Bessarabia. This frontier shall begin from the Black Sea, one kilometre to the east of the Lake Bournasola, shall run perpendicularly to the Akermann road, shall follow that road to the Val de Trajan, pass to the south of Bolgrad, ascend the course of the river Yalpuck to the height of Saratsika, and terminate at Katamosi on the Pruth. Above that point the old frontier between the two empires shall not undergo any modification.

With regard to the principalities, which had been such a fruitful source of strife, it was agreed that the territory ceded by Russia was to be annexed to Moldavia; that the inhabitants of this principality should enjoy the rights and privileges secured to the other principalities; and that during the space of three years they should be permitted to dispose of their property freely, and transfer their domiciles elsewhere. This principality and that of Wallachia were to continue under the suzerainty of the Porte, without any exclusive protection of a foreign power, or any separate right of interference in their internal affairs; and the Porte engages to preserve for them an independent and national administration, as well as full liberty of worship, of legislation, of commerce, and of navigation. The same rights and liberties were to be accorded to the principality of Servia, under the collective guarantee of the contracting powers.

On the other *quæstio vexata* between Turkey

and Russia respecting their possessions in Asia, it was agreed between the czar and the sultan that these should remain as they had existed before the breaking out of the war; and that in order to prevent all local dispute, the line of frontier should be verified, and if necessary rectified, without any prejudice as regards territory to either party.

The territories occupied during the war by the allied troops were to be evacuated as soon as possible after the exchange of the ratifications of the treaty. The periods and the means of evacuation were to form the object of an arrangement between the Sublime Porte and the powers whose troops had occupied its territory.

Such were the terms of this memorable pacification, by which the ambitious aggressions of Russia were checked, and the dismemberment or downfall of Turkey averted. The tidings of the conclusion of an armistice reached the Crimea on the 28th of February; and on the afternoon of the same day, as if to signalize the cessation of hostilities, a pile of edifices in Sebastopol, called the White Buildings, was blown into the air. When the armistice was duly proclaimed on the following day, and the terms of it arranged between the contending armies, the officers and soldiers, between whom there would otherwise have been only a meeting of contention to the death, were now to be seen mixed together in mutual good humour and the interchange of friendly offices—and this, although peace was as yet uncertain, and although its failure might renew the war with more than its former bitterness. On the 2d of April all suspense was at an end among the armies by the proclamation of peace, which was announced with a discharge of 101 guns, and followed by the bustle of preparation for the evacuation of the Crimea. This event finally took place on the 12th of July, on which day General Codrington, the British commander-in-chief, formally gave up Sebastopol and Balaklava to the Russians. But what a surrender! The whole war had been concentrated at Sebastopol, which city was now the type of all its miseries and its desolation—the tomb equally of those who had assailed and those who had defended it; and even on receiving it back, the Russians must have read in its appearance a painful lesson of warning. As it then was, its aspect is thus described by an eloquent writer, from whose pages we have already quoted:—

“Had fire been rained down from heaven upon the devoted city its annihilation could not have been more complete. The stranger who halted to survey it from the neighbouring heights, deceived by the whitewashed and plastered walls of the houses, might think that Sebastopol was still a city; but when he walked through the

grass-grown deserted streets, formed by endless rows of walls alone, or roofless shells of houses, in which not one morsel of timber could be seen from threshold to eaves; when he beheld great yawning craters, half-filled with mounds of cut stone, heaped together in irregular masses; when he gazed on tumuli of disintegrated masonry—once formidable forts, and shaken as it were into dust and powder; when he stumbled over the fragments of imperial edifices, to peer down into the great gulfs, choked up with rubbish, which marked the site of the great docks of the Queen of the Euxine, and beheld the rotting masts and hulls of the sunken navy which had been nurtured there; when he observed that what the wrath of the enemy spared was fast crumbling away beneath the fire of its friends, and that the churches where they worshipped, the theatres, the public monuments, had been specially selected for the practice of the Russian gunners, as though they were emulous of running a race in destruction with the allied armies—he would no doubt have come to the conclusion that the history of the world afforded no such authentic instance of the annihilation of a great city. It is hard to believe that the site can ever be made available for the erection of houses or the construction of docks; but I am by no means certain that the immense resources in the command of manual labour possessed by the government of Russia, of which this very struggle afforded us all such striking proofs, in the Quarantine battery, the Bastion Centrale, the Bastion du Mât, the Redan, the Mamelon, and the Malakoff, may not be made available in time to clear away these modern ruins, and to rebuild houses, theatres, palaces, churches, forts, arsenals, and docks, as before.”¹

In thus giving a consecutive account of the Crimean war from the commencement to the close, we have been obliged wholly to overlook our political and internal history. The greater part indeed of public attention, as well as the principal debates of parliament, were occupied with the fluctuations of this momentous war, according to which stocks rose and fell, and hope or despondency predominated. But other subjects, although less obtrusive at the time, characterized the history of the years 1854, 1855, and 1856, of which we can only give a very brief recapitulation.

At the commencement of the first of the above-mentioned years, the feeling of public insecurity upon the question of peace or war, and the doubtful state of our foreign relations, produced their usual effects upon mercantile activity and enterprise. There was added to these drawbacks

¹ *Russell's British Expedition to the Crimea*, p. 582. London, 1858.

a partial dearth throughout Europe, by which the prices of our manufactures were raised, and the demand for them diminished. But these causes, which depressed the mercantile interests, were favourable to those of the agriculturists, who, it was remarked, were more prosperous and more contented than they had been for many previous years.

The first important business introduced this session into parliament unconnected with the war was the subject of parliamentary reform. To this introduction the ministers considered themselves pledged; and they now ventured to fulfil the obligation, notwithstanding the imminent prospect of war, which might seem to make the proposal unseasonable. This objection was stated by Earl Grey in the House of Lords on the 10th of February, and he expressed his apprehension that a disapproval of this reform bill at a season so critical might occasion a dissolution of parliament, or a resignation of the ministry. At all events it ought not to be introduced until at least the navy and army estimates, and the measure for extending the militia force, had been disposed of. The objections which were urged in both houses were overruled, and on the 13th of February Lord John Russell moved for leave to introduce "A bill further to amend the laws relating to the representation of the people in England and Wales." In his speech he stated how much had been effected in parliamentary reform since 1793, and what encouragement this afforded for the removal of three main defects in the reform act which had been left untouched. These were—1. The existence of several boroughs that still retained the power of sending members to parliament, although the number of their electors scarcely justified their possession of such a privilege. These he proposed to disfranchise altogether, to the number of sixty-two seats. Another defect in the reform act was in the division of the counties, which he proposed to remedy by taking population generally as the rule to be applied, and thus filling the sixty-two vacant seats from districts sufficiently populous, but that were still unrepresented. The third defect in the reform act which his bill proposed to remove was the absolute rule of the ten-pound borough franchise; and this he sought to modify by making several new franchises common to counties and towns, of which the qualifications of a voter should be £100 of yearly salary—£10 a year dividends derived from the government funds, bank stock, or East India stock—the payment of 40s. a year either to income-tax or assessed taxes—the being a graduate at any university in the United Kingdom—or, finally, any person having had a deposit of £50 in a savings-bank for not less than three years. In the fran-

chises belonging exclusively to counties and boroughs, his lordship proposed that the electoral qualification for the counties should be, that £10 householders should have a dwelling of the value of £5 a year, and for the boroughs, all householders rated at above £6 a year, with two years and a half of municipal residence.

Such is a brief outline of Lord John Russell's new parliamentary reform bill, and the discussion that followed indicated how greatly the ministers had its success at heart. But the opposition with which it was encountered, together with the unfortunate season of its appearance, when a new war and new taxes were apprehended by all classes, made the wisdom of its introduction and its chances of success equally a matter of doubt. This was shown by the postponement of the second reading, which was not to come on until the 27th of April. So strongly, however, had the opposition increased, that on the 11th Lord John Russell announced in the House of Commons the intention of the ministers to abandon the bill. When war was merely in prospect, he stated, this circumstance was not of itself enough for deferring such a measure of internal improvement; but now that war was actually declared, and that the public had shown an indifference to this, as well as every other question, government had judged it advisable to drop for the present their plan of parliamentary reform. He was moved even to tears as he announced this abandonment of the great project of his life, while the long and enthusiastic cheers of the house was a gratifying expression of their sympathy and esteem.

In two other bills connected with parliamentary reform, Lord John Russell was more successful: one of these was, to consolidate and amend the laws relating to bribery, treating, and undue influence at elections of members; the other, to amend the law for the trial of election petitions, and for inquiring into the existence of corrupt practices at elections. To check these practices, he proposed that a person guilty of bribery should be for ever incapable of being elected a member of parliament; and that the name of a voter accepting a bribe should be struck out of the register of voters. After much discussion on the subject, and many changes upon the original motion, the bill for the suppression of bribery in parliamentary elections was carried by a majority of 107 to 100. This subject, indeed, was not so easily to be laid to rest; and demands were made during the session for more stringent rules, by which the integrity of elections should be examined and their fraudulent practices punished; but the proposals were defeated and the bills withdrawn.

The important subject of law reform in refer-

ence to the consolidation of the statutes, was brought forward by Lord Lyndhurst before the House of Lords on the 9th of February. His lordship stated that the absurdities which had already been expunged from our statute-book were only a sample of those which remained untouched. There were altogether 16,000 public general statutes, and of these nearly 14,000 might be swept away without the slightest inconvenience, while the remainder might be reduced within a reasonable compass by the process of consolidation. But this process, he was told by the lord-chancellor, had been in operation since the 31st of March, last year; that out of nearly 17,000 statutes, only 2500 were living acts of parliament; and that these, when consolidated, should be presented for the sanction of parliament. On the 27th of February, the lord-chancellor, in conformity with the intention announced in the speech from the throne, brought forward his bill for the amendment of the common law. It proposed certain modifications in trial by jury, by which, when both parties were agreed to have their case tried by the judge alone, the use of a jury might be dispensed with. It also proposed that the qualifications of jurors should be somewhat raised, and that there should be but one panel. In tendering the oath, the conscientious scruples of witnesses were to exempt them equally with Moravians, Quakers, and Separatists from taking it. The judge was also to be empowered to order refreshments for juries; and if at the end of twelve hours a jury was not unanimous, it might be liberated, and a new trial take place. These were the principal features of the lord-chancellor's bill, which was cordially received by both houses, and afterwards passed into law. Another important measure in the way of legislative reform, was in the amendment of the navigation laws, by which the hard measure of excluding foreign vessels from our coasting trade was abolished—and by this conclusive decision, the "last remaining fetters were struck off from the free navigation of the sea." These movements in the right direction were closed by the passing of a bill, introduced by the attorney-general, for the suppression of gaming-houses.

VISCOUNT PALMERSTON
From a photograph by Herbert Watkins

But although 101 out of 121 bills were passed during this parliamentary session, they excited little interest, the chief attention being now engrossed with the events of the war in the Crimea. Some of the most important of these bills were among the rejected, and three of them were ministerial. Indeed, the state of the public mind at the commencement of 1855 was little in favour of government, and ministers had lost the national confidence at a time when it was most necessary for their support. For nine months the war had continued, during which our army was overworked, underfed, and wasted away by diseases occasioned through want of proper management; and with every fresh report from the Crimea that told of nothing but suffering and disaster, the charges against ministerial ineptitude became louder and more confirmed. These broke forth into full officialry as soon as parliament had re-assembled, and only two days after—the 25th of January—both parliament and the public were astounded by the resignation of

Lord John Russell. In reference to the army and the war, he confessed that evils did exist, but he could not also fairly and honestly state that all deficiencies and abuses would be immediately remedied; and in consequence of his inability to give such assurance, he felt that he could no longer remain a member of the government. After this resignation, Mr. Roebuck brought on a motion of which he had given due notice, accusing ministers of neglect and mismanagement in the war, which had led to the most disastrous results; and this was passed by a majority of 305 against 148. The fate of the coalition cabinet, as it was called, which had been formed at the season and for the purposes of peace, was sealed, and in consequence of this vote its members resigned office. A new one was constructed, chiefly, however, from the materials of the old, with certain partial changes in the distribution of office. As it now stood, Lord Palmerston was first lord of the treasury; Lord Cranworth, lord-chancellor; Earl Granville, president of the council; Duke of Argyle, lord privy-seal; Earl of Clarendon, foreign secretary; Mr. Sidney Herbert, colonial secretary; Sir

George Grey, home secretary; Lord Panmure, secretary for war; Mr. Gladstone, chancellor of the exchequer; Sir James Graham, first lord of the admiralty; Sir William Molesworth, public works; Sir Charles Wood, president of the board of control; the Marquis of Lansdowne, without office; Lord Canning, postmaster-general; Mr. Cardwell, president of the board of trade. Of these, Sir James Graham, Mr. Gladstone, and Mr. Sidney Herbert resigned office. A new reconstruction of Lord Palmerston's cabinet was found necessary, the most remarkable change in which was the appointment of Lord John Russell to the office of secretary of state for the colonies, in the room of Mr. Sidney Herbert. Among the other changes, Sir G. Cornwall Lewis took the place of Mr. Gladstone; Sir C. Wood, of Sir James Graham; Mr. V. Smith, of Sir Charles Wood; Lord Stanley, of Mr. Cardwell; and Lord Carlisle, in the secretaryship of Ireland, that of Lord St. Germain.

From the opening of parliament in 1855, until the 14th of August, when it was prorogued, the debates continued to be almost exclusively occupied with the war, of which every event was made the subject of investigation and comment. They were new subjects for parliamentary eloquence, as well as an exhaustless source of patriotism, party feeling, and ambition, and although the sittings were long, few questions of a purely social character had room for introduction. Of the 141 ministerial bills which were introduced, 108 passed into law, 32 were withdrawn, and 1 was rejected in the House of Lords. Of those which were passed that had no immediate connection with the war, the following enumeration in the royal speech at the close, which was read by the lord-chancellor, will convey a distinct though summary idea:—

"Her majesty, in giving her assent to the bill which you presented to her for the local management of the metropolis, trusts that the arrangements provided by that measure will lead to many improvements conducive to the convenience and the health of this great city. The abolition of the duty on newspapers will tend to diffuse useful information among the poorer classes of her majesty's subjects.

"The principle of limited liability, which you have judiciously applied to joint-stock associations, will afford additional facilities for the employment of capital; and the improvements which you have made in the laws which regulate friendly societies will encourage habits of industry and thrift among the labouring classes of the community.

"Her majesty trusts that the measures to which she has given her assent for improving the constitutions of New South Wales, Victoria, and

Tasmania, and for bestowing on these important and flourishing colonies an extended power of self-government, will assist the development of their great national resources, and promote the contentment and happiness of their inhabitants."

With the commencement of 1856, the feelings and the fears of commercial depression had abated, and commerce and manufactures had returned to their healthy condition. But more than even the fluctuations of trade, was the interest of the war upon the public attention. The increase of our experience in the conducting of warlike operations, the force and efficiency to which our army in the Crimea had been raised, and the abundance of our resources for carrying on the conflict, combined with the feeling that enough had not as yet been effected to counterpoise our reverses and accomplish the objects of the enterprise, made the prospect of peace generally regarded with indifference, if not with dislike. It could only be a truce at the best, instead of an enforced peace upon an ambitious enemy; and Russia would be certain to resume her projects of eastern aggrandisement as soon as her strength was renewed and an opportunity afforded. While such was the state of the public mind, the session of parliament was opened by her majesty in person; and in moving the reply to the royal speech, which was congratulatory upon these pacific prospects, the Earl of Gosford in the House of Lords gave distinct expression to the general feeling on the subject. Having declared his full belief in the necessity and justice of the war, he stated that he had looked forward with joyful anticipations to the probable result of the campaign of 1856. But the scene had changed, and he found himself suddenly, and somewhat reluctantly, an advocate of peace. The nation was only now beginning to shake off the rust of a long repose, and to make great preparations for continuing hostilities; it was natural that there should be on the part of the public a certain reluctance to suspend them; but it was doubtful how far this feeling should be indulged if the terms of peace would prevent the aggressions of Russia, not only against Turkey, but in other quarters, and leave no opening for future dispute. Thus far in his advocacy of peace he was ready to go, but no farther, and he trusted the negotiations would be brought to a satisfactory conclusion.

On the 5th of May the treaty of peace was debated in both houses, and every article was scrutinized and commented upon with a freedom of opinion that forms the best characteristic of a British parliament. It is perhaps unnecessary to add, that each article had its eulogist and opponent. Into those conflicting opinions, however, it is not the duty of the historian to enter,

until time has tested them, and separated the false from the true. In the House of Lords, which was filled to overflowing by an eager audience, the Earl of Ellesmere moved the address upon the treaty; and in the classical eloquent speech which he delivered on the occasion, there were two subjects upon which there could be no diversity of opinion. One was a just tribute to the peaceful but painful heroism and self-devotion of Miss Nightingale, whose part in the war could not be too highly commended. "My lords," said the noble speaker, "the agony of that time has become a matter of history. The vegetation of two successive springs has obscured the vestiges of Balaklava and Inkermann. Strong voices now answer to the roll-call, and sturdy forms now cluster round the colours. The ranks are full, the hospitals are empty. The angel of mercy still lingers to the last on the scene of her labours, but her mission is all but accomplished. Those long arcades of Scutari, in which dying men sat up to catch the sound of her footstep or the flutter of her dress, and fell back on the pillow content to have seen her shadow as it passed, are now comparatively deserted. She may probably be thinking how to escape, as best she may, on her return, the demonstrations of a nation's appreciation of the deeds and motives of Florence Nightingale." The other part of the well-merited eulogiums of the eloquent peer was upon Lord Raglan, from whose head-quarters during the awful winter of complicated trials, "had radiated a moral force, a serene and unquenchable spirit of faith, and trust, and duty, which did resist, and which alone could have resisted, the combined influences of weather, privation, and fatigue, superadded to the constant changes of a defective military position, threatened in front, flank, and rear, by a brave, an able, and outnumbering army. The spell prevailed: not even discomfiture, far less disgrace—for discomfiture, and even destruction under such circumstances might have come without disgrace—fell on the banners of England." It was a noble and true, as well as a brave-hearted testimony in behalf of a departed hero, whom it had become too much the fashion to identify with some of the worst errors and mischances of the war. "I am sure," added Lord Ellesmere, in allusion to the return of peace, "that from Balaklava and Kadikoi to the ravine of the Tchernaya and the heights of Inkermann, while England's renovated battalions are shaking the earth with their tramp, and extorting alike from constant allies and former foes that ungrudging admiration which true soldiers love to feel even for 'foemen worthy of their steel'—amidst that pomp and circumstance of war's display without its terrors, and the interchange of hospitalities

between reconciled antagonists—there will be a branch of myrrh in the festival goblet, when the cup is fullest and the revel is at its height, which will make the draught bitter but wholesome. There will be a thought and a sigh for one who should have been there. They will miss among the crowds of officers of many nations the armless sleeve, the noble form, which in the hour of battle they had never far to seek—that countenance which by its winning expression was in itself a passport to the soldier's heart. Yes, there will be a thought and a sigh for him who established and maintained the footing of England on that soil, and but for whom, as I devoutly believe, the graves on Cathcart's Hill would have been now, like the *tumuli* which record in that country the reign of extinct dynasties and forgotten sovereigns, the sole memorial of the achievements and the fate of an English army."

After this speech, which was listened to throughout with profound sympathy, the Earl of Ellesmere moved the address congratulatory of the peace, which was to the following effect, and after much discussion passed by both houses:—

"To assure her majesty that, while we should have deemed it our duty cheerfully to afford her majesty our firm support if it had unfortunately been found necessary to continue the war, we have learned with joy and satisfaction that her majesty has been enabled to re-establish peace on conditions honourable to her majesty's crown, and which fully accomplish the great objects for which the war was undertaken.

"To express to her majesty the great satisfaction which we feel at finding that, while those alliances which have so mainly contributed to the vigorous and successful prosecution of the war, have been equally effective in the consolidation of peace, powers which have not taken an active part in the war have combined with the belligerents to give additional firmness to the arrangements by which the repose of Europe is in future to be protected from disturbance.

"To state to her majesty that we rejoice that, notwithstanding the great exertions which the late war has rendered necessary, the resources of the empire remain unimpaired.

"To express our hope that the peace which has now been concluded may, under the favour of Divine Providence, long continue to shed its blessings over Europe, and that harmony among governments and friendly intercourse among nations may steadily promote the progress of civilization, and secure the welfare and happiness of mankind."

To this address, which was presented to the queen by both houses at Buckingham Palace on the 8th of May, the following was her majesty's reply:—

"I receive with sincere pleasure the loyal and dutiful address which you have presented to me on this occasion.

"I heartily thank you for your cordial co-operation in the measures which I considered necessary for the prosecution of a war, which, in conjunction with my allies, I have been enabled to conduct to an honourable and successful termination, by the full accomplishment of the objects for which it was undertaken.

"It is most satisfactory to me to feel that peace has been re-established on a basis which affords the best security for its permanence, and I trust that, by God's blessing, it may long continue to promote the progress of civilization, and the happiness and welfare of mankind."

The rest of the sitting in both houses during that day was chiefly occupied in passing a vote of thanks to the officers of the navy, army, and royal marines who had taken part in the operations of the late war, and to the officers of the several corps of militia, for their zealous and meritorious services both at home and abroad. In the lords, the vote was moved by Lord Panmure, the secretary of war; and in his enumeration of the services both on land and sea, he gave a succinct view of the late conflicts and their results. Beginning with the navy, he observed that in the Baltic it had maintained the most difficult of all blockades for two years without the loss of a single ship. It had reduced one of the strongholds of the enemy; it had swept the sea of every vessel belonging to Russia; and confined to port the whole of the large navy which that power could command. In the Black Sea, it had attacked the fortresses of Sebastopol and Kinburn; and by the operations in the Sea of Azof had rendered the most valuable assistance to the army. During the course of the war, it had also furnished transport to 435,000 men and 54,000 horses. He then reviewed the services of the army from the date of its landing at Varna, its courage in the field, and its endurance and fortitude under privations and disease; and he compared its condition during the winter

of 1854 with its present state, to show the efficiency into which it had been brought through the efforts of its officers and commanders. In point of health it could bear comparison with the army at home. He then read from official returns an account of its losses from every cause, which amounted to 270 officers and 22,467 men. This was an amount which, compared with the losses of the enemy, gave us cause of thankfulness that our share had been such a light one. In the commons, where the same motion was made by Lord Palmerston and seconded by Mr. D'Israeli, the latter bore the following eloquent testimony to the worth and valour of our enemies:—"While I would join with the noble lord in the fullest expression of thanks, even to our allies—if formally we might offer them—let us remember that there are some who were not our allies, who were not the soldiers of our sovereign, to whom it would be not only generous, but, in my mind, wise to do justice. The father of poetry has told us that the strength of a conqueror cannot be more surely estimated than by the character of him whom he has conquered. Sir, the men whom the forces of the queen and her allies had to meet in the great struggle which is now concluded were no common men. The legions that triumphed under Suvaroff and conquered at the Borodino, although defeated at Sebastopol, have proved themselves foemen worthy of the united chivalry of England and of France. In doing this justice to our late opponents we are, in fact, only placing the achievements of our fellow-countrymen and our allies in their true aspect and proper position. Sir, I have great pleasure in seconding the motion of the noble lord; and if it were not presumption, I would express my opinion that when the verdict—I will not say of posterity—but that when the calm and unimpassioned verdict of the time in which we live is given upon these events, it will be acknowledged that in the late struggle our country has shown all those qualities which maintain a nation's greatness, and which prevent the decline and fall of empires."

CHAPTER XXI.—CIVIL AND MILITARY HISTORY.—A.D. 1857—1858.

VICTORIA.

The Crimean war followed by the Indian revolt—Dangerous increase of native soldiers in the Anglo Indian armies—Danger to be apprehended from the Bengal army—Its mutinous spirit on the subject of greased cartridges—Conspiracy among the sepoys at Barrackpore—Breaking out of the rebellion at Berhampore—The rebels in that quarter disarmed—Mode of disseminating a rebellious spirit through the provinces—Report that the Hindoos were to be forced into Christianity—Alarm occasioned by it—Proclamation of government refuting the report—The rebellion breaks out at Meerut—The mutineers defeated and driven to Delhi—Their sanguinary excesses in Delhi—Mutiny of the city—Murder of the Europeans there—Suppression of the rebellion at Meerut—The rebels disarmed at Ferozepore—Measures of government to suppress the rebellion—Advance of British troops for the recovery of Delhi—They defeat the rebels at Badulee Ke-Serai—They defeat them again near Delhi—Blockade of Delhi by the British—Rebellion breaks out at Fettehghur, Allahabad, and Bundelcund—Cruelties perpetrated on the British by the rebels—Rebellion at Azimghur and Benares—Redeeming circumstances in the rebellion of these two places—Sharp measures for the suppression of the mutineers at Benares—Rebellion at Lucknow—Preparations of the British in that quarter to resist it—They are closely besieged in the residency—Extent of the rebellion throughout India—Its breaking out at Cawnpore—Nana Sahib—His previous history—He attacks Cawnpore—Murder of the Europeans there on their surrender—General Havelock sets out for the recovery of Cawnpore and relief of Lucknow—His rapid and splendid career—His numerous victories—He enters Cawnpore—His severe chastisement of the rebels in Cawnpore—He sets out for the relief of Lucknow—He gains a victory at Unao—His three victories at Busherat Gunge—He falls back on Cawnpore—He defeats the rebels at Bhitoor—Siege of Delhi—Commencement of active operations against the city—Storming of Delhi—Capture of the king and his sons—Execution of the king's sons—Aid given to the British by native soldiers and chiefs.

SCARCELY had Britain congratulated herself on the successful termination of the Crimean war, and begun to enjoy the return of peace, than she was startled by the tidings of a new arena that had been opened, and by a fresh demand upon her military energies and resources. In this case, also, it was to be no war with aliens, but with a people who were living under our sway; while the prize at stake was the fairest, richest, and largest portion of our foreign empire, which had broken out into rebellion, and was on the point of being lost to us for ever. India had risen in deadly revolt against our rule, while its leaders were those native armies whom we had trained to victory, and by whom our eastern supremacy had been hitherto maintained. The tidings were received with a shudder of dread and sad foreboding. Was India, then, to be lost to us even as America had been? Had the season arrived when these rich kingdoms of the East, after having been enjoyed successively by Portugal, Holland, and Britain, were to pass, as they had been wont, into the hands of new masters, or be thrown back into their ancient anarchical independence?

The nature of our hold upon India was so anomalous, that the reflective had constantly doubted of its permanence. Our conquests had been chiefly effected by native armies, and continued to be ruled by their instrumentality; but it was unreasonable to think that the mere military allegiance of the sepoy would be always

superior to those ties of nationality which connected him with the vanquished. And even if he remained insensible to the calls of patriotism and religion, it could not be expected that he would be always superior to the inducements of selfishness and ambition. He had learned his own strength, and been taught how to use it, so that he might now conquer on his own account, instead of winning kingdoms for alien taskmasters. As if also to teach these men their own strength and resources, the native armies in our service had now increased to an alarming amount as compared with the European soldiers. Each of the three presidencies, Bengal, Madras, and Bombay, had its own army; but while they mustered in all 300,000 men, of these there were only about 43,000 who were British. Of all these armies, the most efficient for useful service, as well as the most prompt for revolt, and the most to be feared in such an event, was the army of Bengal, consisting of 118,600 native, and only 22,600 European soldiers. Its cavalry were for the most part Mahometans, men imbued with all the pride and bigotry of the Koran; its infantry were the *elite* of Hindoostan, being chiefly recruited from the people of Rajpootana and Oude, the most warlike and high-spirited of the Indian races, and by whom the utmost purity of the Brahminical caste was supposed to be inherited. It was from this army accordingly that most danger had for some time been apprehended. A single random spark would be enough to set its whole religious bigotry in a blaze. And

even already, a deep cause of offence existed in the Bengal army, on account of the annexation of the kingdom of Oude by the East India Company in 1856. The people of Oude regarded this transference of their national independence, such as it was, with indignant silence, while their countrymen in the army shared in their feelings. By this act they thought not only that their national rights were trampled under foot, but their religious superiority as Brahmins of the highest class regarded with equal contempt, and destined to a similar overthrow.

These and other such causes, which had been gathering and growing for years, had already matured into a deep and widely-extended conspiracy for the overthrow of the British dominion in India; but the particulars of the plan, and the persons who devised it, are still involved in obscurity. It is supposed, however, that the court of Persia was the principal focus of the conspiracy, and that the Mahometans of the north of India were its chief agents and disseminators. Those men, who might be termed the Norman aristocracy of Hindoostan, owed an especial grudge to the British by whom they had been supplanted; and they endeavoured to work upon the credulity of the Hindoo soldiery, by assuring them that the British intended to overthrow their creed, and compel them to become Christians. This was enough to remind them of the conversions of Tippoo Sahib, who propagated Islamism by fire and sword. It is supposed that these Mahometan intriguers intended to replace the old King of Delhi upon the throne of his ancestors, and to rule under his name; and it is known that they were endeavouring to incite Dost Mahomed, the King of Cabool, to prepare for the invasion of the Punjab, as soon as the revolt of the Bengal army, upon which they had calculated, should leave that territory defenceless. Even these representations might have been ineffectual with the Hindoo soldiers, had they not been apparently confirmed by an act of the British government itself. This was the affair of greased cartridges, that served as the commencement of rebellion and signal of outbreak. The Enfield rifle, an improvement upon the Menié, had been introduced at the commencement of 1857 into the Bengal army; and as greased cartridges were necessary for its effective use, these were issued to the troops along with the weapon. A report immediately started up and flew abroad, that the grease employed in the preparation of these cartridges consisted of a preparation of the fat of cows and pigs—the first of these animals being the objects of Hindoo adoration, and the last of Mahometan abhorrence. The first occasion on which the rumour was heard was the following: At Dumdum, where there was a school of

practice for the new Enfield rifle, a sepoy soldier, a Brahmin, was asked by a man of low caste to be permitted to drink out of his lotah, or vessel of water, to whom he replied, "I have scoured my lotah, and you will pollute it by your touch." "You think much of your caste," said the other angrily, "but wait a little, and the Europeans will make you bite cartridges soaked in cow and pork fat, and then where will your caste be?" The sepoy reported these words to his comrades, and they quickly reached Barrackpore, at which several native regiments were stationed. It was in vain they were assured by the government that no such grease had been used in the preparation of the paper in question, and that if they had scruples in the matter, they were at liberty to procure their own ingredients at the bazaar. The report still continued to strengthen at Barrackpore among the four native regiments stationed there; and on the 6th of February, a sepoy revealed to an officer the plot of his companions, who were alarmed with the fear of being compelled to abandon their caste and become Christians. From his revelation it appeared that these regiments intended to rise against their officers, and after plundering or burning down their bungalows, to march to Calcutta, and there attempt to seize Fort William, or failing in this, to take possession of the treasury.

This state of things was too alarming to be neglected, and measures were taken by the British commanders and officers to still the apprehensions of the native soldiery. They were publicly addressed on parade with the assurance that there was no design to make them Christians; that they could not become such without being able to read, and to understand the rules that were written in the Christian's book; and that nothing but their own free choice and request, after they had so learned, could admit them to the privilege of baptism. The issue of the obnoxious ammunition was stopped, and plans were suggested by which the cartridge might be used by tearing off the end, instead of putting it to the mouth and biting it. Native officers were also appointed to learn the process of cartridge-making in which the forbidden articles were to be excluded. But the alarm had grown too strong to be put down by such assurances or concessions: a rebellion was inevitable even where the original cause had dwindled into a mere pretext or watchword. The first open manifestation was at Barrackpore, on the morning of the 26th of February, when the 19th regiment of native infantry were ordered out on parade. Percussion caps were about to be issued to them, but these the soldiers refused to receive, declaring that it was still doubtful how the cartridges were made; and on the evening of the same day they assembled on

parade by their own authority, broke open the *bells* (small oval buildings) in which their arms were piled, and having taken possession of the weapons and ammunition, carried them off to their lines. Their commander, Colonel Mitchell, ordered them to pile arms and disperse, and on their refusal, called up the cavalry and artillery; but they still refused to obey until these troops were withdrawn, which was done accordingly. For this concession, the colonel was tried by a court of inquiry, and censured. It was resolved also to disband this dangerous regiment, and accordingly it was marched off to Barrackpoor, where the 52d and 84th queen's regiments were stationed to disarm them. But on the 29th of March, two days previous to the disbanding, while the 19th was at Barrackpoor, the rebellion commenced in bloodshed. A sepoy of the 34th regiment of native infantry, having intoxicated himself with *bang*, discharged his musket at Lieutenant Baugh, and shot that officer's horse; the lieutenant fired a pistol at his assailant, but missed him, and was wounded in return by the madman, as was also the sergeant-major of the corps, who went to the lieutenant's assistance. The mutineer, whose name was Mungal Pandey, was seized, tried, and sentenced to be hanged; and on the scaffold he expressed his regret for the crime, and tried, but in vain, to persuade his fellow-soldiers to return to their duty. As for the 19th regiment, it was drawn up on parade in the square of Barrackpoor, surrounded by the two British and several native regiments—and for a moment it was doubted whether the latter might not side with the 19th, and offer battle to the 52d and 84th. But no such outbreak occurred: the rebels surrendered their arms, and were marched off under an escort of cavalry to Chinsurah, bewailing their infatuation, and petitioning when too late to be readmitted to the service.

It was not, however, by such checks that the spirit of revolt was to be suppressed, or even retarded; it was diffused like a pestilence far and near by mysterious agencies which the authorities could neither detect nor surmise. One of these was the transmission of a kind of little unleavened cakes, called *chupatties*, a symbol which the Europeans did not understand, but which seems to have been as significant to the natives as the fiery cross to the Highlanders of Scotland, and used for a similar purpose. A *chowkodar*, or village policeman of Cawnpore, gave two of these cakes, the common food of the poor, to another *chowkodar* in Futtehghur, telling him to make ten more, and give them to five of his brethren of the nearest station, with a similar

charge to each; and thus at every hour these runners were multiplying among a class of men who were spread over India, and whose mischievous errand was least liable to be suspected.

A CHOWKODAR OR VILLAGE POLICEMAN.²

The circulation of *chupatties* commenced in Oude and elsewhere in the beginning of 1857, and European conjecture was utterly at a loss to penetrate this Indian mystery, which subsequent events made only too intelligible. Reports also were industriously spread in the bazaars that the missionaries had petitioned the Queen of Great Britain to enforce the use of the greased cartridges, in order to compel the Hindoos to become Christians. They even pretended to give the very words of this petition, which, they alleged, were the following:—"Tippoo made thousands of Hindoos become of his religion, while your majesty has not made one Christian. Under your orders are sepoys of all castes. We therefore pray you to adopt this plan—namely, to cause to be mixed up together bullocks' fat and pigs' fat, and to have it put upon the cartridges which your sepoys put into their mouths, and after six months to have it made known to the sepoys how they have thereby lost their caste, and by this means a certain road will be opened for making many Christians." They added, that the queen was highly satisfied with this petition, and had given her assent to it. Notwithstanding the absurdity of this report, it was so well suited to the credulity and ignorance of the people, and gained such belief, that the governor-general, Lord Canning, in council, was obliged on the 16th of May to issue a proclamation on the subject, disclaiming any attempt to interfere with the castes or religion of the people, and warning

¹ Hence the name of *Pandies*, which was afterwards given to the rebel sepoys by the British soldiers in India.

² From *Isiatic Costumes*, a series of coloured engravings from drawings taken from life.

them against the arts of those who attempted to withdraw them from their allegiance.

But this proclamation was too late, and even had it been earlier it would have been equally useless. The rebellion had already broken out in full violence, and in those districts where it could be least resisted. Of the European regiments in the presidency of Bengal, the greater part were dispersed over the whole extent of our Indian empire, and isolated among a hostile people. One important military station was Meerut, thirty-five miles to the north-east of the city of Delhi, between the Ganges and the Jumna, where there were cantonments on an extensive plain near the town, consisting of barracks and lines for European and native infantry, cavalry, and artillery. At this place were two regiments of native infantry and one of light cavalry, comprising in all 2700 men, and an European force of one regiment of infantry, one of dragoons, and a troop and company of artillery, numbering 1717 men, the whole being under the command of Major-general Hewitt. On the 6th of May, when cartridges, which, to avoid offence, had been made for the purpose, were offered to the native cavalry, eighty-five troopers refused to receive them. They were tried by a court-martial for their disobedience; eighty were sentenced to imprisonment with hard labour for ten years, and five for six years; and on the 9th, after their sentences were read to them on parade, they were put in irons and conducted to jail. But their companions sympathized in their rebellion; their jail-guards were sepoy, and the European troops were posted at the distance of three miles from the native camp. Everything seemed to tempt a rescue, accompanied with violence and lawlessness. On the following morning, which was Sunday, the native regiments rose in mutiny, fired upon their officers, and after making a rush upon the prison, from which they rescued not only their fellows, but upwards of 1000 convicts who were confined there, they set the building on fire. The wildest license now prevailed in Meerut, where the excesses of the rebellious sepoys were aided by the liberated prisoners; the Europeans were attacked wherever they could be found, and several British officers, with their wives and children, were massacred with circumstances of aggravated atrocity. While bungalows were blazing in every direction, and the streets filled with the hurrying rush of the murderers, and shrieks of the dying, the two British regiments in their remote encampment were preparing for church parade; but as soon as the alarm reached them, they marched against the native lines, assailed them with volleys of grape and musketry, drove the mutineers from the encampment, and pursued them in their

retreat, cutting down a considerable number on the way. But as the chase was conducted by only a party of carabineers and riflemen, and as the night was very dark, the main body of the mutineers, consisting of the 3d light cavalry and 20th infantry, were enabled to make good their retreat to Delhi.

Such was the day of horror which prevailed over Meerut and its neighbourhood on this memorable 10th of May; the scene was now to be shifted to Delhi, where three regiments of native infantry and a battery of native artillery were stationed, but not a single company of British soldiers. At an early hour on the morning of the 11th a handful of horsemen, not above thirty or forty in number, came galloping in headlong speed to the city, though their approach excited no alarm. But they were an advanced party of the light cavalry, who had fled from Meerut; and they were the harbingers of the atrocities that were to follow, and the chief actors in their commission. They rushed in at the Calcutta Gate unchallenged, and had no sooner entered the city than, raising the cry of "*Deen, deen,*" their shout equally for a battle-charge or a massacre, they attacked and cut down every European they met in their way. The military cantonment was about two miles distant, and from this place, in consequence of a notice sent to the brigadier, the 54th native regiment with two guns were sent to quell the mutiny. They steadily marched to the city and promptly entered by the Cashmere Gate; but here the mask was dropped; for no sooner did the insurgent body of light cavalry approach than the sepoys withdrew from their officers, leaving the latter exposed to the fierce horsemen, who came upon them at full gallop, and shot them down with their pistols. After this the murderers and sepoys fraternized, and as the main body from the retreat of Meerut continued to pour in, Delhi was now in possession of the rebels—nothing remained to the British but the powder magazine, with two officers and three or four sub-alterns in charge of it. But such as it was, it was the only refuge left to the British dominion in Delhi; and while the work of murder was going on within the city, where the shameful atrocities of Meerut were exceeded, not only upon strong men, but helpless women and unoffending children, the rebels assailed the magazine with their whole united force. The place was gallantly held by the handful within, and the first attacks repelled by volleys of grape; but thousands still pressed forward, and scaling ladders were applied, so that the walls were on the point of being won. But calculating upon this chance, Lieutenant Willoughby, who was in charge of the magazine, had laid a train to that

department which contained the gunpowder; it was fired at his signal; and instantly the building, with hundreds of sepoy, were sent flying into the air. During the smoke and confusion the few defenders managed to escape, with the exception of the gallant Willoughby, who, scorched, blackened, and all but killed by the explosion, succeeded in reaching Meerut, but only to die soon after. While this hasty siege had been going on, such of the British residents, both gentlemen and ladies, as had escaped the first onset of the murderers, endeavoured to find a rallying point, for either shelter or an honourable death, and the greater part repaired to the Flagstaff Tower, in front of the cantonments, where a company of the 38th native infantry and two guns were stationed. The tower itself was strongly built, and might have resisted an attack, while several officers of the 38th had still hope that their soldiers might be recalled to a sense of duty. But at a quarter before four o'clock in the afternoon, while they were remonstrating with them, a glare was suddenly seen in the distance; it was the explosion of the magazine in the city; and as if it had been a signal gun to action, the sepoy rushed to their arms, and the Flagstaff Tower, no longer a safe place of shelter, had to be abandoned by its inmates, who retreated, some to Kernoul, and others to Meerut. Another attempt was made to hold a small fortified bastion called the Main-guard, within the Cashmere Gate, that was soon filled not only with men, but with women and children, and reinforcements were sent for from the cantonments; but at five o'clock these treacherous guards, on whom they had depended, suddenly opened a fire upon them, and commenced a massacre from which only a few escaped. Even the palace, to which many of the Europeans fled, was no protection. There sat the old titular sovereign, weighed down but not softened by the load of more than fourscore years; there, too, were his sons, to give active spirit to his relentless apathy, and encourage the murders that were perpetrated in his name; and all who fled to its courts in the vain hope of safety, or were allured thither by promises of protection, were there murdered, not only, as was alleged, by the express commands of the princes, but even in their very presence. Within a day or two not a British resident was left alive in Delhi.

While the conflagration was thus kindled in which our whole Indian empire was so soon to be enveloped, the electric wires which extended across Hindoostan from Calcutta to Lahore, with branch lines to the principal military and civil stations, were in active operation. On the 11th of May, a telegram announced to the authorities at Lahore the revolt of the previous day at Meerut, and these news were followed on the 12th by an account of the massacres and occupation of Delhi. When the tidings arrived Sir

THE FLAGSTAFF TOWER, DELHI - From a photograph

John Lawrence, the chief commissioner of the Punjab, was absent at Rawal Pindee; but the judicial commissioner, Mr. Montgomery, at this crisis fortunately assumed the direction of affairs, and promptly repaired to Meean Meer, the military cantonment of which was six miles distant. It was well that he did so, for at this station, where there were three native regiments of infantry and one of cavalry, with the 81st British regiment and some artillery, the sepoy had matured a plot to seize the fort at Lahore, break open the jail, and massacre all the Europeans. Their design was discovered, and measures were concerted between Mr. Montgomery and Brigadier Corbett, the commander at Meean Meer, to defeat it. On that evening a hall was to be given by the residents to the officers of the 81st, and to lull suspicion the ball was allowed to go on. But on the next morning the troops were drawn up on parade, ostensibly to hear a general order read; the five companies of the 81st, with their artillery, were stationed in the rear of the native regiments; and the latter, after a few sentences addressed to them, were commanded to pile arms. The sepoy for a moment hesitated: but they found that twelve guns were pointed at them loaded to the muzzle with grape-shot; that at a

single word of command, the lighted matches would be applied; and slowly and moodily they yielded to the necessity, and piled their arms, which were instantly removed in carts by the European soldiers.

The rapid action of the telegraphic wires was equally effectual in other quarters. At Ferozepore, south of the Sutlej, was a very large magazine of military stores; but the 45th native regiment of infantry, which was stationed at this place, had put themselves in communication with the rebels of Meean Meer, and agreed to act with them in the revolt. But on the same day (the 13th), when Brigadier Jones was advertised of the proceedings at Delhi, he quietly moved the native troops out of their entrenchments, and filled their place with a detachment of the 61st British infantry, and twelve pieces of cannon. Thus finding themselves suspected, the sepoys endeavoured to effect their purpose by open violence, and to win back the entrenchments by scaling-ladders, with which they had been previously furnished; but their attempt was repelled and the magazine saved. On the same eventful day, also, when the report of the disarming of the rebels at Lahore was transmitted to Peshawer, the principal officers of that quarter decided upon the formation of a moveable column, whose head-quarters were to be at Jhelum, and which was to "move on every point of the Punjab where open mutiny required to be put down by force." By these decisive proceedings the most important limb of the conspiracy was lopped off, and the best of its strength paralyzed. It was from the Punjab that the greatest danger was apprehended, both from the military spirit of the Sikhs, and the recentness of their subjugation, which still rankled in their memories. Other less important attempts at mutiny, which were on the eve of breaking out in other parts of the country, were either suppressed or abandoned. The next movement on the part of the British government was to be the recovery of Delhi, for which the securing of the Punjab was a necessary step; and accordingly, Sir John Lawrence, Mr. Montgomery, and the other officers in that quarter, bestirred themselves in raising fresh troops, Mooltanese, Sikhs, and men of the hill tribes, who had not been infected by the mutiny, and were ready to serve against any power on the inducements of good pay and plunder. At the same time, Lord Canning, the Governor-general of India, recalled the troops stationed in Persia, and sent for reinforcements from Bombay and Madras, from Burmah and Ceylon, from the Eastern Settlements and the Mauritius, and above all, from England, to put down a rebellion in which so many kingdoms were united, and to maintain which so many armies were in the field.

The commander-in-chief in India during these proceedings of the terrible outburst, was General the Honourable George Anson. He was at Simla when they commenced, having retired thither to avoid the heat of the plains; but as soon as the alarm reached him he proceeded to Umballa, where he collected as many troops as could be mustered, and proceeded towards Delhi. But he died at Kurnool, from an attack of cholera, on the 27th of May. He was succeeded in the command by Major-general Reed, who was worn out with age and sickness, so that this new commander-in-chief was obliged to devolve his charge upon Major-general Sir Henry Bernard, at Alleepore, on the 8th of June, and when he was within a single march of Delhi. Such were the effects of succession by the rule of seniority at a season when the prime of strength, activity, and promptitude was loudly and suddenly called for. The main body under Reed, which was joined to Bernard's own forces, was still further increased by Brigadier-general Wilson, who had marched up from Meerut to join them, defeating on his way in two attacks a strong body of the Delhi insurgents, who had attempted to intercept him, and capturing twenty-six of their guns; and on the 8th, a little after midnight, General Bernard advanced from Alleepore, and found the enemy awaiting him in a strongly fortified position at Badulee Ke Serai. His light artillery could make no impression against the heavy cannon of the rebels; but they were driven from their entrenchments by a gallant bayonet charge of the 75th regiment, and they fled, leaving their guns behind them. Having thus far cleared the way, the British army advanced to the attack upon Delhi; and for this purpose General Bernard divided his force into two columns, one of which, under the command of General Wilson, advanced upon the city along the main trunk road, while the other, headed by himself, proceeded through the cantonments which the rebels had burned and destroyed, and upon a ridge beyond which he found them posted in a strong position, well defended with artillery. In this, as on other occasions throughout the war, they were turning the lessons they had learned against their instructors; but it was merely as humble imitators, and as schoolboys in rebellion against their teachers: the genius of the master-spirit to strike out new paths, or even to follow up the old to their highest result, was equally wanting among them, and hence the disadvantage under which they constantly laboured, notwithstanding their overwhelming numbers and vast resources. Their position was taken in flank and rear, and carried by a rapid flank movement to the left on the part of General Bernard, and the rebels, abandoning their guns, were fain to take to flight, while

General Wilson's column pressing forward, over high walls and through gardens, drove the fugitives back into the city. The British troops having then re-united, established themselves before Delhi in a camp about two miles to the north of the city, with the old cantonments in their front, the river Jumna on their left, and a canal in their rear. Here upon ground high and rocky, and admirably suited for the siege, they were obliged to stand on the defensive for months,

BENARES from the River —From an original drawing by T. Longcroft, Esq.

owing to the smallness of their numbers, and the immense force of the rebel sepoys within the city. The entire amount of the European army who thus established themselves upon blockade before Delhi did not exceed 3000 bayonets, with a detachment of Ghoorkas, who during these encounters aided the British, and served them with admirable courage and fidelity.

During the course of these events that led to the siege of Delhi, the instances of revolt in the several portions of our Indian empire continued to multiply in still closer succession, but to these, important though they were, we can only devote a brief notice. At Futtehghur it was thought advisable, when the rebellion had approached the neighbourhood, to send off the ladies and the children for safety to Cawnpore, and they were embarked in boats upon the Ganges, when, on hearing false reports of the safety that was still to be enjoyed at Futtehghur, a considerable part of them were tempted to return. Here, however, the mutiny broke out on the 18th of June; the fort in which the Europeans had taken refuge was attacked, and, after a desperate but fruitless resistance, its inmates, to the number of 100, including women and children, embarked on the Ganges on the 4th of July, soon after midnight, but were fired upon from the banks by the sepoys; and in consequence of the stranding of one of

the two boats, nearly all on board were killed or drowned, while those who escaped landed at Bhittoor, only to be murdered by Nana Sahib, who had his residence there. At Allahabad, where the mutiny broke out in the beginning of June, the circumstances that accompanied it were still more atrocious, for there the European officers, to the number of fourteen, were butchered on the parade ground by their own sepoy soldiers, the military station was destroyed by fire, and for several days the city was wholly given up to plunder and havoc, in which 100 Europeans were killed. This state of outrage continued until troops were sent up from Benares, by whom the place was recovered, and a severe chastisement inflicted on the rebels. A similar outbreak took place at Jhansi in Bundelcund on the 4th of June, where such of the British residents as could not make their escape from the town retired into the fort, determined to sell their lives as dear as possible. Although they were only fifty-five, including women and children, they maintained the defence four days under an incessant fire of cannon and musketry, and only surrendered on the promise that all their lives should be spared. But no sooner had the rebels got possession of the fort than they violated their promises, and put all their prisoners to the sword. On the 3d of June the revolt broke out at Azim-

ghur, nearly opposite to Benares, but accompanied with such circumstances of forbearance as to make this act, as compared with the other outbreaks, almost seem a virtue; for although the mutineers plundered an escort conveying treasure to Benares, they formed a square with the officers within to protect their lives, and brought carriages for the safe conveyance of the women and children, whom they actually escorted ten miles on the road to Guzeepore! At Benares, where a rebellious *emeute* commenced as soon as the news of the outbreak at Azimghur arrived, a small company of 200 British soldiers maintained themselves against nearly eight times that number of Sikhs and sepoy who suddenly rose upon them, and held their position in the mint until British reinforcements were sent to their aid, and Benares, the Athens of Brahminical learning, recovered from the revolters. It is gratifying to add, that while this conflict at Benares was at the hottest, seventy Sikh soldiers who had been placed in guard of the government treasury, amounting to six lacs of rupees, defended their trust to the last, and restored it entire to our troops when the insurrection was quelled. This rebellion, which had nerved the most timid to such deeds of daring and endurance on the part of the Europeans as will form a fruitful theme

for future Indian story, had also its natural effect in hardening the feelings to the stern modes of suppression and retribution which had to be adopted, and caused deeds to be regarded with toleration which, at other seasons, could not even have been heard of without a shudder. Writing on the 29th of June, a British resident mentions the permanent establishment of the gibbet at Benares, and adds—"Scarcely a day passes without some poor wretches being hurled into eternity. It is horrible, very horrible! To think of it is enough to make one's blood run cold; but such is the state of things here that even fine delicate ladies may be heard expressing their joy at the rigour with which the miscreants are dealt with."

When the rebellion commenced it was of the utmost importance to insure the safety of Lucknow, the capital of the lately annexed and still discontented kingdom of Oude, containing about 700,000 inhabitants. Accordingly, after the 3d of May, Sir Henry Lawrence, who was acting as chief commissioner there in the absence of Sir James Outram, made active preparations for the defence of the residency; and among other measures, he repaired the Muchee Bhawun, an outlying citadel opposite the stone bridge across the Goomtee river, and considered as the key

THE RESIDENCY, LUCKNOW — From a view in the Illustrated London News

to Lucknow. The native force at Lucknow consisted of more than 4000 men, having about sixty European officers: the British troops did not number in all 1000. Here the mutiny, after seven or eight weeks of indignant threats and murmurings, broke out on the evening of the 30th of May, at the military cantonments which were at some distance on the north side of the river Goomtee, and the commencement was with the usual deeds of violence: the *sepoys* burned down some of the buildings, and fired into the mess-

room of the officers, in consequence of which two were shot dead; but on bringing up a part of the 32d regiment and the artillery, the rebels, after some loss, forsook the cantonments, and retreated towards Delhi. It was merely the first murmur of the storm that was to gather round Lucknow; and aware of this, Sir Henry Lawrence redoubled his preparations for the strengthening of the defences, and multiplying the means of resistance. The most active of the rebellious emissaries were hanged on a gallows erected in

front of the Muchee Bhawun; two members of the royal family of Delhi, and a brother of the ex-king, of Oude, were secured and imprisoned in that fortress; and thousands of coolies were employed with spade and pickaxe in repairing batteries, stockades, and trenches. Well might there be stir and bustle, considering the importance of the place, and the number of civilians and the helpless who would have to be protected, as well as Lucknow itself, from an infuriated and merciless enemy. Everything available for war was brought within the residency, and among these were 200 guns without carriages, which were discovered in a garden, and which now bristled upon the walls and ramparts of the British defences. While thus employed, it was learned that a body of the rebels were advancing, and Sir Henry Lawrence, with 300 troops and a few guns, marched out on the 30th of June to oppose them, at the village of Chinhut, about eight miles from Lucknow. But the mutineers were so numerous that Sir Henry was defeated with serious loss, and in consequence of this disaster, it was found necessary to withdraw the British troops from the military cantonments to the residency. On the 1st of July orders were given to evacuate the place, and blow up the Muchee Bhawun. This was done accordingly, by which 240 barrels of gunpowder and 6,000,000 rounds of cartridges were lost, whether for attack or defence. The siege of the residency now commenced in earnest, and the defence made by the British is one of the most heroic episodes in the history of this disastrous rebellion. Hemmed in and all but overpowered, they continued their resistance with unabated constancy, notwithstanding their hopeless condition, and the disasters that multiplied upon them from day to day. On the 2d of July their brave commander, Sir Henry Lawrence, was mortally wounded by the explosion of a shell, and died on the 4th, after appointing Major Banks his successor, and Banks was killed by a musket-shot on the 21st. In this critical situation the siege of Lucknow was continued, while the heroic defenders procrastinated their resistance in the hope of relief, which was finally afforded, but not till after many delays and difficulties, which will fall to be mentioned in the course of our narrative.

In so complex an event as the Indian rebellion, it is difficult, especially within a narrow compass, to follow out the details of the different outbreaks, or even to comprise their names; and hitherto we have been obliged to present only the chief of them, as specimens of the whole. By the end of June the native troops had mutinied at twenty-two stations; and at two of these, we are told by the statements of this period, the rebellion had been signalized by the

massacre of women and children. Of these stations, one of the most important in the history of this rebellion was Cawnpore. This town, situated on the right bank of the Ganges, where the river is about a mile in breadth, is 115 miles north-west of Allahabad, and fifty miles distant from Lucknow, on the opposite side, and is there connected with the Lucknow road by a bridge of boats. The town itself, though large, is mean-looking and dirty, but being one of our principal military stations, its cantonments extended along the right bank of the Ganges nearly seven miles, forming in themselves a town of great size and very imposing appearance. About ten miles higher up the river is Bhittoor, the residence of Nana Sahib, a miscreant whose name has constituted the foulest blot of this otherwise foul rebellion, and whose memory will therefore be permanently gibbeted in every future record of India. This man, a compound of cruelty, craft, and cowardice, was originally named Doondoo Punt, and was the son of a Brahmin from the Deccan; but having been adopted in the eastern fashion as a son, by Bajee Rao, the displaced Peishwa of Poonah, Nana Sahib, on the death of the latter in 1852, claimed as his lawful inheritance the continuation of the pension of eight lacs of rupees which had been allowed by the British government to the peishwa in consequence of his surrender. But this Hindoo form of succession, by which childless princes could have continued successors to their rights at pleasure, had been repudiated by the Company, and the native claims upon it, which had died out with the extinction of these sovereign pensionaries who had no son of their own blood, were disallowed. Thus Nana Sahib, although already possessed of more than £4,000,000 by the death of Bajee Rao, was disappointed in his avaricious hopes, and he nursed the spirit of revenge in his fortified palace at Bhittoor, where he was allowed to retain a body-guard of 200 soldiers. These circumstances, with his advantages of an English education, may account for the readiness with which he threw himself into the rebellion, the importance which he acquired in it as a leader, and the fiendish malignity with which he pursued it to the close.

The condition of Cawnpore at the commencement of the general outbreak was such as to cause serious alarm. The native troops in the cantonments consisted of three regiments of infantry and one of cavalry, mustering in all 3800 men, having 115 European officers, while the other British troops scarcely exceeded 170. Sir Hugh Massey Wheeler was in command of the station; and as the cantonments were on a plain, and without any defences, he proceeded to throw up a breastwork of earth round the hospital and

several smaller buildings, which served as a shelter for the Europeans when the storm arrived. And its coming was not long delayed. The native regiments rebelled, and went off in a body to Nana Sahib, who now found himself in a condition to take the field. He therefore immediately marched upon Cawnpore, plundered

the treasury, and took possession of the magazine, that unfortunately had not been destroyed; and thus furnished with the sinews of war, he commenced on the 7th of June the siege of the slight earthen fortress that had been hastily thrown up. It was a defence better suited to resist a temporary riot than to withstand an army

CAWNPORE.—From a drawing by W. Carpenter, jun., engraved in the Illustrated London News

or hold out against a siege, and the astonishment was that it could have resisted for a single day, more especially when of the 900 persons contained within it 590 were women, children, and non-combatants. But this brave garrison continued their resistance till the 24th, although the cannonade of the besiegers was heavy and their attacks frequent, and although the heat, fatigue, and privations endured in the defence were such as might have quelled the bravest. At last, when courage had done its utmost, and endurance been wasted out, the garrison was induced to surrender, on the promise that they should be allowed to retire in safety to Allahabad. They were escorted by the rebels to the river side, but there the greater part of the boats prepared ostensibly for their embarkation were drawn up too high in the mud to be launched; and during the delay occasioned by this obstacle, three guns were fired from the Nana's camp, as the signal for the massacre to begin. Volleys of musketry were immediately opened upon the boats already launched, when they had reached the middle of the river, and out of the whole flotilla of about forty boats which were embarked on the 27th of June, only one escaped so far as to get ten miles down the river, when it was overtaken, and all within it were killed or taken prisoners except four men, who made their escape by swimming. Of those who survived the massacre at the embarkation, and who were carried back to Cawnpore,

the men were murdered, while the women and children were reserved for a more lingering death. All this was accomplished by the orders and under the direction of Nana Sahib; and when the foul work was accomplished, he issued proclamations in which he gloried in the deed, and justified his proceedings, by the charges he attempted to fasten upon the British government and its functionaries.

In the meantime Allahabad, situated at the confluence of the Ganges and the Jumna, was the place of rendezvous for the British troops that could be sent from Calcutta, Benares, and other quarters, and Colonel Havelock, who had arrived at Calcutta from the Persian war, was raised to the rank of brigadier-general, and sent to the recovery of Cawnpore and the relief of the garrison in Lucknow. This good and gallant veteran, who had entered the army in 1815, and who, notwithstanding his worth, had served twenty-three years before he attained the rank of captain, was now to exhibit, in one short and final campaign, such talents as might have won, and which now helped to recover, our Indian empire to its former rule. He arrived at Allahabad on the 30th of June, and set out from this place by a forced march under a burning sun, to attack the enemy. He was joined on the way by a body of troops under Major Renaud, which raised his force to 1400 British and nearly 600 native soldiers, with eight guns. On the morn-

ing of the 11th of July he found the rebels, to the number of 3500, strongly entrenched at Futtehpoor, having twelve pieces of cannon, with which they opened fire upon the British as they advanced. But their ardour was quickly damped by discharges of Enfield rifles, which killed them from a distance, and with a certainty, on which they had not calculated; they were speedily put to the rout, and they fled back to Cawnpore, leaving behind them their ammunition and baggage, and all their guns. This victory was won without the loss of a single European killed, but twelve were struck down during the fight by *coup-de-soleil*, for they had made a forced march of nearly twenty miles before this four hours' engagement commenced. The march upon Cawnpore was resumed, but on the 15th the victors were twice encountered by the rebels, first at the village of Aong, and afterwards at the bridge over the Pandoo Nuddee, eight miles from Cawnpore. In both engagements the revolted sepoys were completely routed, and Havelock pressed forward with the relief of Cawnpore all but within his grasp, when one of those atrocities was committed which are of unusual occurrence even in the wars of rebels and savages. When Nana Sahib learned that the British had won the bridge over the Pandoo Nuddee, and were advancing upon him by a rapid march, he resolved to evacuate Cawnpore; but to revenge himself upon the victors, by defeating the purpose of their coming, he gave orders that all the women and children whom he had imprisoned should be murdered. The infernal command was so faithfully executed by the ruffians who followed him, that not one woman or child was spared—all were mercilessly murdered, and their bodies thrown into a deep well by command of the Nana. After this atrocious deed, which was consummated on the 17th, he blew up the magazine at Cawnpore, and fled to his fortress at Bhitoor. In the meantime, the advance of General Havelock was retarded by a rebel army of 5000 men posted behind some villages in front of Cawnpore; but by a few skilful manœuvres, and the gallant daring of the 78th Highlanders, the enemy, although so greatly superior in numbers, and notwithstanding their desperate attempts to rally, were driven at every point from their positions and guns, and sent fleeing in wild confusion. The British entered Cawnpore in triumph—but where were the fruits of their victories and toils? They found nothing but the slaughter-house, on the walls of which the blood of the murdered was still warm—the well in which their limbs were still quivering with the recent death-agony. It was a sight over which the brave conquerors wept like women, until their tears were dried up by the burning desire of vengeance. Wherever a rebel was caught,

unless he could prove his innocence of the deed, he was instantly hanged. As for the chief rebels, they were compelled, previously, to cleanse a certain portion of the pool of blood, that was still two inches deep, where the murders had taken place—for to touch blood was, with high-caste natives, to incur damnation, however plentifully they might cause it to be shed—and when they shrank back in abhorrence, the lash of the provost-marshal drove them forward to the task. "No one," writes Havelock indignantly, "who has witnessed the scenes of murder, mutilation, and massacre, can ever listen to the word 'mercy' as applied to these fiends. The well of mutilated bodies—alas! containing upwards of 200 women and children—I have had decently covered in and built up as one large grave." And fearful would have been the doom of the chief offender if he had but ventured to wait the arrival of the British at Bhitoor. But Nana Sahib, the murderer of women and children, had performed a consistent part by running away from his strongly fortified palace, and in company of his numerous cut-throats, although they mustered 5000 men, with whom he might have made a decisive stand. On the 19th Bhitoor was occupied by the British; the evacuated fortress was destroyed, and thirteen guns found in it were carried away.

The relief of Lucknow was the next task to be attempted, and leaving General Neill in command at Cawnpore, Havelock crossed the Ganges into Oude, and resumed an exhausting march at the height of the rainy season, through an overflowed country, and under the heat of a withering sun. On the 29th of July he was confronted by a rebel army near the town of Unao. Their position was truly formidable, for their right was protected by a swamp that could neither be forced nor turned, their advance was drawn up in a garden inclosure, which had purposely or accidentally assumed the form of a bastion, while the rest of their forces were posted in or behind a village, the houses of which were loop-holed. The flooded state of the country on the British right, and the swamp on their left, made an attack upon the enemy's front unavoidable. It was gallantly made, although at every disadvantage, and with complete success: the village was set on fire, and its defenders driven out; and by a series of skilful movements on a narrow passage between the village and the town of Unao, the enemy, who were rallied, and drawn up in line upon the plain, were driven from their batteries, deprived of their guns, and put utterly to the rout. After a brief rest of only three hours, that was more than needful by the fatigue of such a victory, the British advanced against Basherat Gunge, a walled town on the road to Lucknow, with wet ditches, and provided with

every means of a strong resistance. But in spite of these obstacles, and a heavy cannonade, the earthworks were scaled, the entrenchments broken through, and the town captured. Here, however, General Havelock was obliged to pause in his hitherto victorious progress, for he was encumbered with his sick and wounded, and cholera had broken out in his little army. He therefore fell back upon Mungalwar, about six miles from the Ganges, to recruit his troops and wait for reinforcements, for he declared that to advance upon Lucknow in their present condition was to march to certain destruction. On the 5th of August, hearing that the enemy had again rallied at Buserat Gunge, he advanced against them and was again victorious, turning them both in front and flank, and driving them off the field with great slaughter. He then made preparations to return to Cawnpore for reinforcements, and had already sent his baggage across the Ganges, when he heard that the enemy had rallied for a third time at Buserat Gunge, to abide yet another trial upon that fated spot. With 4000 men and six guns, they now varied their mode of defence, but in vain; for Havelock, by a correspondent change in his attack, foiled all their arrangements, captured their redoubts, guns, and batteries, and drove them before him into a retreat that was soon changed into flight. Wearied and worn out with so many successes, as well as wounds, sickness, and incessant action under a burning sun, the army now recrossed the river and returned to Cawnpore, but not to rest, for they were almost immediately dragged again into the field by a strong body of the enemy who had mustered at Bhitoor, and were threatening to descend upon Cawnpore. Having united his force to that of General Neill, Havelock, on the 16th of August, advanced upon the rebels, who consisted of 4000 of the mutineers, joined with a portion of Nana Sahib's own troops, and who occupied a position which General Havelock described as one of the strongest he had ever seen. But after an hour of hard fighting, the rebels were driven from their almost impregnable defences with heavy loss, and compelled to retreat to Seorajpore, and if Havelock had possessed a few cavalry, not one of the enemy would have reached that place. Seldom, if ever, had so small an army made such marches and obtained so many victories in so short a space of time. Between the 12th of July and the 17th of August it had fought nine battles, and been successful in them all. Reduced by sickness and the sword to 700 men, they now took up their quarters at Cawnpore, to wait the arrival of reinforcements under General Sir James Outram, without which it was impossible for them to march to the relief of Lucknow.

But leaving Lucknow for the present, we must now turn our attention to the important siege of Delhi, before which the small force under General Bernard had established itself on the 8th of June. The first purpose of the besiegers was merely to maintain their ground and hold the rebels of the city in check, until the arrival of reinforcements should enable them to become the assailants, and they successfully resisted the numerous attacks that continued to be made upon them from the city. Reinforcements, indeed, they continued to receive, but this advantage was more than counterbalanced by the troops of rebels that poured into Delhi, now the great centre and stronghold of the revolt. On the 5th of July General Bernard died of cholera, and was succeeded in the command by General Reed, who on the 16th was obliged from ill health to resign office to Brigadier Wilson. By the middle of the month the besieging army had been raised to 9000 men, of whom half were Europeans, and in every encounter they succeeded in repelling the enemy with heavy loss. One of these encounters was with a powerful body of the rebels, who had moved out of Delhi on the 25th of August, towards Nujifghur, about twenty miles off, with the intention of crossing the canal at that place, and attacking the British camp in the rear. Aware of this design, General Nicholson, at the head of 3000 men, made a day's rapid march, came up with them near Nujifghur, and attacked them with such spirit that he drove them across the canal with a single charge, capturing all their artillery, and blowing up the bridge, after which he returned in triumph to the camp with little loss. This important success, with the arrival of fresh reinforcements of native soldiers, and a siege train from Meerut, on the 4th of September, encouraged the British to turn the blockade into an active siege, which was commenced on the 11th, as soon as the batteries were completed. And it was no easy undertaking; for this ancient city of the Moguls and chief capital of India was strong in its fortifications, that extended about seven miles in circumference, and included an area of about three square miles, while it was defended by a numerous army that expected little mercy, and fought with the courage of despair.

After a heavy bombardment of two days from fifty-four siege guns, by which some of the best defences of Delhi were shattered and their cannon silenced, the assault was ordered on the morning of the 14th. While no quarter was to be given to the mutineers, no harm was to be inflicted upon women and children, and the soldiers were warned of the necessity of keeping closely together, instead of straggling from their columns. In the advance of the four columns of attack it was neces-

sary to blow open the Cashmere Gate, to give an entrance to the city, and this hazardous deed was performed, at the almost certain risk of death, by a gallant handful who devoted themselves to the work. Through the gap, the first, second, and third columns rushed and formed within the ruined gate, but as yet the outer works only were won; a fierce resistance was maintained from the interior defences, and from the city, which retarded the advance of the besiegers for several days, and it was not till the 20th that the whole external defences of Delhi were in our possession, and the gate of the strongly fortified palace blown in. And now all resistance was at an end. The old king fled from his palace, the inhabitants from the city, and the rebel soldiers from their bastions and ramparts—all that could escape were fleeing in confused crowds, some across the bridge of boats into the Doab country, some down the right bank of the Jumna, and some to the bottom of the Ganges and the Jumna, in their blind hurry to escape the vengeance of the conquerors. Thus Delhi was won, but not without a loss to the besiegers of 1178 in killed and wounded on the first day of assault, and 177 in the intervening days to the 20th

But before the hopes of the mutineers could be effectually crushed, it was necessary to obtain possession of the phantom of rebel sovereignty, the King of Delhi, and inflict justice upon his murderous family, and attempts were next made to discover the hiding-places in which they lay

THE PALACE OF THE KING, DELHI
From the Hon. C. B. Hardinge's Recollections of India.

concealed Lieutenant Hodson, who was commissioned for the purpose, soon found the old man, who could not flee far, and brought him back to Delhi. Learning that two of the king's sons had concealed themselves in the tomb of the Mogul sovereign Humaïoon, a huge pile of buildings at some distance from Delhi, Lieu-

THE TOMB OF HUMAÏOON, NEAR DELHI — From an oriental drawing in the East India House.

tenant Hodson on the following morning repaired to the place of refuge, with a company of 100 soldiers. He sent two natives into this palace of the dead, to persuade the princes to come forth; and as soon as they appeared they

were thrust into a carriage, and whirled off under a small guard towards Delhi. Lieutenant Hodson at the head of a few soldiers then entered the building, and there found above 5000 fugitives variously armed, whom he commanded

to throw down their weapons and surrender—with which order, being awed by his bold bearing, they instantly complied. He then returned to the city, but not far from the walls he found the carriage of the two princes, surrounded by a mob who were evidently attempting their rescue. Resolving that such offenders should not escape, Lieutenant Hodson dashed through the crowd, and exclaimed, “These are the men who have not only rebelled against the government, but ordered and witnessed the massacre and shameful exposure of innocent women and children; and thus, therefore, the government punishes such traitors taken in open resistance.” With these words he shot them both on the spot. The effect upon the mob was instantaneous,—electric; they submitted to the doom, while some Mahometans exclaimed aloud, “Well and rightly done! Their crime has met with its just penalty. These were they who gave the signal for the death of helpless women and children, and now a righteous judgment has fallen on them. Allah akbar!” The bodies were carried into Delhi, and thrown out in front of the Kotwallee, on the very spot where the blood of their victims had been shed; and thus, to the dullest of Asiatic perceptions, a display was given of a just and sure retribution, and of the full power of Britain to inflict it on all offenders. Soon afterwards, two others of the king’s sons, who had been equally guilty, were tried before a military commission, condemned to death, and executed. By these terrible acts of justice all hope of the restoration of the Mogul dynasty, or even the pretext of it, which the mutineers had held out,

was utterly destroyed. The last act of the recovery of Delhi was to appoint a flying column for the pursuit of the fugitives on the right bank of the Jumna, and into the Doab, and this was done on the 23d of September, the regiments that composed this force being known during the rest of the war under the name of *Greathed’s* column, from that of Colonel *Greathed*, its commander.

In this important capture of Delhi, it is worthy of note that the deed **was achieved** before a single soldier of the **many thousands** from Britain sent out for the recovery of India had landed upon its shores. What might not, therefore, be anticipated for the complete re-establishment of the British dominion when these troops had arrived? Another gratifying circumstance was the faithful devoted zeal of those native soldiers who remained true to their colours during all the weary months of siege, and the hearty co-operation of the Rajah of Putteeala, and Jheend Rajah, the former in quelling the revolt of Umballa, and the latter in the operations of the siege. Their services, as well as those of several khans, showed that all India was not against us—that there were many who could rightly appreciate the benefits of British rule, and maintain it in the field even against their own misguided countrymen. They were thanked by the governor-general in council, and in the proclamation delivered afterwards it was stated, “These true-hearted chiefs, faithful to their engagements, have shown trust in the power, honour, and friendship of the British government, and they will not repent it.”

CHAPTER XXII.—CIVIL AND MILITARY HISTORY.—A.D. 1857—1858.

VICTORIA.

Condition of the British garrison in Lucknow—Their difficulties and disasters during the siege—Their courageous resistance—Their hope of relief disappointed—General Havelock advances to their aid—His successful entrance into Lucknow—He reinforces the garrison and enables it to hold out—Sir Colin Campbell's masterly advance to the relief of Lucknow—His entrance into the residency—He extricates the garrison—Death of General Havelock—General Windham's battle with the rebels at Cawnpore—His troops driven back—They are relieved by Sir Colin Campbell—Jung Bahadoor joins the British—Diminished range of the rebellion—Sir Colin Campbell's capture of Lucknow—Excesses of the native auxiliaries at the capture—Campaign of Sir Hugh Rose in Central India—His victories and captures—His attack on Jhansi—Jhansi taken—Desperate resistance of the fort and city—Further victories of Sir Hugh Rose—Tantia Topse and the Ranees of Jhansi leaders of the rebels in Oude—Oude disarmed—Severe policy of the governor-general for the subjugation of the province—The commissioner of Oude remonstrates against it—Its condemnation by the East India Company—Resolution of the British government to substitute the rule of the crown for that of the Company over India—The resolution introduced into parliament—Protest of the Company against the proposed change—Difficulties opposed to it in parliament—Lord John Russell's fortunate interposition—Successful progress of the measure—A sudden arrest upon it—Lord Ellenborough in consequence resigns office—The India bill at length passed—Preamble of the bill transferring the government of India to the crown—Successful continuation of the war in India—General pacification of the country promoted by the transference of rule—Royal proclamation to the natives of India—Lenient conditions offered by it—Difficulties in the pacification of Oude—Resistance of the ex Queen of Oude—The rebellion in Oude quelled by Lord Clyde—The revolt of India subdued.

AFTER the capture of Delhi, the great object of interest was the relief of the garrison of Lucknow, whose condition was every day becoming more perilous. Already they had endured a long and harassing siege, in which active courage and patient endurance had been equally tried to the utmost; and upon any day, or at any hour, no alternative might be left to them but surrender. We have already mentioned the diligence with which the half-ruined building called the Muchee Bhawun had been repaired and fortified, and how necessary it was found, almost immediately after, to undo the work, by evacuating and blowing up the fortress. After the disasters of the 30th of June, Sir Henry Lawrence, the commissioner, had found that it would be impossible to maintain both the Bhawun and the residency, and that to leave the former in the hands of the enemy would be to give them the means of commanding the latter defences: he therefore destroyed it, and withdrew on the 1st of July, confining himself exclusively to the residency, in the hope of maintaining it until relief arrived. But on the following day he was mortally wounded by the fragment of a shell that alighted in the chamber where he was reclining on his bed, worn out with anxiety and sickness. Major Banks, whom he appointed his successor, was equally unfortunate, being killed by a musket-bullet on the 21st of July. Deprived successively of their two brave

leaders, the situation of the little garrison was perilous in the extreme. The neighbouring mosques and noblemen's houses, which Sir Henry Lawrence, from a regard to religious buildings and private property, had spared, although he was urged to destroy them, were manned by the enemy's sharpshooters, who kept up an incessant fire; and as they were within pistol-shot of the British barricades, every part of the residency was exposed to the muskets of about 8000 men, who discharged their volleys wherever a gap was found, or a living object was visible. Thus even the women and the children were comparatively under fire in the recesses of the innermost apartments, and the sick in the hospitals were exposed to the same mischievous annoyance, by which several lives were lost. Nothing could exceed the pertinacity of the enemy, who surrounded the British post with batteries mounting from twenty to twenty-five guns, which were protected by barricades that defied every attempt to silence them by musketry, and who constructed mines under the principal defences of the residency, by which its defenders were constantly in danger of being blown into the air. Every art of warfare which they had learned in the British service was adopted by the mutineers, who were confident in the thousands they could muster for the attack, and in the miserably limited means and numbers of those who resisted. But those who had such overwhelming odds to confront were

true to the long-established reputation of their countrymen; and never in our Indian wars were British valour and British indomitable resolution more conspicuous than in the defence which this small party maintained against such an ocean-tide of opposition at Lucknow. Exposed to incessant cannonade, and the fire of musketry, they never lost courage: kept on the alert by continual night alarms, in which, from the fewness of their numbers, all were obliged to be on the watch, they never allowed themselves to be surprised. To sleeplessness was added the nightly toil of moving heavy guns, repairing breaches, and other fatigue-duties; but every day found them awake, and ready for its active calls and dangers. When opportunity offered, they even assumed the aggressive, and in five sorties which they successively made, they spiked two of the enemy's

heaviest guns, and blew up several of the neighbouring houses, from which the fire had been especially dangerous. But wofully were their numbers thinned, not only by the casualties of such a defence, but by scanty and coarse provisions, which added small-pox and cholera to the list of their other calamities. And what the while of the heroines of Lucknow? They too have erected for themselves an imperishable record, and strong men became stronger at the spectacle of their unfearing, uncomplaining endurance. Many of them were made widows in the siege; and at the bedsides of the sick and the wounded, where every one was a Miss Nightingale, they found in active Christian duty the best-sources of Christian consolation and hope.

But human endurance, which in this instance seemed to be boundless, has its limits; and from

THE INTERIOR OF THE ALUMBAGH NEAR LUCKNOW —From Lieutenant Mechem's Siege of Lucknow

day to day many a wistful eye had looked into the far distance for the expected relief, only to be disappointed, while the messengers whom they sent out for tidings never returned. At length, on the twenty-sixth day of the siege, the garrison were cheered by a letter from Havelock's camp, informing them that the troops were on their march, and in five or six days would probably reach them. But six days elapsed, and no aid arrived. They did not learn until thirty-five long days had passed that the relieving force, after such strenuous efforts and signal victories, had been obliged to fall back upon Cawnpore. But their relief from Cawnpore was to issue at last, and not an hour later than the march could be commenced. At that city Sir James Outram, justly called by Napier the "Bayard of India," arrived on the 16th of September, with the reinforcements for which Havelock had been so anxiously waiting; and although, as superior officer and chief

commissioner of Oude, Sir James might have himself undertaken the relief of Lucknow, he chivalrously resigned the whole glory of the enterprise to General Havelock, who had already achieved such deeds in the attempt, offering to accompany him as a volunteer. Thus invested with a mission on which his generous heart was so keenly bent, Havelock crossed the Ganges at the head of 2500 men, among which were the gallant 78th Highlanders, to whom his previous victories were chiefly owing, and seventeen guns. The enemy, after retiring at his approach, attempted, on the 21st (September), to make a stand at Mungalwar, but after a four hours' fight they were defeated, and Havelock pressing forward, was within three miles of the residency of Lucknow, when on the 23d he found the enemy advantageously posted, with their left resting on the Alumbagh, an isolated building with gardens and inclosures, and their centre and right drawn

up behind a chain of hillocks. But the strategic skill and rapid movements of General Havelock, seconded as they were by the gallantry of Sir James Outram, were again successful; the enemy were defeated once more; and after halting his troops, that had marched three days in a heavy deluge of rain, and been scantily provisioned and badly lodged, the victorious commander effected his decisive advance upon the residency. What remained was a terrible march, along a road cut by trenches and crossed by palisades, with the houses loop-holed on either side of the way, and where progress was to be made at one step by detouring and the next by fighting, while night was fast coming on; but aware of the value of every moment, and dreading the consequences of delay to the besieged, whose danger was now at the climax, Havelock and Outram put themselves at the head of the 78th Highlanders and the Ferozepore regiment, with which they charged and surmounted every obstacle, entered the residency, and were welcomed by a long-drawn sigh of relief, that was followed by shouts of almost delirious triumph. Deliverance had reached the garrison—but through what a fiery furnace it had come to them! No wonder that Havelock himself looked back upon it with astonishment, accustomed as he was to dare all but impossibilities. "Our advance," he writes, "was through streets of flat-roofed, loop-holed houses, from which a perpetual fire was kept up, and thus each forming a separate fortress. To form an adequate idea of the obstacles overcome, reference must be made to the events that are known to have occurred at Buenos Ayres and Saragossa. I am filled with surprise at the success of the operation, which demanded the efforts of 10,000 good troops. The advantage gained has cost us dear. The killed, wounded, and missing, the latter being wounded soldiers, who, I much fear, some or all have fallen into the hands of a merciless foe, amounted, up to the evening of the 26th, to 535 officers and men." Among those who thus fell was the brave General Neill, a name distinguished in this unhappy war, who was killed on entering the gate leading to the Doolie Square. From the number of the fallen out of this small relieving force, an idea may be formed of the importance of the object at stake, and the earnestness of those who were engaged in the enterprise.

Though much had been done, the garrison of Lucknow by this last exploit had been reinforced but not relieved. A sufficiency of troops had arrived to lighten the labours of the overwearied defenders and insure their safety for the present, but not to withdraw them from the place around which the coil of siege, after the momentary interruption, was drawn as closely and strongly as

ever. Finding it impossible, therefore, to extricate the women, children, and non-combatants, General Havelock and his companions in arms

GENERAL SIR COLIN CAMPBELL.—From a photograph by Herbert Watkins.

resolved to remain with them and abide the brunt of conflict until General Sir Colin Campbell, the newly appointed commander-in-chief, should be able effectually to relieve them. This distinguished hero of the Crimean war had arrived at Calcutta from England on the 14th of August; but as he was obliged to wait the coming of reinforcements from home, it was not till the 9th of November that he was able to set out from Cawnpore for the effectual relief of Lucknow. Even then, important and difficult as was the task, his force amounted to only 4550 men and thirty-two guns. On the 12th he arrived at the Alumbagh, and there his difficulties commenced, as the residency was to be reached through the heart of the city, where every street, house, and wall was a fortress, a march along which would have been enough to have destroyed thrice the numbers he commanded. But he had been previously informed of all the localities of the city and suburbs, and the positions of the enemy, and he availed himself of this knowledge by making a detour to the right, as Havelock had done. It was effected with equal success, although against obstacles equally formidable; and, after a series of desperate skirmishes, he reached the residency on the 17th, his arrival being aided on the part of Havelock and the garrison by a sally, in which the enemy was routed and the way cleared for his entrance. And now to remove the women and children, the sick, wounded, and civilians, for he saw that the residency must be abandoned! This was a still more difficult task than to lead armed men into the place. But this also was suc-

cessfully accomplished. By a series of masterly feints Sir Colin distracted the attention of the enemy; and while he kept them massed together in the expectation of an immediate attack, he quietly removed the helpless during the afternoon and night of the 19th, along a line of posts which he formed on the left rear of his position, and conveyed them in safety to Dilkoosha, a palace belonging to the Kings of Oude, after which the troops of the garrison followed on the 22d, and all reached Dilkoosha in safety, without the loss of a man. In like manner the whole of the treasure and all the European guns were carried off in safety. So completely the while was the enemy deceived, that their fire was kept up on the old British positions many hours after they had been abandoned. Altogether it was one of the most masterly retreats under trying disadvantages which the history of modern warfare has on record. Only one event occurred to mar the joy of the rescued, and this was the death of the brave Havelock, who expired at Dilkoosha on the 24th, by an attack of dysentery, under which his enfeebled frame, worn out with such excessive exertions, rapidly sunk. Undistinguished during a long course of military service since 1815, except among his friends, who knew him to be a master of strategy in all its branches, he had no sooner attained a separate command, and found his right sphere of action, than he crowded within little more than two short months such a series of victories as would have sufficed for a lifetime, and made any commander illustrious. In that brief period he combined the rapidity of Napoleon with the caution and foresight of Wellington, and upon his own limited field was as successful as either, while the tidings of his victories, which reached home in rapid succession, made all men wonder who this new hero was, and why he had been neglected so long. The queen created him a baronet, but it was three days after he had expired at Dilkoosha, and thus the wreath that should have decked his brow could only be planted on his grave.

Sir Colin Campbell was now in full retreat to Cawnpore, where the ladies, children, and civilians, a helpless band of 2000 souls, might be left in safety before further military operations could be undertaken; and he had reached Bunnee on the evening of the 27th November, when he heard a heavy firing in the direction of Cawnpore, for which he could not account, as he had received no news from that quarter for several days. But there a desperate battle was going on, and the British arms were in danger. During the absence of Sir Colin, General Windham occupied the military cantonments which lay to the south of that city; but on learning that the Gwalior contingent

of rebels were advancing to attack it on the north, he marched on the 26th to encounter them before they could reach Cawnpore, and found them drawn up on the opposite bank of the Pandoo Nuddee, the bed of which river was at that time dry. The disparity between the two armies was alarming, for while General Windham's force consisted of only 1200 infantry, 100 cavalry, and eight guns, the rebels were about 25,000 men, well provided with artillery. They were gallantly charged, and their advanced troops were driven back; but on their main body coming up, General Windham retired his troops to the canal. On the following day the rebels commenced the attack with a heavy cannonade, that was kept up for five hours, under which the British were obliged to withdraw to their entrenchments after severe loss, while their tents and camp stores, which they were compelled to leave behind them, were burned by the enemy. It was this firing that arrested the attention of Sir Colin Campbell, and surmising that General Windham was attacked, he hurried forward to the rescue. On reaching the scene of conflict in the evening, he found the British shut up within their entrenchments, and the rebels in possession of the city. It was necessary to dislodge them; but before the attempt could be made, the helpless survivors of Lucknow under his charge had to be conveyed across the Ganges by a single bridge which the enemy had not destroyed, and it was not until the 30th that the last cart had crossed the bridge, while two or three days more were spent in having them safely forwarded to Allahabad. He was now in readiness for the fight; but his arrival had made the enemy cautious, and it was not until they had been reinforced by the rebels of Oude and the followers of Nana Sahib that they ventured, on the 6th of December, to make a decisive stand. But they were effectually beaten, with the loss of all their guns and ammunition, and wherever they attempted to rally they were met by British detachments, and so thoroughly routed and dispersed, that this Gwalior contingent as an army could no longer be found. Nor did Nana Sahib, who had sent reinforcements to the rebels, escape a merited chastisement; for troops were sent to Bhitoor who destroyed all his remaining property, discovered and seized his treasures which were concealed in the wells, and soon left him too poor to continue long his rebellion with any hope of success. While one powerful rebel chief was thus reduced to comparative helplessness, our government in India had obtained an effective ally in Maharajah Jung Bahadoor, the prime minister of the King of Nepal. This prince having offered his aid to the governor-general, which was gladly accepted, crossed the frontier with 10,000 Ghoorkas, among the most warlike

of the population of India, and in his advance he, on the Juanpore frontier, twice encountered and defeated a rebel army. He then, at the close of the year, established himself at Goruckpore, to check the rebels of Lucknow in any attempt they might make in an easterly direction after Sir Colin Campbell should have driven them from the city, an event which was anticipated as likely soon to take place. Indeed, all fear and foreboding as to the result of the Indian mutiny was now at an end. Reinforcements had been sent from Britain in such numbers that no native army could confront them successfully in the field; the British soldiers were confident in the valour and skill of their well-trying illustrious leader, while the rebels were so daunted by repeated defeats, that their courage and confidence were on the wane. The revolt was now in a great measure confined to Rohilcund, to the territory

between Agra and Allahabad, to Bundelcund, and to Oude, while the great metropolis of the insurrection after the fall of Delhi was the populous, warlike, and strongly-fortified city of Lucknow. To strike a mortal blow, therefore, at the head of the evil, by the final conquest of this place, was the aim of the commander-in-chief after he had effected the liberation of the garrison.

All being in readiness for this important enterprise, Sir Colin Campbell commenced operations by sending forward two regiments on the 1st of January, 1858, to prevent the rebels from destroying an iron suspension-bridge across the river Kallee Nuddee. He then commenced his own march two days after to Futteghur, where he remained till the 1st of February, restoring order in the disaffected districts of the Doab, after which he proceeded to Cawnpore, for the purpose of crossing the Ganges at that place; and to clear

CHUTTUR MUNZIL PALACE, LUCKNOW — From a photograph engraved in the Illustrated Times

his line of march, strong detachments were sent forward, by one of which, commanded by General Franks, a brilliant victory was gained over an army of rebels 21,000 strong, who were encountered and completely scattered at Badshahgunge, about two miles from Sultanpore. On the 5th of March Sir Colin was before Lucknow with his whole force collected, and his siege train brought up, the right of his line resting on Bibiapore and the Goomtee river, and his left stretching towards the Alumbagh. With such a force as was now arrayed against the devoted city, the issue could not long be doubtful. On the 9th the attack commenced, and by the 21st all the strong defences of Lucknow were stormed and won; the rebels were fleeing in every direction, and a scene followed such as only a rich eastern city could exhibit, when a large portion

of the victors are barbarians inflamed with the feelings of hatred, avarice, and revenge. It was now the hour of triumph for the Asiatic allies of the British, and they did not neglect the opportunity. "Those stately buildings," says an eye-witness, "which had never before been entered by European foot, except by a commissioner of Oude on a state day, were now open to the common soldier and to the poorest camp follower of our army. How their splendours vanished like snow in sunshine! The destruction around one, the shouting, the smashing noises, the yells of the Sikhs and natives, were oppressive." After a painful description of the spectacle, the writer adds, "It was late in the evening when we returned to camp, through roads thronged with at least 20,000 camp followers, all staggering under loads of plunder—

the most extraordinary and indescribable spectacle I ever beheld—coolies, syces, kitmutgars, dhooly-bearers, Sikhs, grass-cutters, a flood of men covered with clothing not their own, carrying on heads and shoulders looking-glasses, mirrors, pictures, brass pots, swords, firelocks, rich shawls, scarfs, embroidered dresses, all the 'loot' of ransacked palaces. The noise, the dust, the shouting, the excitement were almost beyond endurance. Lucknow was borne away piecemeal to camp, and the wild Ghoorikas and Sikhs, with open mouths and glaring eyes, burning with haste to get rich, were contending fiercely against the current, as they sought to get to the sources of such unexpected wealth." On the whole, it seems to have been but a renewal of the capture and sacking of Jerusalem, Babylon, or Nineveh, as they were exhibited nearly 3000 years ago, when war was comparatively young, and the passions of men at the wildest. How unfortunate it was for the British that the necessity of their position should have united them with such allies, and made them in some measure responsible for their deeds!

In noticing the leading events of this war, it would be unpardonable to omit the campaign that was carrying on in Central India by Sir Hugh Rose, at the head of the Malwah or Nerbudda field force of about 6000 men, of which 2500 were British. At the end of January Sir Hugh captured Ratghur, situated on a pear-shaped hill, and surrounded with precipices, except at the narrowest part, by which, however, the access was very difficult. Although one of the strongest forts in Central India, its difficulties were surmounted and the walls stormed in three days, and such of the rebels as escaped were obliged to use ropes to aid their descent down the rocks. He then advanced to the relief of Sangor, where an European garrison and about a hundred women and children had been closely besieged for more than half a year; and on his arrival the enemy were glad to raise the siege. Soon after, the Garakota fort, situated between the Giddaree and the Sonar rivers, yielded almost without a blow, although it was so strong that it might have withstood a siege for months against the whole assailing force. Sir Hugh Rose having thus dislodged the rebels from their most available defences, commenced at the end of February his march upon Jhansi, on the way to which there was a mountain-ridge with three passes, that formed the means of a military advance upon Jhansi. Judging that of these three Sir Hugh would select the pass of Narut, the most difficult of them all for his march, as the one least apt to be guarded, the rebels had barricaded and blocked it up with masses of rock, and stationed in it the Rajah of Banpore, with a

force of 8000 or 10,000 men. But Sir Hugh, making merely a feint of attack upon the Narut, threw his real advance on the 3d of March upon the pass of Nudinpore, where an entrance he knew was most practicable, although the enemy occupied it in considerable force. The rebel sepoys who lined it were driven from their shelters and through the gorge into the village of Nudinpore, which they had fortified, and where they attempted to make a final stand, but they were soon compelled to flee from it to the jungle; after this the forts of the passes were speedily taken, and Sir Hugh Rose was master of the whole country between Sangor and Jhansi, to the east of the Betwa river.

The attack of Jhansi itself was now the great object of enterprise. It was the richest city in Central India, and one of the most culpable in the massacres and plunders of the rebellion, so that there was scarcely a house in which there was not some booty that had been taken from the English. Its fortress also was strong, not only by its natural position, but the resources of art; and its walls, which were built of granite, from sixteen to twenty feet in thickness, were well embrasured for cannon and loop-holed for musketry, while the place was defended by a garrison of 12,000 men, headed by a fearless virago, the Ranees of Jhansi. Altogether, the siege was one of the most desperate undertakings of the war; but the capture of fort and city was certain to be followed by the downfall of the rebellion in Central India. Seven flying camps of cavalry were established round the city, which was about four miles and a half in circumference; and as the fort could only be breached from the south, where it was strongly fortified by a ditch, mound, and wall, batteries were erected against this quarter, and a heavy cannonade opened upon it on the 21st of March. But desperate was the resistance of the men of Jhansi, who were conscious of their crimes, and apprehensive of a just retribution. By the 30th of March the defences both of city and fort were dismantled by the British artillery, but as the ammunition of the besiegers was running short, they resolved to attempt Jhansi by escalade. The assault was made on the 2d of April, and the city was successfully entered by two storming columns, who fought their way through every obstacle until they met and were concentrated in the palace. "This was not effected," says Sir Hugh Rose in his graphic description of the siege, "without bloody, often hand-to-hand combats. One of the most remarkable of them was between detachments of her majesty's 85th regiment and 3d Europeans, and thirty or forty Velaitie sowars, the body-guard of the Ranees, in the palace stables under the fire of the fort. The

sowars, full of opium, defended their stables, firing with matchlocks and pistols from the windows and loop-holes, and cutting with their tulwars, and from behind the doors. When driven in they retreated behind their horses, still firing, or fighting with their swords in both hands, till they were shot or bayoneted, struggling even when dying on the ground to strike again. A party of them remained in a room off the stables, which were on fire, till they were half burned: their clothes in flames, they rushed out, hacking at their assailants, and guarding their heads with their shields." Such frantic deeds of despairing resistance, of which the foregoing is a specimen, were multiplied over the streets and buildings of Jhansi before it was taken; and it was well that there was nothing less than the utmost of British courage and firmness to confront them. When all was hopeless both for city and fortress, the Ranee gave the signal for flight, by mounting a gray horse, and making off with only four attendants, with a body of British cavalry in full pursuit; and on the night after, the rebels fled from the fort, leaving it wholly defenceless, but not until they had lost 5000 men in the siege and storm. The city was treated with more humanity than it had deserved or expected, and the British soldiers, after the storm had ceased, were to be seen everywhere sharing their rations of food with the wives and children of those who had been the murderers of their countrymen.

After the fall of Jhansi, the capture of Calpee was the next enterprise to be attempted, and Sir Hugh Rose, directing his march in this direction, encamped at Golowlie, on the Jumna, about three miles from Calpee, where he was attacked on the 22d of May by the rebels, who advanced upon him with great spirit and confidence; but after a hard fight their left wing gave way, and their whole army was put to the rout. On the following day he commenced an attack upon Calpee, in the form of a regular siege, expecting a stout resistance; but after firing a few shots, the enemy took fright and fled from the town, leaving it in the hands of the British, who there discovered a subterranean magazine containing an immense quantity of gunpowder and cannon, which had been stored for the maintenance of the rebellion. Besides these successes, other victories which had been gained by Generals Roberts and Whitlock made Sir Hugh Rose imagine that Central India was now completely cleared of the rebels, and that there would be no further occasion for the services of his troops in that quarter. This he announced to them in a farewell address, in which he complimented them on their gallant meritorious services during the arduous campaign. But his hopes were premature, for the war was not yet ended: the leader of the rebels

at Calpee, whose name was Tantia Topee, had retreated before the fall of the town, and in him the British found the ablest and most impracticable of all the chiefs of the rebellion. He retired to Gwalior, the capital of Scindia, whose troops he persuaded to fraternize with the rebels; and when the fugitives of Calpee fled, they joined these new allies, and drove Scindia from his capital to the British cantonments at Agra, after which they placed Rao Sahib, a nephew of Nana Sahib, upon the throne of Gwalior. These events called Sir Hugh Rose again into the field; but before his arrival, the principal rebels and Tantia Topee had left Gwalior, taking with them all the treasure they could find, and leaving the Ranee of Jhansi to abide the encounter, at the head of her rebels of Calpee and the mutineers of the troops of Scindia. Sir Hugh found them occupying the Moorar cantonment in the neighbourhood of Gwalior, dislodged and defeated them, and drove them in headlong flight into the capital. On the 19th of June, the rebels rallied upon a range of heights in front of the town, being headed by the Ranee of Jhansi, who was dressed in male attire, and fought gallantly like a common soldier; but they were defeated with the loss of twenty-seven guns, and also of their brave Amazonian leader, who is supposed to have fallen in the battle, as she never afterwards appeared. Scindia was thus restored to his capital and throne, and the rebellion in Central India being now at an end, the troops of Sir Hugh Rose were parted into garrisons for Jhansi, Gwalior, and other parts of the country.

With the fall of Lucknow, its capital, the kingdom of Oude might be considered as disarmed; and it now became necessary to determine the line of policy that was to be followed out in the government of this dangerous and rebellious province. This was soon announced by Lord Canning, the governor-general, then at Allahabad, in a proclamation which he issued on the 3d of March. His first object, he declared, would be to reward those who had been steadfast in their allegiance, and who had aided and supported the British authority; and after this, the nature of the reward was announced, and the persons who were to enjoy it. Six talookdars (land-owners) of Oude, including two rajahs, were named, and it was declared that these were henceforward to be the sole hereditary proprietors of the lands which they held when the province came under British rule, with such additional rewards as the government should judge fit to confer upon them—but that with these exceptions, the proprietary right in the soil of the province was confiscated to the British government, to be disposed of according to its own judgment. To those talookdars, chiefs, and landholders, with their followers,

who should make submission to the chief commissioner of Oude, surrendering their arms to him and obeying his orders, an indemnity from punishment should be granted, provided that their hands were unstained with English blood murderously shed; but for any further indulgence they must throw themselves upon the justice and mercy of the British government. Those among them who should promptly come forward and support the chief commissioner in the restoration of peace and order, were to have their claims of restitution to their rights liberally considered; but those who had participated in the murder of Englishmen and Englishwomen were to be excluded from all mercy. Such was the proclamation sent to Sir James Outram, the chief commissioner, who neither relished its terms nor the ungracious power with which it invested him, and he lost no time in writing from his camp at Chinhut to Lord Canning, remonstrating upon the impolicy of the measure. There were not, he declared, a dozen chiefs and landholders who had not participated in the rebellion; and those who were thus to be summarily dispossessed would betake themselves to their domains, and continue their resistance. Hitherto, he alleged, they had been most unjustly treated under our settlement operations, and hence, when the rebellion was at its height, and their country overrun by the rebel soldiery, they had made common cause with the insurgents; and this being the case, they ought now to be treated rather as honourable enemies than as rebels. These, and other such considerations, were urged by Sir James Outram, but with little effect, for although Lord Canning added a short clause more definite in its promises of restitution to those who should give their aid in the establishment of peace and order, no abatement was made to the right of wholesale confiscation, and the punishment of general dispossession.

Had these resolutions been adopted at an earlier period, and when the progress of our Indian conquest was in full career, they might have been passed without question and acted on without scruple. But now the case was different. We had almost lost our hold of India, and this by the severity of our rule, originating in over-confidence in our power. Such was the general feeling at home when tidings of this widely-spread and all but universal rebellion in our eastern empire had arrived in England; and while reports followed of the victories which our arms were achieving in the East, the popular triumph was accompanied with the surmise that the rebellion had been provoked, and that justice must be done to India. This was manifested even in the India House, when the original draft of Lord Canning's proclamation had arrived; and

a despatch, in the form of a letter from the secret committee of the court of directors of the Company, was sent to his lordship, animadverting upon his resolutions, and enjoining their mitigation. We had annexed the kingdom of Oude to our own dominion without just cause, and notwithstanding its past services and fidelity to our alliance; we had deprived it of its king, and imposed upon it our own rule, and administered its revenues, without regard to those whom the change had reduced from wealth and distinction to utter destitution. Under these circumstances the hostilities carried on in Oude had rather the character of a legitimate war than that of rebellion, and its people were to be regarded rather with indulgent consideration, "than made the objects of a penalty exceeding in extent and in severity almost any which has been recorded in history as inflicted upon a subdued nation." And in conclusion they added, "We desire that you will mitigate in practice the stringent severity of the decree of confiscation you have issued against the landholders of Oude. We desire to see British authority in India rest upon the willing obedience of a contented people: there cannot be contentment where there is general confiscation."

But the days of the Company itself were already numbered, and this humane appeal was a graceful close to its existence. The great subject of importance in parliament during the session of 1858 was the suppression of the rebellion in India, and the means of retaining the country under our rule, and for this even the important question of parliamentary reform was postponed. The consideration of the re-settlement and better government of India was brought forward by a motion from Mr. Vernon Smith, the president of the board of control, for leave to bring in a bill "for enabling the East India Company to raise money in the United Kingdom for the service of the government of India." And then followed the question asked by Mr. T. Baring, "What was the government of India?" "The East India Company," he added "was supposed to be a dying body; who then was to have the control over the money? The house ought to understand who was to raise the money, and who were to spend it. If the government of India were to be vested in the crown, India should have the benefit of the credit of this country." The bill, reducing the loan from £10,000,000 to £8,000,000, was passed, but still the questions were asked, "What was the security? What were the future liabilities of the consolidated fund in regard to the finances of India?"

As it was now certain that measures were about to be introduced by ministers for altering the form of government in India, the Company

drew up a long, elaborate, and able petition to parliament, setting forth its past services and exertions for the benefit of India and the empire at large, and deprecating the withdrawal of their powers, and the transference of their rule into other hands. It was presented by Earl Grey to the House of Lords, and by Mr. Baring to the House of Commons; but notwithstanding their appeals in its behalf, Lord Palmerston introduced on the 12th of February the government scheme for the new administration of Indian rule. Against it Mr. Baring moved an amendment, that "it is not at present expedient to legislate for the government of India." Of the debate itself upon so important a subject, and in which the personal interests of so many were at stake, it would be impossible to give within our limited range even a bare epitome, ranging as the arguments did not only over the abstract merits of the question, but the whole history of the administration of the Company in India from its commencement to the present hour. After the debate had been twice adjourned, the amendment on the 18th was negatived by 318 to 173. In consequence of the downfall of the Palmerston administration, and the formation of a new government under the Earl of Derby, the progress of the question experienced a short delay; but on the 26th of March it was introduced as "the India bill No. 2, for the transfer of the government of India from the East India Company to the crown," the bill of Lord Palmerston, which was not yet abandoned, being described as No. 1. The bill No. 2 was introduced by Mr. Disraeli, the new chancellor of the exchequer. But during the adjournment for the Easter recess, this new bill was closely scrutinized, and with such general reprobation, that there was no hope of its passing into law, at least without considerable alteration. The influence of the government was also felt to be so seriously damaged by this failure, that it was thought they could not meet parliament again upon the subject except under a serious disadvantage. But from this dilemma they were so adroitly relieved by Lord John Russell, that it was supposed his interposition was the result of a preconcerted design. As soon as the chancellor of exchequer had made his statement at the re-assembling of the house, announcing among other things that the second reading of the India bill would be proposed as soon as possible after the budget, Lord John announced his proposal:—it was, that they should not proceed at once with the India bill of the government, nor with the rival bill of Lord Palmerston, but to take resolutions in a committee of the whole house, and thus practically to obtain a consultation between the queen's ministers and the House of Commons on the principles of the

future government of India. The proposal was eagerly accepted by the ministers, and by none more gladly than Mr. Disraeli himself, who a few days afterwards laid on the table of the House of Commons a set of propositions which were to be moved in the shape of resolutions.

The settlement of the question being thus simplified, the chancellor of the exchequer moved on the 26th of April that the house on the 30th should resolve itself into a committee, to consider the foregoing resolutions. This was agreed to; but on that day, when the house had resolved itself into a committee, Lord H. Vane moved a resolution, "that the change of circumstances since the first proposal by her majesty's late advisers to transfer the government of India from the East India Company to the crown, renders it inexpedient to proceed further with legislation on the subject during the present session." But so little was the idea of further delay relished, that the motion of his lordship was negatived by 447 to 37. The chancellor of the exchequer then moved the first resolution, that "it is expedient to transfer the government of India to the crown," which was agreed to without a division. The second resolution, which affirmed the expediency of providing that "her majesty should have and perform the power and duties relating to the government of India by one of her principal secretaries of state," was also agreed to, merely substituting in lieu of the last phrase, the words, "one of the responsible ministers of the crown." All at once, however, a crisis occurred which threatened not only to scatter the India bill to the winds, but to unseat Lord Derby's cabinet. Early in May, a copy of Lord Canning's proclamation to the inhabitants of Oude was published, and this was quickly followed by the publication of the condemnatory letter addressed by Lord Ellenborough, the president of the board of control, to the governor-general. But the most awkward part of the case was, that while the proclamation was presented entire to the House of Commons, it was given with some omissions to the lords. Lord Ellenborough explained the causes of this discrepancy as originating in mere accident, but neither parliament nor the public would be so answered; and harsh as Lord Canning's measures had been in the Oude affair, it was thought that the censures passed upon them by Lord Ellenborough had been harsher still. They had not only condemned a public man absent at a post of great responsibility, and under circumstances of no common difficulty and peril, but by their publication of both documents had prejudiced the question, and endangered the administration, who would be thought to have sanctioned this act of their colleague. Under such circumstances, Lord Ellenborough made what expiation

he could by resigning office. Even this self-devoted sacrifice, however, was insufficient to allay the storm which continued to rage in parliament till the Whitsuntide recess, and from which, not only a change of ministry was apprehended, but a reconstruction of parties, or even a dissolution of parliament. But the agitators themselves became at last ashamed of the form the discussion had assumed, by which the subject was narrowed to the case of the province of Oude and the indiscreet act of Lord Ellenborough, and the question resumed its original aspect on the 7th of June when the parliament had re-assembled.

In the foregoing sketch, enough has been stated to show the difficulty with which the settlement of this important subject was attended. We cannot even advert to the discussions that followed, in which every step was followed by a pause or a conflict: all this was only commensurate with the importance of the great question of the future government of our Indian empire, in which so many mistakes were to be amended and so many evils redressed. It was felt that upon the issue our dominion of the East was to be permanently established—that by a single blunder it might be lost to us for ever. The India bill finally passed the House of Commons on the 8th of July, and that of the lords on the 23d, and received the assent of the crown on August 2d, the last day of the session. There is a solemnity and vastness of meaning in the simple words by which the transfer is announced in the first clause of the bill, to which the grandeur of the decrees of the Roman senate can present no parallel:—

“The government of the territories now in the possession or under the government of the East India Company, and all the powers in relation to government vested in or exercised by the said Company, in trust for her majesty, shall cease to be vested in or exercised by the said Company, and all territories in the possession or under the government of the said Company, and all rights vested, or which, if this act had not been passed, might have been exercised by the said Company in relation to any territories, shall become vested in her majesty, and be exercised in her name; and for the purposes of this act, India shall mean the territories vested in her majesty as aforesaid, and all territories which may become vested in her majesty by virtue of any such rights as aforesaid.”

While these discussions were going on in the British parliament, the progress of the war in India was such as promised both a speedy and successful termination. A strong garrison was left in Lucknow to control the city and its neighbourhood, while a campaign was opened against the district of Rohilcund, to which the

Lucknow rebels had retired. Every fort that was assailed by the British was taken, and every enemy in the field put to the rout—and hence the little interest that belongs to the narrative of this closing portion of the war. It reminds us of the monotony of the Roman armies, every advance of which was a conquest, and every battle a victory, and where a chance incident of defeat or disaster is welcomed by the reader as a change and a relief. In all these proceedings, also, were to be recognized the masterly intellect and military skill of Sir Colin Campbell, who directed each movement, and who, for his able services, was raised to the peerage by the title of Lord Clyde. The progress towards a general pacification was likewise promoted by the transference of the government of India to the British crown, and the natives were induced to reverence a sovereign power, more especially when aggrandized by remoteness and invisibility, in preference to the authority of men who were present, and known to be subjects like themselves. Accordingly, when a royal proclamation, which was transmitted to India, was published by the governor-general on the 1st of November, it called forth several native addresses to the queen, expressive of their loyalty and attachment.

In this proclamation it was announced to the native princes of India, that all engagements which had been made with them by the Company would be scrupulously maintained and fulfilled; that no extension of territorial possession was sought; and that no aggression upon it should be tolerated, or encroachment upon that of others sanctioned. It held itself bound to the natives of our Indian territories by the same obligations of duty which bound it to all the other subjects of the British empire. Upon the important subject of religion, in which the rebellion had originated, the declaration was explicit: “Firmly relying ourselves on the truth of Christianity, and acknowledging with gratitude the solace of religion, we disclaim alike the right and the desire to impose our convictions on any of our subjects. We declare it to be our royal will and pleasure that none be in anywise favoured, none molested or disquieted by reason of their religious faith or observances, but that all shall alike enjoy the equal and impartial protection of the law; and we do strictly charge and enjoin all those who may be in authority under us, that they abstain from all interference with the religious belief or worship of any of our subjects, on pain of our highest displeasure.” It was added, that all of whatever race or creed were to be freely and impartially admitted to such offices in her majesty’s service as they were qualified to hold. Those who inherited lands were to be protected in all rights connected there-

with, subject to the equitable demands of the state; and in framing and administering the law, due regard was to be paid to the ancient rights, usages, and customs of India. With regard to the late rebellion, a general pardon was granted for past offences, except to those who had taken part in the murder of British subjects, or who had given asylum to murderers, knowing them to be such, or who may have acted as leaders or instigators in revolt; but in apportioning the penalty due to such persons, full consideration should be given to the circumstances under which they had been tempted from their allegiance. To all others still in arms against the government, an unconditional pardon, amnesty, and oblivion was promised, on their return to their homes and peaceful pursuits, and compliance with these conditions before the 1st day of January next. Having thus dealt with present difficulties and offences in the spirit of peace and conciliation, the proclamation thus announced the purposes of the new change of rule: "When, by the blessing of Providence, internal tranquillity shall be restored, it is our earnest desire to stimulate the peaceful industry of India, to promote works of public utility and improvement, and to administer its government for the benefit of all our subjects resident therein. In their prosperity will be our strength, in their contentment our security, and in their gratitude our best reward. And may the God of all power grant to us, and to those in authority under us, strength to carry out these our wishes for the good of our people."

The chief difficulty that still remained was the pacification of Oude, without which our government of India could not be fully re-established; and to effect this, such decisive measures were adopted, as could only be justified by the necessity of the case, and the warlike dangerous spirit of the people. A proclamation was issued by Mr. Montgomery, who had been appointed chief commissioner of Oude, ordering that all talookdars, zemindars, and native inhabitants of the province should deliver up to the servants of government at the nearest police station, within one month from that date, all their cannon, firearms, weapons, and ammunition, under pain of fine and imprisonment for one year, *with flogging*; and if a landholder, of the confiscation of his lands." The next step was to suppress the rebels who were still in the field, which was no such easy achievement, for they had made Oude their place of shelter and rallying point for their final stand, and were likely to defend it with the fierceness of despair. They had also for one of their chief leaders, the ex-queen of Oude, a woman of fearless courage and unyielding spirit, who issued a counter-proclamation to the people, warning them not to trust the promises of the

British government, and analyzing the proclamation of our sovereign, paragraph by paragraph, with all the shrewdness and caustic severity of a well-practised literary reviewer. The winter campaign was opened in November, and the Oude chieftains surrendered their hill-forts, or were driven from them after a short and useless resistance. One of these forts was Shunkerpore, which Bainie Madhoo, an insurgent chief, held out against the approach of Lord Clyde. The commander-in-chief ordered him to surrender unconditionally, promising that in this case he should have no cause to repent of his submission; and to this, Bainie Madhoo returned for answer the following curious proposal:—"If the government will continue the settlement with me, I will turn out my father. He is on the part of Birjies Kuddr, but I am loyal to the British government, and I do not wish to be ruined for my father's sake." In justice however it must be owned, that this unfilial tender was only a feint, for on the following night the chief abandoned the fort with all his followers, and outstripped the pursuit that was sent after him.

This unexpected surrender of the fort of Shunkerpore, for the reduction of which the whole British force had been concentrated, enabled Lord Clyde to separate his army into divisions for the prosecution of the war on every side; and such success attended all his operations, that the rebels, everywhere beaten, had no resource except to surrender, or betake themselves to the hills of Nepaul, where little else than a churlish welcome and precarious shelter awaited them. Thither Nana Sahib was driven after a ruinous defeat, to become an outcast and a hunted fugitive; and to this quarter also his brother, Bala Rao, betook himself, after attempting a final stand, in which his troops were beaten and dispersed, almost without resistance. Thus, with the close of the year, the rebellion in Oude, its last stronghold, had terminated, and an army, originally numbering 150,000, been routed and dispersed with comparatively little loss to the victors. Resistance indeed continued to be made, but it was the hopeless resistance of broken bands and fugitive chiefs, lurking among the fastnesses of Nepaul, beyond the British dominions, and urged by hunger or revenge; and with every attempt their numbers were diminished and their range circumscribed, so that what had lately been armies, were little more than troops of brigands, whose outrages the nearest military station was strong enough to suppress. The British empire was re-established in India upon a basis more august and imposing than before; let us hope that it will also prove more authoritative and enduring, and that the change from the rule of a Company to that of the sovereign, will

be conjoined with that parental solicitude and clemency on the one side, which is the source of loyalty and filial affection on the other. May the people of Hindoostan be no longer mere thralls and aliens, but British subjects in reality as well as in name. May the cruelties of conquest and the iniquities of usurpation be cancelled and forgot in a happy futurity for India!

CHAPTER XXIII.—HISTORY OF RELIGION.

A.D. 1830—1853.

Difficulties in writing the history of religion as it now exists—Political history of the Church of England in the present day—Hostility of dissenters to the Established church—Their petition for its dis-establishment—Their petition to deprive the bishops of their share in the government—Petitions to admit the dissenters to university honours and privileges—Petition of the dissenters against church-rates—Extension of the means of spiritual instruction—Trial on the Lady Hewley bequests—Decision of the House of Lords on the subject—General alarm at the aggressions of Popery—England divided into sees by the pope—Precarious condition of the principle of church establishment—Demand for the revival of convocation—Origin of Puseyism—Its progress and Popish tendencies—The Oxford tracts—Opposition to Puseyism by the Archbishop of Canterbury—Defeat of Puseyism in the trial of Mr. Gorham—Doctrines of Puseyism—Its claims in behalf of the apostolic succession, and efficacy of the sacraments—The Plymouth Brethren—Origin and progress of the sect—Their creed, form of worship, and polity—Beginning of the Row heresy in Scotland—Its transplantation into England and adoption by Mr. Irving—Its fanatical manifestations—Its final transition into the "Apostolic Catholic Church"—Its creed, government, and forms of worship—The Mormons or Latter-day Saints—Origin of the sect—Their creed—Their form of church government—Interest attached to Scotland in the religious history of this period—Growing increase of the Evangelical party in the Scottish church—General awakening of the public mind to its religious rights—The Voluntary controversy in Scotland—Overtures from the Evangelical party against patronage in the presentation of church-livings—Contest between the Evangelical and Moderate parties on the subject—The veto-law proposed in the General Assembly—Its conditions—Its establishment in the Scottish church—Rapid progress of church extension—Opposition of patronage to the veto—Commencement of the conflict at Auchterarder—The trial removed from the church tribunal to the Court of Session—Decision given against the church—Similar case of Lethendy—Recusancy of the Strathgogie presbytery to the award of the General Assembly—Consummation of their resistance—Their deposition by the church—The crisis of the conflict between church and state—Final rejection of the claims of the Scottish church by the House of Lords—Convocation of the clergy at Edinburgh—Their resolve to terminate their connection with the state—Incredulity of statesmen about this decision—Meeting of the General Assembly in 1843—The Disruption—The seceding ministers constitute a General Assembly of their own—Address of Dr. Chalmers to the new General Assembly—Formation of the Free Church—General astonishment produced by the Disruption—Present condition of the Free church—Prosperous state of its finances—Missionary societies—Bible societies—Reduction of the price of Bibles in England and Scotland.

THE history of the national church during the present period may be briefly summed up. This brevity, although partly owing to the paucity of events that occurred during these thirty years, is still more necessary on account of the wideness with which the knowledge of them is diffused throughout every class of society, and the vividness and distinctness with which they are remembered. They are part and parcel of the existence of the present generation, and of them every reader can be an historian to himself. To touch, therefore, on but a few of them, however lightly, is enough to recall the subject to his own thoughts in all its amplitude and completeness. This brevity, however, is most of all demanded by the nature of the events themselves, which being still so recent, have rather the character of ex-

periments awaiting their issue, than actions of which the character may be judged by their results. A generation; or even a whole century may have to pass away, before they can be tested by their full development.

In that department of the subject which may be called the political history of the church, the first circumstance that arrests our notice is the open and systematic hostility displayed by the dissenters against the Establishment, which they no longer recognized as the church of the nation, or deserving of the exclusive patronage and support of the state. The different classes of dissent were now sufficiently numerous and powerful to offer such a manifestation, and make their arguments heard; and however they might differ upon their several theological distinctions, they found, in this opposition to the Established church, a bond of common union, as well as the

means of displaying their own weight and importance, which had hitherto been too little recognized. In 1834, therefore, the conflict commenced, by numerous petitions from different bodies of dissenters to parliament against the exclusive privileges of the church, and praying for its total dis-establishment. But so bold a demand was premature; it roused the whole church party into alarm and active opposition, and such a shower of counter-petitions in favour of the church succeeded, that dissenterism was out-voted and silenced. It was only, however, that the mode of onset should be exchanged for others less obtrusive; and the next attempt was against the dignitaries of the church, who were to be deprived of their power in the state and their place in parliament. The great fabric of the national church was thus to be displaced stone by stone, instead of being thrown down by a single attack. This mode of eversion was commenced in the same year by a motion of Mr. Rippon in the House of Commons, "to relieve the archbishops and bishops of the Established church from their legislative and judicial duties in the House of Peers." It was a gentle, unsuspected approach to the full measure of dis-establishment; and although it was out-voted by 125 against 58, yet the largeness of the minority was full of promise to the assailants, and encouraged them to go onward in their warfare.

Another ground of umbrage with the dissenters, was the exclusive possession which the Established church maintained in the universities, in which none of their party, however learned, could compete for the literary distinctions they had merited, without subscribing their adherence to the Establishment. The removal of this disqualifying distinction was the next attempt of the dissenters, who got up numerous petitions for the removal of the test requiring them to sign the Thirty-nine Articles before they could take degrees in the universities of Oxford and Cambridge. As they had a considerable party within the colleges themselves, they endeavoured to have their application backed by petitions to the same effect from the universities of Oxford and Cambridge; and they were so successful that from the latter a petition subscribed by sixty-three graduates and office-bearers was sent, craving for the abolition of "every religious test exacted from members of the university, before they proceed to degrees, whether of bachelor, master, or doctor in arts, law, and physic." The motion, when introduced into parliament, was withdrawn, but leave was given to bring in a bill to that effect. The bill was passed in the commons, but rejected on the second reading in the lords, while the debates in both houses were sufficiently characterized, not only by abundance of classical zeal

on either side, but also of political and religious rancour. The friends of the church were as keen for the old-established privileges of the universities as they had been for those of the bishops. To soothe the dissenters for their defeat in a measure which they had so much at heart, and in which the justice of their claim was so apparent, a ministerial bill was introduced to relieve them from the burden of church-rates; but unfortunately this ill-concerted plan only deepened their resentment. In the ways and means for making up the deficiency they would not only have to pay their share, but assent to the justice of the rate itself, which formed the ground of their opposition. They had declared from the beginning that the connection between church and state was un-Christian and sinful, and therefore, in the present case, they would not pay a farthing, either directly or indirectly, to uphold a church establishment—it was with them a matter of conscience, and not a mere question about the saving of money. Another plan of conciliation similar in character had the same result. It was an attempt to gratify the dissenters by a ministerial bill allowing them to celebrate the marriage ceremony in their own chapels, instead of being obliged to repair to the parish churches; but as it still required the banns to be proclaimed in the parish churches, the dissenters naturally refused even thus far to recognize and acknowledge any paramount authority in the Establishment. In the following year this difficulty was happily got rid of by Mr. Peel's bill, which, in the case of dissenters, dispensed with the proclamation of banns, making the attestation of a magistrate, before whom the parties should appear, to be sufficient for the purpose.

The non-payment of church-rates was the next subject on which the church was to be in conflict with dissenterism. This was no doubt an attractive doctrine for many who cared little for the distinctions of creeds and sects, by which payment could be withheld and money saved upon purely conscientious principles; and accordingly, in several large towns, especially in Sheffield and Manchester, the payment of church-rates had ceased, while the law was insufficient to enforce it. To meet this deficiency in time to come, and especially to conciliate the dissenters, a plan was proposed in 1837 by Mr. Spring Rice, the chancellor of the exchequer. It was, to take the whole property of the bishops, deans, and chapters out of their hands, and consign it to the guardianship of a commission, by whose management such improvement might be effected, that after these dignitaries were sufficiently paid, enough would be saved for the purposes of church-rates. It was no wonder if at such a proposal the hierarchy were indignant: it would not only

commence a spoliation of the church that might go on unchecked, but reduce its chief functionaries to a state of pupillage that would lower them in the eyes of the community at large. Accordingly, in the lords, the prelates, with the Archbishop of Canterbury at their head, protested earnestly against the proposal, which, after a very animated debate, was defeated. That such a proposal, however, should have been made, and from such a quarter, was proof of the critical position of the state church, and the progress that had been made by its opponents.

After this there was a temporary lull in the conflict between the two great parties, and in the interval a measure of general benefit was brought forward, upon which all parties could be in full accordance. It was the extension of the means of spiritual instruction, which were still found to have fallen greatly short of the increase of the population. The subject was brought before the House of Commons in 1843 by Sir Robert Peel; and he proposed a relief of the evil by the endowment of additional ministers, and the augmentation of small livings, to the amount in all of £48,000 per annum. From what source this money was to be raised was a ticklish question, considering the jealousy with which every grant to the church was watched; but for this difficulty Sir Robert had so carefully provided, that his plan was received with general acquiescence. He proposed that the sum in question should be derived, partly from the retrenchments which had been made upon the large or superfluous livings in the church, and partly from Queen Anne's bounty for the augmentation of small livings. The annual sum of £48,000, it was acknowledged, bore but a small proportion to the necessity of the case, and the purpose to be accomplished; but it was anticipated that this government movement would have the effect of stimulating private and individual benevolence, as had been the case in the government grant for church extension, by which the original sum might be more than doubled. Sir Robert Peel's proposal was passed with cordial unanimity.

In the following year the dissenters entered once more into the field, and with a grievance which was generally thought deserving of redress. At the close of the seventeenth century, and before the Puritan spirit of England had departed or merged into new forms, Lady Hewley had bequeathed several benefactions to chapels of Calvinistic Independents, for the comfortable maintenance of their ministers in all time coming. But the Calvinism of these chapels had slowly and insensibly dwindled into Socinianism, and Unitarian instead of Calvinistic preachers occupied their pulpits, and availed themselves without scruple of those comfortable endowments which

had been left for the support of a very different kind of instruction. The period, however, for such passive endurance had gone by; the awakening of the different religious communities, which had been going on during the earlier part of this century, had roused both Presbyterians and Independents to a sense of their duties and their interests; and they found that their best-endowed charges were occupied by clergymen who, under the orthodox name of Presbyterians, inculcated the doctrines of Arius and Socinus. There could be also no mistake about the matter, as the tenets of these heresiarchs were boldly preached without concealment or reservation. A prosecution was accordingly commenced for the dislodgment of these pastors, and the recovery of the endowments to the purposes of the original founder; but the difficulty of arraigning a heresy, and the proverbial delays of the law, together with the sanction derived from the prescriptive right of possession, were so greatly in favour of the occupants, that after fourteen years of litigation, they still held their places. Nothing less than an act of parliament could decide the controversy, and accordingly, in 1844, a bill was brought into the House of Lords by the lord-chancellor, for "confirming the possession of religious endowments in the hands of dissenters," while the specific object was to ascertain to which of the two contending parties Lady Hewley's bequests rightly belonged. To settle all such cases for the present, and prevent their recurrence in future, the bill proposed to vest the property belonging to voluntary endowments of dissenting chapels in the hands of that community by which it had been held for the preceding twenty years. In favour of this measure it was argued that sects changed their forms and opinions through lapse of time, so that it was often difficult after half a century to identify them, and that a twenty years' possession was in such doubtful cases the best right of occupancy. By such a conclusion the purpose of the original donor was nothing, and the difference between the creeds of Calvin and Socinus a thing too minute to be detected! Notwithstanding a very keen opposition in both houses, the bill was passed by a large majority, and the endowed churches became the property of the present occupants. The dissenters were indignant at such a conclusion, and denounced it as a measure for giving undue favour and political support to the Unitarians.

These contentions between the two chief portions of English Protestantism might have been carried to greater lengths, and attended with more deplorable results, had it not been for the aggressions and advance of their common enemy. But since the passing of Catholic emancipation, which the Papists of Britain had ac-

cepted as only the first of a series of concessions, their demands had become more exorbitant, and their pretensions more menacing than ever, while government having committed itself in the first instance by yielding, was obliged to continue in the same course of conciliation. Such was especially the case in 1845, when Sir Robert Peel brought forward his bill in parliament for the endowment of the Maynooth college. The demand was a signal to all classes of Protestants to forget for a while their minor differences, and unite against the common danger; and accordingly churchman and dissenter met on one common field, and agitated against the measure with equal cordiality. But strong though they were in their union, they were unable to withstand the progress of that conciliatory spirit which was now the great political principle of the day, backed also as it was by some of the best of both parties, who measured the aims of Popery by the standard of their own moderation and sense of justice. The Maynooth grant was therefore passed, the particulars of which have been detailed in a preceding chapter; and as a state endowment of Popery, it remained a fruitful ground for opposition and protest, on which all other classes of religionists could be at one. Accordingly, the subject has continued to be a theme of parliamentary overture and popular petition to the present hour.

But if anything could tend to reconcile churchmen and dissenters, and make them forgetful for a while of their mutual feuds, it was the great Popish aggression of 1850. In this case, the Roman conclave, forgetful of its wonted caution, and trusting too much in the conciliatory spirit of our government, ventured to parcel out England into twelve Popish episcopal sees, as if the kingdom had already been wholly recovered to the spiritual dominion of Rome. This was a home appeal to the state itself, and to the political forbearance upon the subject of religious differences on which our statesmen had placed such confidence: it was a sudden flash of lightning by which the gulf was revealed, towards which they had been so contentedly marching. It was now time both for religionists and politicians to unite when church and state alike were thus rudely assailed, and our civil as well as religious liberties proscribed by one and the same Papal bull. Accordingly, as if it had been an affair of yesterday, we can vividly remember the universal national indignation that was roused at the insult—the cordiality with which every class, party, and sect arrayed themselves as one compact Protestant phalanx against it—and the lubricious softness and dexterity with which Popery receded, and wound itself out of its dangerous position. But is the attempt con-

clusively abandoned? Or does the infallible church relinquish a claim which she has once advanced, and attempted to reduce to action? These are questions that still continue to agitate the heart of British Protestantism; and if they can only make it more wary of future danger, and more anxious for the cultivation of a spirit of Christian union among its own discordant members, this frustrated attempt of Romish usurpation will yet prove one of the best of national benefits to Britain.

Amidst the rapid increase of dissenterism, and its growing hostility to establishments, an apprehension had been growing during the present period that the bond of connection between church and state would at no very distant period be dissolved. But this was a consummation which the friends of the Established church could not contemplate without alarm, and to avert it every expedient was suggested, while not a few had been adopted. This was manifested in a more tolerant and conciliatory spirit towards the dissenters; the stricter lives of the clergy, and a more careful discharge of their duties; the retrenchment of the higher salaries of the church, and the increase of the means of spiritual instruction. But still it was felt as if these remedies were in vain—as if the inundation was still advancing that would sweep away the barriers of state protection, and reduce all parties of religion to one common level. Among the various expedients suggested for the protection of the church a very common one was that of Convocation, in which the clergy assembled should meet, not in empty form as hitherto, but for permanent sittings, and with full power to legislate for the church in whatever its interests were concerned. But this *imperium in imperio* was too terrible for statesmen to contemplate; it would be a meeting before which even the “*omnipotence of parliament*” would stand rebuked, and in no long time might grow into a conclave as irresponsible and arbitrary as that of Rome itself. Nor were even the most anxious of the clergy less averse to such a measure. Independently of the invidious position in which it would place them with relation to the state on one hand and the community on the other, it would revive into fresh vigour all that contrariety of opinion and all those controversies which had prevailed in the church since the days of Elizabeth. Notwithstanding these considerations, Lord Redesdale ventured in 1851 to introduce into the House of Lords a motion for the “renewal of the synodical action of the church by the revival of convocation.” As might be expected, the proposal had not the slightest chance against the arguments that were brought against it, and it failed accordingly. The Archbishop of Canterbury spoke

the mind of the more considerate of the clergy on this occasion. He feared that such a revival of convocation would only revive dissension and controversy. If the assembling of convocation, he added, were to end in reconciling some conflicting rubrics, or in supplying the deficiencies of others, the result would be little worth the cost. Thus far you would disappoint; go farther and you would excite. In stating the superior advantages of the Church of England as it now existed, his grace also said that during the last thirty years it had founded a thousand new parishes at home, and established twenty new episcopal sees in our colonies abroad.

But even more dangerous than the avowed antagonism of Popery and the hostile attacks of dissenterism, was the rise of a party within the church itself that divided the best of its members, and threatened to rend the whole fabric asunder. We allude to that innovation which, under the name of Tractarianism or Puseyism, had its origin about the commencement of the present period; which continued to grow from year to year in strength, numbers, and importance; and which attracts notice and excites alarm even at the present hour.

The divisions of Protestantism so prevalent in England, the land of universal toleration, had tended from the beginning to unsettle the faith of the weak or the inquiring, and throw them into that state of uncertainty in which an infallible church is welcomed as a relief. But although Popery was at hand to receive them, they recoiled from such an alternative, well knowing the price it exacted and the odium to which it would subject them, so that the conversions from the Church of England to that of Rome had hitherto been few and of small account. While matters were in this condition, a body of clergymen at Oxford, with Dr. Pusey, professor of Hebrew in the university, at their head, began to publish a series of pamphlets, under the title of "Tracts for the Times," which were continued at short but irregular intervals until 1841; and as these productions were written by men of high name, and were distinguished by great learning, talent, and eloquence, they arrested attention, and were very widely circulated. The opinions which at first they announced were sufficiently startling; but as they went onward, they increased in boldness, and inculcated a creed that was neither Protestantism nor Popery, but a compound of both, laying claim alternately to the independence of the former and the infallibility of the latter. During the eight years of their continuance, ninety of these tracts appeared, and a party in the church was formed, which, under the name of Tractarians, Anglo-Catholics, or Puseyites, was numbered by thousands. But it was

not by tracts alone that the principles of this new creed were inculcated: they were also illustrated by novels, by poems, by poetry and architecture—by every means that could convey them into high places, and make them alluring to all who were of refined taste and sensitive temperament. The progressive growth of the system, its character under its full development, and the modes by which it was recommended, were nothing more, perhaps, than an undesigned and uncalculated result; but had it been a crafty device of the Jesuits themselves to bring back souls by whatever means to Rome, it would have been accounted a masterpiece of Jesuitism. For however alluring it was at first, and however complete in appearance, it was soon discovered by many of its converts to be only a compromise, and having gone thus far, they felt as if consistency required them to complete the journey. It became accordingly a sort of half-way house, in which the pilgrims made only a temporary sojourn; and the numbers that went onward from it to Popery, both among the clergy and laity, caused this to be regarded as an inevitable result. The eyes of the public were opened, and an outcry so loud was raised against the movement that an answer was necessary; and in 1839, Dr. Pusey, in a letter to the Bishop of Oxford which he published, endeavoured to show that the doctrines of the tracts had no such tendency, being fitted rather to check the progress of ultra-Protestantism, than support the cause of Popery. But the contrary of this continued to be manifested by the numerous secessions to Romanism, which were still on the increase; and the young students designed for the church who had embraced Anglo-Catholicism, felt that they could not take orders by subscribing the Thirty-nine Articles consistently with their present opinions. This was bringing matters to too conclusive an issue, and to satisfy the conscientious misgivings of such persons, Mr. Newman published Tract 90 of the series, in which he endeavoured to prove that an Anglo-Catholic might subscribe the Thirty-nine Articles without any religious inconsistency. But it was an attempt to prove too much; the university condemned the tract; and public feeling was so strong that the series was discontinued. Mr. Newman himself also refuted his own statements, and showed the impossibility of such a compromise, by seceding in 1845 to the Church of Rome, an example which was followed in the course of a few months by a considerable number of the clergymen of the Church of England, whom the tracts had infected with the doctrines of the new Oxford school.

It was now too late to deny or conceal the Romish tendencies of Puseyism, and accordingly

from this period those who held such opinions and still retained their livings adopted a more open course of action. Not satisfied with preaching the doctrines, they also introduced the forms

REV. DR. PUSEY — From a print entitled *a Recollection*

of Popery, and lighted candles upon the altars; bowing before the cross and using the sign of it, the intonation of the church service, and preaching in a surplice were introduced, under the plea, either that they were part and parcel of the earliest and purest period of our Reformation, or that they were in themselves decent and edifying, and conformable to the general practice of Christendom. Moreover, in the repairing of old churches and the building of new, a devout, scrupulous adherence was manifested to the peculiarities of medieval religious architecture, and no building was regarded as the house of God unless it was a gospel of stone and lime—a revival of the devotional structures, with their quaint allegorical ornaments, that had taught the eyes of the people of England in the days of the earliest Plantagenets. These were startling innovations; but the remissness of the prelates had been still more strange, for they either had looked on in utter silence or protested against them in little more than a whisper. But in 1845, when the evil had grown to a height, and toleration was no longer a virtue, the Archbishop of Canterbury issued a letter to the clergy and laity of his province, requesting them to beware of introducing changes without the general acquiescence of the people, and warning them of the risk of division from any such attempts. A check was the consequence; but, owing to the gentle style of the letter, the interruption was only partial and temporary—the tide rallied and returned in full strength; and not only several congregations in

the country, but some of the richer ones in London, adopted those Anglo-Catholic practices which the Primate of all England had condemned.

A more decisive stand, originating in a personal grievance, was made in 1847. In that year Mr. Gorham had been presented to the living of Bramford-Speke, induction to which was refused him by the Bishop of Exeter, because in a lengthened examination, chiefly on the subject of baptism, he had refused to assent to the doctrine of baptismal regeneration. Mr. Gorham appealed to the court of archbishops, but there the prelate's decision was confirmed, upon which the case was transferred to the judicial committee of the privy council, who, after considerable delay and discussion, reversed, at the beginning of 1850, the decision of the inferior court. This was a discouraging blow to the Anglo-Catholics, and a large secession followed, so that during that and the following year, nearly one hundred clergymen abandoned the church and went over to the Romish communion. Previously, the example of the Church of Scotland at the Disruption had awoken among them the inquiry as to how far civil authority, and especially the right of the crown, extended in ecclesiastical matters and the government of the church; but the question assumed double vigour in consequence of this decision in the case of Mr. Gorham. Hence the motion for the revival of convocation and the exercise of synodical action made in the House of Lords in 1851, of which mention has been already made. The supremacy of the sovereign as head of the English church is still the subject of Puseyite controversy; and while this party are opposed to it, they feel that by remaining in the church they acknowledge that supremacy, and expose themselves to the charge of inconsistency. This they endeavour to avoid by declaring that their submission is under the saving clause "as far as is permitted by the law of Christ." But the law knows no such exception, and allows of no mental reservations, and a royal edict would give them no alternative but submission or secession. In the meantime the controversy still goes onward, and the party is increasing in numbers and in boldness; but as fast as accessions are made to it the increase is balanced by an equal proportion of members who leave its equivocal communion for that of Rome.

Of the doctrines of the Anglo-Catholics, as they are given in the Oxford tracts and numerous publications of the party, a short sketch will suffice. Their avowed aim was to bring back the Protestant church both in doctrine and practice to a complete harmony with Scripture and the Anti-Nicene fathers, and reject everything which had accumulated since the first Nicene council in A.D. 325. Here, therefore,

Scripture alone was not recognized as the test and standard of religious truth: on the contrary, early tradition was admitted as an equal authority; and instead of conceding the right of private interpretation to every individual, they bound him to receive the meaning of Scripture solely as it was held, or said to be held, during the first three centuries of Christianity. "Catholic tradition," as one of the tracts explains it, "teaches revealed truth, Scripture proves it; Scripture is the document of faith, tradition the witness of it; the true creed is the Catholic interpretation of Scripture, or scripturally proved tradition; Scripture by itself teaches mediately and proves decisively; tradition by itself proves negatively and teaches positively; Scripture and tradition taken together are the joint rule of faith." In this way, as only the learned in theology have access to tradition, the clergy would exclusively become the authoritative exponents of Scripture, and dictators of the popular faith. In this way, also, from such a remote, unsatisfactory, and contradictory source, the germ of every subsequent corruption in the Christian church can be easily derived, whether for ritual or doctrine. As the clergy were to be invested with such extraordinary power, it was necessary to find for them a divine commission; and this was done by the doctrine of apostolical succession. "Our ordinations," says Dr. Hook, "descend in an unbroken line from Peter and Paul, the apostles of circumcision and of the Gentiles. These great apostles successively ordained Linus, Cletus, and Clement, Bishops of Rome; and the apostolical succession was regularly continued from them to Celestine, Gregory, and Vitalianus, who ordained Patrick bishop of the Irish, and Augustine and Theodore for the English. And from those times an uninterrupted series of valid ordinations has carried down the apostolical succession in our churches to the present day. There is not a bishop, priest, or deacon among us who may not, if he please, trace his spiritual descent from Peter and Paul." By this revival of the doctrine of apostolical succession, which ecclesiastical history fails to establish, and which the wisest and most learned of our churchmen had gladly abandoned, the clerical claims to an authoritative right in the interpretation of Scripture was established, to the full satisfaction of Puseyism, while all other churches, except the Greek, the Roman, and the English, were thrown down to the level of mere schisms, and branded as heretical.

Another great source of clerical authority was the power of the sacraments as inculcated by the Anglo-Catholic teachers. The efficacy of these sacraments to procure divine grace and insure salvation was inherent, they alleged, in them-

selves; but to possess this efficacy, they must be administered by a priest who could lay claim to the apostolical succession. Thus the eucharist, when administered by the hand of such a clergyman, was in itself a communication of every spiritual benefit, which, if given by another, would only be 'an unmeaning ceremony or a downright profanation. But to invest the eucharist with this mysterious power, it was necessary for Puseyism to have recourse to the doctrine of transubstantiation; and this accordingly was done by the Oxford tractarians at an early stage of the controversy. They boasted of their church as being the sole depository of the body of Christ to his people, and Dr. Pusey alluded to their clergy as "intrusted with the awful privilege of making the body and blood of Christ." This, however, was felt to be dangerous language in a Protestant church, and from clergymen holding its appointments, so that a phraseology was adopted, by which the doctrine might be rendered less specific and repulsive. Accordingly, they stated that the body of Christ in the sacrament, although really present, is so only spiritually and after a transcendental manner, and not with the material qualities of a body, or with "bones and sinews," as the Council of Trent has asserted. But disguise the subject as they might by obscure words and unintelligible distinctions, their sacrament was a mass in which the real presence was contained, and to which the power of salvation was attributed. Another doctrine of Puseyism in connection with the sacraments, was that of baptismal regeneration, in which the graces bestowed by the "baptism of the Spirit" are attributed to that which is administered by water. "Whosoever has been baptized," says one of the tracts on this subject, "was thereby incorporated into Christ." "Our life in Christ Jesus begins, when we are by baptism made members of Christ and children of God." "Baptism is the channel through which God bestows justification, and faith is the quality through which we receive it."¹

Such were the principal doctrines of Puseyism as the system continued to expand, until it touched so closely the confines of Popery, that it was difficult to distinguish where the one ended and the other commenced; and in this manner a preparation was made for the absorption of a passive and negative system of belief into one that was active and positive. But while so learned and so logical a creed was rising into existence in the halls of Oxford, the seat of Greek erudition, patristic study, and medieval taste, another, equally remarkable but for its opposite qualities of simplicity and nakedness, was commencing its existence in the illiterate seaport

¹ *Faiths of the World*, in the article "Anglo Catholic," by the Rev J. Gardner, M.D.

town of Plymouth. We allude to the sect who, in consequence of the locality in which they first appeared, are known by the name of the Plymouth Brethren. This was in 1830, and in twenty years they had so greatly increased, that they numbered 132 places of worship, and 6000 or 7000 adherents. This indeed gives but a small proportion for each congregation, but the smallness of these congregational groups can be accounted for by the character of their simple polity, which is favourable to the assembling of little communities for social worship, rather than crowds for an imposing ritual, and the allurements of well-trained eloquence. In doctrine, the Plymouth Brethren hold several of those extreme opinions which were so prevalent among some of the sectaries during the period of the Commonwealth. All articles, creeds, and confessions they regard as a denial of the sufficiency of Scripture; a regular ministry and an established ritual they denounce as a refusal of the all-sufficient guidance of the Holy Spirit. All believers, they allege, are a spiritual priesthood, and every brother who possesses the gift of preaching is not only authorized, but also bound to exercise it for the edification of the church. In their meetings, therefore, any one who believes himself prompted by the Spirit may freely address the assembly, and should any one conceive himself so gifted as to devote himself exclusively to preaching, he must do it on his own spiritual responsibility, and exercise his office without appointment or ordination. Being thus independent of a regular ministry, the sacraments of Baptism and the Lord's Supper are administered among them by lay brethren, and the last is observed among them once a week. As may be expected from the foregoing account, their idea of a Christian church is not that of an ecclesiastical organization, but a religious union and brotherhood—a body united under one spiritual head. With this simple polity, which resembles that of the Quakers, they combine certain practical doctrines which, under a vitiated state of society, would be certain to lead to unhappy practical results. They allege, that as all true believers have been delivered by Christ from the law as a rule of life, the preaching of the law to such is worthless legalism, and a denial of that perfect work by which Christ has made his people free. They also maintain that, being in a state of grace already, a Christian has no need to ask for blessings which he has already received, but only for an increase of them. These doctrines, and the completely republican character of their church government, have not only considerably increased the numbers of the community in England since the census given in 1851, but have been favourably received in America;

and in that congenial soil, the Plymouth Brethren, from the rapid growth of their cause, appear to have found their best resting-place and home.

While Puseyism had been springing up in the Church of England, it is worthy of note that a similar system, with an equally Romish tendency, was originating in the Scottish church. Its first manifestations, which appeared in the parish of Row, and the town of Port-Glasgow, on the banks of the Clyde, occasioned it to be called the Row heresy; while its pretensions, which aimed at the infallible interpretation of prophecy, the gift of tongues, and the working of miracles, were a source not only of great popular attractiveness, but of wild fanatical excess. The delusion, however, was chiefly confined to silly women; and on account of such supporters, as well as from the overstrained fervour of its absurdities, it would have been confined to its own narrow locality, and soon have died out, had it not been adopted by a heresiarch whose talents and reputation were fitted to give it publicity. This was the celebrated Edward Irving, who, after delighting by his pulpit eloquence the British metropolis, where he had been settled towards the close of the preceding period, was now astonishing it by his daring and heretical theories. Numbers of his excited followers, on hearing of the movement on the Clyde, hurried to the spot, to examine the portent, and judge of its reality; and as they had been previously hungering and thirsting for miracles, they quickly caught the infection, and hurried back to London, to communicate it to their fellow-worshippers. And strange was the exhibition now afforded by Mr. Irving's congregation that assembled at the Scots Church in Regent Square! The religious services were interrupted by the harangues of the inspired; women started up and in strange tones poured forth a jargon of words which none could understand, but which were assumed to be inspired by the same power that had imparted the gift of tongues on the day of Pentecost; even the lame were commanded to walk, and the dead to rise to life, by those confident thaumaturgists, who were astonished at the non-compliance of their patients, and in whom want of faith alone, they declared, had been the cause of the failure. And of all the deluded none exceeded Mr. Irving himself, whose morbid intellect it inspired with fresh activity, and to whose eloquence it furnished a new and exciting theme. The latter days, he declared, had come; the miraculous powers of the church were restored; the millennium itself was at hand. But the Church of Scotland could no longer tolerate the unsoundness of his preaching, and the extravagant displays of his congregation; and in 1830 he was deposed from his local cure as minister of the

Scots Church in Regent Square by the presbytery of London, and finally, in 1833, from his standing as an ordained minister, by the presbytery of his native Annan. For these exclusions, how-

REV. EDWARD IRVING

From a print by Meyer, after a drawing by A. Robertson

ever, Mr. Irving cared little, surrounded as he was by prophets and prophetesses, who were of higher account with him than presbyteries and general assemblies; and on his expulsion from Regent Square he betook himself to a building in Newman Street, which his people had fitted up as a place of worship, and where he organized his congregation into a separate and distinct church. They were now placed under a fourfold ministry of apostles, prophets, evangelists, and pastors, Mr. Irving himself being ordained as the angel of the church of Newman Street. In 1834 he died at the age of forty-two, worn out by a life of intellectual excitement, and the feverish labours of his latter years in supporting and propagating the doctrines of his new system. His followers, who were numerous, had at first been called Rowites, from the parish in which the excitement had commenced; but this name, which designated a small class of people who soon became ashamed of their aberration, passed into that of Irvingites, from the name of their great leader: this title also was soon abandoned for that of the "Apostolic Catholic Church," which they claim for their numerous and influential body, and by which they are now generally known. It may be stated, however, that in assuming this name they do not claim an exclusive right to hold it. They deny that they are sectaries or separatists of any kind, and consider themselves as members of the one

church baptized into Christ; while their great mission, they allege, is to reunite the scattered members of the one true church, the body of Christ. The only standards of belief which they acknowledge are the Apostles', the Nicene, and the Athanasian creeds. But while they profess to be guided by these in their interpretation of the Word of God, they have a boundless latitude in reserve, by the authority they attribute and the credence they yield to the dictates of their prophets, which they receive as inspiration. They also believe in transubstantiation, and hold that the elements of bread and wine in the eucharist are the real body and blood of Christ. On this account the consecrated elements are constantly kept in a receptacle or pix upon the altar, and towards these the priests and people reverently bow on entering and leaving the chapel.

In the government of the "Apostolic Catholic Church," and in its forms of worship as well as its doctrines, those changes have entered that might have been expected from the members of which it was latterly composed, and the nature of its organization. Hence the disappearance of its early presbyterianism, and the various phases it afterwards presented, according to the prophet or the inspiration that might for the time predominate. Their first ministry was fourfold, consisting of apostles, prophets, evangelists, and pastors; and in the ordination of a pastor, he was first designated by the prophet, after which the apostles ordained him by the imposition of hands. In this way, the sentence of deposition from the ministerial office pronounced by the Church of Scotland on Mr. Irving was removed by a prophet, when the former was to be appointed angel of the congregation in Newman Street. The same prophetic authority also decreed the appointment of elders and deacons, the former being invested with a priestly character, and the latter with the right of teaching. Afterwards, in 1835-6, the apostles, twelve in number, retired to Albury, to formulate their new church, and after a year of study and discussion they produced a constitution modelled somewhat in the form of a Jewish tabernacle, so as "to give an idea of the true relation and adjustment of the machinery of the universal church." This, however, was still found insufficient, and in 1838 the apostles, by the command of another prophecy, spent two years in visiting most of the European countries, to collect from their several churches whatever portion of divine truth could be found valuable in each; and in 1844 they again departed upon a similar mission. It was no wonder therefore if both in its ritual and forms of worship, this "Apostolic Catholic Church" soon comprised the varieties of the Eastern, Western, and Protestant churches, with a

strong infusion from those several sects which arrogate to themselves a superior and more direct heavenly inspiration. As might have been expected also, the more pompous and alluring ceremonial of the Church of Rome has obtained the preponderance in these importations, so that in their form of worship the Apostolic Catholics could scarcely be distinguished from those "worshippers of the beast," upon whom Irving until the hour of his death had never ceased to pour such terrible denunciations. Such a half-measure has produced the same effect that a similar process has wrought in Puseyism, by making this church a sort of resting-house on the way to Rome. Here, however, its transitions have not finally terminated, as it adheres to the doctrine of development, at least in ritualism, and holds out to its people the prospect of new rites and ceremonies more perfect still, which, in due time, will be revealed to their prophets and apostles.

After this explanation, the principal features in the public worship of this church, as being of uncertain duration, may be briefly announced. In framing their liturgy, they endeavoured to "combine the excellence of all preceding liturgies;" and while it largely partakes of the service-book of England as well as that of Rome, it is almost identified with the latter in its recognition of the real presence in the sacramental elements; its prayers for the dead; its intonations, chantings, and music; its variety of postures and evolutions. The priests and the numerous sacerdotal office-bearers, who of themselves almost form a congregation, are distinguished in their costume by the alb and girdle, the stole and chasuble, the surplice, rochette, and mosette, according to their offices and the functions to be performed; while a latitude is still given to the inspired men and women of the congregation to break forth upon the service with whatever divine revelation may at the moment be vouchsafed to them. Like the Puseyites also, they attach great importance to symbolical representations; and therefore while the walls of their churches are plentifully adorned with richly painted texts and allegorical figures, they have two lights burning upon the altar, to indicate the divine light by the institution of prophets and apostles, and seven before the altar, to represent the divine light communicated through the sevenfold eldership; while the incense which is burned during prayer, is to remind the people of the sweet incense of the prayers of the faithful ascending before the throne of God. So costly a ritual, and such a numerous priesthood, would be difficult to maintain, were it not that, besides free-will offerings, every member is required to give a tenth of his increase, that is, of his income of every description, for the support of the church and ministry.

A church so alluring in its form of worship, and so gratifying in its promises of novelty and change, has secured many followers, and the party is numerous not only in England and Scotland, but also in Ireland, in America, and several places of the Continent.

But still further removed from the authority of revelation, and wilder in its origin, its character, and doctrines, is the sect which has sprung up during this period under the name of "Mormons," or "Latter-day Saints." It originated in America under the notorious Joseph Smith, a native of Vermont in the United States; and the sect was first organized at Manchester, in the state of New York, on the 6th of April, 1830. Into the history of this vulgar arch-deceiver, Smith, it is unnecessary to descend; it is sufficient to state that he pretended to have received his new gospel engraved upon thin plates of gold, from the hands of an angel; that, though it was written in an unknown and obsolete language, he was divinely inspired to read and interpret it; and that after he had delivered this Koran chapter by chapter to his first followers, the number of converts rapidly grew into congregations in New York, Pennsylvania, Ohio, Indiana, Illinois, and Missouri. As the doctrines they taught were subversive not only of divine revelation, but the rules of common morality and civil government, the sect was driven from the different states into Missouri, from which they were soon after obliged to emigrate to Illinois, where they built their famous city and temple of Nauvoo. But here the popular hostility followed them: in 1844 Joseph Smith himself was murdered by an insurgent mob; and finding themselves still unsafe, the Mormons finally retired in 1847 to the Salt Lake Valley, far in the interior of America, where they formed their state of Deseret, in which they are still located.

Notwithstanding their loose morality and the wildness of their religious tenets, these Mormons or Latter-day Saints displayed that fervent zeal for proselytizing by which every new sect is distinguished; and their missionaries were active in making converts not merely throughout each of the United States, but in several of the countries of Europe. Not only in Denmark, Norway, and Sweden have their efforts been attended with great success, but even in England and Wales, in which latter countries, in 1851, they had more than 30,000 converts; and since that time their number has greatly increased, notwithstanding their frequent emigrations to the parent community in the Salt Lake Valley. In our own country, however, the extravagant doctrines of the Latter-day Saints are somewhat abated, and their worst practices repudiated or at least avoided, especially polygamy and the right of

self-government, which no European state would tolerate. Their principles of belief, as set forth by Joseph Smith, their hierophant, are the following:—

“We believe in God the eternal Father, and in his Son Jesus Christ, and in the Holy Ghost.

“We believe that men will be punished for their own sins and not for Adam’s transgression.

“We believe that through the atonement of Christ all men may be saved by obedience to the laws and ordinances of the gospel.

“We believe that these ordinances are: 1st, Faith in the Lord Jesus Christ; 2d, Repentance; 3d, Baptism by immersion for the remission of sins; 4th, Laying on of hands for the gift of the Holy Ghost.

“We believe that a man must be called of God ‘by prophecy, and by laying on of hands,’ by those who are in authority, to preach the gospel and administer in the ordinances thereof.

“We believe in the same organization that existed in the primitive church—viz., apostles, prophets, pastors, teachers, evangelists, &c.

“We believe in the gift of tongues, prophecy, revelation, visions, healing, interpretation of tongues, &c.

“We believe the Bible to be the word of God as far as it is translated correctly; we also believe the Book of Mormon to be the word of God.

“We believe all that God has revealed, all that he does now reveal, and we believe that he will yet reveal many great and important things pertaining to the kingdom of God.

“We believe in the literal gathering of Israel, and in the restoration of the ten tribes. That Zion will be built upon this [American] continent. That Christ will reign personally upon the earth, and that the earth will be renewed and receive its paradisaical glory.

“We claim the privilege of worshipping Almighty God according to the dictates of our conscience, and allow all men the same privilege, let them worship how, where, or what they may.

“We believe in being subject to kings, presidents, rulers, and magistrates; in obeying, honouring, and sustaining the law.

“We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men; indeed, we may say that we follow the admonition of Paul—‘We believe all things; we hope all things;’ we have endured many things, and hope to be able to endure all things. If there is anything virtuous, lovely, or of good report, or praiseworthy, we seek thereafter.

Notwithstanding the temperate appearance of this creed, it will be seen at once that all is not announced. The Book of Mormon is to be received with the Bible as of equal authority, and even the revelations now existing are liable to

be superseded by those which are still to follow. But of all these strange doctrines, as well as the flagitious license allowed by Joseph Smith and his successors, the European converts are kept in ignorance, until they have hastened to the land of promise in the far West, where they find themselves inclosed within the verge of a watchful and vigorous theocracy, from which they are not permitted to escape. This government at its head-quarters consists of a presidency of three persons, a college of twelve apostles, and a council of twelve high-priests, with numerous local rulers under the titles of prophets, priests, elders, bishops, teachers, deacons, and evangelists or missionaries. The order of their priesthood is twofold, that of Melchizedek and that of Aaron; and every Mormon is required to give a tenth of his income for the support of the clergy, and a tenth of his time to the temple and other public works. Their sabbaths are merry festivals rather than days of solemn devotion, and are signalized by songs, dancing, and feasting. Infant baptism they denounce as sinful, on which account the rite is delayed until the child is eight years of age, at which period he is reckoned accountable; he is then baptized by immersion; and regeneration, which is supposed to be begun by the rite, is perfected by the laying on of the hands of the Melchizedek priesthood, through which he is baptized by the Holy Ghost. Such importance, also, is attributed to this sacrament that they have a baptism by proxy, in which a person is baptized in lieu of a dead friend, by which the deceased secures in the other world all the privileges of a Latter-day Saint, unless he has committed the unpardonable sin. In the Lord’s Supper, which is administered every Sabbath, they use water instead of wine, and the bishops carry round the bread and a pail of water, with a tin or glass cup, to administer the elements to the people both young and old, who receive them in their pews. That such a system should have obtained a footing in Britain might be wondered at, did we not know the hungering for religious novelty which forms a characteristic of the age, and the multitudes of ignorant and enthusiastic persons who will always be found in every community, however elevated its general character and however abundant its means of religious instruction. It must be kept in mind, also, that they have received the Mormon delusion in its simplest and least repulsive form. Recent events in America, where the system has suffered a ruinous blow, have led to the expectation that its ramifications throughout Europe, already languishing, must speedily expire. But even at the worst, although it has matched the wildness of the Anabaptist heresy of Munster in the sixteenth century, and been accompanied with similar outbreaks, it may

yet like it undergo a tanning process, in which it will be as difficult to recognize the successors of Joseph Smith and Brigham Young as those of John of Leyden and Knipperdoling.

But the great scene of religious interest and the chief arena of church controversy and contention during this period was Scotland, where a keen conflict was waged, not by the church united against dissenterism, but by one great division of the church against another, and the result of which was not the mere formation of a new sect, but the rending of the church itself in twain. We allude to the Disruption, not only the most important event in the whole history of the Church of Scotland since the days of Knox and Melville, but fraught with consequences yet undeveloped to Christendom at large, as a great trial and experiment upon the connection of church and state, and the expediency of church establishments in general. To this startling and unexpected issue the long conflict that had been waged in Scotland against church patronage since the time of the union was to come at last, and the persistency of the Scottish character, after nearly a century and a half of disregarded opposition and protest, to be finally and fully vindicated.

Since the commencement of the present century, a visible change had begun in the Scottish church, which had gone on during the whole of the preceding period. It was the rise of the Evangelical party, with which the sentiments of the bulk of the people had been so long identified, and the depression of their opponents, the Moderates. And to this change the progress of events had naturally tended. That revival of liberal opinions which formed the great characteristic of the earlier part of the nineteenth century, was felt in the church as well as the state, and the people had become as indisposed to clerical, as they were to royal and political domination. They had also found that they could make their voice heard not only in the choice of their political, but their spiritual rulers and guides. Another cause, and connected with the preceding, was the high talent and energy of the new leaders of the popular party; and in such men as Sir Henry Moncrieff, Dr. Andrew Thomson, and Dr. Chalmers, their claims were not likely to be either silenced or disregarded. A third cause was to be found in the acquiescence of the Moderates themselves to the new state of things, who either from choice or necessity yielded to the current which they could no longer hope to resist. Not only was their opposition to the doctrines of evangelism less decided, but in many cases their most distinguished adherents became the advocates of those religious principles which their predecessors had been wont to oppose. In this manner the warfare against the Moderate

party was no longer a controversy in behalf of Arminian or even Arian principles, but a contest for a higher style of orthodoxy, and a more constitutional system of ecclesiastical government.

While the Evangelical party had thus grown so powerful that at the commencement of this period they could almost counterpoise their opponents, there were new agencies at hand by the operation of which their strength and efficiency were greatly augmented. One of these was the passing of the reform bill, which, by the recognition it gave to the popular choice in the right of government, was certain to give an impulse to that republican element which forms so essential a part of the Presbyterian Church of Scotland. By this sweeping measure such a general spirit of inquiry was awakened, that even in remote Scotland, and amidst its ecclesiastical polity, hitherto so little regarded in high places, popular abuses could no longer hope to escape detection, or a parliamentary indifference to the popular will be safely continued. Another source of strength was derived from the conflict of dissenterism against the Established church, which was waged in Scotland with greater ardour, and more decisive results, than those which had distinguished the same agitation in England. Animated by a consciousness of their strength, and by the new spirit that had been awakened against public grievances, the seceders of Scotland hoped that the time had come for the overthrow of the Established church, and the substitution of a clergy wholly supported by the voluntary benevolence, as well as elected by the choice of the people. This was called the Voluntary Controversy, which commenced in 1831, and reached its height in the following year. The chief arguments of the dissenters were derived from the condition of the church as it had lately existed under the ascendancy of Moderatism—a fertile store-house of weapons fitted for their purpose—and the case which it enabled them to make out bore a formidable appearance in behalf of their claims, and against the church establishment. It happened also from such a mode of warfare, that the Moderates were compelled to be silent—they could not deny the evidence of facts, and the natural consequences that were deduced from them. In this emergency, the Evangelical party of the church came forward and maintained the brunt of the controversy; and this they did successfully, by showing that these evils were accidental abuses, not inevitable consequences. They took their ground upon the principles of the church itself, as they were formulated by its standards before Moderatism was heard of; and in this position, which they could assume with a good grace, the perilous attack of dissenterism was met and repelled.

It was felt, however, by the Evangelical party, that however pleasant such a victory might be, the proper end had not yet been attained; and that so long as the evils complained of were continued, the opposition to church establishments was liable to be renewed. And first of these was patronage, in which Scottish dissenterism itself had not only founded its strongest argument, but from which it had derived its very existence. It was of this evil, and the disregard of the people's choice, that the popular party had complained, and for its amelioration at least, if not its entire removal, the Voluntary controversy had been a very urgent warning. This was now to be the great subject at issue, and while the conflict of the church against the enemy from without was at its height, the internal conflict commenced which was to go on without a pause, until it ended in a final DISRUPTION. It was at the General Assembly of 1832, that this new beginning was made, by overtures from three synods and eight presbyteries, to the following effect:—"That whereas the practice of church courts for many years had reduced the call to a mere formality; and whereas this practice has a direct tendency to alienate the affections of the people of Scotland from the Established church; it is overtured, that such measures as may be deemed necessary be adopted, in order to restore the call to its constitutional and salutary efficiency." But here the Moderate party took the alarm, and the proposal was rejected by a majority of forty-two. At the next year's Assembly, forty-five similar overtures were presented on the subject of calls, an increase of numbers that compelled attention; and a long debate followed on the subject, in which it was clearly shown that the right of the people to the choice of a minister was established by the original constitution and laws of the church, and that no pastor should be intruded upon them contrary to their will. Upon the subject of these overtures two motions were brought forward. The first was by Dr. Chalmers, in which he proposed that efficacy should be given to the call of a minister, by declaring that the dissent of a majority of the male heads of families, who were resident in the parish and communicants, expressed with or without the assignment of reasons, should be sufficient to set the presentee aside, unless it was clearly established that this dissent was founded in corrupt and malicious combination, or not in any personal objection to his ministerial gifts and qualifications, either in general, or with regard to that particular parish. The other motion, which was by Dr. Cook, the leader of the Moderate party, proposed that it should be competent for the heads of families to present their objections to the presbytery; that the presbytery should consider these objections,

and if they judged them unfounded, or originating from causeless prejudices, should proceed to the settlement of the presentee; but if they judged them well founded, that they should reject the presentation. This last motion, which gave to a majority, or even the whole parish, no greater right than had belonged to any individual, was carried by a majority of 149 to 137. It was significant, however, that this majority, so small in itself, was obtained chiefly through the laic portion of the Assembly, as there was a majority of twenty ministers in favour of the motion of Dr. Chalmers.
